10

10 ORIENTATION--information especially likely to be needed by users of a file as a frame of reference for understanding the materials classified elsewhere; organization of the file, special coding decisions, and evaluation of the file.

GUIDE TO THE AR7 KHASI FILE

[The AR7 Khasi file is concerned with the Mon-Khmer-speaking Khasi people living in the United Khasi-Jaintia Hills district of Assam in northeastern India. It also contains some information on the very closely related Jaintias who live in the southeastern part of this area and the Lynngams in the western part of the area. Though all Khasis fundamentally share the same language and social structure, their culture, dialects, economy and political organization do vary. They are generally matrilineal in social organization, having matrilineal clans and a social class system. Their economy is based on agriculture, with emphasis on potatoes or rice depending on the location.

There are 21 sources in the Khasi file, all of them in English except for five translations from the German (2: Stegmiller, 3: Stegmiller, 4: Stegmiller, 5: Stegmiller, 6: Becker and 7: Becker). There are three major sources in the file, 1: Gurdon, 15: Nakane and 19: Assam. 1: Gurdon, by a British army officer, is a general, systematic ethnography of the Khasi, based on three years experience with the tribe around the year 1900. 15: Nakane, by a Japanese ethnologist, is a comparative study of Garo and Khasi matrilineal systems based on fieldwork in 1955 and 1956. 19: Assam is a general economic survey of the Khasi and Jaintia Hills area containing a great deal of detailed statistical information. Sources 2 through 7, by the Roman Catholic missionaries Stegmiller and Becker, emphasize various religious and cermonial customs of the period 1905-1920. 8: Gurdon and 16: McCormick are cultural summaries, with 16: McCormick being much better organized and being a good place to get an overview of the culture. Three sources (9: Godwin-Austen, 10: Clarke, and 18: Godwin-Austen) deal with stone monuments and their cultural implications. Sources concentrating on kinship and social organization are 13: Mukherjee, 14: Roy,

and 21: Ehrenfels. 11: Chattopadhyay contains a miscellany of cultural information, 12: Mukherjee et al. is a survey of house types, 17: Banerjee a description of a festival, and 20: Hunter a general description of the Khasi during the middle 1870's. This is generally a good file for comparative purposes, containing a good deal of information in depth on social organization and economics. However, most of the other subjects are only superficially covered. The researcher should be aware of subcultural variations within the society and of possible confusion in the data between Khasi, Jaintia and Lynngam. The file also has some historical depth, with several sources dating from the 1870s and with other material relating to the 1950s. The file was processed between 1956 and 1974.]

[P. XIV is blank]

INTRODUCTION.

121 In 1903 Sir Bampfylde Fuller, then Chief Commissioner
122 of Assam, proposed, and the Government of India sanctioned, the preparation of a series of monographs on the more important tribes and castes of the Province, of which this volume is the first. They were to be undertaken by writers who had had special and intimate experience of the races to be described, the accounts of earlier observers being at the same time studied and incorporated; a uniform scheme of treatment was laid down which was to be adhered to in each monograph, and certain limits of size were prescribed.

114 Major Gurdon, the author of the following pages, who is also, as Superintendent of Ethnography in Assam, editor of the whole series, has enjoyed a long and close acquaintance with the Khasi race, whose institutions he has here undertaken to describe. Thoroughly familiar with their language, he has for three years been in charge as Deputy-Commissioner of the district where they dwell, continually moving among them, and visiting every part of the beautiful region which is called
643 by their name. The administration of the Khasi and
101 Jaintia Hills is an exceptionally interesting field of official responsibility. About half of the district, including the country around the capital, Shillong, is outside the limits of British India, consisting of a collection of small states in political relations, regulated by treaty with the Government of India, which enjoy

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

643 almost complete autonomy in the management of their
101 local affairs. In the remainder, called the Jaintia Hills, which became British in 1835, it has been the wise policy of the Government to maintain the indigenous system of administration through officers named *dolois*, who preside over large areas of country with very little interference. All the British portion of the hills is what is called a "Scheduled District" under Acts XIV and XV of 1874, and legislation which may be inappropriate to the conditions of the people can be, and is, excluded from operation within it. In these circumstances the administration is carried on in a manner well calculated to win the confidence and attachment of the people, who have to bear few of the burdens which press upon the population elsewhere, and, with the peace and protection guaranteed by British rule, are able to develop their institutions upon indigenous lines. It is now more than forty years since any military operations have been necessary within the hills, and the advance of the district in prosperity and civilization during the last half-century has been very striking.

177 The first contact between the British and the
648 inhabitants of the Khasi Hills followed upon the
175 acquisition by the East India Company, in consequence of the grant of the *Dīwānī* of Bengal in 1765, of the district of Sylhet. The Khasis were our neighbours on the north of that district, and to the north-east was the State of Jaintia,* ruled over by a chief of Khasi lineage, whose capital, Jaintiapur, was situated in the plain between the Surma river and the hills. Along this frontier the Khasis, though not averse from trade, and in possession of the quarries which furnished the chief

113 * The previous history of the Khasi State of Jaintia, so far as it can be traced, will be found related in Mr. E. A. Gait's *History of Assam* (1906), pp. 253-262.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

177 Europeans had entered the hill territory of the Khasi
648 tribes, and the account of the march, quoted in
175 Pemberton's Report,* is the earliest authentic information which we possess of the institutions of the Khasi race. Dr. Buchanan-Hamilton, who spent several years at the beginning of the 19th Century in collecting information regarding the people of Eastern India, during which he lived for some time at Goalpara in the Brahmaputra Valley, confused the Khasis with the
[101] Garos, and his descriptions apply only to the latter people. The name Garo, however, is still used by the inhabitants of Kamrup in speaking of their Khasi neighbours to the South, and Hamilton only followed the local usage. In 1826 Mr. David Scott, after the expulsion of the Burmese from Assam and the occupation of that province by the Company, entered the Khasi Hills in order to negotiate for the construction of a road through the territory of the Khasi *Siem* or Chief of Nongkhlāw, which should unite Sylhet with Gauhati. A treaty was concluded with the chief, and the construction of the road began. At Cherrapunji Mr. Scott built for himself a house on the plateau which, two years later, was acquired from the Siem by exchange for land in the plains, as the site of a sanitarium.† Everything seemed to promise well, when the peace was suddenly broken by an attack made, in April 1829, by the people of Nongkhlāw on the survey party engaged in laying out the road, resulting in the massacre of two British officers and between fifty and sixty natives. This led to a general confederacy of

* Pp. 218-220. It appears from p. 219 that Mr. Scott's report is responsible for the erroneous statement (often repeated) that the mountaineers "called by us Cossyahs, denominate themselves Khyee." This second name is in fact the pronunciation current in Sylhet of the word *Khāsi*, *h* being substituted for *s*, and should be written *Khāhi*.

† In Mr. Scott's time it was usual to speak of such a place as a "Sanatary."

THE KHASIS

SECTION I.

HABITAT.

101 162 THE Khasis reside in the Khasi and Jaintia Hills district of Assam. They number 176,614 souls, which total is made up as:—

Khasis	107,515
Syntengs	47,883
Christian Khasis	17,125
Khasis inhabiting other districts	4,091
	176,614

131 162 563 The Khasi and Jaintia Hills district is situated between 25° 1′ and 26° 5′ North Latitude, and between 90° 47′ and 92° 52′ East Longitude. It contains an area of 6,157 square miles, with a total population at the Census of 1901 of 202,250 souls. In addition to the Khasis there are some members of Bodo tribes inhabiting parts of the district.

The Lynngam tribe appears to have been reckoned in 1901 as Khasi, there being no separate record at the last Census of these people.

101 131 [133] 563 The district is split up into two divisions, the Khasi Hills proper and the Jaintia Hills. The Khasi Hills form the western portion of the district and the Jaintia Hills the eastern. The Khasis inhabit the Khasi Hills proper, and the Syntengs, or Pnars, the Jaintia Hills. The latter hills take their name from the Rajas of Jaintia, the former rulers of this part of the country, who had as their capital Jaintiapur, a place situated at the foot of the Jaintia Hills on the southern side, which now falls within the boundaries of the Sylhet

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

101 district. The Lynngams inhabit the western portion of the
131 Khasi Hills proper. A line drawn north and south through
563 the village of Nongstoin may be said to form their eastern boundary, and the Kamrup and Sylhet districts their northern and southern boundaries, respectively. The people known as *Bhois* in these hills, who are many of them really Mikirs, live in the low hills to the north and north-east of the district, the term "Bhoi" being a territorial name rather than tribal. The eastern boundary of the Lynngam country may be said to form their north-western boundary. The Wárs inhabit the precipitous slopes and deep valleys to the south of the district. Their country extends along the entire southern boundary of the district to the Jadukata, or Kenchi-iong, river where the Lynngam territory may be said to commence towards the south. There are some Hadem colonies in the extreme eastern portions of the Jaintia Hills. It is these colonies which are sometimes referred to by other writers as "Kuki Colonies." They are settlers from the North Cachar Sub-division of the Cachar district within recent years. It is possible that the title Hadem may have some connection with *Hidimba*, the ancient name for the North Cachar Hills.

APPEARANCE.

142 The colour of the Khasi skin may be described as being usually brown, varying from dark to a light yellowish brown, according to locality. The complexion of the people who inhabit the uplands is of a somewhat lighter shade, and many of the
[361] women, especially those who live at Nongkrem, Laitlyngkot, Mawphlang, and other villages of the surrounding high plateaux, possess that pretty gipsy complexion that is seen in the South of Europe amongst the peasants. The people of Cherrapunji village are specially fair. The Syntengs of the Jaintia Hills are darker than the Khasi uplanders. The Wárs who live in the low valleys are frequently more swarthy than the Khasis. The Bhois have the flabby-looking yellow skin of the Mikirs, and the Lynngams are darker than the Khasis. The Lynngams are probably the darkest complexioned people in the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

577 plains, jealous of their power, brave in action, and have an aversion to falsehood."

797 Khasis of the interior who have adopted Christianity are
177 generally cleaner in their persons than the non-Christians,
515 and their women dress better than the latter and have an air
342 of self-respect about them. The houses in a Christian village are also far superior, especially where there are resident European missionaries. Khasis who have become Christians often
771 take to religion with much earnestness (witness the recent
797 religious revival in these hills, which is estimated by the Welsh
794 missionaries to have added between 4,000 and 5,000 converts to Christianity), and are model Sabbatarians, it being a pleasing sight to see men, women, and children trooping to church on a Sunday dressed in their best, and with quite the Sunday expression on their faces one sees in England. It is a pleasure to hear the sound of the distant church bell on the hill-side on a Sunday evening, soon to be succeeded by the beautiful Welsh hymn tunes which, when wafted across the valleys, carry one's thoughts far away. The Welsh missionaries have done, and continue to do, an immense amount of good amongst these people. It would be an evil day for the Khasis if anything should occur to arrest the progress of the mission work in the Khasi Hills.

GEOGRAPHICAL DISTRIBUTION.

162 The Khasis inhabit the Khasi and Jaintia Hills, although
101 there are a few Khasi settlers in the neighbouring plains districts. The Census Report of 1901 gives the following figures of Khasi residents in the plains:—

Cachar	333
Sylhet	3,083
Goalpara	4
Kamrup	191
Darrang	10
Nowgong	29
Sibsagar	62
Lakhimpur	22
Lushai Hills	77
North Cachar	32
Naga Hills	62

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Garo Hills	117	162
Manipur	69	101
Total	4,091*	

The following information regarding the general aspect of [127] the Khasi and Jaintia Hills district, with some additions, is 133 derived from Sir William Hunter's Statistical Account of Assam. The district consists almost entirely of hills, only a very small portion lying in the plains. The slope of the hills on the southern side is very steep until a table-land is met with at an elevation of about 4,000 feet at Cherrapunji. Higher up there is another plateau at Mawphlang. This is the [361] highest portion of the hills, some villages being found at as high an elevation as close on 6,000 feet above sea level. Fifteen miles to the east of Mawphlang, and in the same range, is situated the civil station of Shillong, at an average elevation of about 4,900 feet. The elevation of the Shillong Peak, the highest hill in the district, is 6,450 feet above sea level. On the northern side of the hills are two plateaux, one between 1,000 and 2,000 feet below the level of Shillong, and another at an elevation of about 2,000 feet above sea level. In general features all these plateaux are much alike, and consist of a succession of undulating downs, broken here and there by the valleys of the larger hill streams. In the higher ranges, where 137 the hills have been denuded of forest, the country is covered 185 with short grass, which becomes longer and more rank in the 374 lower elevations. This denudation of forest has been largely 327 due to the wood being used by the Khasis for fuel for iron smelting in days gone by. The Government, however, has taken steps to protect the remaining forests from further 137 spoliation. A remarkable feature is the presence of numerous sacred groves situated generally just below the brows of the [778] hills. In these woods are to be found principally oak and rhododendron trees. The fir-tree (Pinus Khasia) is first met with on the road from Gauhati to Shillong, at Umsning, at an elevation of about 2,500 feet. In the neighbourhood of Shillong the fir grows profusely, but the finest fir-trees are to be seen

* The figures for Khasi population in the Khasi and Jaintia Hills district will be found under "Habitat."

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

SECTION III.

LAWS AND CUSTOMS.

TRIBAL ORGANIZATION.

101 [197] THE inhabitants of the Khasi and Jaintia Hills may be said to be divided into the following sections:—Khasi, Synteng or Pnar, Wár, Bhoi, and Lynngam. These divisions represent collections of people inhabiting several tracts of country and speaking dialects which, although often deriving their origin from the Khasi roots, are frequently so dissimilar to the standard language as to be almost unrecognizable. The above sections may be sub-divided as follows:—The Khasis into the inhabitants of the central high plateau, Cherra and Nongstoin, Maharam, Mario, Nongkhlaw, and the neighbouring Siemships. The Syntengs or Pnars may be divided as follows:—Into Syntengs proper, Nongtungs, and Kharwangs; the Wárs into Wár proper, and Wár Pnar; the Bhois into Jinthongs, Mynris, Ryngkhongs, and the Khasi-Bhois, i.e. Khasis who inhabit the low country to the north of the district, which is called generally the "Bhoi." The Lynngams are a separate division. They must not be confused with the Dkos or Hanas who are Garos. It must, however, be remembered that the Jinthong, Mynri, and Ryngkhong Sub-divisions of the Bhoi division are not Khasi, but Mikir, i.e. they belong to the Bodo or Bara group. The Lynngams are half Khasis and half Garos, and the Dkos or
101 Hanas are Garos who observe the Khasi custom of erecting
582 memorial stones. The above tribes and sub-tribes are not
614 strictly endogamous, nor are they strictly exogamous, but they are more endogamous than exogamous; for instance, Syntengs more often marry Syntengs than Khasis, and *vice versâ*, and it would be usually considered derogatory for a

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Khasi of the Uplands to marry a Bhoi or Wár woman, and 101
a disgrace to marry a Lynngam. These divisions are sub- 582
divided into a number of septs, taking Mr. Risley's definition of 614
"sept" as being the largest exogamous division of the tribe. It will, however, be more convenient to speak of these septs as "clans," the word "clan" having been used in other parts of this Monograph and by other writers.

Many of the clans trace their descent from ancestresses or 614
kiaw (grandmothers), who are styled *ki Iawbei-Tynrai*, lit. grandmothers of the root (i.e. the root of the tree of the clan). In some of the clans, the name of this ancestress survives; take as instances the Mylliem-ngap and Mylliem-pdah clans of the Khyrim State, the names of the ancestresses of the clans being *ka ngap* (honey, i.e. the sweet one), and *ka pdah* respectively. [776]
This tribal ancestress, as will be seen in the paragraph of the monograph dealing with ancestor-worship, is greatly reverenced, in fact, she may almost be said to be deified. The descendants of one ancestress of the clan, *Ka Iawbei Tynrai*, are called *shi kur* or one clan. We then come to the division of the *kpoh* or sub-clan, all the descendants of one great grandmother (*ka Iawbei Tymmen*), being styled *shi kpoh*. The next division is the *iing* (lit. house) or family. It is almost in- [592]
variably the case that the grandmother, her daughters and the daughter's children, live together under one roof, the grandmother during her life-time being the head of the house. The grandmother is styled *ka Iawbei Khynraw*, or the young grandmother, to distinguish her from the other two grandmothers, *ka Iawbei-tynrai* and *ka Iawbei-tymmen* who have been mentioned above. The young grandmother, her daughters and their children are said to belong to *shi iing*, one house, the word *iing* in this instance possessing amongst the Khasis the same significance as the English word *family*.

We will now see how the Khasi clan (*kur* or *jaid*) grew out 614
of the Khasi family (*iing*). Let us take the example of the 773
great Diengdoh clan of Cherra. Disregarding the myth that the Diengdohs are descended from a mermaid, it may be stated that there seems to be a fairly general belief amongst the Diengdohs that their first ancestress or *kiaw* came from the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

585 of a Garo marriage. The Lyngams, unlike the Garos, do not
782 observe which way the beaks of the fowls turn when they are thrown on the ground after being sacrificed. The Lyngams,
787 like the Khasis, take auguries from the entrails of the fowls and the pig. After these ceremonies are over, the Lyngam pair are allowed to cohabit. The cost of an ordinary Lyngam
585 marriage is from Rs. 30 to Rs. 40. The marriage system in
435 vogue among the Lyngams may be described as a mixture of the Khasi and Garo customs. As has already been stated,
101 the Lyngams are a mongrel breed of Khasis and Garos.

CEREMONIES ATTENDING DEATH.

764 The death customs of the Khasis are not only very elaborate, but possess a significance of their own, it is, therefore, necessary to describe them in detail; they are as follows:—

763 A member of the family bends down towards the ear of the apparently deceased person and calls him or her by name three times, to make sure that death has occurred. If no answer comes, the family laments, for it is then con-
764 cluded that the person is really dead. The body is then bathed
291 in warm water from three earthen pots and is reverently laid on a mat (*japung*), where it is dressed in white cloth, a peculiar feature of the dressing being that the waist-cloth and turban are folded from left to right, and not from right to left, as in the case of the living. An egg called *u'leng kpoh*
764 is placed on the stomach of the deceased, and nine fried grains, of *riw hadem*, or Indian corn, are tied round the head with a string. The rich place ear-rings in the ears and other jewellery on the body of the deceased, it being necessary that this jewellery should be specially made for the occasion, and they
[775] deck the corpse with valuable cloths. A cock, *u'iar krad lyati* (literally the cock that scratches the way), is sacrificed, the idea being that a cock will scratch a path for the spirit to the next world. A sacrifice of a bull, or of a cow in case the deceased is a woman, (*u* or *ka masi pynsum*,) follows. Portions of the left leg of the fowl and the lower part of the jaw of the bull or cow are kept, to be placed afterwards in the *mawshieng*, or bone,

1: Gurdon, E-4, 5 (no date) 1907 AR7 Khasi AR7

539 in the Rupatylli channel at Duwara. She was covered with shame, and she slackened her speed and split herself up into five branches, namely, ka Umtong, ka Torasa, ka Pasbiria, ka Kumarjani, and ka Duwara. Umiam did this so as to hide her shame from Umngot. This is how the river Rupatylli was formed at Duwara, to be a token that Umngot had been victorious in her contest with Umiew.*

leh khnang ba'n búh rien ia la ka jingkhein burom ha khymat ka Umngot. Kumta sa long ka wah Rupatylli ha Duwara namar ka long ka dak ka jingjop ka Umngot ia ka Umiew.

THE KUPLI (KOPILI).

539 133 484 782 The Kopili river rises in the "Black Mountains," † and flows northwards into the Brahmaputra. It is the boundary between the country of the Syntengs and that of the Hadems. ‡ Any traveller who wishes to cross this river must leave behind him the rice which he has taken for his journey, and any other food that he may have taken with him. If he does not do so, even if he crosses the river at an unforbidden point, he is liable to offer a sacrifice to the Kopili goddess. The people offer to her three fowls and three goats outside the village, i.e. one to the goddess herself, and the other two to her sons, U Shyngkram and U Jali; and five fowls, that

SHAPHANG KA KUPLI, U SHYNGKRAM BAD U JALI, KI KHÚN JONG KA.

Ka Kupli ka long ka wah na ki lúm baiong bad ka túid da artet ha ka wah Brahmaputra. Ka long ka púd ia ka ri Synteng bad ka ri Hadem ha mihngi. Uno-uno u nongleit jingleit uba kwah ban jám ia kane ka wah Blei-Kupli u don kam ba'n bred noh ia la u kháw-ryneng ha shiliang wah, bad ia ki kynja jingbám baroh phar, te un sa klan ia ka. Lada u'm da leh kumta, la'u klan na ka jaka ka b'ym sang ruh un háp jingaingúh ha ka. Ki khún-ki-hajár ia ka ba lum lái s'iar, lái blang kawei ia ka, marmar uwei ia U Shyngkram bad U Jali; bad san s'iar ba ki'n ia bám sngewbba baroh lái

* Both rivers, Umngot and Umiew, or Umiam, have their sources in or close to the Shillong Peak. The word "*Rupatylli*" signifies in Khasi a solid silver necklace of a peculiar shape. In order to appreciate this pretty tale thoroughly, the reader ought to view the river "Rupatylli" from the heights of Laitkynsew, or Mahadeo, whence it is to be seen glistening in the sun like a veritable *rupatylli* or silver necklace.

† These mountains are the high hills which lie to the east of the Jowai Sub-Division, and which form part of the boundary line between the Khasi and Jaintia Hills District and North Cachar.

‡ The word Hadem is possibly a corruption of "Hidimba," the old name for North Cachar.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

805
443

Khasi Hills.	Jaintia Hills.
1. Lynkah (Barpani or Khawang)	Kyllao. (Suhtnga).
2. Nongkrem	Pynsing.
3. Um-long (Maolong the hat at Laban)	Maolong. (Nartiang).
4. Ranghep (Ieu-bah at Cherra) (Mawtawar in Mylliem) (Unsaw in Nongkhlaw)	Maosiang. (Jowai).
5. Shillong (Laitlyngkot)	Maoshai. (Shangpung).
6. Pomtih or Pomtiah (Mawkhar, small market)	Pynkat. (Mynso).
7. Umnih	Thym-blein.
8. Yeo-duh (Mawkhar, large market)	Ka-hat. (Jaintiapur).

In the Wár country, markets are usually held every fourth day, e.g. at Nongjri, Mawbang, Tyllap, and Shella. At Theria the market is held every Friday, and at Hat-majai, or Bholagunj, every Tuesday.

THE LYNNGAMS.

●101 131 Although mention has been made incidentally in various parts of this monograph of Lynngam customs, it has been thought necessary to give the Lynngams a separate chapter, as these people differ so very greatly from the Khasis in their manner of life, and in their customs. *Lynngam* is the Khasi name; the Garo name for the Lynngams is *Megam*. There [361] are several *Megam* villages in the north-eastern corner of the Garo Hills district, and there is regular communication kept up between these villages and the Lynngam inhabitants of the Khasi Hills district. The Lynngams must not be confused with the *Hámá* or *Námdaniya* Garos who inhabit the low hills to the north of the Khasi Hills district, and are called by the 101 Khasis *Dko*. All Lynngams claim to be Khasis, they dislike 197 being called Garos; but although it is true they speak what may be called a dialect of Khasi, and observe some of the Khasi customs, the Lynngams, are more Garo than Khasi. Before 101 proceeding further, it should be stated that the Assamese of Boko call the Lynngams *Núniyá* Garos, all hill people being Garos to the Assamese of that region, without distinction

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

or difference. It is owing to these three different names being 101
used for the same people that there has been so much confusion
about Lynngams previously; e.g. at one census they were named
Lynngam, at another they received the appellation of Garo, and
at a third enumeration they were called Khasis. In Section I. 131
the habitat of the Lynngams has been roughly defined. It is 361
impossible to define the Lynngam country exactly, because 173
these people are continually shifting their village sites
owing to the exigencies of *jhum* cultivation, which has been
described in Section II. Some of the Lynngams preserve
a tradition that they originally came from the Kamrup
plains. It is interesting that a people, like the Garos in so
many respects, should have the same idea as the Garos as to the
hills on the south bank of the Brahmaputra not always having
been their abode. The Garo legend is that they dwelt for 173
some years in the Goalpara and Kamrup plains after they 361
descended from Thibet, and before they moved to the Garo 144
Hills; and there is unmistakable evidence of their occupation of
both districts in the shape of certain Garo villages on both
banks of the Brahmaputra for some little distance up the river.
If, as I suspect, the Lynngams are an offshoot of the Garos, it
is, perhaps, possible that they entered the Khasi Hills much in
the same way as the Garos entered the hill district to which
they have given their name. The Lynngams are much darker 142
than the Khasis, and possess the Thibeto-Burman type of 177
feature often to a marked degree. It is not extraordinary that
they should have adopted some of the Khasi customs, for the
Khasis, being the stronger people, would in course of time be
bound to influence them in this respect. That the Lynngams 611
observe the matriarchate and erect (some clans) memorial 211
stones is not peculiar, because the Garos, like the Khasis, are 764
also a matriarchal people (to a limited degree), and the custom
of erecting memorial stones is not confined to the Khasis, for
other hill tribes in Assam observe the practice, e.g. certain
Naga tribes and the Mikirs; and the Garos themselves put up
carved posts, called *kima*, in honour of the departed. Although 582
there is not much intermarriage between the Khasis and the 101
Lynngams nowadays, perhaps in days gone by there was a 147
mixture of blood, the result being the hybrid race we are now
considered

443 The Market Life of the Khasi
(with ten original photographs by the author)
by P.F. Stegmiller, S.D.S., Munich

[101] The mountains in the northeast corner of India which lie between the valleys of the Brahmaputra and the Barak are inhabited by a [161] tribe, the Khasi, numbering about 200,000 people. Although they rarely cross the borders of their homeland and live almost cut off from their [484] neighbors, they have an active traffic amongst themselves and travel a lot. This traveling is determined by the very distinct market life of the Khasi. It is truly the pulse beat of the people. The rest of their homelife, their activities, and their private, public, and religious life. (1) Time is divided according to the market; the market replaces the daily newspaper and the information service; the market unites the individual villages; the market offers a living to many and for many has become a source of wealth.

1. P.F. Stegmiller, "Aus dem religiösen Leben der Khasi' [The Religion Life of the Khasi], Anthropos, 1921-1922, pp. 425 ff.

443 How much the Khasi depend on a thriving 782 market may be seen in their prayers which are spoken every year at the great state sacrifices in honor of the god Shillong by the sacrificer (lyngdoh) presenting the service: "O god, Shillong! Thou who receivest this prayer, this sacrifice of goats, of fowl, of kou and rynsi (a kind of bread of rice flour or cornmeal with pounded sugar), of utensils used in the preparation, as thou has given them to the royal

Family Property and Maternal Rights

/127/ by C. Becker S.D.S., Wurzburg

The fall of 1910 and the entire following year found the distin-
114 guished head of the Ethnographic Museum in Munich, to whom this anniversary volume is dedicated, on a research and collection trip in the extensive and inexhaustible territories of India. He was accompanied by his active wife, who served as his scientific assistant. From Burma, a mine of rich, ethnographic treasure and where the greatest part of their Indian stay was spent, their journey led the research couple into Assam, situated in the northeast of India, a country of equal significance. Assam certainly belongs politically to an-
101 terior India, but forms a bridge to interior India both ethnographically and linguistically.

Among the mountain peoples who inhabit the chain of hills which traverses the length of present-day Assam, and which separates the two largest parts of the country from each other, the Brahmaputra Valley in the north and the Surma Plain in the south, is one of the most interesting and doubtless the most advanced of the tribes, the Khasi, who inhabit the so-called Khasi and Jaintia Mountains. It
[631] was in Shillong, the center of this area, which is now the capital of the country Assam under the English government, where towards the end of September, 1911, I first became acquainted with Professor D. L. Scherman and his wife and where a friendship of many years
133 had its beginning. Therefore this little study will lead us to the Khasi Mountains, to its slopes overgrown with its peculiar pine trees, which receive greetings across the plains from the snow-crowned peaks of the Himalayas, which are flooded by the mighty waves of the Brahmaputra River and the alternating inundations of the Surma River. Here a contented and cheerful little people live who have maintained their own special characteristics in spite of the many European influences and those of neighboring cultures.

162 /128/ Of the entire population of 243,263 people, who form the inhabitants of the Khasi and Jaintai Mountains (1), 203,855 are Khasi.

1. The following statistical estimates are taken from the Census of India 1921, Vol. III, Assam, (Shillong 1923) pp. I and II.

162
797 Of those, 37,852 have adopted Christianity, while the others are still adherents of ancient animistic cults, with the exception of somewhat

JOURNAL

OF THE

ASIATIC SOCIETY OF BENGAL.

Vol. LXXIII. Part III.—ANTHROPOLOGY AND COGNATE SUBJECTS.

No. 4.—1904.

101 *Note on the Khasis, Syntengs, and allied Tribes, inhabiting the Khasi and Jaintia Hills District in Assam.*—By MAJOR P. R. T. GURDON, *Superintendent of Ethnography in Assam.* (With plates III—IV).

[Read 3rd August, 1904.]

142 1. *Physical characteristics.*—The men are seldom tall; they are generally well made, and possess great strength of limb,—of leg in particular. Their features show a resemblance to those of the Japanese; their complexions are fair, noses flat, lips thick, and eyes very frequently obliquely set. The women are good-looking, of a buxom type, and are cheerful and pleasant-mannered. Children are sometimes [276] exceedingly pretty. Khasis are inveterate chewers of *pán*,—both men, [405] women, and children; the distances from place to place being measured [302] by the number of betel-nuts that can be chewed on the journey. The hair of the males is shaved above the forehead pretty high up, and the remainder is gathered into a knot at the back of the head. Very few 291 Khasis have much hair about the face. Both Khasis and Synteng wear the sleeveless coat (*jymphong*) loin-cloth, *jain sieng* (a kind of

On the STONE MONUMENTS *of the* KHASI HILL TRIBES, *and on some of the Peculiar Rites and Customs of the People.* By Major H. H. GODWIN-AUSTEN, F.R.G.S., Deputy Superintendent Topographical Survey of India.

121 THE increasing interest that is taken at the present day in ethnology and the history of man in past and present ages, more particularly in the customs of semi-civilised races in distant quarters of the world as compared with the state of those races who dwelt in Europe in early historic times, has led me to put together the information I obtained regarding the people of the Khāsi Hill tracts. Their customs are peculiar, and the fact that they are among the very few who erect at the present day monolithic monuments, is alone of great interest.

This has not escaped the attention of different travellers, 122 officers of the Indian service and others who have visited that quarter of the Bengal Presidency, and from time to time papers have been published; these are scattered through a number of periodicals, and in no case is a complete record of these Hill people to be found.

Notices on the Garos and Khāsis, as well as many of the other tribes on the north-eastern frontier of Bengal, are generally very short, in some instances mislead, and in some cases do the peo- 152 ple, savages though they be, but little justice; in truth, there is very much to admire in these Hill people, they are in many ways, socially and physically, far above their Bengāli neighbours of the plains; intercourse with them is, in consequence, much pleasanter, easier, and has far greater interest; innate honesty and truth in their manners of dealing often crop out, more especially in villages well within the hills, where contact with the people of the plains is of rare occurrence.

101 I shall notice the best of these papers having reference to tribes inhabiting the range of hills running west to east, south of Assam, from the sharp southern bend of the Brahmaputra up to the Kopili and Diyung river, in long. 92 deg. 45 min., a length of some one hundred and sixty-five miles.

114 In the "Asiatic Researches," vol. iii, published so far back as 1792, is a very interesting paper on the Gāros, by Mr. John 113 Eliot; his travels, however, did not extend so far to the east as the Khāsias.

The Rev. A. B. Lish, a missionary of Cherra Poonjee, published an account of the Khāsias in the "Calcutta Christian Observer" for 1838, he gives an account of their mode of breaking eggs for omens, etc.

Neither in M'Cosh's "Topography of Assam," or in Robinson's "Assam," is any newer or better information afforded concerning

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

114 etc., when employed at heavy labour. Very much more decent is it than the thin gauze-like cloth worn by even the better class of Baboo in Calcutta, which makes hardly any pretence of concealing the private parts. I can speak for the Gāro women being particularly quiet and modest in their demeanour; and the young men on reaching a certain age, and until they marry, live and take their meals apart in a large house constructed for them; this is always the largest in the village, and where strangers are put up. This custom mitigates strongly against "their want of modesty", so often advanced, and proves, if anything, an advanced state of morality.

Again, in speaking of the Khasis and the looseness of their family and domestic relations, which are somewhat easy, the frequent changing of wives is not so common as might be supposed, and in the remoter villages I should say very rare.. There is a very strong force which militates against its frequent practice. The men of these tribes select thei wives not for beauty and delicacy, but for their well-developed forms and hard-working qualities—those who can carry heavy loads throughout the day; and the more children she begets the better for the pair: they can cultivate as these grow up a larger area, and live in greater comfort.

[113] In the *Calcutta Christian Observer*, March, 1852, is to be found one of the best papers on the Khāsis, by the Rev. W. Pryse, who was attached to the Welsh Mission working both at Cherra Poonjee and Sylhet. A very good article appears in the *Calcutta Review* for 1856, vol. 27, being a review of the "Geology of the Khāsi Hills, with Observations on the Meteorology and Ethnology of that District," by Thomas Oldham, Superintendent of the Geological Survey of India. a work containing much valuable and interesting matter. An Introduction to the Khāsia Language, by the Rev. W. Pryse, is also included in the above review.

114 The various ways in which the word Khāsi has been spelt by
101 different writers, has no doubt puzzled many an European reader, and will be familiar no doubt to some in the form of Cossyah, Khassyah, Kasia, etc. The most correct has been adopted by the mission at Cherra Poonjee in their printed works in the language, and adopted in this paper.

101 They call themselves Ki Khási, and their country Ká Ri
197 Khási;* and without going out of our way to seek for a derivation of this word, may it not be derived from the Hindustani "Ghāsi"—grassy: the whole of the upper lands being of this nature, in contradiction to the forest-clad valleys and slopes of the outer hills both north and south. The Khásias never pro-

* Compare "Rhi", a mountain (Tibetan).

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

nounce the hard G; and in all words of Hindustani origin this letter has the sound of K. 101 [197]

They are called by the tribes of Kúkis and Nágás on the west "Káro", the name they themselves have for the whole mass of hill people on their western side, the Gāros, though as we pass towards their confines, we find the names of local clans giving way to this general term which was not known to some of the villagers of West Nongstoin, who call the Gāros "Dékor."

The Gāro appellation for the Khāsis is "Dikkil" or "Digil"; and it was very interesting to find, after visiting the villages of both, that they mutually fear each other, and consequently border raids never occur. The Gāros owned that they feared the bow and arrow of their neighbour, a weapon they themselves are unacquainted with the use of.

The Khāsis always point to the east as the quarter from which they emigrated, but there is very little, if any, similarity with the languages of the people now occupying the hills on that side. [173] [197]

Before entering further on the subject matter of this paper, I must request my hearers or readers to remember that having no knowledge colloquially of the Khasi language, the information I give was obtained from natives who understood either English or Hindustani well. The greater part of the information was given me by a very intelligent man, a native inspector of schools in the district; thus I hope that all errors that exist may be hereafter corrected by others who have been able to elucidate with greater exactness the meaning of their many different rites and superstitions. 115

Certainly the most striking objects of interest in the Khāsi Hills are the upright stone monuments that are to be seen all over the country; these, set up by the wayside, or in the villages, more frequently cutting the sky on prominent hills, with the large slabs horizontally set before them, at once recall the Druidical remains of our own island, northern France, etc., and lead one to marvel at the similarity of the custom, and to inquire its origin and design. Many who visit those hills take it at once for granted that they are the graves of illustrious men, or, after a vain endeavour to get some information from the coolies about them, let the matter rest, or finally believe that the ashes of the dead, to whose memory the monoliths are erected, are buried under the flat kind of altar or dolmen seen in front. 764 211

It is always a very difficult matter to obtain information from semi-civilised people on such a subject as their religious rites, especially if the inquirer is ignorant of their language. A slight knowledge of Hindustani on the part of the Khāsia villager, renders the attempt still more hopeless, and the information given quite erroneous.

The STONE MONUMENTS *of the* KHASI HILLS. By C. B. CLARKE. [Communicated by Professor H. Fawcett, through Sir John Lubbock, Bart].*

131 THE Khasi Hills form a plateau, at a mean elevation of 4,500 feet above the sea, between the plain of Assam on the north and the plain of Sylhet on the south. They are inhabited by the
● 101 Khasi tribe, a people very distinct from the Hindoos north and south of them, and who are a branch of a race which extends eastward as far as South China. Immediately east of them are the Jaintea people, also called Sintengs, who are very closely allied in race and customs to the Khasi tribe. The
133 Jaintea country is physically a portion of the same plateau as the Khasi, and is only arbitrarily divided from it, and exhibits the same grassy hill-tops. The Khasi and Jaintea tribes together occupy the political district administered by the Deputy-Commissioner of Shillong, and the whole plateau is accordingly called the Shillong Plateau by Mr. Medlicott, the Dep.-Superintendent of the Geological Survey in India. Shillong is the English station which is the political capital. The plateau is remarkable for its freedom from the dense jungle which covers the neighbouring Himalayas at similar elevations; it is a fine rocky moor-like plateau, with isolated

CHAPTER I

According to traditions preserved by the local people, the Iangblah clan were the first settlers in Mawphlang. The Lyngdohs were invited to come and settle as the Iangblahs wanted priests to perform proper worship for their village. Other clans came later and settled in the State. These old clans are known as Khadar Kur. Myntris are elected from the following four clans—Iangblah, Khar Shiing, Khar Hunai and Khar Sohlia. The above traditions of the origin of the settlement were furnished by the myntri U Subu Rai, his sister's husband U Alisson and others. The list of Khadar Kur furnished by the myntri is noted below :— 101 [124]

(1) Iangblah.	(2) Lyngdoh.	(3) Khar Shiing.
(4) Khar Hunai	(5) Khar Sohlia.	(6) Khar Phannap.
(7) Khar Kynnie.	(8) Khar Sahkhar.	(9) Marbaniang.
(10) Khar Narbi.	(11) Khar Mawphlang.	(12) Khar Syntiew.

The genealogy of myntri U Subu Rai, of myntri U Orong Singh and others are shown at the end of this chapter. In collecting kinship terms, three questions were asked of the informant : 125 601

(i). What is the relationship of B to the informant A (and of A to B). This is shown in the tables as the kinship term.

(ii). What the informant A called B (and conversely). This is shown in the tables as the term of address.

(iii). How the informant A referred to the relationship of B to C, another relative. This is shown as the term of reference.

PREFACE

K
G
121

The purpose of this monograph is to present theoretical problems of Garo and Khasi social organization in relation to those of other matrilineal systems. In fact, the study of these two matrilineal systems has led me to enquire into many other matrilineal systems, as will appear throughout my discussion in Parts I and II. As a result, I think I have reached certain conclusions of theorical interest concerning matrilineal systems as a whole; these are presented in the last part of the book.

CHAPTER I

INTRODUCTION

The homeland of the Khasi is the hilly country situated in the northeast of India and known at present as the District of United Khasi and Jaintia Hills, under the Assam State Government. The area is bounded by the plains of the Kamrup and the Nowgong Districts to the north, by the Cachar Hills and East Pakistan (District of Sylhet) to the south, and by the United Mikir and North Cachar Hills Districts to the east. The Khasi and Jaintia Hills are divided politically into two subdivisions, with headquarters at Shillong for the Khasi Hills, and at Jowai for the Jaintia Hills, respectively. The peoples of both subdivisions are called "Khasi" in a broad sense, and are distinctly marked off from other neighbouring tribes and peoples by language and social structure. The population of the Khasi in the District is 363,599 *(Census of India, 1951, Assam)*. Their language belongs to one of the Mon group of the Austro-Asiatic family to which the Munda in central India also belongs.[1]

Though all Khasis share fundamentally the same language and social structure, their culture, dialects, economy, social usage, and political organization vary greatly, owing to the ecological and politico-historical differences among them. The United Khasi and Jaintia Hills are much higher than the neighbouring Garo Hills. The plateau of the Khasi Hills ranges from about 5,000 feet to 6,000 feet, of which

1. The *Census of India, 1951, Assam*, makes the following remarks on their language: "Their nearest kinsmen have been discovered to be the Palaungs, a tribe inhabiting one of the Shan States to the northeast of Mandalay on the middle Salween. Later the relationship of the Khasi language has been traced not only to the Mon-Khmer language, but also to the Nicobarese and several dialects spoken by some tribes in the Malay Peninsula. In Assam, this special form of speech is only found in the Khasi and Jaintias while nearly all the other primitive languages with which it is surrounded belong to the great Bodo family. The Khasi language is the only member of the Mon-Khmer family which possesses a grammatical gender distinguishing all nouns as masculine and feminine, and here also the feminine nouns immensely preponderate."

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

133 the highest point is the Shillong Peak, 6,445 feet, covered with scrub,
137 grassland and forests (mostly oak, rhododendron and pine trees). The Jaintia Hills are considerably lower, with much flat land; wet paddy cultivation is practised here and there where sufficient water is available. From the plateau of the Khasi Hills northwards to the Assam Brahmaputra Valley there is a gentle slope covered with thick jungle, and the southern slope towards the Bengal plain is very steep, so that

• 101
102
619

MAP. 8. — *Map of the Khasi-Jaintia Hills with Classification of Groups.*

133 the upland remained practically cut off from the plains until the
137 middle of the 19th century.

Following the geographical and ecological differences, the five
619 groups are segregated into fairly well-defined cultural areas, each developing a different economy and dialect:

[131]
[24]

1. The Jaintia[1] — associated mostly with wet rice cultivation.
2. The Khasi (upland Khasi) — practise potato cultivation with small-scale rice and maize cultivation.
3. The War — inhabit the southern slope of the Khasi and Jaintia Hills (they are called geographically the Khasi War and the Jaintia War). Due to the heavy rainfall, the soil is the most fertile in the Khasi and Jaintia Hills. The Khasi War practise jhuming of which the main yield is millet. In the lower part of this area, pan-leaf, betel-nut, and orange gardens are cultivated. The Jaintia War practise wet rice cultivation like most of the Jaintias, as well as pan-leaf cultivation.

1. They are called also the Synteng or the Pnar.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

CHAPTER II

VILLAGE COMMUNITY

As models of a Khasi village community, I have taken my data for the discussion presented in this chapter from two villages situated in the Kadashinong area, Sohkynduh and Kongton, with comparative data from Shella and Jatinga villages. 121

Sohkynduh and Kongton are situated in one of the most secluded spots of the Khasi Hills and the economy is shifting cultivation, with millet as its main product. Only a few Christians are found; most of the population are pagans. Shella is situated on the southern border of the Khasi Hills, adjacent to Pakistan. Jatinga is in the North Cachar Hills, surrounded by patrilineal tribes, such as the Zemi-Naga, the Kuki and the Cacharee. The economy of both villages is pan-leaf and orange cultivation. In Shella, Hindu, Christian and pagan are found among the villagers almost in the same proportions, while the Jatinga villagers are all Christian. The two Kadashinong villages, Shella and Jatinga, differ from one another not only in their religious and economic aspects, but in overt culture, dialect and political organization as well. (Additional information concerning Shella and Jatinga is given in Appendix.) Shella and Jatinga are unique among Khasi villages and quite sophisticated, having been developed under a trading economy, with considerable contacts with other peoples, including Hindus. I selected these villages in order to ascertain how far the structural principle which operates in the Kadashinong villages can be found to act also in totally different economic and environmental situations.

621 771 [101] [245] 184 621 121

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

APPENDIX

SOME ADDITIONAL INFORMATION FROM SHELLA AND JATINGA

SHELLA

Shella is situated on the lowest of the southern slopes of the Khasi Hills, bordering on the Sylhet plain of East Pakistan. For centuries the people of Shella maintained close trading connections with the people of the plain, so that they have been much influenced by the Hindu. They have been to some extent divorced economically and culturally from their own people who live in the uplands and on higher part of the slopes. Actually, this is a natural result of their geographical location. From Cherrapunjee, the southern edge of the upland Khasi Hills, only a narrow footpath goes down to Shella. The altitude of Cherrapunjee is about 5,000 feet and of Shella from 500 to 1,000 feet, and the distance between them is 8 miles. The path descends very steeply and is full of hard stones. This difficulty of communication is also why the Hindu influence did not penetrate the upland Khasi, as in the case of the Jaintia Hills.[1]

This area has a unique political organization which differs from the majority of Khasi states who are traditionally ruled by the members of the Siem clan. Shella is organized as a confederation, called 'Shella Confederacy,' and consists of four local villages. The head of the village is called *wadadhar*, and is elected by the villagers every three years. The number of households of the Shella Confederacy was about 900 in January 1956. The names of the four villages and their *wadadhar* in 1956 were:

Name of village	*Name of wadadhar*
1. Shella	Devish Mohan Roy
2. Mushtoh	Ditojou Roy
3. Nongtrai	Orju Roy
4. Tyngnger	Jabuni Roy

Each village is divided into sections. For instance, Shella village has nine sections: (1) Jasir, (2) Disong, (3) Duba, (4) Jamau, (5) Nongrum, (6) Nongnong,

1. However, Shella was the only way out and the main gateway from the Khasi Hills to the plain; it was here that the British first entered the Khasi Hills. They proceeded from Shella to Cherrapunjee and made the latter headquarters of the Khasi Hills in 1833.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

[Shella]

wife who lives with him. The Khasi woman lives with her mother. Some say the Khasi woman is his second wife, other say their marriage is not recognized by the public. 563

Actually, owing to the bad climate, very few non-Khasi live in this area. Besides the two non-Khasi just mentioned, there were a Bengalee tax collector and an Assamese Forest Officer, both of whom lived at Shella Bazaar. Bengalee villages are situated about five miles south of Shella. Except in the bazaar, Bengalee and Khasi have no social contact with each other, and intermarriages have been rare.

However, it is obvious that in the past the Khasi must have had many cases of intermarriage with Bengalee. Among the Khasi, there is a clan called 'Dkhar.' The term 'Dkhar' is also used for the peoples of the plains: Bengalee are called 'Dkhar' by the Khasi. They say that the Dkhar clan originated in Bengalee girls who married Khasi men and who went to live in the Hills. It is said that in older days, the Khasi often raided the Sylhet plain and kidnapped Bengalee girls as well as goods. In Bengalee records of Sylhet, Khasi appear as 'bloody Khasi.' Khasi old men say that in order to increase their population they did sometimes kidnap Bengalee girls, but that they treated these girls very nicely and kindly, no differently from their own people. Since they follow the matrilineal system, they decided to name their descendants 'Dkhar.' It is said that all the present Dkhar people are descendants of such marriages. The Dkhar are found more on the southern slopes of the Khasi Hills i.e. among the Wars. 101 563

It seems there were many reasons for the descendants by marriage between the Khasi and the Bengalee to become Khasi. First of all, it is said that in the olden days the Khasi wanted to increase the population by such marriages. At the same time, a Bengalee who married a Khasi became an outcast from his or her own society owing to the caste system, and this inevitably made them Khasi. Secondly, the Khasi were primarily grouped into the *iing*, and they considered the marriage relation as of secondary importance. Hence it was rather difficult to remove by marriage a Khasi man or woman from their native place. Thirdly, Khasi could hardly live in the plain where no betel-nut or pan-leaf gardens were available; they could not engage in rice cultivation in the plain, as the technique is entirely different from the cultivation of betel-nut or pan-leaf. Moreover, they said they could not stand the heat in the plain. Therefore, the orientation of intermarriages was always towards the Khasi community: the Khasi brought outsiders to their own land; they did not themselves leave.

Such a marked tendency on the part of the Khasi to remain attached to their own homeland, is in no way contradictory with the phenomena of their migration to places outside the Khasi Hills, owing to the exploitation of their homeland and to the increase in population. The formation of Jatinga represents such an instance; there are also the cases of modern Khasi women from sophisticated urban areas, who easily leave their homeland, after marriage with a non-Khasi; this also appears in the following data on Jatinga. 161 167 [563]

Jatinga

Jatinga is a Khasi village situated in the North Cachar Hills, three miles west from Haflong, the headquarters of the North Cachar Hills. The number of households was about sixty in February 1956. Their economy depends on the pan-leaf, orange and pineapple gardens, similar to that of the Shella people. 131 621 433

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

621 [Jatinga]

[175] This village was founded in 1905 by Khasi immigrants from the Jaintia Hills. At the entrance of the village, a bust of the founder, Lakhanbang Suchiang, [101] stands facing towards the east; it was erected on the occasion of the celebration [211] of their Golden jubilee, in November 1955. Houses are scattered along the [346] ridge of the moutain to the east and to the west; in the centre is the church. [771] All the inhabitants are Christians. Before the Partition this was one of the most modern and prosperous villages in Assam.

101 Jatinga provides a very interesting instance of the Khasi 'colonial' village. It is surrounded by villages of the Kuki, of the Zemi-Naga, and of the Cacharee, 121 who constitute the main population of the North Cachar Hills, and who are 621 tribes entirely different from the Khasi, in economy, social organization, language and culture. Therefore, Jatinga is like an island of Khasi community. I took this village as one of my fields, because I was particularly interested to discover how far the Khasi matrilineal organization is kept up in a community thus situated, surrounded by patrilineal tribes, and considerably modernized by Christianization and economic prosperity; and I was also interested in the process of formation of a new village, in comparison with Rinsibara and Joshipara in the Garo Hills.

Formation of the Present Population of Jatinga.

The first immigrants to Jatinga.

101 The main population of Jatinga, including the founder, originated in Bataw 166 village in the Jaintia Hills, twelve miles away from Jaintiapur, the capital of the then Jaintia Rajas. This village is situated on the border of the Jaintia 175 Hills and the East Bengal plain, the location being very similar to that of Shella, as are their culture and economy. In the later part of the nineteenth 621 century, some members of Bataw village moved to Borkhala, ten miles from Silchar, one of the biggest villages of the then Cacharee king.

These immigrants who came to Borkhala stayed there about fifteen years before they came to Jatinga. Kloribon, the first daughter of the founder's sister was born there. In November 1905, some Christian Khasi left Borkhala for Jatinga, acting on information gathered from a Welsh Mission at Haflong, that the land of present Jatinga was fertile and fit for their cultivation. They were the first immigrants to Jatinga. The Government record names the 166 following three persons as the first immigrants to Jatinga: Suchiang Lakhanbang, 551 Tariang, and Suchen Munik. In fact, according to the data which I collected 614 at Jatinga, Suchiang Lakhanbang was accompanied by the following persons (the names in brackets indicate the clans):

621 his wife, Misibon (Phanwar),[1]
175 his brother, Pryntah, and Pryntah's wife, Sintu (Rupsi),
his sister, Laptho, and Laptho's husband, Munik (Suchen) with their daughter, Kloribon, and Munik's younger brother, Sain.
his friend, Tariang.

Soon after their settlement, Sain, the brother of Munik, brought his wife Tahin (Suiam) from Jaintia. Misibon brought her younger sister, Diasibon. Tariang who came with Lakhanbang afterwards called his wife, Palong. But having spent some time there, they left eventually for another place, so that

1. Misibon was a native of the Cherrapunjee area of the Khasi Hills (not of Jaintia like the others). She was a school teacher at Cherrapunjee, and later became a teacher at a school near Jaintiapur, where she married Lakhanbang.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

178 like the Zemi-Naga, the Cacharee and the Kuki. But after the period of
563 economic prosperity as I shall describe in the next section, the Jatinga people
621 reached a rather high level of education, while most of the neighbouring tribes
[871] remained illiterate. Their standard of living likewise improved. Fashionable girls of Jatinga who have studied at the Convent school in Shillong, and speak English and Hindi, cannot marry half-naked tribesmen who work in the jungle. They prefer to intermarry with Moslem, Panjabee or Assamese who belong to amore sophisticated community, and through whom they can enjoy urban life. Thus the orientation of the intermarriage of the people of Jatinga has changed, along with the growth of Jatinga.

It should be noted that intermarriages came mostly through the contacts at Haflong, where people used to go once a week for the bazaar, rather than through direct contacts with neighbouring villages.

Economy of Jatinga and its Relation to Neighbouring Tribes.

178 It is very interesting to find two different kinds of economy in the same
171 ecological background: Jatinga Khasi practise pan-leaf and orange cultivation
245 and depend mainly on a trading economy, while the other neighbouring tribal peoples practise jhum cultivation, almost a subsistence economy. This situation has remained unchanged for the last fifty years since the establishment of Jatinga village.

101 The first Jatinga immigrants occupied one ridge of the mountain where the
245 present Jatinga is situated. Formerly, this land belonged to the Zemi-Naga, one of the old inhabitants of the Cachar Hills, who possessed a vast jungle area for jhum cultivation. It seems that there was no objection to the Khasi occupying this small spot: it was apparently too small an area for the jhum cultivator —pan-leaf cultivation of the Khasi requires less than one twentieth of the land of the usual jhum cultivation. The Khasi who started pan-leaf cultivation were able to accumulate some capital, and after several years they started orange gardens. They had had experience of orange cultivation in their homeland, but this was the first time they had operated commercially.

245 The success of this orange cultivation was beyond their dreams. Hearing
434 of good oranges at Jatinga, many Bengalee merchants from Dacca, Sylhet,
439 Silchar and Gauhati began to come to buy them. Moreover, the village had the great advantage of being situated near the railway station. Oranges were sold by carloads. Unimaginable wealth came to the Jatinga people. Especi-
[496] ally the founder's family, including his brother's and sister's, became extraor-
[871] dinarily wealthy; their income used to be Rs. 20,000 a year. The children were sent to the school which was established in the village and some were educated at colleges in Dacca, Sylhet and Shillong. The villagers had
[362] beautiful houses built by Manipuri and Bengalee carpenters. Actually the houses of Jatinga were known as some of the best construction in Assam.

Like the Shella people, they were managers of gardens and employed workers.
245 Wealthy households used to engage several labourers annually, most of them
46 from Jaintia where the Jatinga people had originated. These workers were provided with shelter in the servant quarters of their employer's house, but they had to provide meals for themselves. They were paid daily according to the work done. They were available to other households, when their employer had no work. Some labourers were also engaged locally among the Zemi-Naga, the Cacharee and the Kuki, though not as many as among the Jaintia.
245 These local tribes were fairly well occupied by their jhum cultivation, and not
464 used to being employed as workers. Therefore, most of them were not regular

group of matrilineal and Mon-Khmer-speaking people who claim as their ancestral homeland the present-day United Khasi-Jaintia Hills District (within approximately 90° 47′ and 92° 52′ E. and 25° 5′ and 26° 5′ N.). This group includes the Jaintias (also Pnar or Synteng) in the southeast, who differ from the Khasis primarily in their duolocal residence pattern and less virulent forms of sorcery. (The Hadem in eastern Jaintia are a Kuki people.) It also includes the Lyngngams (also spelled Lynngam) in the west, who practice migratory swidden agriculture and certain peculiar funerary rites, and are said by Ehrenfels (1955) to be culturally intermediate between Khasis and Garos. Finally, it includes Bhois, Wars, and upland Khasis, which terms are primarily territorial. Bhoi country is the north-central part of the District, and is culturally complicated by the presence of Mikirs, Lalungs, and Nepalis. War country spans the entire southern length of the District, so that Wars divide into Jaintia Wars and Khasi Wars; of these, the Khasi Wars have traditionally transmitted property to sons as well as to daughters. The upland center of the District is the country of the Khasis proper, those whose culture provides the most useful model for interpreting the variations found elsewhere. [For general reference on all categories of Khasi culture, cf. Costa 1936 and 1937; also Gurdon 1907, especially for data on regional variations.] **Geography.** The District is 5,554 square miles of hilly tableland, intricately dissected by numerous rivers, and marked by significant ecological variation over very short distances. The tablelands step gently downward north from Shillong Peak, which at 6,445 feet is the highest point in the District, and over about 55 miles ease into the Brahmaputra valley where this is some 250 feet above sea level. To the south, the land slopes more steeply downward for about 20 miles, and then drops abruptly, in cliff and steep-slope formations, to the Ganges sea-level delta that begins at its north with Sylhet. The annual southwest monsoons drop torrential rains around Cherrapunji and Mawsynram villages (for Cherrapunji, a record 805 inches in 1861), but then, reaching Shillong 33 miles to the northeast, provide only about 100 inches per year. Rainfall is again greater in Bhoi, which shares the Brahmaputra valley climate. Climate is temperate on the high Shillong plateau, where it seldom freezes and never snows. To the north, climate becomes subtropical, forest is jungly, and fauna abound. The climate to the south is also subtropical. [Cf. Hooker 1891: chap. XXIX.] **Linguistic affiliation.** Khasi is one of the major Mon-Khmer languages, related to Mon, Khmer, Semang-Sakai, Nicobarese, and Palaung-Wa. The major Khasi dialects are Khasi, Jaintia, and Lyngngam, to which Grierson adds War. Further minor variations occur from village to village. The Khasis had no script until 1842, when the roman alphabet was successfully applied to the Cherrapunji dialect of Khasi proper. [Cf. Rabel 1961; Grierson 1903-28: 2; Bareh 1962.]

THE KHASI FESTIVAL OF 'POMBLANG'

S. BANERJEE

INTRODUCTION

The Khasi inhabit the upland of the central part of the United Khasi and Jaintia Hills district of Assam. They reckon descent through mother and the youngest daughter (Ka khadduh) of the house is the custodian of the ancestral property. Belief in the existence of spirits is strong among them and the causes of diseases are ascertained by taking recourse to the process of divination. They are ruled by different categories of Chief. The *Siem* is the highest official responsible for the administration of the state but a few small states are also governed by *Sirdars* with same powers as vested in the former although does not possess the same status. It is interesting to note that their priest whose rank is next to *Siem*, have also been allotted to perform this secular duties in some of the regions of the Khasi country. The Chief function through their respective council comprising elected members from different administrative units. He is rather subservient to this body as he is liable to be censured or even dismissed, if his activities are not in conformity with the Khasi traditional usage. Most of his directives are implemented through the assistance of his subordinates who are in-charge of various sections of the State. The Khasi place his grievance first to these junior officers for redress and justice, after which an appeal can be preferred to the *Siem* or any other higher officer as the case may be. One of the eminent States of the Khasi people known as Khyriem, where this festival is celebrated, consists of eight units for administrative convenience under the supervision of different grades of officials who participated in this celebration along with the *Siem* as representatives of the people.

The Khasi festival of *Pomblang* (Goat killing) described below used to be celebrated at one time in Shillong when the Khasi states of Khyriem and Myliiem were not separated. The first chief of the Khyriem state U Singh Manik shifted his headquarters to Nongkrem village after partition of the kingdom, which occured before the arrival of the British. He again moved to Langkerdem after a brief stay at the village of Lyngshing. He performed this festival as long as he was there, transferring it again to Nongkrem where he re-settled again. It was celebrated here for a long time and consequently it was named after this village. Although the ruling family had later on shifted its residence about sixty years ago to the present village Smit, during the time of U Klur Singh, Siem, it is performed regularly as *Nongkrem dance* which was observed by the author from 21st June to 25th June, 1955.

OBJECT OF THE FESTIVAL

It is being held every year since the days of U Shillong who was supposed to be the founder of original Khyriem State. They celebrate it to perpetuate his memory and pay homage with a view to ensure rain, good harvest, eliminating diseases and famine. He was worshipped along with other ancestors with view to guide the present Chief in his discharge of his duties and for the welfare of the people.

The house of Siem (iing-sad) where the rites are observed, is considered sacred. It consists of a big-hall (shlur) in the centre, surrounded by rooms. One of these on the north is used as a kitchen room (iing-chetja) where ritual

FURTHER NOTES *on the* RUDE STONE MONUMENTS *of the* KHASI HILL TRIBES. By Major H. H. GODWIN-AUSTEN, F.R.G.S., F.Z.S., &c., Deputy Superintendent Topographical Survey of India. [With Plates ii. and iii.]

HAVING again visited the Khasi Hills since writing my last paper, I am enabled to give some further details regarding their

18: Godwin-Austen G-3 (ca. 1872) 1875 AR7
Khasi AR7

211 rude stone monuments. At the village of Nougshai, near
[101] Shillong, are to be seen some very striking monoliths; and
[131] although they do not come up quite to the length of those at Nurtiang (noticed by Dr. Hooker in his "Himalayan Journals"), yet they are very worthy of being mentioned. They stand on
[133] the open spur just above the village, and have been worked out of the beds of the Shillong sandstone series, and some of the smaller blocks have been taken from the conglomerate beds, the lowest in the series, and which come in, in the bed of the ravine, to the north of the spur. There are a number of monuments on this site, large and small, arranged both in line and on two sides of a square; the two largest have their central monoliths—height, 24 ft. 3 in.; width, 5 ft. 6 in.; thickness, 8 in.; and height, 23 ft. 2 in.; width, 2 ft. 9 in.; thickness, 1 ft., respectively.

[126 Plate ii., which is taken from a photograph by Mr. William Robert, Assistant Surveyor in the Khasi Hills survey party, gives an excellent idea of the second largest structure, showing the very massive flat-stone, the "Mao Kynthai," in front. This structure consisted of thirteen upright stones, which could not all be brought into the field of the camera; but the six outside stones on the right are shown. Many of the slabs in the
175 adjacent monuments have been overthrown and broken quite
211 recently, perhaps by Sepoys and camp followers from the military station close by. At one time a mountain battery of Eurasian Artillery was quartered there, and I attribute the overthrow of so many of the stones in the neighbourhood to their handiwork, who would look on such amusement as a "great lark." The Sepoy (native of India) is not of a mischievous disposition; the European and half-European (uneducated) is markedly so. Thus the monument with the highest stone is imperfect, and it must, when perfect, have been a very handsome one. This is a sad pity, after the time and labour that must have been expended in its erection.

361 I did not observe any new slabs anywhere in the immediate
712 neighbourhood. Nougshai must formerly have been a large
[211] and powerful village; it stands on a naturally very strong position, and old lines of fortification are to be traced on many sides, especially on the approach from the direction of the Falls of the Umiam. These old lines of defence are on a curious system: a ditch and bank have been carried forward from the main defences from 200 to 300 yards down the ridge of the spurs, thus effectually preventing an enemy working round the hill sides below the villages.

174 This fortified site points to a state of things in these hills
712 when the relations between the large village communities or
628

628

clans were very much as we find them at the present day among the Nagas and Kukis, beyond and bordering our present extreme limits, viz. that of constant feud. They are now the quietest, most peaceful, and contented of all the hill people on the eastern frontier. [178]

172

In my former paper I did not allude to the cairns in these hills, which I am inclined to think are works of greater age than the stone structures. The custom is one that certainly has long since been given up, for I could not obtain any satisfactory account of them. They are only to be seen on the northern side of the Khasi plateau, and Dr. Hooker, in his account of his trips to the Kollong Rock, did not fail to notice them. About Mairaug and towards Nougstoiu they are very numerous, and always stand on commanding situations. On the path leading down the grassy spur to the stone monuments previously described, near Nougshai, is a very fine large example of a cairn, about eight feet high. They are usually plain hemispherical mounds of earth; but this one is faced all round at the base with slabs of stone about four feet high; they are frequently not higher than six feet. A distant view is shown in Plate iii. [103]

Nowhere is there any trace of the earth that forms them having been excavated close by; it must, therefore, have been carried in some short distance, to avoid unsightly hollows near the structure. I should much like to have dug into one of these cairns, but was afraid to hurt the feelings of the people by doing so. They are very probably cineraries of an earlier form to those now made of stone, and this point it might be interesting to clear up.

Beyond the Khasi area no cairns are to be found, at least I had never come across any until visiting North Munipur last winter (1872—73), where, at the head of the Imphal river, on the direct road from Samaguting, are four fine cairns, all faced with large boulders. They are old, and the Nagas now living in the village near said they had been made by another clan of Nagas, who long ago had gone further north, and the site of whose village had been lately re-occupied by Kukis. [114] [101]

Mr. C. B. Clarke, in a paper read lately before your Institute, refers to the different forms of the cinerary in the Khasi Hills; but he has not quite exhausted the subject, or got further than I did, although with regard to the disposal of the ashes of the dead he gives some further interesting particulars. [114]

As I think that drawings are of very great interest, and better exhibit the many different forms of bone depository or cinerary that have been adopted at different periods by tribes inhabiting localities very far apart, and often quite unconnected affinitively, [126] [764]

20: Hunter G-4 (no date) 1897 AR7 Khasi AR7

[P. 203]

STATISTICAL ACCOUNT

OF THE

KHASI AND JAINTIA HILLS.

THE DISTRICT OF THE KHASI AND JAINTIA HILLS, called by the inhabitants Ka Ri Khási and Ka Ri Synteng, is situated between 26° 9′ 30″ and 25° 8′ 28″ north latitude, and between 91° 9′ 0″ and 92° 51′ 30″ east longitude. It contains an approximate area of 6157 square miles, and a population, according to the Census of 1872, of 141,838 souls. The principal town and Civil Station, which is also the headquarters of the Chief Commissioner of Assam, is Shillong, situated in 25° 32′ 39″ north latitude and 91° 55′ 32″ east longitude. 131 [101] [161] [632] [648]

BOUNDARIES.—The Khási and Jáintiá Hills District is bounded on the north by the Districts of Kámrúp and Nowgong; on the east by Northern Cáchár, the Nágá Hills District, and the Kapilí river; on the south by Sylhet District; and on the west by the Gáro Hills.

JURISDICTION.—The Khási and Jáintiá Hills constitute a Political District, removed from the jurisdiction of the ordinary Criminal, Civil, and Revenue Courts, and of the offices established under the General Regulations and Acts. The administration of the country is vested in the Chief Commissioner of Assam, the Deputy-Commissioner of the Khási and Jáintiá Hills and his Assistants, and the native Chiefs, who are variously styled Siems, Wáhadádárs, Sardárs, Dolloís, Pathors, and Lyngdohs. Siem, or more properly Seim, is derived from the Khási word for 'soul, life;' Wáhadárlár, from the Hindu term *wháddár*, meaning an 'officer;' Lyngdoh strictly means a 'sacrificial soothsayer,' from the Khási *ong*, 'to speak,' and *doh*, 'flesh.' The District is divided into three portions, —namely, British possessions in the Khási Hills; petty dependent 648 631

question and indeed has been compiled without knowledge of Professor CHATTOPADHYAY's work, and before he very kindly sent a private copy of this work, which had not been available to me previously.

The present paper offers data on the following subjects:

1. Khasi kinship terms from the Mawshai Khasi plateau-area in the Khyrim State, about 20 to 30 miles south-east of Shillong, which are in some minor details different from the Mawphlang data, collected by CHATTOPADHYAY, south-west of Shillong;
2. Comparative data from the Wár-Khasi;
3. from the plateau-area of Jowai in the Jaintia [10] Hills, and
4. from the Wár-Jaintia;
5. Aspects of the Khasi kinship terms, with special reference to the matrilineal order of society, and to the respective position of women and men there, especially the particular consideration which the biological relationship through the father receives in kinship terminology, in spite of the emphasis on the matrilineal structure in Khasi society (comp. term No. 1 of the list and its discussion in para 3/6 of the present paper, on p. 400).

The data were collected in field researches to which I was enabled by two Research Grants for comparative studies in matrilineal civilizations of India, given by the Viking Fund Inc. (now: Wenner-Gren Foundation for Anthropological Research) in New York, during the periods 1949-50 and 1951-52. My gratefulness to the foundation for enabling me to carry out these field researches, as well as to the University of Madras, for granting me Sabbathical leaves for the same purpose, is here once more recorded.

My research programme was based on the first tentative working hypothesis, laid down in my book "Mother-right in India" [11], but includes also various other aspects of study which have not been pre-planned, or even considered there [12], as for instance also the present comparative study of kinship terms in areas of four Khasi dialects and their special significance to the Khasi matrilineal social system. The material was collected during a five weeks house-to-house study in the recently founded Plateau Khasi village Maw Syn Jri, during April and May 1950. This village consisted mostly of houses, owned by Khasi elder sisters and inhabited by them, with their families, after they had left the ancestral home in the main village Kharang, about one mile across the valley on the western side of the new settlement. The ancestral family houses there were in the possession of either the mother, or, if she was no more alive, the youngest daughter of the family, the *ka khun khadduh* [13].

[10] Jaintia, (Pnár or "Syntieng") are the Khasi speaking eastern neighbours of the Khasi proper. As among the Khasi, so also among Jaintia the people in the cool plateau highlands are in many ways different from those who settled in the luxurious tropical rainforests of the southern slopes, now situated just north of the East Pakistan frontier: — the so-called Wár-country, where economy is mainly based on pan-leaf gardening.

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

105 It will here be recalled that the Khasi are a matrilineal agricultural
[175] people, pre-litterate until the advent of the British in the sixth decade of
[197] the 19th century, organized under democratically ruling *sieu*, or Khasi
144 princes and chieftains and speaking an Austro-Asiatic language [14]. Their physical affinities are unmistakably mongoloid and quite distinct from the Assamese speaking plains-Indians, — but not from the other mountaineers of Assam, Nepal and even Burmah or China, with whom they feel to be more closely related, as with the Indian plainspeople, as some of the tribal designations in the following lists of terms for Non-Khasi testifies (comp. No. 41 as against No. 42, 43 and 43/a-c).

114 In the collection of the material, I was hampered by my inability to
122 pick up the Khasi language sufficiently quickly, for conversation without the help of an interpreter, but on the other hand greatly eased by generous and voluntary assistance on the part of several Khasi friends, especially U Ekiman Singh, the President, Unitarian Union, Khasi- and Jaintai Hills and his (Khasi) wife, Ka Austria [15], who offered me hospitality in their house at Maw Syn Jri, during my stay there. Dr. H. LYNGDOH, Shillong, the author of detailed accounts on Khasi religious ceremonial and institutions [16], U Jeeban Roy, a leading Pnár gentleman of Jowei in the Jaintia Hills, Ka Ellen Giri, Principal, Govt. Basic Education Training Centre, Malki, Shillong, Ka Kongmen, Shillong, and U David Roy, Prime Minister (retd.), and a number of hospitable Wár Khasi and Wár-Jaintia pan-leaf cultivators in the southern slopes of the Khasi- and Jaintia Hills, especially from the villages Mawlat and Padu, also helped me greatly in my task. My thanks are due to all of them.

101 The data, submitted and briefly described in this paper were thus
114 collected in four different areas.

1. The South-eastern corner of the Khasi-Hills (plateau-area),
2. the southern slopes of the Khasi Hills, the "Wár-Khasi country" between the Khasi plateau proper and the northern boundary of East Pakistan,
3. the central plateau of the Jaintia Hills, round its capital market Jowei, and
4. the southern slopes of the Jaintia Hills, the "Wár-Jaintia country" between these and a section of the northern boundary of East Pakistan, further to the East than area 2.

197 Slightly different Khasi dialects are spoken in these four regions, Jaintia (Pnár or "Syntreng") and Wár-Jaintia being more akin to each other, similarly as Plateau-Khasi and Wár-Khasi are.

101 The Pnár or Jaintias ("Syntreng" is a slightly opprobious designation,
175 used by the Plateau-Khasi for these, their eastern neighbours) look back

[14] SCHMIDT (1906).

[15] So named, because Austria was much in the news at the time of her birth, during the first world war, — a fact which illustrates the Khasi peculiarity to use either ad hoc inventions as names for children, or to adopt such, from the Khasi point of view, outlandish words like: "Ka Austria" or "Ka Mediterranean Sea" as names for their children.

[16] LYNGDOH (1937).

[553]

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

on a historical past, different from that of the Khasi proper, the former having been ruled by the powerful, but somewhat Hinduised dynasty of the Jaintia Rajas until the Jaintia Wars of the British; the latter by small independent chiefs. Yet Jaintia social organization appears on the whole to preserve the matrilineal social structure clearer and to be less influenced by plains-acculturation, than that of the Khasi, though a few features of Brahmanical religious observances and also some traces of racial admixture are found in the immediate vicinity of Jowei, the former summer residence of the Jaintia Rajas. Stronger no doubt, than this influence, was that exercised by the British and non-Assamese Indians in the provincial capital Shillong since 1866. Methods of agriculture and other aspects of material civilization differ but little in the Jaintia- and Khasi plateau-areas.

The same cannot be said of both: the Wár-Khasi and Wár-Jaintias. Linguistically their affiliations are with the Khasi or Jaintias respectively, as the plateau-areas. Economically, however, both Wár-groups form a separate pan-leaf cultivating unit in the little accessible steep southern slopes of the Khasi- and Jaintia Hill massif. Both Wár-groups live in the environment of luscious tropical flora and fauna, sharply differentiated from the cool, barren plateau with its perennial winds and the heroic, if solitary beauty of its highland heaths, which forms the background of both the Khasi- and Jaintia plateau-groups.

The age of the Wár-Khasi and -Jaintias, as one independent economic, — and two half-independent dialectical linguistic entities, is an intricate problem. The two Wár-groups subsist on pan-leaf cultivation as a money crop, grown in the thick tree-gardens as creepers; not on food-cultivation, as do the plateau-groups, because there is insufficient space on the steep slopes, for vegetable gardens or -fields. The pan-leaf cultivators therefore depend on food, purchased from outside. The slopes seem to have been uninhabited until not long ago. Yet pan-leaf chewing is such an integral part of Khasi life, that until quite recently, and occasionally even now, a distance between two places is not measured by the number of hours used for walking, but by the number of betelnut- and pan-leaf packages, consumed on the way. Also the common benediction among Khasi expresses the wish that so and so may eat pan in the Garden of God. Yet pan-cultivation and the settlements of the Wár-people as pan-leaf cultivators in the southern slopes seem comparatively young. Pan-cultivation on the plateau is impracticable. It is therefore possible that pan was for a long time only a much valued import article from the plains, bartered against Khasi ore and iron tools, though it is now an export article from the Wár-country, brought to the markets of the plains, by both Wár-Khasi and Wár-Jaintia women and men.

According to a tradition, across which I came among the Nonglamin clan of the Nongmuker village, the ancestors of the present Wár people were on the plateau at a time when no pan-cultivation was going on in the slopes and none of the present big estates of pan-tree gardens was yet held by their present (Wár-) owners. A not distant ancestor of a Nonglamin clan-member who about two or three generations ago told the story to U Siang (one of

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

namely that male members of a matrilineal clan enjoy, among Khasi as among other matrilineal groups in India, a position which, far from unenviable, is a very high one in itself and doubly fortified by the respect which to the same male family member is being shown (*a*) in his capacity as the father of his children in his wife's clan (comp. term 8 of the list), and (*b*) in that of the maternal uncle (comp. terms 14, 14/*a*, 14/*b* and 26 and 28). 601 602

The terms 33/*b*, *c*, *g*, *h*, have classificatory character. 601

The term 33/*e* — *u kong* for the husband's older sister's husband is one of the exceptions of the rule that *kong* generally signifies an honoured older female relative but, as in this case, also her husband (comp. term 26).

Term 36/*a* *u pa* (father) in its usage among Pnár (Jaintia), also for stepfather is significant. A Pnár child has no legal clan-relationsihp with his/her biological father, who belongs to another (matrilineal) clan than the child and mother. Yet the honorific term *pa* is, among Pnár, also applied to a stepfather, although neither legal, nor biological but merely ideological relationship via the mother, exists between stepfather and -child. This use of the word *pa* thus seems to emphasize both, firstly the integration of the matrilineal family structure, by making an unrelated stepfather to be looked upon as father, owing to his relationship with Ego's mother and, secondly the important sociological and psychological position of the father in this matrilineal family structure which appears to go back to an old tradition among the Pnár. 601 593 [614]

Term 41 — *para 'riew lum* [33] (Assamese hill tribals) are characteristically termed *para* (Brethren), although they are different in many respects, from the Khasi, yet considered as definitely nearer related than all other neighbours, grouped under the 601

Term 43 — *dkhar* (plainspeople) [34], — a term which varies in emotional content from contempt pure and simple to an attitude, somewhat parallel to what ordinary English usage would generally associate with the expression "continental". Marriages of Khasi girls and boys with *dkhar* do occur, though infinitely rarer than marriages of (especially educated) Khasi girls with (educated) *para 'riew lum*, Nepalese, Gurkha or Chinese boys. One of the reasons which is usually being given for this preference for non-Indians is by no means colour-prejudice, but the taboo on either beef or pork which most *dkhar ïong* [35] (Indians, Hindus or Muslims, respectively) observe; a taboo which they generally extend to their Khasi wives, thus preventing them from enjoying two favourite Khasi national dishes. Another more psychological reason is the overbearing treatment of wives, which is generally ascribed to *dkhar ïong*, more even than to *dkhar li* [36]. It is in this connection 601 582

[33] Literally: Brethren Humans Hill.

[34] With Dkhar are here meant the plainspeople as such; — not the Khasi Dkhar (or Khar) clans which are mostly, if not always, descended from ancestresses who had been captured in the plains and brought to the Khasi Hills; comp. CHATTOPADHYAY (1941), pp. 30/31 and EHRENFELS (1950/*A*), pp. 33/34. [101]

[35] Literally: Plainspeople black.

[36] Literally: Plainspeople white.

G 342 space about three quarters of the width of the house, was partitioned off by mat walls. It served as a room for the married couple. The unmarried women sleep near the fireplace; the young men in the bachelor's house. Adjacent to the room of the couple, a small door opened on a small roofed veranda with a low gallery (Plate X, 3) which had no exit. The rear post was at-
[531] tractively carved. According to Dalton, the Garo have a special talent for this kind of work. The space under the house piles by the lower side of
[231] the slope, at the end of the house, was used for the oxen. Higher up, where they had less space, they kept the pig sty.

The Garo, like the Kachin and also other mountain tribes, have a second smaller house on their fields, frequently far distant. They live in these houses during tillage time and also to guard the crops. According to Playfair they have in more recent days even shown a tendency to abandon the village houses permanently in favor of the field huts.

They try to build the huts as high above the ground as possible in order to have a wider view, but mainly as a protection of the occupants against nocturnal attacks by elephants. To achieve this the Garo often use high trees instead of piles and build their houses into the forked branch stumps (73).

73. In Playfair, p. 36 is an excellent illustration of such a tree house (borang). These tree houses, of course, have nothing to do with primitive customs (Schurtz, ibid., p. 433; Brigham, ibid., pp. 58 et seq.).

K 101 197 Bordering the settlements of the Garo in the east live the Khasi, who linguistically must be linked to the Palaung, Wa, and Talaing in Burma.

Hills, the kindred Synteng in the Jaintia Hills. The Lynn Gam who are classified by Gurdon as half Khasi and half Garo live in the western part of the Khasi Hills, the people who inhabit the low hill country in the north of the district, which is usually called "Bhoi," are named the Bhoi. Many of them are really Mikir. My obser-
361 vations of the Khasi are limited to the surrounding of Shillong from where I visited the village of Nongkrem which is about 13 kilometers away (75).

75. Cf. C. Becker, Anthropos 4 (1909), pp. 892-902.

The place is located in a trough between low hills which are covered by large stone boulders. A small water course runs through the village. The huts are partly built along the slopes of the hills which surround the village. The houses
342 (Plate X, 4) all stand on small plots of land which are separated from each other by low stone walls; a narrow passage leads to them from the front side. Sometimes this passage is completely missing, in which event one has to climb over the wall. The houses stand on foundations of layers of irregular stone boulders. The walls are made of wooden boards--sometimes of bamboo--and are covered on the outside by grass. Grass is also used for roofing. Each strand is tied individually to bamboo poles, as in Burma (not as in Bengal where it is squeezed together between bamboo poles). Especially typical is the form of the roof; it is high and steep in the middle and the roof ridge is curved. The roof slopes down

PREFACE

K
G
121

The purpose of this monograph is to present theoretical problems of Garo and Khasi social organization in relation to those of other matrilineal systems. In fact, the study of these two matrilineal systems has led me to enquire into many other matrilineal systems, as will appear throughout my discussion in Parts I and II. As a result, I think I have reached certain conclusions of theorical interest concerning matrilineal systems as a whole; these are presented in the last part of the book.

133 the highest point is the Shillong Peak, 6,445 feet, covered with scrub,
137 grassland and forests (mostly oak, rhododendron and pine trees). The Jaintia Hills are considerably lower, with much flat land; wet paddy cultivation is practised here and there where sufficient water is available. From the plateau of the Khasi Hills northwards to the Assam Brahmaputra Valley there is a gentle slope covered with thick jungle, and the southern slope towards the Bengal plain is very steep, so that

MAP. 8. — *Map of the Khasi-Jaintia Hills with Classification of Groups.*

133 the upland remained practically cut off from the plains until the
137 middle of the 19th century.

Following the geographical and ecological differences, the five
619 groups are segregated into fairly well-defined cultural areas, each developing a different economy and dialect:

[131]
[24]

1. The Jaintia[1] — associated mostly with wet rice cultivation.
2. The Khasi (upland Khasi) — practise potato cultivation with small-scale rice and maize cultivation.
3. The War — inhabit the southern slope of the Khasi and Jaintia Hills (they are called geographically the Khasi War and the Jaintia War). Due to the heavy rainfall, the soil is the most fertile in the Khasi and Jaintia Hills. The Khasi War practise jhuming of which the main yield is millet. In the lower part of this area, pan-leaf, betel-nut, and orange gardens are cultivated. The Jaintia War practise wet rice cultivation like most of the Jaintias, as well as pan-leaf cultivation.

1. They are called also the Synteng or the Pnar.

[Shella]

621 (7) Mawrongkhong, (8) Rynsong-kanor, and (9) Sholap, as shown in Map 9.
103 In Shella village the number of households in each section ranges between 10 and 80. Such a section is called *kher*, and was supposed to be the site of house-
614 holds of segments of every *kur* (clan). It seems that Shella village was once composed of nine different *kur* which could intermarry with each other. However,
621 nowadays, each section, as appeared in my census, has nothing to do with the
178 *kur* as such; it is simply a geographical section. According to the information which I gathered, there had been a tendency for the same *kur* people to gather
731 within the section, before the great earthquake in 1897 brought considerable

[102]

MAP 9. — *Distribution of Sections in Shella Village.*

damages and death to this area: many of them left the village at the time and many houses changed their sites in the village when they were reconstructed. For instance, the composition of Jasir section in January 1956 was as follows:

614
621

Name of kur	*Number of houses*	*Name of kur*	*Number of houses*
1. Yuchyne	7	9. Lyngdoh	1
2. Iunei	4	10. Riang	1
3. Lorit	4	11. Nongtathiang	1
4. Synren	3	12. Loki	1
5. Ksaieng	3	13. Kanto	1
6. Nongbri	3	14. Kanti	1
7. Siem	2	15. Khelwa	1
8. Iunoi	2	16. ?	5
		Total	40

178 The people said that in Jasir, the Yuchyne was the most influential *kur*, and must have been the original *kur* in this section. However, no clan solidarity
621 could be observed. These seven households were socially and economically quite independent of each other, as are all other households. As a whole, the
614 importance of *kur* diminished a great deal in this village. Five households in Jasir were reluctant to mention their *kur*; some of them did not care about their *kur*; others were not themselves certain to which *kur* they belonged. The *kur* is losing its function to a great extent. This can be ascribed to the high degree of sophistication and mobility. However, except for one Siem woman who came from the uplands and married a man of this village, all 15 *kur* mentioned above are local clans frequently found within the Shella Confederacy. In
621 this area also community endogamy was predominant. Perhaps the Shella

782 One month before the celebration rice liquor is poured into a hollowed-
796 out gourd bottle in the house of the S'iem sād and offered before the rishot Blei as a 'suit' (sacrifice of drink). This is done in order to in-
[769] form the u Suidnia long S'iem (the spirit of the first great-uncle on
[776] the maternal side who was the first king), the ka Blei long S'iem (the divinity who makes kings kings) and the u Blei Shillong (the god Shillong), that preparations are now being made for the Puja and that they might help with them.

776 The u Blei Shillong plays the chief part in the whole ceremony. He enjoys great reverence among the Khasi, especially in the kingdom Nongkrem and Nylliem. Not far from Nongkrem a mountain
[133] peak rises 6,450 feet above the sea. It is the highest peak in the Khasi Mountains; its name is "Shillong Peak." Here is the seat of
[773] the god Shillong. The story goes that a man appeared here once, who said he /894/ had not been born but came of himself (shu long). He also told the people that they would receive the kings, S'iem. So the god who lives here was called u Shu long (he who is out of him-
[103] self), from which the Europeans gradually made the word Shillong and also gave this name to the splendid mountain station in the heart of the Khasi Mountains.

796 After the S'iem sād has determined exactly the day of the cere-
782 monies, the news of this is sent out two weeks prior to the ceremony to the village elders (Rangbah shnong). This is done on the day of the large market (jēu duh), which takes place every eighth day. Two weeks after is the pom blang, also on the day of the large market, which is discussed below.

The way in which the invitation is issued is interesting. A num-
[211] ber of chains about an ell long are made of bamboo rings. These are called kyrwoh. One of these is sent to the oldest man of each village. Since the Khasi formerly had no script, this bamboo chain always served as a sign of invitation or summons to the S'iem for ceremonies, or of danger of war, or of court matters and such. The degree of urgency was shown by the form of the links; in the case of great haste the form was longish and flat, otherwise correspondingly rounder. The sending of the kyrwoh to the village elders serves now as a sign of invitation for the whole village to appear at the ceremonies and at the same time as a demand to gather together the prescribed sacri-
[651] ficial gifts. Each of the six districts, into which the kingdom Nongkrem is divided, must furnish a goat; each individual hut must pay a tax (called pynshok) of one rupee and four annas in addition. Very poor people only have to pay one anna or even only a half. The sacrificial gifts, such as rice, various sacrificial animals, fish, brandy

773 Several Khasis claim that the devil pre-
782 scribed to their ancestors the method of sacrificing. On the other hand others maintain that in times past a man of rare size and strength came to their country. This man accomplished wonderful things, and commanded their ancestors to sacrifice and at the same time prescribed for them the method of sacrificing. Today the place
● [103] of his former dwelling on a mountain near Shillong is still pointed out. Since something divine was suspected in that man, he was called u 'lei shillong (the god Shillong).

776 The Khasi believe in a highest being, whom they call u blei nongthaw (1) (the creator god).

[194] 1. Pronounciation of Khasi (method of writing): ei is pronounced as two syllables, e - i, w is pronounced like u, aw is therefore like a - u, sh is pronounced like sch = phonetic š.

Just as the ideas about this person are very hazy, so are the concepts of eternity and the soul.

775 The Khasi are not in agreement among themselves about the conception of what happens to the soul after death. Several say that after death the soul goes up in the air and becomes air and therefore exists no longer. But most of them believe that the soul exists after death and can be happy or unhappy. But this does not depend on personal guilt or sin but only on the conscientious completion of the burial ceremonies.

[631] The country in which the Khasi live is
776 divided into several districts, which were formerly ruled by several kings before the English came. [408] According to the Khasi each district

APPENDIX

SOME ADDITIONAL INFORMATION FROM SHELLA AND JATINGA

SHELLA

Shella is situated on the lowest of the southern slopes of the Khasi Hills, bordering on the Sylhet plain of East Pakistan. For centuries the people of Shella maintained close trading connections with the people of the plain, so that they have been much influenced by the Hindu. They have been to some extent divorced economically and culturally from their own people who live in the uplands and on higher part of the slopes. Actually, this is a natural result of their geographical location. From Cherrapunjee, the southern edge of the upland Khasi Hills, only a narrow footpath goes down to Shella. The altitude of Cherrapunjee is about 5,000 feet and of Shella from 500 to 1,000 feet, and the distance between them is 8 miles. The path descends very steeply and is full of hard stones. This difficulty of communication is also why the Hindu influence did not penetrate the upland Khasi, as in the case of the Jaintia Hills.[1]

This area has a unique political organization which differs from the majority of Khasi states who are traditionally ruled by the members of the Siem clan. Shella is organized as a confederation, called 'Shella Confederacy,' and consists of four local villages. The head of the village is called *wadadhar*, and is elected by the villagers every three years. The number of households of the Shella Confederacy was about 900 in January 1956. The names of the four villages and their *wadadhar* in 1956 were:

Name of village	*Name of wadadhar*
1. Shella	Devish Mohan Roy
2. Mushtoh	Ditojou Roy
3. Nongtrai	Orju Roy
4. Tyngnger	Jabuni Roy

Each village is divided into sections. For instance, Shella village has nine sections: (1) Jasir, (2) Disong, (3) Duba, (4) Jamau, (5) Nongrum, (6) Nongnong,

1. However, Shella was the only way out and the main gateway from the Khasi Hills to the plain; it was here that the British first entered the Khasi Hills. They proceeded from Shella to Cherrapunjee and made the latter headquarters of the Khasi Hills in 1833.

clans were very much as we find them at the present day among the Nagas and Kukis, beyond and bordering our present extreme limits, viz. that of constant feud. They are now the quietest, most peaceful, and contented of all the hill people on the eastern frontier.

In my former paper I did not allude to the cairns in these hills, which I am inclined to think are works of greater age than the stone structures. The custom is one that certainly has long since been given up, for I could not obtain any satisfactory account of them. They are only to be seen on the northern side of the Khasi plateau, and Dr. Hooker, in his account of his trips to the Kollong Rock, did not fail to notice them. About Mairaug and towards Nougstoiu they are very numerous, and always stand on commanding situations. On the path leading down the grassy spur to the stone monuments previously described, near Nougshai, is a very fine large example of a cairn, about eight feet high. They are usually plain hemispherical mounds of earth; but this one is faced all round at the base with slabs of stone about four feet high; they are frequently not higher than six feet. A distant view is shown in Plate iii.

Nowhere is there any trace of the earth that forms them having been excavated close by; it must, therefore, have been carried in some short distance, to avoid unsightly hollows near the structure. I should much like to have dug into one of these cairns, but was afraid to hurt the feelings of the people by doing so. They are very probably cineraries of an earlier form to those now made of stone, and this point it might be interesting to clear up.

Beyond the Khasi area no cairns are to be found, at least I had never come across any until visiting North Munipur last winter (1872—73), where, at the head of the Imphal river, on the direct road from Samaguting, are four fine cairns, all faced with large boulders. They are old, and the Nagas now living in the village near said they had been made by another clan of Nagas, who long ago had gone further north, and the site of whose village had been lately re-occupied by Kukis.

Mr. C. B. Clarke, in a paper read lately before your Institute, refers to the different forms of the cinerary in the Khasi Hills; but he has not quite exhausted the subject, or got further than I did, although with regard to the disposal of the ashes of the dead he gives some further interesting particulars.

As I think that drawings are of very great interest, and better exhibit the many different forms of bone depository or cinerary that have been adopted at different periods by tribes inhabiting localities very far apart, and often quite unconnected affinitively,

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

787 [791] case. The Khasi word for consulting the omens is *khan*, and a diviner is called a *nongkhan*. Another method of obtaining omens is by dropping two leaves into a pool of water or on a stone, the position of the leaves as they fall, either right side uppermost or upside down, signifying good or evil as the case may be; this is called *khan-sla*.

PRIESTHOOD.

793 104 The Khasi priest is usually called *Lyngdoh*, or *langdoh*; he is always appointed from the lyngdoh clan. The etymology of the word *lyngdoh* is said by certain lyngdohs of the Khyrim State to be *lang*=together and *doh*=flesh. A *lyngdoh*, or *langdoh*, is one who collects sacrificial victims, i.e. flesh for the purpose of sacrificing. It must be confessed, however, that this definition is doubtful, owing to the absence in the word *lyngdoh* of the prefix *nong* which is the sign of the agent in Khasi. Besides *lyngdohs* there are persons called *soh-blei* or *soh-sla*, who may 793 also be said to be priests. The Khasis, unlike the Hindus, have [604] no *purohit* or priest to perform the family ceremonies. Such duties fall to the lot of the head of the family or clan, who 782 carries them out generally through the agency of the *kni*, or maternal uncle. Old Khasis are frequently well versed in the details of sacrifices, and in the art of obtaining auguries by examining the viscera of sacrificial victims. Apart from family and clan sacrifices, there are the sacrifices for the good of the State or community at large; it is these sacrifices that it is the duty of the *lyngdoh* to perform. He may be said to be the priest of the communal religion, although he has certain duties in connection with offences committed against the social law of marriage, and with regard to the casting out of evil spirits from houses which may be thought to be infested with them. The lyngdohs of the Khasis may be likened to the Roman *pontifices*. 793 In the different Khasi States there is, as a rule, more 631 than one *lyngdoh*; sometimes there is quite a number of such priests, as in Nongkrem where there is a *lyngdoh* for each *raj* 793 or division of the state. There are a few Khasi States where 643 the priest altogether takes the place of the Siem, and rules the community with the help of his elders in addition to perform-

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

105 It will here be recalled that the Khasi are a matrilineal agricultural
[175] people, pre-litterate until the advent of the British in the sixth decade of
[197] the 19th century, organized under democratically ruling *siem*, or Khasi
144 princes and chieftains and speaking an Austro-Asiatic language [14]. Their physical affinities are unmistakably mongoloid and quite distinct from the Assamese speaking plains-Indians, — but not from the other mountaineers of Assam, Nepal and even Burmah or China, with whom they feel to be more closely related, as with the Indian plainspeople, as some of the tribal designations in the following lists of terms for Non-Khasi testifies (comp. No. 41 as against No. 42, 43 and 43/a-e).

114 In the collection of the material, I was hampered by my inability to
122 pick up the Khasi language sufficiently quickly, for conversation without the help of an interpreter, but on the other hand greatly eased by generous and voluntary assistance on the part of several Khasi friends, especially U Ekiman Singh, the President, Unitarian Union, Khasi- and Jaintai Hills and his (Khasi) wife, Ka Austria [15], who offered me hospitality in their house at Maw Syn Jri, during my stay there. Dr. H. LYNGDOH, Shillong, the author of detailed accounts on Khasi religious ceremonial and institutions [16], U Jeehan Roy, a leading Pnár gentleman of Jowei in the Jaintia Hills, Ka Ellen Giri, Principal, Govt. Basic Education Training Centre, Malki, Shillong, Ka Kongmen, Shillong, and U David Roy, Prime Minister (retd.), and a number of hospitable Wár Khasi and Wár-Jaintia pan-leaf cultivators in the southern slopes of the Khasi- and Jaintia Hills, especially from the villages Mawlat and Padu, also helped me greatly in my task. My thanks are due to all of them.

101 The data, submitted and briefly described in this paper were thus
114 collected in four different areas.

1. The South-eastern corner of the Khasi-Hills (plateau-area),
2. the southern slopes of the Khasi Hills, the "Wár-Khasi country" between the Khasi plateau proper and the northern boundary of East Pakistan,
3. the central plateau of the Jaintia Hills, round its capital market Jowei, and
4. the southern slopes of the Jaintia Hills, the "Wár-Jaintia country" between these and a section of the northern boundary of East Pakistan, further to the East than area 2.

197 Slightly different Khasi dialects are spoken in these four regions, Jaintia (Pnár or "Synteng") and Wár-Jaintia being more akin to each other, similarly as Plateau-Khasi and Wár-Khasi are.

101 The Pnár or Jaintias ("Synteng" is a slightly opprobious designation,
125 used by the Plateau-Khasi for these, their eastern neighbours) look back

[14] SCHMIDT (1906).

[553] [15] So named, because Austria was much in the news at the time of her birth, during the first world war; — a fact which illustrates the Khasi peculiarity to use either ad hoc inventions as names for children, or to adopt such, from the Khasi point of view, outlandish words like: "Ka Austria" or "Ka Mediterranean Sea" as names for these children.

1 Figure, 5 Plates. [HRAF pagination: 1-70]

Translated from the German for the Human Relations Area Files by Elizabeth Knight.

[The author, an Apostolic missionary in Assam, herein describes various aspects of the Khasi religion. His presentation includes lists of Khasi spirits and gods and many Khasi religious taboos; he treats in detail ceremonies related to taboos, illness, naming and funerals. Incidental to such ceremonies are the sacrifices and divination procedures such as egg-throwing, which are adequately explained. He also gives texts and translations of the invocations used in the ceremonies. --Analyst]

187 p.; 8 plates, 13 text figures; 9 maps; bibliography.

Yale: Nkc90 967N.

[After describing the matrilineal system of the Garo and the Khasi separately, the author compares them with each other and with other societies having matrilineal systems. Similarity between the social structure of the Garo and Khasi is found only at the level of the minimum criteria of matrilineal systems: the basic succession rules of mother-daughter, mother's-brother's-sister's-son; and the fact that property is owned by the woman, but the controlling power and authority over it are in the hands of the man. Differences lie in the composition of a property group: the property group of the Khasi is formed by a descent group at a shallow generational depth, while that of the Garo is maintained by the cooperation of two local lines, each of which represents a localized lineage group. Hence the descent group of the Khasi tends to have a stronger solidarity whereas the one of the Garo tends to be weakened in its solidarity. The author also gives consideration to culture change taking place due to expansion of both groups into the lowlands, and consequently more intense contact with the surrounding Hindu population, as well as due to Christian missionaries and their educational programs.]

2, 155 p. tables.

Yale: Nn96 I3 963A.

[This survey report gives a general description of the economic situation of the Khasi people as found in 1958, and provides a great amount of statistical material on its specific features. Before the 1948 division of the Indian sub-continent into India and Pakistan, the Khasis enjoyed a prosperous economy. Their main income had come through the sale of agricultural products (mostly oranges, betelnut and betel leaves, rice, and potatoes) to an area which belongs now to East Pakistan. Due to the division, the Khasis who live on the Indian side of the border have lost their market. Various measures to boost up the desparate economic situation which have been undertaken by the Indian government have not shown any noticeable effect. There is material on every page on subcultural differences. The source is very poorly printed; what is in HRAF is the best of several copies.]

almost complete autonomy in the management of their local affairs. In the remainder, called the Jaintia Hills, which became British in 1835, it has been the wise policy of the Government to maintain the indigenous system of administration through officers named *doloiś*, who preside over large areas of country with very little interference. All the British portion of the hills is what is called a "Scheduled District" under Acts XIV and XV of 1874, and legislation which may be inappropriate to the conditions of the people can be, and is, excluded from operation within it. In these circumstances the administration is carried on in a manner well calculated to win the confidence and attachment of the people, who have to bear few of the burdens which press upon the population elsewhere, and, with the peace and protection guaranteed by British rule, are able to develop their institutions upon indigenous lines. It is now more than forty years since any military operations have been necessary within the hills, and the advance of the district in prosperity and civilization during the last half-century has been very striking.

The first contact between the British and the inhabitants of the Khasi Hills followed upon the acquisition by the East India Company, in consequence of the grant of the *Diwani* of Bengal in 1765, of the district of Sylhet. The Khasis were our neighbours on the north of this district, and to the north-east was the State of Jaintia,* ruled over by a chief of Khasi lineage, whose capital, Jaintiapur, was situated in the plain between the Surma river and the hills. Along this frontier the Khasis, though not averse from trade, and in possession of the quarries which furnished the chief

l: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

supply of lime to deltaic Bengal, were also known as troublesome marauders, whose raids were a terror to the inhabitants of the plains. Captain R. B. Pemberton, in his Report on the Eastern Frontier (1835), mentions* an attack on Jaintia by a force under Major Henniker in 1774, supposed to have been made in retaliation for aggression by the Raja in Sylhet; and Robert Lindsay who was Resident and Collector of Sylhet about 1778, has an interesting account of the hill tribes and the Raja of Jaintia in the lively narrative embodied in the "Lives of the Lindsays." † Lindsay, who made a large fortune by working the lime quarries and thus converting into cash the millions of cowries in which the land-revenue of Sylhet was paid, appears to have imagined that the Khasis, whom he calls "a tribe of independent Tartars," were in direct relations with China, and imported thence the silk cloths ‡ which they brought down for sale in the Sylhet markets. A line of forts was established along the foot of the hills to hold the mountaineers in check, and a Regulation, No. 1 of 1792, was passed declaring freedom of trade between them and Sylhet, but prohibiting the supply to them of arms and ammunition, and forbidding any one to pass the Company's frontier towards the hills with arms in his hands.

The outbreak of the first Burma War, in 1824, brought us into closer relations with the Raja of Jaintia, and in April of that year Mr. David Scott, the Governor-General's Agent on the frontier, marched through his territory from Sylhet to Assam, emerging at Raha on the Kalang river, in what is now the Nowgong district. This was the first occasion on which

* P. 211. † Vol. iii., p. 148, 177, &c.

‡ These cloths, which Lindsay calls "mongrelettes," were really the produce of Assam, and were dhotis or waist-cloths of eraje silk.

327 Colonel Lister, writing in 1853, estimated that 20,000 maunds
439 of iron were exported from the hills in the shape of hoes to
442 the Assam Valley, and in lumps of pig iron to the Surma Valley, where it was used by boat-builders for clamps. Nowadays the smelting of iron is carried on in very few places. There are still smelting-houses at Nongkrem and Nongspung, but these are practically the only places left where smelting of iron ore goes on; there are many forges where rough iron brought from the plains is melted down and forged into billhooks and hoes. Messrs. Yule and Crawfurd have described the
113 native process of smelting iron, and it is only necessary to refer
114 to their papers if information is required on the subject. Yule's
327 account is a very full one, and is to be found at page 853, vol. xi. part ii. of the Journal of the Asiatic Society of Bengal. The system pursued, both in the extraction and in the subsequent smelting of the ore, is the same at the present day as that described by Yule. Dr. Oldham, writing in 1863, says, "The
327 quality of this Khasi iron is excellent for all such purposes as Swedish iron is now used for. The impurity of the blooms (or masses of the metal in a molten state), however, as they are sent to market, is a great objection to its use, and the waste consequent thereon renders it expensive. It would also form steel or wootz (Indian steel) of excellent quality. I have no doubt that the manufacture could be greatly improved and possibly extended." Dr. Oldham, however, goes on to remark that the manufacture of iron could not be very much extended, owing to the scanty dissemination of the ore in the rocks, and
[312] the consequent high cost of obtaining it. At present the want of any permanent supply of water prevents the natives from working for more than a few days during the year, whilst the rains are heavy, and they can readily obtain sufficient force of water for the washing of the ore from its matrix. The export of iron in any form from the district has now almost died out, only a few hoes being brought down by the Khasis from Laitkôm, in Khadewphra, to the Bordwar and Palasbari markets in the Kamrup District of the Assam Valley. Iron of English manufacture has, of course, much cheapened the market, but probably the fact that the parts of the country in the neighbourhood of the rocks which contain the metal have

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

586 Khasi religion. If the marriage has been celebrated according to the *pynkiar synjat* rite, a *kniang* (go-between) is necessary on each side, also the *kni*, or maternal uncles of the parties, to witness the divorce. In other cases the presence of the *kniang* is unnecessary, but some acquaintances and friends as well as the relatives on both sides should witness the ceremony. The husband and the wife each bring five cowries (*shai*), or, more commonly nowadays, five pice. The wife gives her five cowries or pice to her husband, who places them with his, and then returns the five cowries or coins to his wife, together with his own five. The wife then returns the ten shells or coins to the husband who throws them on the ground. A crier (*u niang pyrta shnong*) then goes round the village to proclaim the divorce, using the following words:—

[203] "Kaw—hear, oh villagers, that U—— and K—— have become separated in the presence of the elders. Hei! thou, oh, young man, canst go and make love to Ka—— for she is now unmarried (*khynraw*), and thou, oh, spinster, canst make love to U——. Hei! there is no let or hindrance from henceforth." Among the Khasis divorce must be by mutual consent, and the ceremony must take place in the open air. Until the

[587] divorce ceremony has been performed as above described, neither husband nor wife can marry again, but after it has taken place, either can remarry, but not within the family of the divorced husband or wife. In the event of a husband or wife being absent for a long period, say ten years, without any communication having been received from either of them, a divorce ceremony is performed by the relatives on his or her behalf. It is stated by U Jeebon Roy* that the rule of

575 monogamy is not so strict for the husband as it is for the wife.
428 he can contract an informal alliance with another woman, the only prohibition being that she must not belong to the original wife's village. Such a wife is called *ka tynga tuk*, literally, stolen wife, in contradistinction to the legally married wife (*ka tynga tuei*). The children by the unmarried wife are called *ki khun khier* (children from the top). By children from the top, is understood to mean children from the branches not from the root (*tuei*) of the tree. Such children cannot claim ancestral property [illegible]

* See page 18, "Ka Niam Khasi." (U Jeebon Roy.)

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

The bridegroom then sets out with this man and a number of followers, clothed in clean garments and wearing either white or red pagris (a black pagri not being considered a fitting head-dress on this occasion), to the house of the bride, where a feast has been prepared, and fermented rice-beer (*ka-kiad-kiar*) in gourds (*klong*) placed ready. The bride, her female attendants, and her mother and aunts have collected in the meantime, dressed in their best, wearing their jewellery, and with their heads uncovered, for it is not thought proper for the females to cover their heads on the marriage day. On the side of the bride, also, a *kniang* (go-between) has been appointed, and it is his duty to manage all the business of the marriage on behalf of her family. Some young men of the bride's party go to meet the bridegroom's contingent by way of doing them honour. When they have reached the bride's house, the *kniang* of the bridegroom enters first, followed by the bridegroom, and after him the bridegroom's party. The *kniang* then hands over the bridegroom to the maternal uncle (*kni*) of the bride, or to the bride's father. Either of the latter then provides the bridegroom with a seat next the bride. The bride and bridegroom exchange bags of betel-nut, and where the custom of investiture of the ring is in vogue, these tokens are interchanged. The *kniangs* of the bridegroom and bride recite the marriage contract in lengthy formulæ, which may be found on pages 6, 7, 8 of the late U Jeebon Roy's interesting notes on the Khasi religion. The two *kniangs* then take up, each of them, a gourd containing fermented liquor from the gourd provided by the contracting party, and give them to an old man who is versed in sacrificial lore, who solemnly mixes the contents together. Three dried fish are produced, and are placed on the floor of the house. The priest thus appointed then solemnly adjures the gods in the following words:—

Ilei, oh god from above; oh god from below; oh *lei synohar*; oh god who hast created man; as thou hast ordained this marriage, the ring has been given this day; thou wilt know; thou wilt hear; from the clear firmament above that . . . . have been married this day. Thou wilt bless them; thou wilt grant them prosperity; thou wilt show them the way; thou wilt show them the road, that they may be well, that they may obtain dwellings and houses,

782 must be appeased by throwing eggs. If the desired
[787] effect does not occur after the sacrifice has been offered, further information is sought by observing intestines (sacrifice of rooster), and the sacrifice is offered again. At least that is what is done for sickness. The other sacrifices will be described in more detail later.

771 The religion of the Khasi is one that arises
114 from fear of misfortune and harm, and is active in the worship of (evil) spirits through sacrifice. This definition of mine corresponds essentialy with the definitions of Bivar, (3) who

•[113] 3. Bivar, Administration Report on the Khasi and Jaintia Hills District of 1876.

says: "The Khasi religion may be briefly defined as a form to cure illnesses and to ward off misfortune, by finding out [410] the name of the devil who is the original cause of the evil and to appease him by sacrifices which are necessary," and Gurdon (4) "calls the Khasi religion a cult

[113] 4. Gurdon, The Khasi (London, 1907) p. 105.

of spirits, i.e., actually rather a reconciliation of spirits, good as well as bad, by sacrifices, which are offered occasionally, especially in time of misfortune."

Table of Summary

774 of several gods (good and evil) who are revered by the Khasi and the Synteng.

1. Good Gods:

u blei nongthaw, the creator god,
u 'lei longspah, the (good) god of wealth,

776 Then the wings of his nose are cut with a shear,
782 or pincer of silver and the blood is drained off. In the same way the nails on the hands and feet are cut off with silver shears. Finally the dead body is thrown into an abyss. (5)

[113] 5. For further details about "Human Sacrifice Among the Khasi", see Dr. P. C. Becker, Salvatorianische Mitteilungen [Salvatorian Communications], 1909, No. 5, pp. 75 ff.

754 [114] Since on the one hand many Khasi are busy
782 trying to kill others with the help of the devil or to make them sick (ai-ksuid), and on the other hand the evil spirits also harm men without being called upon, an enormous fear is thus the fruit of this superstition. From this fear comes the desire to make oneself free from the influence of evil spirits (lait-ksuid) or to modify this influence by sacrifices (khad) or at least to propitiate the devil completely (khein-ban khai).

796 Therefore the Synteng annually hold a large feast for driving away cholera (ka behdiengkhlam).
[782] The offered sacrifices have the purpose or propitiating the feared demoness ka khlam but at the same time they also have the purpose of making the participants in the sacrifice safe against cholera (to enchant them). Gurdon (6)

6. Gurdon, The Khasis.

describes this feast as follows: "In the month of June when the river is full of water, on a certain day the men go in the morning in front of the huts and strike the roofs of the huts with sticks. At the same time they call on the demoness ka khlam continuously and challenge her to leave

796 the house concerned. Then they go slowly down to the river. Large poles, which were set out the day before, are now placed on the river. The people jump onto the poles and try to break them. If this happens a general great shout of joy sounds forth. If all the poles are broken, they fetch a particularly strong pole, actually a beam, and place it over the river. The people now divide up into two halves, and a battle begins for the possession of this beam. But the fight is a friendly one and even though there are many blows and even wounds, the people do not engage in a serious fight, even though they battle and struggle for the possession of the beam so hard that many lose all their clothes. The side which has the luck of winning possession of the beam will be healthy (free of cholera) and well for the coming year according to the belief of the people.

797 The use of charcoal also borders on magic. Thus P.V. Kartte, Apostolic Missionary, S.D.S. writes: (7) If a mother has a long journey to

[113] 7. Kartte, Die Religion der heidnischen Khasi [The Religion of the Heathen Khasi], Apostelkalender, 1895. [Apostle Calendar]

make, she makes a black mark with charcoal on the forehead of her child to protect it from any harm. Then she takes a longish piece of wood, splits it at one end into four parts, and puts the piece of charcoal in between. The mother carries this in her hand on the journey.

798 The same missionary also reports the doings of the Khasi during an eclipse of the moon: "If there is an eclipse of the moon, the Khasi believe that a frog is with the moon and is eating it up. The Khasi like the moon very much, and in order to prevent the frog from eating up the

821 moon they try to frighten the frog with noise and to drive him away. A few days ago we experienced a sample of it. In all the villages the Khasi beat drums and screamed at the same time. It was a purely hellish spectacle." (8)

8. Loc. cit., p. 62.

[415] The Khasi also have no explanation for thunderstorms. They believe, therefore, that the ksuid (devils) cause them. Especially disturbing to them is thunder, which can be extremely vio-
[712] lent in a tropical storm. When lightning strikes anywhere, they sacrifice to the ksuid u pyrthat a fat pig, the blood of which is smeared on the altar in order to propitiate him and to prevent the lightning from striking again.

When the Khasi sacrifice to protect themselves from harm or to heal themselves from illnesses, they murmur formulas or prayers during the sacrifice. They implore the invisible powers at the same time and thus support the offered sacrifice. They call this murmuring tim-knia (swearing-sacrificing). It is also reported thus of the sacrifices in Mongkrem: (9) "Each person places

[413] 9. P. Dr. G. Becker, Die Mongkrem-Puja in den Khasibergen (Assam) [The Mongkrem Puja in the Khasi Mountains (Assam)], Anthropos, IV (1909), p. 890.

the little bottle of liquor on the little pile of mud in front of him. This represents the altar. Then they take pepper leaves and oak leaves and place them in front of the altar in a certain way next to and on top of each other; pieces of betel nut are placed on top and the whole is sprinkled with rice, kpu meal and rynsi meal, while [illegible]."

784 the heir must pay 11 or 7 1/2 or 5 1/2 percent
782 of their wealth, in order to be able to pay for the great festivities at the cremation and the later disposal of the ashes. First of all various sacrificial gifts are bought with the money. When one has all the sacrificial gifts together, one erects three hewn stones in the manner of mau-bynna (urn stones) on any road. These stones are called "adulterer stones" /Ehebrechersteine/(mau-klim). Then one catches a pig and curses it in the following way: (10)

[113]

10. This and the following Khasi texts are taken from the kitab jingphawar by U. Rabon Singh (Shillong, 1902); I am indebted to the very worthy P.C. Bonheim, Apostolic Missionary, S.D.S. of Cherrapunji, who was most willing to place his many years of experience at my disposal for the translation into German.

Hei sngewkyndiang ho kane nga iathuhkhana ba me ba la ioh ka sang na ka tnga ka jong me yn leh kumno kynrad wei la pom ka bneng ka khyndew, ka tyrut ka smer sngew la khuid ka sang ka ma, ka klim ka ngat yn long sa ka rong sa ka taw, sa ka sngewbha ka sngewniat mo! Hei une sa u dykhot u lamjew ka iad bang ka iad thiang mo!

So listen carefully to this that I am saying, thou who hast inherited the sang from thy wife; What else should we do, lord; after heaven and earth, the Tyrut and the Smer (demonesses) slay him, we are freed; the sang is made holy, the feared sang, adultery and other sins. Then it can be that the bones are transferred and peace and joy will come to us, mo! Is it

784
683 hates stone; he does not wish any lime." (14)
342

14. P.A. Mänzloher, S.D.S. Die apostolische Präfektur Assam [The Apostolic Prefecture of Assam] Rome, 1899), p. 83.

4. Egg Throwing (shat-pylleng)

787 The most common of all the oracles of the
782 Khasi is egg throwing (shat-pylleng). A great deal has already been written about it. (15)

[113]

15. P. Dr. C. Becker, Das Eierwerfen der Khasi [Egg Throwing Among the Khasi] Anthropos XII-XIII (1917-1918), pp. 494-496.

I will only add here the prayer of the sacrificer u nongshat-pylleng. It is not an actual prayer, at least the nongshat-pylleng is not bound to any formula. The sacrificer speaks approximately thus:

Ko lengsam khun ka blei, ko banang ko bati, ko ba lah ko baiai, nga pynthiah nga pyndem halor ka diengshat ka diengkhein, ka duwan ka dupat, a kynrad ngan kylli ngan	O thou egg of the oracle, thou daughter of the goddess, thou whom thou knowest and art aware of (art able to) thou remainest thou (stayest); I put thee down here on the board (16)

16. Cf. Table II, Picture 1. [119]

togkit katne ba long shitom ka lanot ka shoh ka ther ka shit ka lyang ka pisa ka lynga ia ka met u	on the oracular wood, on the altar, o mistress, I question and ponder (would like to question,

193 high. Interrogative adverbs may either precede or follow the verb, e.g., *nari phi una* or *phi una nari*, where do you come from.[1]

121 18. *Conclusion.*—I have endeavoured to note down briefly above some of what seem to be the more prominent features of Khasi Ethnology, reserving a more detailed account of the Khasis for the monograph which is under preparation. In publishing this brief account, it is my hope that it may attract criticism by persons who are more familiar with the Khasis than myself, and it is my earnest desire that if experts who are acquainted with the Ethnology of the province of Burma and of that great country comprising the valleys of the Mekong and the Menam, find any points of resemblance between Khasi Ethnology and that of those regions, they will kindly bring those points to my notice, so that perhaps a clue may be found to the origin of the Khasis, which is at present so obscure.

113 [1] In the compilation of this brief notice of the Khasi language, I beg to acknowledge my indebtedness to Dr. Grimson's Skeleton Khasi Grammar, the Revd. H. Robert's Khasi Grammar, and to Nimar Singh's "Hints on the Study of the Khasi language."—P. R. T. G.

On the STONE MONUMENTS *of the* KHASI HILL TRIBES, *and on some of the Peculiar Rites and Customs of the People.* By Major H. H. GODWIN-AUSTEN, F.R.G.S., Deputy Superintendent Topographical Survey of India.

121 THE increasing interest that is taken at the present day in ethnology and the history of man in past and present ages, more particularly in the customs of semi-civilised races in distant quarters of the world as compared with the state of those races who dwelt in Europe in early historic times, has led me to put together the information I obtained regarding the people of the Khási Hill tracts. Their customs are peculiar, and the fact that they are among the very few who erect at the present day monolithic monuments, is alone of great interest.

This has not escaped the attention of different travellers, 122 officers of the Indian service and others who have visited that quarter of the Bengal Presidency, and from time to time papers have been published; these are scattered through a number of periodicals, and in no case is a complete record of these Hill people to be found.

Notices on the Garos and Khásis, as well as many of the other tribes on the north-eastern frontier of Bengal, are generally very short, in some instances misleud, and in some cases do the peo- 52 ple, savages though they be, but little justice; in truth, there is very much to admire in these Hill people, they are in many ways, socially and physically, far above their Bengáli neighbours of the plains; intercourse with them is, in consequence, much pleasanter, easier, and has far greater interest; innate honesty and truth in their manners of dealing often crop out, more especially in villages well within the hills, where contact with the people of the plains is of rare occurrence.

101 I shall notice the best of those papers having reference to tribes inhabiting the range of hills [illegible] of Assam, from the sharp southern bend of the Brahmaputra up to the Kopili and Dhrung river, in long. 92 deg. 45 min., a length of some one hundred and sixty-five miles.

114 In the "Asiatic Researches," vol. iii, published so far back as 1792, is a very interesting paper on the Gáros, by Mr. John 113 Eliot; his travels, however, did not extend so far to the east as the Khásias.

The Rev. A. B. Lish, a missionary of Cherra Poonjee, published an account of the Khásias in the "Calcutta Christian Observer" for 1838, he gives an account of their mode of breaking [illegible] for [illegible], etc.

Neither in M'Cosh's "Topography of Assam," or in Robinson's "Assam," is any newer or better information afforded concerning

9: Godwin-Austen G-3 (no date) 1872 A87 Khasi A87

the Gáro or Khási than is to be found in earlier writers, and no allusion is made to the stone monuments. The first contains a very exaggerated and by no means faithful account of both the Khási and Gáro, and the latter has copied Elliott's descriptions. 114 113

Dr. Hooker, in his "Himalayan Journals," gives some good drawings of the stone monuments—alludes briefly to their form, and the habits of the people. Dr. Hooker also alluded to the Khásias at the meeting of the British Association at Norwich in 1868; thus attention was drawn to them in a prominent manner. A paper was written shortly after this by Lieut. E. N. Steel, R.A., who had been quartered for some time at Cherra Poonjee, and published in the "Transactions of the Ethnological Society," vol. vii.

The latest paper that we have on the Khásias is one published in the "Ausland" of last year, by — Schlagintweit, yet is not confined solely to the people, but treats of the meteorology of the district, and very briefly of the geology. The Gáros and Nágas are also noticed. I hope to be able in a future paper to call attention to these people, and shall then allude to one or two paragraphs where I think M. Schlagintweit has been led into error. To one such error I would now refer. He says, "The Khásias are the most numerous and most powerful of the tribes inhabiting the part running from west to south (he must mean east) in this mountainous district, but it is also necessary to mention the two groups of Gárdos and Jaintias who are their neighbours in the south (he must mean the east) and the west. The grade of civilisation of the Gárdos and Jaintias is very low, etc., etc." Now, M. Schlagintweit must have been quite misinformed as regards the Jaintias, and he has evidently never been among them, or he would have known that the Jaintias, or more properly speaking, the Sintengs, are of the same stock as the Khásis, that the language is the same with some slight modification, and that their customs and religious rites are almost identical. In Cherra Poonjee itself there is a small hamlet of emigrants from the Jaintia side, and they are found living among the Khásias in the main village. Many of the clans in Cherra claim to have originally come, several generations back, from the side of Jawai. 114

M. Schlagintweit further on says:—"The want of all modesty in the grown-up people of these primitive races, to whom we apply the term savages, is very remarkable." With this statement I do not agree, and consider they have the feeling strongly developed, and are quite as particular about the exposure of their persons as the people of India proper. The Gáro wears the "Langooti" quite as large as that worn by the lower classes in Bengal and N. W. Provinces, etc.,

9: Godwin-Austen G-3 (no date) 1872 A87 Khasi A87

114 etc., when employed at heavy labour. Very much more decent is it than the thin gauze-like cloth worn by even the better class of Babus in Calcutta, which makes hardly any pretence of concealing the private parts. I can speak for the Gáro women being particularly quiet and modest in their demeanour; and the young men on reaching a certain age, and until they marry, live and take their meals apart in a large house constructed for them; this is always the largest in the village, and where strangers are put up. This custom mitigates strongly against "their want of modesty", so often advanced, and proves, if anything, an advanced state of morality.

Again, in speaking of the Khasis and the looseness of their family and domestic relations, which are somewhat easy, the frequent changing of wives is not so common as might be supposed, and in the remoter villages I should say very rare. There is a very strong force which militates against its frequent practice. The men of those tribes select their wives not for beauty and delicacy, but for their well-developed forms and hard-working qualities—those who can carry heavy loads throughout the day; and the more children she begets the better for the pair: they can cultivate as these grow up a larger area, and live in greater comfort.

[113] In the *Calcutta Christian Observer*, March, 1852, is to be found one of the best papers on the Khásis, by the Rev. W. Pryse, who was attached to the Welsh Mission working both at Cherra Poonjee and Sylhet. A very good article appears in the *Calcutta Review* for 1856, vol. 27, being a review of the "Geology of the Khási Hills, with Observations on the Meteorology and Ethnology of that District," by Thomas Oldham, Superintendent of the Geological Survey of India, a work containing much valuable and interesting matter. An Introduction to the Khásia Language, by the Rev. W. Pryse, is also included in the above review.

114 101 The various ways in which the word Khási has been spelt by different writers, has no doubt puzzled many an European reader, and will be familiar no doubt to some in the form of Cossyah, Khassyah, Kasia, etc. The most correct has been adopted by the mission at Cherra Poonjee in their printed works in the language, and adopted in this paper.

101 197 They call themselves Ki Khási, and their country Ká Ri Khási,* and without going out of our way to seek for a derivation of this word, may it not be derived from the Hindustani "Ghási"—grassy: the whole of the upper lands being of this nature, in contradiction to the forest-clad valleys and slopes of the outer hills both north and south. The Khásias never pro-

* Compare "Rhi", a mountain (Tibetan).

9: Godwin-Austen C-3 (no date) 1872 AR7 Khasi AR7

intimately connected with cremation, and that bangles and other ornaments are to be found in them. Whether such are removed from the body at the present day is a point I did not satisfactorily clear up, but which is one of interest. 764

You find the cromlech cuboidal form of four well-cut large stones on edge, closely fitted and surmounted by another horizontal one closing the structure. I give a drawing of a very large and striking one not far from the mission houses at Cherra; one of the sides of this has fallen and been removed, it is probably of great age, and the family is extinct. In other cases a number of rough stones are set up in a circle, crowned by a flat circular slab. I have also seen them of octagonal form, the sketch represents one in the south of Jawai, near the site of a deserted village, one of the side stones has fallen outwards, thus exposing the interior; in this I found several calcined bones and two bangles or wristlets of brass; this surprised me, for I was not aware that ornaments were left on the body on cremation; nor do I think they are at the present day. There were no traces of pottery either, and the bones had not been placed in a vessel as is the usual custom now. The structure was apparently of considerable age, and no village had occupied the site for many years.

A very general form at present of these bone receptacles is that of a heavy slab of stone, level with the ground, covering a cyst, which is lined with stones.

The bones are not consigned to these receptacles for some time, often a year or more after the burning of the body, and in no case until it has been ascertained that the soul of the deceased is at rest, and leading a life, or rather a new existence of happiness; should the whole of his family remain in health, this state is assumed to be attained, if, on the contrary, any member be afflicted with illness or pain, the spirit is understood to be restless and in want of something; the breaking of eggs is resorted to, and such may indicate that it is necessary to sacrifice a fowl or goats, and that the bones of the defunct be taken up and buried in another spot. Such removal, however, in the case of the most troublesome ghost is only done three times, and restless as he may be, the bones are then finally deposited in the family bone receptacle; man and wife are never deposited together; they belong to different clans, thus the ashes of children are placed in the receptacle of their mother's tribe to which they are considered to belong. I would here refer to the paper written by the Rev. J. Pryse in the *Calcutta Review* for 1854, p. 128, with his excellent description of a form of sacrifice. (Appendix B.) [113]

The collection of the bones into one vault, as it may be termed, is done under the impression that the souls of the departed may 764 775

[see category 116, pp. 137-8. — Analyst]

9: Godwin-Austen G-3 (no date) 1872 A87 Khasi A87

is seen by the inmates, and quite as soon by the neighbours, who collect to revile and jeer the unfortunate individual; his relations leave him; his wife, if he has one, retires to her parent's or sister's home, and in no other way can he recover his position in society save by throwing away all he possesses; cash and clothes are scattered on the road as he goes out of the village, and are picked up by those who follow; his house, I was told, is also demolished, and the thatch roof carried out and burnt in the outskirts of the place.

This paper has become much longer than I had anticipated, and I fear will exhaust the interest that there may be in it. I had intended alluding to the Kúkis, Mikirs, Garos, etc., and exhibiting drawings of their burial-grounds, but this I think may be best postponed and introduced with some notes on the extension of those tribes and the people of the northern slopes of the Khasi range of hills, if this Society should think such of sufficient interest to them. I trust also that Captain Williamson, Deputy-Commissioner of the Garo Hills, now on leave in England, will give us the benefit of the valuable information I know he has obtained regarding the manners and customs of the Garo tribes, among whom he has mixed so much and so intimately.

Appendix A

Paper on the Origin, Location, etc., of the Bodo, Koch, Dhimal People, by B. H. Hodgson, Esq., Asiatic Society of Bengal, 1849, Vol. xviii, pt. ii, p. 728.—"Thirteen leaves, each with a few grains of rice upon it, are placed by the exorcist in the segment of a circle before him, to represent the deities. The Ojha squatting on his hams before the leaves causes a pendulum attached to his thumb by a string to vibrate before them, repeating invocations the while. The god who has possessed the sick man is indicated by the exclusive vibration of the pendulum towards his representative leaf, which is then taken apart, and the god in question is asked what sacrifice he requires!—a buffalo, a hog, a fowl, or a duck to spare the sufferer (the Ojha best know how!) a hog, and it is forthwith vowed by the sick man and promised by the exorcist, but only paid when the former has recovered. On recovery the animal is sacrificed, and its *blood* offered to the offending deity."

Appendix B.

Calcutta Review, 1854, p. 128. Paper by the Rev. J. Pryse.—"The universal desire to immortalize the memory of their dead ancestors on earth by the erection of stone monuments, may be deemed as a faint indication of an expectation of some kind of future existence. The sacrifice for their dead, which they call 'Suid-ing', or "Kuid-ing', that is, the ghost or demon of the dead, may be considered indicative of the same notion. The professed intention of the sacrifice is to pacify the

Dimension.

[illegible] *Measurements of Size and Weight of the Stones composing the Monument at Lailongkote, Khasi Hills (from careful measurement of same).*

Upright Stones or Columns.

	Cubic feet.	Total cubic feet.
No. 1 = 13ft. 11in. × 6ft. 6in. × 1ft. 6in. =	63·0	
2 = 14ft. 9in. × 5ft. 6in. ×	56·4	
3 = 11ft. 2in. × 4ft. 6in. × 1ft. 6in. =	44·7	
		164·9

Upright Stones or Sacrificial.

5 = 16ft. 6in. × 3ft. 6in. × 1ft. 6in. =	216·7	
6 = 12ft. 6in. × 3ft. 6in. × 1ft. 6in. =	63·0	
7 = 9ft. 6in. × 3ft. 6in. × 1ft. 6in. =	47·2	
8 = 4ft. 3in. × 2ft. 6in. ×	14·4	
9 = 10ft. 9in. × 4ft. 6in. × 1ft. 6in. =	30·6	
10 = 9ft. 6in. × 2ft. 3in. × 1ft. 3in. =	20·6	
11 = 11ft. 9in. × 2ft. 6in. × 1ft. 3in. =	19·6	
12 = 12ft. 3in. × 2ft. 6in. × 1ft. 6in. =	46·7	
		417·7
		164·6

The Largest Flat Stone or Column.

Greatest height, 21ft. 6in.; breadth, 7ft.; and mean thickness, about 1 foot; measured by co-ordinates laid off from a central line, at 2 feet apart, with the thickness at edge. Total of cubic feet as above 329·0.

Flat Stones or Sufficient Size, are the two Sizes.

	Mean length.	Mean height.	Mean thickness.	Cubic feet.
No. 1 =	6ft. 6in. ×	5ft. 6in. ×	1ft. 6in. =	53·0
2 =	5ft. 6in. ×	5ft. 6in. ×	1ft. 6in. =	46·0
3 =	5ft. 3in. ×	5ft. 3in. ×	1ft. 6in. =	42·0
4 =	5ft. 3in. ×	5ft. 3in. ×	1ft. 6in. =	42·0
5 =	5ft. 3in. ×	5ft. 3in. ×	1ft. 6in. =	42·0
6 =	5ft. 3in. ×	5ft. 3in. ×	1ft. 6in. =	42·0
				293·0 cubic feet.

The specific gravity of granite being taken at 2·6, or 162 lbs., the weight of the Lailongkote granite by experiment, we have for the weight of the largest flat stone, 329 cubic feet=53·1 : 19 : 3 : 7, for the other sort, 293 cubic feet=53·1 : 9 : 1 : 5.

Discussion.

[illegible] Dr. Cunningham said the "Asiatic Researches" for the year 1829 contained a short paper by a Mr. Walters on the Khasi (Cheras). The paper in question, which related to the village of Sugar-Punji, also [illegible] drawings of certain stone monuments; among others, four large upright stones standing together. They were only a few feet

Dr Clarke U-3 (no date)1974 AR? Khasi AR?

years ago, previous to some of these published accounts, but contains several details not given by any of them.

3. The Khasi stones are of three classes, viz.:—

a. The funeral pyres.

b. The kists containing the pots of ashes.

c. The monumental groups.

It is the last class (c.) which has, hitherto, mostly monopolised attention, and to which the published notices almost exclusively refer.

4. The Funeral Pyres.—When a rich man dies his body is generally reduced to ashes immediately, but his honorific cremation does not take place till some time, often a year, afterwards. In the interim the earthen jar containing his ashes is kept "under a stone" (in Khasi talk) *i.e.*, in a small temporary closed kist. For the honorific burning a pyre is prepared on which the ashes are burnt once again a very little, *pro forma*, and the great funeral feast follows.

The pyre is placed just outside the village of the deceased, on a hillock or in a clear space and near the road. The modern pyres are usually square, (approximately), the sides of stone (dressed or undressed according to the means of the family) about four or five feet high, the whole of the middle filled with loose stones and earth up to the level of the walls.*

A pyre was raised about four years ago just outside the village of Mawmai close by the English main road. Many hundreds of men and women carrying from 1 cwt. to 1½ cwt. on their backs pass close by this pyre daily and a considerable per centage cast a few minutes on it. Lodges are raised on two sides, but are by no means essential to a pyre; they merely add a utility. The Khasis mean the lodges to be a convenient height to rest on with a load, and such lodge satisfies this condition, but no Khasi would dream of measuring with a two-foot rule, so as to get them the same height. So the pyre itself is meant to be a square or thereabouts. All the Khasi stonework is done in this way; they do not care to make it geometrically accurate, and consequently in my opinion little valuable result could be drawn from any accurate measurement and mapping of the stone monuments.

This pyre at the entrance to Mawmai is one of the most complete modern pyres. The ancient pyres were very seldom (if ever) made with hewn stones, and the Khasis state that in former times they were as often made round (*i.e.* oval) as square. Being thus originally very roughly shaped heaps of loose

* For admirable illustrations of the Khasi monuments, see "Proceedings of the Soc. Ant., Scotland," vol. i, p. 98. Ferguson's "Rude Stone Monuments," chap. viii, and "Asiatic Researches," vol. xvii, p. 348. [Ed.]

Pyna Karan, for the reciprocal relations. Normally, however, the mother-in-law is referred to by a separate special term which does not stress this aspect of the relation between the two persons.

19: McCormack E-4,5 (1956-1958) 1964
AR7 Khasi AR7

[P. 106 A]

group of matrilineal and Mon-Khmer-speaking people who claim as their ancestral homeland the premier United Khasi-Jaintia Hills District (within approximately 90° 4' and 92° 52' E, and 25° 9' and 26° 9' N). This group includes the Jaintias (also Pnar or Syntengi) in the southeast, who differ from the Khasis primarily in their dualoid residence patterns and less virulent forms of sorcery. (The Hadaos or eastern Jaintia are a Kuki people.) It also includes the Lyngngams (also spelled Lyngam) in the west, who practice migratory swidden agriculture and certain peculiar funerary rites, and are said by Khasis [1955] to be culturally intermediate between Khasis and Garos. Finally, it includes Bhoi, War, and upland Khasis, which terms are primarily territorial. Bhoi country is the north-central part of the District, and is culturally complicated by the presence of Mikirs, Lalungs and Nepalis. War country spans the entire southern length of the District, so that Wars divide into Jaintia Wars and Khasi Wars, of these, the Khasi Wars have traditionally transmitted property to sons as well as to daughters. The upland center of the District is the country of the Khasis proper, those whose culture provides the most useful model for interpreting the variations found elsewhere. [For general reference on all categories of Khasi culture, cf. Gurdon 1906 and 1907, also Gurdon 1907, especially for data on regional variations.] Geography. The District is 5,384 square miles of hilly tableland, irregularly dissected by numerous rivers, and marked by significant ecological variation over very short distances. The tablelands step gently downward north from Shillong Peak, which at 6,449 feet is the highest point in the District, and over about 35 miles come into the Brahmaputra valley where this is some 200 feet above sea level. To the south, the land slopes more steeply downward for about 20 miles, and then drops abruptly, in cliff and steep-slope formations, to the Ganges sea-level delta that begins at its north with Sylhet. The annual southwest monsoons drop torrential rains around Cherrapunji and Mawsynram villages (for Cherrapunji, a record 905 inches in 1861), but then, reaching Shillong 35 miles to the northeast, provide only about 100 inches per year. Rainfall is again greater in Bhoi, which shares the Brahmaputra valley climate. Climate is temperate on the high Shillong plateau, where it seldom freezes and never snows. To the north, climate becomes subtropical, forest is jungle, and leeches abound. The climate to the south is also subtropical. [Cf. Hooker 1891, chap. XXIX.] Linguistic affiliation. Khasi is one of the major Mon-Khmer languages, related to Bhoi, Khmer, Semang-Sakai, Northern, and Pa-lung-Wa. The major Khasi dialects are Khasi, Jaintia, and Lyngngam, to which Gurdon adds War. Further minor variations occur from village to village. The Khasis had no script until 1842, when the roman alphabet was successfully applied to the Cherrapunji dialect of Khasi proper. [Cf. Sabel 1862, Gurdon 1915-24; 21 March 1962.]

[illegible]

1963-38. 2. Barth 1962] **Demography.** According to the 1961 census of India, the United Khasi-Jaintia Hills District contained 221,982 Khasis and 97,532 Syntengs. Pears and Jaintias (India [Republic] 1962-57). These figures, together with those for Khasis enumerated in Cachar (4,988), Mikir and North Cachar Hills (467), Lakhimpur (287), Sibsagar (279), and Darrang (211) districts, and those for Syntengs enumerated in Mikir and North Cachar District (464), yield a total of 305,224 Khasis. **History and cultural relations.** Khasis believe that they had supernatural origin in Khasi Hills (see Gait 1928: 200 for historical evidence, and Rafe 1928: 5-9 for myth, but see also Gurdon 1904, 1906; Gurdon 1907: 10-11, and Chatterji 1951: 12). Khasi tradition also states that in early times they moved gradually from east to west, from Jaintia toward Khasi Hills, in the practice of swidden agriculture (Carpbell 1947: 97-98). The salient fact of known Khasi history, which begins generally in the mid-seventh century a.d. when there already existed the present-day 25 native Khasi chiefdoms, is the distinctive line of development followed by the separate kingdom of Jaintia. To the north, Jaintia was successively tributary, in part or in whole, to the Kachari kingdom (ca. 1250 a.d.), the Koch kingdom (strongest ca. 1500 a.d.), and the Ahom kingdom (strongest ca. 1700 a.d.) (Shakespear 1914: Map I). To the south, about 1500 a.d., Jaintia extended its rule over a tract of Sylhet, which was populated by Hindus and Muslims, and saw its kings fall thereafter under Brahman influence. In the early 1800s, Jaintia became involved in the fratricidal strife then prevalent in the ruling family of Manipur. In 1832, after the Jaintia, long ignored British warnings not to seize British subjects for human sacrifice, justice was punished by the British annexation of the Jaintia pargana in Sylhet. The Jaintia king then voluntarily turned over to the British the hills area of his domain, so that the whole of Jaintia became part of British India and, in 1835, came to be taxed as such, although the Jaintias were otherwise allowed to maintain their traditional system of village government. • By contrast, the remaining Khasi states had few formal external relations until British times. Khasis resided and traded in both the Brahmaputra and Sylhet valleys, but were basically turned inward on their own hills, where warfare between villages and between the states was apparently common. Khasis came into indirect relation with the British in 1765, when Sylhet and its markets became part of British India. In the 1770s, stepped-up Khasi raids into Sylhet caused the British to throw up a defensive line of forts along the foothills. Later, it became necessary to place an embargo on Khasi products in the Sylhet markets. In 1827, the British penetrated into western Khasi Hills by negotiating with the Khasi chief of Nongkhlaw Siem to build a road through his territory, linking the recently annexed Brahmaputra valley with Calcutta. For three decades

thereafter, the British-negotiated treaties with all the Khasi states, the last treaty being signed in 1883, it was contracted that he chiefs would be subject to the authority of a resident political agent, whose duties would involve maintaining law and order, trying cases of heinous crimes, approving the popular selection of any new chief, and exercising control over certain categories of natural resources. Khasis were guaranteed noninterference in their customary way of life, and they were so then, nor are they now, taxed. Most Khasis, as opposed to Jaintias, were never an integral part of British India, but they did undergo social change as a result of British presence. To summarize Mills (n.d.): (1) The British introduced the potato, which the Khasis rapidly took up as a cash crop for marketing as far as Calcutta. The intensive specialization exhausted the soil and made for ever poorer crops. (2) Christian missionaries made large numbers of converts, and there arose the difficult question of whether a Christian should inherit property that traditionally was earmarked for his performance of non-Christian religious rituals. (3) About 1864 the British transferred their headquarters from Cherrapunji to Shillong. When they made Shillong the capital of the new state of Assam, non-Khasis flocked to it, land rents soared, and the concept of private property became increasingly important. Khasis began to marry with members of other ethnic groups, which introduced confusion into traditional social patterns. These problems were exacerbated during World War II, when Shillong and its environs enjoyed enormous economic prosperity. One notable aftermath of this affluence has been the accelerated enrollments in school and colleges. Hundreds of Khasis now have the I.A., B.A., and even the Ph.D. degree. • With the Independence of India in 1947, and under the Sixth Schedule of the Constitution of India (which was drafted by a Khasi), the United Khasi-Jaintia Hills District became a Part B, or autonomous, Tribal Area to be governed by a District Council composed largely of Khasis and Jaintias and responsible not to the Legislature of Assam, but to the Governor of Assam as agent of the President of India. The native-state system and the chiefs still exist, and the District Council finds it difficult to effect legislation which neither offends its supposed masters nor a simple majority of Khasis and all India legislation. The major political schism at this time is between Jaintias, who are accustomed to central and authority and taxation, and Khasis, who resent the notion of taxation to support the work of a central District Council. (J. Gait 1906, Anderson 1931, Bhuyan 1940, Morris 1951.)

SETTLEMENT PATTERN AND HOUSING. Settlement pattern. Khasis by ethnicity is nuclear, nucleated, and neolocal villages which are situated just below hill summits to avoid strong winds but still be defensible, and which usually include a de-

the active, and in that decade one U Kyrbai, a Khasi convert to Presbyterianism, left their church and founded a unique sect that blends something of Islam with something of mystical Hinduism and Christianity. The competition who most seriously threatened the dominance of the Welsh Presbyterians were the Roman Catholic missionaries who arrived in Shillong about 1890. Catholics have since opened a number of high schools, colleges, convents, and orphanages. They also established a technical school, and are now constructing a seminary. At the present time, one estimate is that there are about 100,000 Presbyterians and 30,000 Roman Catholics among Khasis. Hindus, together Christian sects are comparatively few, adherents to Hinduism and Islam are fewer still, comprised chiefly of Khasi women married to Hindu or Muslim men. U Kyrbai's sect is dying out, and the balance of Khasis are, according to their own term, "Khasi" in religion. (U Longkhit 1967, Morris 1910, Bopanna 1960, Singh 1960, Pugh 1961.) Supernaturals. The great deities are two, an unnamed masculine God (U Blei) and an unnamed feminine Goddess (Ka Blei Nongsynrhiew Nongkhulum). God created the earth, and in the beginning instructed man in cultivation techniques and also laid down the framework of a moral order that should guide his every move if he wished to join God in heaven after death. This framework was then filled in by the first ancestors, who are therefore the authorities on the subject and are considered as Ka Lyngkhi (the mother), U Thawlang (the father), and U Sniaiba (the mother's brother). Very early, Goddess undertook to keep account of the numbers of human beings on earth, and this role was so important, relating as it did to the health and the multiplication of the people, that she became of major importance to the Khasi pantheon. When no least human society, God activated automatic punishments in the form of natural calamities, and man finally decided that some mortal should go and intercede with God on behalf of humans. The cult went, agreed to take upon himself the burden of human sin, and received instruction in the correct divinatory and sacrificial techniques for which he would be one of the main objects of the faith. Again, over a period of time, it was the ancestors who perfected these techniques. Now, God is regarded as powerful and merciful, but passive. His punishments have their own impetus, and the presence of His mercy is exhibited in ritual. Goddess is more vengeful conceived, but is much closer to the individual. Shi of Khynriah 1890, who conceives of one double-sexed, great deity among Khasis.) Regarding ancestors, it is never clear from process whether supplication is to generalized ancestors or to particular first ancestors of a Khasi's own matrilineage, and such a distinction seems not to matter. There are three other categories of minor deities: those who protect places such as villages, groves, or springs,

God or Goddess, deities regarded as helpful in bringing prosperity, producing fertility, and so on. Rituals of this kind are no longer practiced, except for the Rangbakhlam ceremony designed to protect the Jaintia village of Jowai. Finally, the main religion of many chieftains was supposed to use great ceremony per year which was intended to secure ancestral blessing for a chief and his lineage, and, through this, for the entire chieftain. The notable example, still practiced, is the Pomblang Syiem of Khyrim chieftain. (Cf. Lyngdoh 1937, 1940; Gurdon 1906; Sutton 1906.) Shaman and medicine. In view of the rare, a Khasi calls to a medicine, and possibly also a medicine man. The medicine man is an ordinary individual who has hit upon some herbal remedy for one or more ailments, who has become famous enough to be sought out and rewarded in cash, and who jealously guards the formula of his medicine until it dies with him. He and his patients tend to regard him as specially blessed. Soul, death, and afterlife. The universe is composed of a heaven, the earth, and the air between. Heaven is where the souls of deceased mortals live in eternal peace, grouped ab by ab. The earth and all nature was created by God, and everything that God created has its own individual soul. There is no other great earth deity, for it was God who created the earth. The air is inhabited by the wandering souls of those dead for whom full death rites were not performed. A Khasi's potentiality for enjoying an afterlife in heaven with his ancestors depends on his receiving proper death rites at the hands of his ab nurts. First, his body is cremated by his children, notably his youngest daughter, and his bones are collected and deposited temporarily in a small stone receptacle. All work stops in the village while everyone participates in the funeral. Once every several years, an entire ab gathers to witness the transfer of the bones of recently deceased ab nurts from their temporary receptacles to the great ab nurt that is in the keeping of the youngest daughter, descended from the ab founder through a line of youngest daughters. This final ceremony covers five days, and is elaborate and expensive, but when an individual's bones are finally resting with those of his antecedents in the nurt, it is understood that his soul is finally in heaven, "resting level out in the house of God."

would not be in a position to direct their attention to the problems of large families and other necessities in their life. This is expressed through rituals which are maintained through tradition and transmitted from generation to generation. A proper performance of the ritual ensures prosperity.

The mother of [illegible] occupies a very important position in the social life of the Khasi community. He acts as a manager of the family and his opinion is always sought for in any matter of social implications. He is thus honoured and respected by all the members of the house. In spite of the mentioned set up of their society, the men are given honourable position in the affairs of the family. They are thus been given due recognition in their various customs and rites. The uncle (mother's brother) or also husbands in some exceptional cases, are always consulted by the living members of the house for their welfare and security. They are thus skilled and are prepared by them to become of possible help to take over their period of crisis. The Khasi partitions to whom the people in general pay due reverence, are considered to have led similar life as parentes in their private society. Thus the various rites and ceremonies that are observed, expressing clearly the duties, nature and obligations for these deities, are simply a reflection of the Khasi way of life. The general pattern of social structure has been found to be projected unconsciously through their religious worship and these celebrations are of course of great value to the ritual celebrants as it re-affirms certain cultural features as characteristics of the tribe.

sonal or instruments of music which have not thereby suffered either abscription or discription—that is to say, they are all, with a few exceptions, reducible to their constituent root words, which are still "current coin," and retain their power as independent vocables. The cases in which abscription and "fusion" of roots have taken place are confined to—(1) the noun prefix *jing*, expressing abstract ideas; (2) the verbal prefixes *ïym*, *ïym*, *ïym*, *ym*, *ym*, *ym*, *ym*, *ym*, *ym*, *ym*, *ym*, *ym*, *ym*, expressing causation, intensification, and reciprocity. The language is found purest at Chunú Punji. The Khásis have no written character or literature of any kind of their own. Tradition says that all was lost while they were yet masters of the plains, whence they were driven by a general conflagration or deluge to their present fastnesses in the hills. The following works on the language have been published: *Khásí Grammar*, *Anglo-Khásí Dictionary*, *Khásí Primer* (Parts I. and II., with Vocabulary),—all issued by the Calcutta School-Book Society; *Khásí English Dictionary* (in preparation), and an *Anglo-Khásí First Book*.

"Customary Inheritance.—A Khásí, whether married or single, if he makes his mother's house his home, is said to be earning *ka* his *ïaw*, *i.e.* for his mother, or his brothers and sisters, or his mother's relatives. On his death his property goes to his mother, if living; if not, to the grandmother; if she is not living, then to his sisters; should his sisters also be dead, to his sisters' children. Should the deceased have left no sisters, the property goes to the brothers; should he have no brothers or should they be dead, the property descends to his aunts, or to their children if the aunts are not living; should the aunts have left no children, the property descends to the grandmother's or great-grandmother's sisters or children. The property of a female on her death goes to her mother, if the deceased have no children; or if the mother of the deceased is not living, the property goes to the brothers and sisters; if the sisters are dead, then their children become the heirs. If there are no such children, the property devolves as in the case of males. When a man is not living in his mother's house, but in that of his wife, he cares for his wife and children. On his death his property descends to his wife, with the exception of the ornaments and clothing worn by him during his lifetime, which go to the brothers and sisters or other relatives of the deceased. Should the deceased have been a widower, the property goes to his children, and in their absence

PREFACE.

This book is an attempt to give a systematic account of the Khasi people, their manners and customs, their ethnological affinities, their laws and institutions, their religious beliefs, their folk-lore, their theories as to their origin, and their language.

This account would perhaps have assumed a more elaborate and ambitious form were it not that the author has been able to give to it only the scanty leisure of a busy district officer. He has been somewhat hampered by the fact that his work forms part of a series of official publications issued at the expense of the Government of Eastern Bengal and Assam, and that it had to be completed within a prescribed period of time.

The author gladly takes this opportunity to record his grateful thanks to many kind friends who have helped him either with actual contributions to his material, or with not less valued suggestions and criticisms. The arrangement of the subjects discussed is due to Sir Bampfylde Fuller, lately Lieutenant-Governor of the Province, whose kindly interest in the Khasis will long be remembered by them with affectionate gratitude. The Introduction is from the accomplished pen of Sir Charles Lyall, to whom the author is also indebted for much other help and encou-

[Xid 18 6 [illegible]]

INTRODUCTION.

121 In 1903 Sir Bampfylde Fuller, then Chief Commissioner
122 of Assam, proposed, and the Government of India sanctioned, the preparation of a series of monographs on the more important tribes and castes of the Province, of which this volume is the first. They were to be undertaken by writers who had had special and intimate experience of the races to be described, the accounts of earlier observers being at the same time studied and incorporated; a uniform scheme of treatment was laid down which was to be adhered to in each monograph, and certain limits of size were prescribed.

• 114 Major Gurdon, the author of the following pages, who is also, as Superintendent of Ethnography in Assam, editor of the whole series, has enjoyed a long and close acquaintance with the Khasi race, whose institutions he has here undertaken to describe. Thoroughly familiar with their language, he has for three years been in charge as Deputy-Commissioner of the district where they dwell, continually moving among them, and visiting every part of the beautiful region which is called
643 by their name. The administration of the Khasi and
101 Jaintia Hills is an exceptionally interesting field of official responsibility. About half of the district, including the country around the capital, Shillong, is outside the limits of British India, consisting of a collection of small states in political relations, regulated by treaty, with the Government of India, which enjoy

P XV

most of the neighbouring chiefs to resist the British, and a long and harassing war, which was not brought to a close till 1833. Cherrapunji then became the head-quarters of the Sylhet Light Infantry, whose commandant was placed in political charge of the district, including the former dominions in the hills of the Raja of Jaintia, which he voluntarily relinquished in 1835 on the confiscation of his territory in the plains.

Cherrapunji, celebrated as the place which has the greatest measured rainfall on the globe, became a popular station, and the discovery of coal there, and at several other places in the hills, attracted to it many visitors, some of whom published accounts of the country and people. The first detailed description was apparently that of the Rev. W. Lish, a Baptist missionary, which appeared in a missionary journal in 1838. In 1840 Capt. Fisher, an officer of the Survey Department, published in the Journal of the Asiatic Society of Bengal * an account which showed that the leadingcharacteristics of the Khasi race had already been apprehended; he mentions the prevalence of matriarchyor mother-kinship, notes the absence of polyandry, except in so far as its place was taken by facile divorce, describes the religion as a worship of gods of valleys and hills, draws attention to the system of augury used to ascertain the will of the gods, and gives an account of the remarkable megalithic monuments which everywhere stud the higher plateaus. He also recognizes the fact that the Khasis as a race are totally distinct from the neighbouring hill tribes. In 1841 Mr. W. Robinson, Inspector of Schools in Assam, included an account of the Khasis in a volume on that province which was printed at Calcutta. In 1844 Lieut.

* Vol. ix., pp. 833 sqq.

1:Garden E-4, 5 (no date) 1907 AR7 Khasi AR7

Yule (afterwards Sir Henry Yule) published in the Journal of the Bengal Asiatic Society* a much more detailed description of the hills and their inhabitants than had been given by Fisher. This formed the basis of many subsequent descriptions, the best known of which is the attractive account contained in the second volume of Sir Joseph Hooker's *Himalayan Journals*† published in London in 1854. Sir Joseph visited Cherrapunji in June 1850, and stayed in the hills until the middle of the following November.

Meanwhile the Welsh Calvinistic Methodist Mission, originally located at Sylhet, had extended their operations to Cherrapunji, and in 1842 established a branch there. They applied themselves to the study of the Khasi language, for which, after a trial of the Bengali, they resolved to adopt the Roman character. Their system of expressing the sounds of Khasi has since that time continued in use, and after sixty years' prescription it would be difficult to make a change. Their Welsh nationality led them to use the vowel *y* for the obscure sound represented elsewhere in India by a short *a* (the *u* in the English *but*), and for the consonantal *y* to substitute the vowel *i*: *w* is also used as a vowel, but only in diphthongs (*âw*, *ew*, *iw*, *ow*); in other respects the system agrees fairly well with the standard adopted elsewhere. Primers for the study of the language were printed at Calcutta in 1846 and 1852, and in 1855 appeared the excellent "Introduction to the Khasia language, comprising a grammar, selections for reading, and a Khasi-English vocabulary," of the Rev. W. Pryse. There now exists a somewhat extensive literature in Khasi, both religious and secular. An exhaustive grammar, by the Rev. H. Roberts, was

I: Gurdon E-4, 5 (no date) 1907 AR? Khasi AR?

published in Trübner's series of "Simplified Grammars" in 1891, and there are dictionaries, English-Khasi (1875) and Khasi-English (1906), besides many other aids to the study of the language which need not be mentioned here. It is recognised by the Calcutta University as sufficiently cultivated to be offered for the examinations of that body. Two monthly periodicals are published in it at Shillong, to which place the headquarters of the District were removed from Cherrapunji in 1864, and which has been the permanent seat of the Assam Government since the Province was separated from Bengal in 1874.

The isolation of the Khasi race, in the midst of a great encircling population all of whom belong to the Tibeto-Burman stock, and the remarkable features presented by their language and institutions, soon attracted the attention of comparative philologists and ethnologists. An account of their researches will be found in Dr. Grierson's *Linguistic Survey of India*, vol. ii. Here it will be sufficient to mention the important work of Mr. J. R. Logan, who, in a series of papers published at Singapore between 1850 and 1857 in the *Journal of the Indian Archipelago* (of which he was the editor), demonstrated the relationship which exists between the Khasis and certain peoples of Further India, the chief representatives of whom are the Mōns or Talaings of Pegu and Tenasserim, the Khmērs of Cambodia, and the majority of the inhabitants of Annam. He was even able, through the means of vocabularies furnished to him by the late Bishop Bigandet, to discover the nearest kinsmen of the Khasis in the Palaungs, a tribe inhabiting one of the Shan States to the north-east of Mandalay on the middle Salween. With the progress of research it became apparent that the Mōn-Khmēr group of Indo-

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

117 China thus constituted, to which the Khasis belong, was
197 in some way connected with the large linguistic family in the Indian Peninsula once called Kolarian, but now more generally known as *Mundā*, who inhabit the hilly region of Chutia Nagpur and parts of the Satpura range in the Central Provinces. Of these tribes the principal are the Santhals, the Mundas, and the Korkus. In physical characters they differ greatly from the Indo-Chinese Khasis, but the points of resemblance in their languages and in some of their institutions cannot be denied; and the exact nature of the relation between them is as yet one of the unsolved problems of ethnology.

117 The work of Logan was carried further by Prof.
197 Ernst Kuhn, of Munich, who in 1883 and 1889 published important contributions to our knowledge of the languages and peoples of Further India. More recently our acquaintance with the phonology of Khasi and its relatives has been still further advanced by the labours of Pater W. Schmidt, of Vienna, whose latest work, *Die Mon-Khmer Völker, ein Bindeglied zwischen Völkern Zentralasiens und Australiens* (Braunschweig, 1906), has established the relationship of Khasi not only to the Mōn-Khmēr languages, but also to Nicobarese and several dialects spoken by wild tribes in the Malay Peninsula.

There still remains much to be done before the speech of the Khasi nation can be considered to have been thoroughly investigated. In the *Linguistic Survey* four dialects are dealt with, the standard literary form, founded on the language of Cherrapunji, the *Pnār* or *Synteng*, of Jowai, the *War*, spoken in the valleys on the southern face of the hills, and the *Lyngngām*, spoken in the tract adjacent to the Garos on the west. Major Gurdon (p. 203) mentions a fifth, that of Jirang

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

or Mynnir, spoken in the extreme north, and there may be others. A great desideratum for linguistic purposes is a more adequate method of recording sounds, and especially differences of tone, than that adopted for the standard speech, which though sufficient for practical purposes, does not accurately represent either the quantity or the quality of the vowels, and leaves something to be desired as regards the consonants (especially those only faintly sounded or suppressed). These things, no doubt, will come in time. The immense advance which has been made in education by the Khasis during the last half-century has enabled some among them to appreciate the interesting field for exploration and study which their own country and people afford; and there is reason to hope that with European guidance the work of record will progress by the agency of indigenous students.

It remains to summarize briefly the principal distinctive features of this vigorous and sturdy race, who have preserved their independence and their ancestral institutions through many centuries in the face of the attractions offered by the alien forms of culture around them.

In the first place, their social organization presents one of the most perfect examples still surviving of matriarchal institutions, carried out with a logic and thoroughness which, to those accustomed to regard the status and authority of the father as the foundation of society, are exceedingly remarkable. Not only is the mother the head and source, and only bond of union, of the family: in the most primitive part of the hills, the Synteng country, she is the only owner of real property, and through her alone is inheritance transmitted. The father has no kinship with his children, who belong to their mother's clan; what he earns goes

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

787 diviners in ancient Hellas.* This method has (with
171 much else in Khasi practice) been adopted by the former subjects of the Khasis, the Mikirs; but it does not appear to be prevalent among any other of the animistic tribes within the boundaries of India.

28 The third remarkable feature of Khasi usage is the
171 custom, which prevails to this day, of setting up great
74 memorials of rough stone, of the same style and character as the *menhirs* and *cromlechs* which are found in Western Europe, Northern Africa, and Western Asia. It is very surprising to a visitor, unprepared for the sight by previous information, to find himself on arrival at the plateau in the midst of great groups of standing and table stones exactly like those he may have seen in Brittany, the Channel Islands, the south of England, or the Western Isles. Unfortunately the great earthquake of June 1897 overthrew many of the finest of these megalithic monuments; but several still remain, and of these Major Gurdon has given an excellent description (pp. 144 sqq.), with an explanation of the different forms which they assume and the objects with which they are erected. Other races in India besides the Khasis set up stone memorials; but none, perhaps, to the same extent or with the same systematic purpose and arrangement.

114 In conclusion, I have only to commend this work to the consideration of all interested in the accurate and detailed description of primitive custom. I lived myself for many years among the Khasis, and endeavoured to find out what I could about them; but much of what Major Gurdon records is new to me, though the book generally agrees with what I was able

* Called φοσκοποιοί; one of the lost books of the Orphic cycle was entitled τὰ φοσκοποιά.

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

to gather of their institutions and characteristics. It is, I think, an excellent example of research, and well fitted to stand at the head of a series which may be expected to make an important contribution to the data of anthropology.

C. J. LYALL.

147 villages, such as Sheila, Sepunji, Umnish, and in Nongpoh in
132 the Jaintia Hills.
30

ORIGIN.

173 The origin of the Khasis is a very vexed question. Although it is probable that the Khasis have inhabited their present abode for at any rate a considerable period, there seems to be a fairly general belief amongst them that they originally came from elsewhere. The Rev. H. Roberts, in the introduction to his Khasi Grammar, states that "tradition, such as it is, connects them politically with the Burmese, to whose king they were up to a comparatively recent date rendering homage, by sending him an annual tribute in the shape of an axe, as an emblem merely of submission." Another tradition points out the north as the direction from which they migrated, and Sylhet as the terminus of their wanderings, from which they were ultimately driven back into their present hill fastnesses by a great flood, after a more or less peaceful occupation of that district. It was on the occasion of this great flood, the legend runs, that the Khasi lost the art of writing, the Khasi losing his book whilst he was swimming at the time of this flood, whereas the Bengali
[212] managed to preserve his. Owing to the Khasis having possessed no written character before the advent of the Welsh missionaries, there are no histories as is the case with the Ahoms of the Assam Valley, and therefore no record of their journeys.
114 Mr. Shadwell, the oldest living authority we have on the
173 Khasis, and one who has been in close touch with the people for more than half a century, mentions a tradition amongst them that they originally came into Assam from Burma *viâ* the Patkoi range, having followed the route of one of the Burmese invasions. Mr. Shadwell has heard them mention the name Patkoi as a hill they met with on their journey. All this sort of
144 thing is, however, inexpressibly vague. In the chapter dealing
173 with "Affinities" have been given some reasons for supposing that the Khasis and other tribes of the Mon-Anam family, originally occupied a large portion of the Indian continent. Where the actual cradle of the Mon-Anam race was, is as

It Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

impossible to state, as it is to fix upon the exact tract of country from which the Aryans sprung. With reference to the Khasi branch of the Mon-Anam family, it would seem reasonable to suppose that if they are not the autochthons of a portion of the hills on the southern bank of the Brahmaputra, and if they migrated to Assam from some other country, it is not unlikely that they followed the direction of the different irruptions of foreign peoples into Assam of which we have authentic data, i.e. from south-east to north-west, as was the case with the Ahom invaders of Assam who invaded Assam from their settlements in the Shan States *viâ* the Patkoi range, the different Burmese invasions, the movements of the Khamtis and, again, the Singphos, from the country to the east of the Hukong Valley. Whether the first cousins of the Khasis, the Mons, moved to their present abode from China, whether they are the aborigines of the portion of Burma they at present occupy, or were one of the races "of Turanian origin" who, as Forbes thinks, originally occupied the valley of the Ganges before the Aryan invasion, must be left to others more qualified than myself to determine. Further, it is difficult to clear up the mystery of the survival, in an isolated position, of people like the Ho-Mundas, whose language and certain customs exhibit points of similarity with those of the Khasis, in close proximity to the Dravidian tribes and at a great distance from the Khasis, there being no people who exhibit similar characteristics inhabiting countries situated in between; but we can, I think, reasonably suppose that the Khasis are an offshoot of the Mon people of Further India in the light of the historical fact I have quoted, i.e. that the movements of races into Assam have usually, although not invariably, taken place from the east, and not from the west. The tendency for outside people to move into Assam from the east still continues.

Affinities.

The late Mr. S. E. Peal, F.R.G.S., in an interesting and suggestive paper published in the Journal of the Asiatic Society of Bengal in 1896, drew attention to certain illustrations of

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[114] 182 171 177

"singular shoulder-headed celts," found only in the Malay Peninsula till the year 1875, when they were also discovered in Chota Nagpur, and figured in the *Journal of the Asiatic Society of Bengal* for June of that year. These "celts" are, as the name implies, ancient stone implements. Mr. Peal goes on to state the interesting fact that when he was at Leeko and Tikak, Naga villages, east of Mokum, on the south-east frontier of the Lakhimpur district of Assam, in 1885, he found iron implements, ministrow hoes, used by the Nagas, of a similar shape to the "shoulder-headed celts" which had been found in the Malay Peninsula and Chota Nagpur. Now the peculiarly shaped Khasi hoe or *ma-khiw*, a sketch of which is given, with its far projecting shoulders, is merely an enlarged edition of the Naga hoe described by Peal, and may therefore be regarded as a modern representative in iron, although on an enlarged scale, of the "shoulder-headed celts." Another interesting point is that, according to Forbes, the Burmese name for these stone celts is *ma-gyo*. Now the Khasi name for the hoe is *ma-khiw*. The similarity between the two words seems very strong. Forbes says the name *ma-gyo* in Burmese means "cloud or sky chain," which he interprets "thunderbolt," the popular belief there, as in other countries, being that these palæolithic implements fell from heaven. Although the Khasi name *ma-khiw* has no connection whatsoever with aerolites, it is a singular coincidence that the name for the Khasi hoe of the present day should almost exactly correspond with the Burmese name for the palæolithic implement found in Burma and the Malay Peninsula, and when it is remembered that these stone celts are of a different shape from that of the stone implements which have been found in India (with the exception of Chota Nagpur), there would seem to be some grounds for believing that the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

327 Colonel Lister, writing in 1853, estimated that 20,000 maunds
439 of iron were exported from the hills in the shape of hoes to
442 the Assam Valley, and in lumps of pig iron to the Surma Valley, where it was used by boat-builders for clamps. Nowadays the smelting of iron is carried on in very few places. There are still smelting-houses at Nongkrem and Nongsprung, but these are practically the only places left where smelting of iron ore goes on; there are many forges where rough iron brought from the plains is melted down and forged into billhooks and hoes. Messrs. Yule and Cracroft have described the
113 native process of smelting iron, and it is only necessary to refer
114 to their papers if information is required on the subject. Yule's
327 account is a very full one, and is to be found at page 853, vol. xi. part ii. of the Journal of the Asiatic Society of Bengal. The system pursued, both in the extraction and in the subsequent smelting of the ore, is the same at the present day as that described by Yule. Dr. Oldham, writing in 1863, says, "The
327 quality of this Khasi iron is excellent for all such purposes as Swedish iron is now used for. The impurity of the blooms (or masses of the metal in a molten state), however, as they are sent to market, is a great objection to its use, and the waste consequent thereon renders it expensive. It would also form steel or wootz (Indian steel) of excellent quality. I have no doubt that the manufacture could be greatly improved and possibly extended." Dr. Oldham, however, goes on to remark that the manufacture of iron could not be very much extended, owing to the scanty dissemination of the ore in the rocks, and
[312] the consequent high cost of obtaining it. At present the want of any permanent supply of water prevents the natives from working for more than a few days during the year, whilst the rains are heavy, and they can readily obtain sufficient force of water for the washing of the ore from its matrix. The export of iron in any form from the district has now almost died out, only a few hoes being brought down by the Khasis from Laitkem, in Khaboupkra, to the Burdwar and Palashari markets in the Kamrup District of the Assam Valley. Iron of English manufacture has, of course, much cheapened the market, but probably the fact that the parts of the country in the neighbourhood of the rocks which contain the metal have

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

from those of the Khasis and the Mons. Dr. Grierson comes to the same conclusion with respect to these languages as Professor Kuhn, which is as follows:—"Owing to the existence of these differences we should not be justified in assuming a common origin for the Mon-Khmêr langu..ges on the one hand, and for the Munda, Nancowry, and Malacca languages on the other. We may, however, safely assume that there is at the bottom of all these tongues a common substratum, over which there have settled layers of the speeches of other peoples, differing in different localities. Nevertheless, this substratum was so firmly established as to prevent its being entirely hidden by them, and frequent undeniable traces of it are still discernible in languages spoken in widely distant tracts of Nearer and Further India. Of what language this original substratum consisted we are not yet in a position to say. Whatever it was, it covered a wide area, larger than the area covered by many families of languages in India at the present day. Languages with this common substratum are now spoken, not only in the modern Province of Assam, in Burma, Siam, Cambodia, and Anam, but also over the whole of Central India, as far west as the Berars." Grierson, having agreed regarding the existence of this common substratum, does not finally determine whether the ancient substratum was the parent of the present Munda languages, or of the Mon-Khmêr language. He says, "It cannot have been the parent of both, but it is possible that it was the parent of neither." We are thus still in a state of uncertainty as to what was the origin of these languages. 197 193

The brief description which follows of some of the more prominent characteristics of the Khasi language is based chiefly on Sir Charles Lyall's skeleton Grammar contained in Vol. II. of Dr. Grierson's "Linguistic Survey of India." It does not pretend to be an exhaustive treatise on the language; for this students are referred to the excellent grammar compiled by the Rev. H. Roberts. 193 [14]

The Article.—There are four articles in Khasi; three in the singular, *u* (masculine), *ka* (feminine), and *i* (diminutive of both genders); and one in the plural for both genders, *ki*.

All Khasi nouns take a pronominal prefix to denote the gender, i.e. the third personal pronoun, *u* (masculine), *ka* (feminine),

782 must be appeased by throwing eggs. If the desired
[787] effect does not occur after the sacrifice has been offered, further information is sought by observing intestines (sacrifice of rooster), and the sacrifice is offered again. At least that is what is done for sickness. The other sacrifices will be described in more detail later.

771 The religion of the Khasi is one that arises
114 from fear of misfortune and harm, and is active in the worship of (evil) spirits through sacrifice. This definition of mine corresponds essentially with the definitions of Bivar, (3) who

[113] 3. Bivar, Administration Report on the Khasi and Jaintia Hills District of 1876.

says: "The Khasi religion may be briefly defined as a form to cure illnesses and to ward off misfortune, by finding out [410] the name of the devil who is the original cause of the evil and to appease him by sacrifices which are necessary," and Gurdon (4) "calls the Khasi religion a cult

[113] 4. Gurdon, The Khasi (London, 1907) p. 105.

of spirits, i.e., actually rather a reconciliation of spirits, good as well as bad, by sacrifices, which are offered occasionally, especially in times of distress."

Table of Summary

776 of several gods (good and evil) who are revered by the Khasi and the Synteng.

1. Good Gods:

u blei nongthaw, the creator god,
u 'lei longspah, the (good) god of wealth,

7:Becker--i M-4, 5(1910-11)1924 AR7 Khasi AR7

Editor's Note:

114 The author of this paper apparently uses several words to denote the same social group: Familie, Stamm, Sippe, Clan Stammesfamilie, Familienstamm, Familiensippe.

Stamm is translated as tribe when it refers to the Khasi as a whole, otherwise it is translated clan especially in the compounds Stammesgott, Stammgut, Stammeshütte, Stammesmutter. Sippe is also translated as clan; Stammesfamilie as clan-family; Familiensippe and Familienstamm as family-clan. The German word is occasionally kept in brackets.

Family Property and Maternal Rights

/127/ by C. Becker S.D.S., Wurzburg

The fall of 1910 and the entire following year found the distin-
114 guished head of the Ethnographic Museum in Munich, to whom this anniversary volume is dedicated, on a research and collection trip in the extensive and inexhaustible territories of India. He was accompanied by his active wife, who served as his scientific assistant. From Burma, a mine of rich, ethnographic treasure and where the greatest part of their Indian stay was spent, their journey led the research couple into Assam, situated in the northeast of India, a country of equal significance. Assam certainly belongs politically to an-
101 terior India, but forms a bridge to interior India both ethnographically and linguistically.

Among the mountain peoples who inhabit the chain of hills which traverses the length of present-day Assam, and which separates the two largest parts of the country from each other, the Brahmaputra Valley in the north and the Surma Plain in the south, is one of the most interesting and doubtless the most advanced of the tribes, the Khasi, who inhabit the so-called Khasi and Jaintia Mountains. It
[631] was in Shillong, the center of this area, which is now the capital of the country Assam under the English government, where towards the end of September, 1911, I first became acquainted with Professor D. L. Scherman and his wife and where a friendship of many years
133 had its beginning. Therefore this little study will lead us to the Khasi Mountains, to its slopes overgrown with its peculiar pine trees, which receive greetings across the plains from the snow-crowned peaks of the Himalayas, which are flooded by the mighty waves of the Brahmaputra River and the alternating inundations of the Surma River. Here a contented and cheerful little people live who have maintained their own special characteristics in spite of the many European influences and those of neighboring cultures.

162 /128/ Of the entire population of 243,263 people, who form the inhabitants of the Khasi and Jaintai Mountains (1), 203,855 are Khasi.

1. The following statistical estimates are taken from the Census of India 1921, Vol. III, Assam, (Shillong, 1923) pp. I and II.

162
797 Of those, 37,852 have adopted Christianity, while the others are still adherents of ancient animistic cults, with the exception of somewhat

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

On the STONE MONUMENTS *of the* KHASI HILL TRIBES, *and on some of the Peculiar Rites and Customs of the People.* By Major H. H. GODWIN-AUSTEN, F.R.G.S., Deputy Superintendent Topographical Survey of India.

121 THE increasing interest that is taken at the present day in ethnology and the history of man in past and present ages, more particularly in the customs of semi-civilised races in distant quarters of the world as compared with the state of those races who dwelt in Europe in early historic times, has led me to put together the information I obtained regarding the people of the Khāsi Hill tracts. Their customs are peculiar, and the fact that they are among the very few who erect at the present day monolithic monuments, is alone of great interest.

This has not escaped the attention of different travellers, 122 officers of the Indian service and others who have visited that quarter of the Bengal Presidency, and from time to time papers have been published; these are scattered through a number of periodicals, and in no case is a complete record of these Hill people to be found.

Notices on the Garos and Khāsis, as well as many of the other tribes on the north-eastern frontier of Bengal, are generally very short, in some instances mislead, and in some cases do the peo- 152 ple, savages though they be, but little justice; in truth, there is very much to admire in these Hill people, they are in many ways, socially and physically, far above their Bengāli neighbours of the plains; intercourse with them is, in consequence, much pleasanter, easier, and has far greater interest; innate honesty and truth in their manners of dealing often crop out, more especially in villages well within the hills, where contact with the people of the plains is of rare occurrence.

101 I shall notice the best of these papers having reference to tribes inhabiting the range of hills running west to east, south of Assam, from the sharp southern bend of the Brahmaputra up to the Kopili and Diyung river, in long. 92 deg. 45 min., a length of some one hundred and sixty-five miles.

114 In the "Asiatic Researches," vol. iii, published so far back as 1792, is a very interesting paper on the Gāros, by Mr. John 113 Eliot; his travels, however, did not extend so far to the east as the Khāsias.

The Rev. A. B. Lish, a missionary of Cherra Poonjee, published an account of the Khāsias in the "Calcutta Christian Observer" for 1838, he gives an account of their mode of breaking eggs for omens, etc.

Neither in M'Cosh's "Topography of Assam," or in Robinson's "Assam," is any newer or better information afforded concerning

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

the Gāro or Khāsi than is to be found in earlier writers, and no allusion is made to the stone monuments. The first contains a very exaggerated and by no means faithful account of both the Khāsi and Gāro, and the latter has copied Elliott's descriptions. 114 113

Dr. Hooker, in his "Himalayan Journals," gives some good drawings of the stone monuments—alludes briefly to their form, and the habits of the people. Dr. Hooker also alluded to the Khāsias at the meeting of the British Association at Norwich in 1868; thus attention was drawn to them in a prominent manner. A paper was written shortly after this by Lieut. E. N. Steel, R.A., who had been quartered for some time at Cherra Poonjee, and published in the "Transactions of the Ethnological Society," vol. vii.

The latest paper that we have on the Khāsias is one published in the "Ausland" of last year, by — Schlagintweit, yet is not confined solely to the people, but treats of the meteorology of the district, and very briefly of the geology. The Gāros and Nāgas are also noticed. I hope to be able in a future paper to call attention to these people, and shall then allude to one or two paragraphs where I think M. Schlagintweit has been led into error. To one such error I would now refer. He says, "The Khassias are the most numerous and most powerful of the tribes inhabiting the part running from west to south (he must mean east) in this mountainous district, but it is also necessary to mention the two groups of Gārdos and Jaintias who are their neighbours in the south (he must mean the east) and the west. The grade of civilisation of the Gārdos and Jaintias is very low, etc., etc." Now, M. Schlagintweit must have been quite misinformed as regards the Jaintias, and he has evidently never been among them, or he would have known that the Jaintias, or more properly speaking, the Sintengs, are of the same stock as the Khāsis, that the language is the same with some slight modification, and that their customs and religious rites are almost identical. In Cherra Poonjee itself there is a small hamlet of emigrants from the Jaintia side, and they are found living among the Khasias in the main village. Many of the clans in Cherra claim to have originally come, several generations back, from the side of Jawai. 114

M. Schlagintweit further on says:—"The want of all modesty in the grown-up people of these primitive races, to whom we apply the term savages, is very remarkable." With this statement I do not agree, and consider they have the feeling strongly developed, and are quite as particular about the exposure of their persons as the people of India proper. The Gāro wears the "Lungooti" quite as large as that worn by the lower classes in Bengal and N. W. Provinces, etc.,

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

114 etc., when employed at heavy labour. Very much more decent is it than the thin gauze-like cloth worn by even the better class of Baboo in Calcutta, which makes hardly any pretence of concealing the private parts. I can speak for the Gāro women being particularly quiet and modest in their demeanour; and the young men on reaching a certain age, and until they marry, live and take their meals apart in a large house constructed for them; this is always the largest in the village, and where strangers are put up. This custom mitigates strongly against "their want of modesty", so often advanced, and proves, if anything, an advanced state of morality.

Again, in speaking of the Khasis and the looseness of their family and domestic relations, which are somewhat easy, the frequent changing of wives is not so common as might be supposed, and in the remoter villages I should say very rare.. There is a very strong force which militates against its frequent practice. The men of these tribes select thei wives not for beauty and delicacy, but for their well-developed forms and hard-working qualities—those who can carry heavy loads throughout the day; and the more children she begets the better for the pair: they can cultivate as these grow up a larger area, and live in greater comfort.

[113] In the *Calcutta Christian Observer*, March, 1852, is to be found one of the best papers on the Khāsis, by the Rev. W. Pryse, who was attached to the Welsh Mission working both at Cherra Poonjee and Sylhet. A very good article appears in the *Calcutta Review* for 1856, vol. 27, being a review of the "Geology of the Khāsi Hills, with Observations on the Meteorology and Ethnology of that District," by Thomas Oldham, Superintendent of the Geological Survey of India. a work containing much valuable and interesting matter. An Introduction to the Khāsia Language, by the Rev. W. Pryse, is also included in the above review.

114 101 The various ways in which the word Khāsi has been spelt by different writers, has no doubt puzzled many an European reader, and will be familiar no doubt to some in the form of Cossyah, Khassyah, Kasia, etc. The most correct has been adopted by the mission at Cherra Poonjee in their printed works in the language, and adopted in this paper.

101 197 They call themselves Ki Khási, and their country Ká Ri Khási;* and without going out of our way to seek for a derivation of this word, may it not be derived from the Hindustani "Ghāsi"—grassy: the whole of the upper lands being of this nature, in contradiction to the forest-clad valleys and slopes of the outer hills both north and south. The Khásias never pro-

				295·0 cubic feet.

The specific gravity of granite being taken at 2·6, or 163 lbs., the weight of the Lailangkote granite by experiment, we have for the weight of the largest flat stone, 329 cubic feet=tons 23 : 18 : 3 : 7; for the other six, 295 cubic feet=tons 21 : 9 : 1 : 9.

DISCUSSION.

[113] 764 211 114

Dr. CHARNOCK said the "Asiatic Researches" for the year 1828 contained a short paper by a Mr. Walters on the Khāsi (Cāsias). The paper in question, which related to the village of Supar-Punji, also contained drawings of certain stone monuments; among others, four large circular stones standing together. They were only a few feet

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

high, with a smooth surface, and resembled trees cut down; but it did not appear for what purpose they were used. Mr. Walters stated that the uprights and stone doors referred to in the paper were monuments to the memory of deceased rajahs and chiefs; that the upright slabs of granite were detached from the rock by means of fire; and that the dead bodies of the Khāsi are burned at an appointed place, and the ashes placed in earthen pots, which are deposited under the stones. He (Dr. Charnock) doubted the suggested derivation of the name of the tribe. If derived from the Hindústání, it could not be very ancient. The chief interest in the paper lay in the fact that the Khāsi erect these monuments at the present day.

764
211
114

Sir Duncan Gibb said there was a feature of some interest in the author's very interesting paper, and that was the statement that the stones of the megalithic remains described by him were obtained from quarries of sandstone not far distant from the place in which they were erected. Now, this point he looked upon as of considerable importance, because it so readily explained the comparative facility of transport of such huge masses of stone as entered into the construction of the monument described. In this country the most diverse opinions prevailed as to the locality whence the stones were obtained composing such monuments as are found at Stonehenge, Aylesbury, and other places, and he thought the author had added to the value of his paper by giving accurate details as to the locality whence the stone was obtained, composing the remarkable monuments so graphically illustrated; nevertheless, as a geologist, he should like to know from the author to what formation these sandstones belonged.

Col. A. Lane Fox thought the Institute might be congratulated upon the paper which they had just heard, which was one of the most important contributions to anthropology that had been received for some time past. It was impossible to overrate the value of the details of the manners and customs which Major Godwin Austin had given, and which were associated with the erection of these megalithic monuments at the present time. They might at some future time serve as links of evidence in interpreting the object of similar monuments in other times and places. The great problem before the Institute, he thought, was how far the builders of these monuments in our own time might be regarded as the representatives of those who erected them in the prehistoric period of Europe, or how far the monuments themselves might be regarded as survivals from the prehistoric age. The geographical distribution of these monuments, as he had before shown in the *Ethnological Journal*, was continuous, or nearly so, extending from those Kassias in the north-east of India to Central India, Persia, Asia Minor, the Crimea, along the north coast of Africa bordering the Mediterranean. They are found in Etruria, up the south and west coast of France into Britain, and as far as Denmark and Sweden. In so far as our present knowledge enabled us to judge, they were unknown in Russia proper, in Northern Asia, in Central and Southern Africa, and on the two continents of America, with the exception of Peru. Their continuous geographical distribu-

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

764
21
114

tion extending from our own country to the country of these Kassias was in favour of the view that their erection might be a practice handed down by them from the remotest time; and this gave great additional interest to the study of the customs of the people who built them. Evidence of great antiquity of these monuments in India was wanting; most of those examined in Central India have been found to be associated with implements of iron; but it had been shewn that iron in the soil in that country would be preserved for ages, and there was no knowing how far back the use of this metal might have extended. There was one peculiar custom which in Europe, Africa, and Russia appeared to have nearly the same geographical distribution as those monuments, and which was sometimes associated with them; he alluded to the custom of placing pieces of rags upon trees at holy wells and elsewhere as a cure for diseases, and he should like to ask Major Austin whether this custom prevailed amongst these Kassias or in their neighbourhood.

Mr. HYDE CLARKE observed that Colonel Fox had just enumerated the geographical region of megalithic monuments, and this was precisely the region described in his paper on the Caucaso-Tibetans. The areas are coincident. The Khasias are seated among tribes, which have linguistic affinities with Georgian and Palæogeorgian. The present Khasias cannot, however, be considered as *in situ* in reference to the ancient migration connected with the stone monuments of the Dekkan, but are a subsequent migration. The connection of traditions between Khasias, etc., and Burmah is simply because they are obtained from a common centre in High Asia. Among the many valuable facts is that of the male and female stones, and the numbers of these are, perhaps, also male and female. The numbers three and seven signify middle. In two cases where eleven occur they are arranged as six and five. The male stones are more numerous than the female, and may have some relation to polyandrous notions. Egg divination may possibly have its metaphysical basis in the relations which exist in many languages in the form of words for eye (eage) and egg. Major Austen's testimony to the moral qualities of the hill tribes is of value. Dr. Hunter, hon. member Anthropological Institute, has pointed out in his *Rural Life in Bengal* that it is on the hill tribes we must greatly rely for the invigoration of our Indian empire.

Mr. W. C. DENDY: The great merit of this paper is that it is written by a careful observer who was an eye-witness of all which he describes; one such narrative is worth a volume of compilations. In our own region the megalith is a relic of very ancient date, the record, perhaps, of a semi-barbarous race, and all account of them is usually speculative and conjectural. In the east we learn there are kistvaens and cromlechs and dolmens of recent date, the constructors of which are yet in existence, and an inquiry into their history may elucidate by analogy some of the obscurity that has yet clouded our own megalithic monuments. Choir Gawr or Stonehenge is composed of several sorts of rock, blue stone and marble, sand and granitic: why is this variety of selection? Among Major Austen's sketches there is

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

764 one of a beautiful megalithic temple, and he alluded to male and
211 female stones. May this variety of quality and colour in the stones
114 be symbolical of idol or astral or planetary worship? In Asia, it seems, these relics are chiefly within a certain latitude forming a belt from Oceania to the Mediterranean, the zone, indeed, of the anthropomorphous simiæ; and we have accounts of the relics of Asiatic pigmies discovered in and around one of these cromlechs not remote from the Khasi Hills. Remembering the influence of climate on both mind and body, it might be interesting to inquire how far a superstitious psychology may be an ethnic trait among the less accomplished orientals.

Dr. A. Campbell, Mr. James Fergusson, Mr. J. W. Flower, Dr. Seemann, Mr. E. B. Tylor, Mr. Wake, and the Chairman, also took part in the discussion.

10:Clarke U-3 (no date)1874 AR7 Khasi AR7

211 middle; annexed is a representation of a common type containing five stones.

A common height for the middle stone of such a monument will be six to ten feet, by 2-3 feet wide. The stones are sunk not very deep, say 1-2 feet, into the earth; great numbers of fallen stones are seen. Monuments of this character are often placed on the crest of the hills, and in many parts of Khasiland the landscape appears dotted over with them.

The horizontal slabs are commonly grouped in pairs. The flat slabs may be 5-10 feet long, and are rarely so exactly quadrangular, and they generally have some of the corners irregularly rounded off, and thus pass into the oval or round horizontal slab, which is also a frequent type.

The upright and horizontal slabs are often combined to form a single monument, and perhaps the commonest of all the combinations is that in which five upright slabs have two horizontal before them. The combinations adopted are, however, endless in variety. In these combinations it must be understood that the whole group of stones forms one indivisible monument, which may be the monument of one individual, a household, or a family. Families retain a history of the monuments which belong to the family, and thus in a small degree of the names of their ancestors. Such family monuments may be repaired, added to, or rebuilt from time to time. They are not necessarily placed where the family ashes are kept in kists, or near such kists; but they are usually at no great distance from the village where the family dwells.

The putting up a large stone, say one that stands fifteen feet out of the ground, is a very costly matter, and the monuments of the first class in size in the Khasi country are not very numerous; in the monuments of small stones, the number of stones is often great, I have noticed twenty-one stones in a row, no stone exceeding two feet high.

The upright slabs are (particularly when unaccompanied by any horizontal slabs) usually placed in a straight line. But frequently, where the horizontal slab is round, the upright slabs stand in the arc of a circle, and sometimes the upright slabs are placed in a curved line apparently by accident, or because the nature of the steep ground suggested such an arrangement. Two such monuments occur on the main road to Lailankote.

114 Major Godwin-Austen states in his article on the subject that
301 the upright slabs *always* stand in threes, fives, sevens, etc. This
211 is a mistake; to have the number of stones unequal, with the central slab the tallest, is perhaps the plan adopted in forty-nine monuments out of fifty; but among the vast variety of monuments

10: Clarke U-3 (no date)1874 AR7 Khasi AR7

in these hills a dozen monuments on the binary type may soon be found in which there are two equal upright slabs in the middle, and the other stones placed symmetrically on each side of them.

7. There are three kinds of rock employed by the Khasis for stone monuments, viz.:—

a. The Cherra sandstones.
b. The Shillong sandstones.
c. The granite.

Small stones are conveyed considerable distances from the place of manufacture before they are set up—large stones are not—hence the material of the monuments is determined everywhere geologically.

a. The Cherra sandstones are tertiary and cretaceous rocks spread along the southern edge of the plateau and producing the ledges which mark its abrupt termination. In the great thickness of these sandstones are many beds in which the rock occurs in large sheets with very few joints, and well-adapted for working out large slabs therefrom. The sandstone is generally very hard, but not so hard but that the Khasis can work it with their own native-made iron tools.

There is a quarry, now in full work, about half-a-mile out of the old Cherra cantonment, upon the Mamloo path, where slabs may be seen in preparation. The slabs made from the Cherra sandstones, admitting of being worked, are generally hewn pretty fairly to a shape and smoothed before being set up. The ancient monuments are, however, often made of very rough slabs.

All the well-known monuments near the old Cherra station are made of these sandstones, as also the large monuments at Mamloo, Mausmai, and Lirinow. These three monuments all stand on sheets of Cherra sandstone and the stones were cut out of the rock hard by where they now stand. The stones quarried now outside the Cherra cantonment, being for transport, are none of great size.

The Khasis also work gigantic slabs of stone for bridges. Where the span is anything under twenty feet a single slab four or five feet wide and two feet thick is thrown across; piers of enormous blocks of sandstone are raised on each side, on which the slab may rest, if there is the remotest fear that the water can, in any flood, reach the under surface of the slab. As compared with such a bridge the Khasis regard the best efforts of the English engineers as mere makeshifts. The arch at Amwee figured by Dr. Hooker is Bengali work.

b. The Shillong sandstones extend over a large area of the northern portion of the plateau: they are often more argillaceous

[p. 1]

KHASI KINSHIP AND SOCIAL ORGANISATION

BY

PROF. K. P. CHATTOPADHYAY.

Introduction

114 121 In a paper on Khasi marriage rules Prof. Hodson has tried to explain the special features of the Khasi kinship terms and marriage rules on the hypothesis of a former dual division of Khasi Society, and certain new social forces which came into operation when the dual society broke up (1).

Hodson used for his work, the kinship terms noted in the Assam Census Report (2), Gurdon's work on Khasis* (3) and a dictionary by U. Nissorsing. A full list of Khasi kinship terms was published by Rai Bahadur S. C. Roy shortly afterwards (4). The list is stated to have been compiled with the help of the ex- Siem of Cherra, on the genealogical method. The genealogies have not however been printed, and detailed notes are not available.

Recently the writer of this paper proceeded to the village of Mawphlang, the head-quarters of the Khasi State of this name and collected a certain amount of data to discuss this problem. The village is situated to the southwest of Shillong, at a distance of sixteen miles, and has preserved the old customs to a fair extent. It is ruled over by a lyngdoh or priest-chief, assisted by four myntris. At the time of the visit, the lyngdoh was away, suspended by the Political Agent for misgovernment, and the powers of the State were vested in the council of myntris. The senior myntri U Subu Rai, who is an old man

602 [36]

Il: Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

nearly seventy years of age, spoke English a little, and kindly agreed to help by acting as introducer as well as interpreter. The Chowkidar of the bungalow, a Christian Khasi who spoke Hindi tolerably well was however our principal interpreter. Before proceeding to the village, I had studied Roberts' Khasi Grammar and also learnt simple sentences in Khasi necessary for collecting genealogies, kinship terms and connected details, like the inheritance of the ancestral house and lands. This portion of the data was collected entirely through questions and answers in Khasi; the other details were obtained with the help of myntri U Subu Rai and his friends and the Chowkidar, U Hudrington. On important points however, some checking was made, by simple questions in Khasi, which involved definite answers in the affirmative or negative. My students who had accompanied me for training in field studies, repeated some of my observations, in my presence and with my help and guidance.

My best thanks are due to Mr. K. Cantlie, Deputy Commissioner, Khasi and Jaintia Hills, for furnishing me with the letter of introduction to U Subu Rai and for other facilities. His published notes on Khasi law, especially the chapters on inheritance also proved to be of great value in carrying out the enquiries (5). In the subsequent portions of this article, references to the works of Gurdon and Cantlie, will be indicated merely by (G) and (CN) respectively.

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

Generally the terms for (i) and (iii) are the same. In a few instances a distinction was said to be made. Many people however do not observe such distinctions. In the list of kinship terms published by Rai Bahadur S. C. Roy, this distinction has not been made. While his list agrees with mine in many respects, there are important differences. He has noted certain identities in kinship terms, which I did not find, and which have not been noted also in the Census Report.

The kinship system of the Khasis has certain special features:

(a) There is a clear distinction drawn in the kinship terms, with regard to seniority and juniority in age between siblings. This distinction is also made in the generation above that of the speaker, with regard to the mother's sisters, and father's brothers and their spouses. It is also observed with regard to the mother's brothers but not with regard to the father's sisters or the spouses, or their children. The distinction is however observed throughout in terms of address.

(b) A woman refers to her sister's children by the same term as a man to his brother's children; but a woman refers to her brother's children by a different term, which is applied also by her brother to her children.

(c) Certain kin are grouped together. The same term, for example is applied to the mother, step mother, the mother's sisters, and the wives of the brothers of the father. Similarly, the father, the step father, the father's brothers and the husdands of the mother's sisters are grouped together. In both cases, the actual father and mother are referred to by a term, to which adjectives denoting seniority and juniority are added for the other relatives. The mother's brother and the father's sister's husband have a common term. But the mother's brother is always distinguished by adding the adjective of age noting his position as elder or younger uncle. The father's sister's husband is not so distinguished. The sister of the father is clearly distinguished

THE KHASI HUTS OF MAWPHLANG

BY

RAM KRISHNA MUKHERJEE, RAM CHANDRA BOSE, SALIL RAI CHAUDHURI, SAROJ GUPTA AND KUMARES SENGUPTA

114 Post-Graduate students of the Department of Anthropology of the University of Calcutta are expected to do a certain amount of field work for practical training. In 1940 a Khasi village was studied by us, the students of the Post-Graduate class, as part of our training, under the guidance of Prof. K. P. Chattopadhyay, the Head of the Department of Anthropology, whom we have 121 to thank also for the photographs used for this paper. This note 342 on Khasi house structure is based on our work in the village of Mawphlang, the headquarters of the Khasi State of this name, in the Khasi Hills, Assam. Our studies included a survey of the village and its house types. Particular attention was paid to the structure of the old type of Khasi house.

342 Gurdon in his book on the Khasis of Assam describes the Khasi hut as elliptical in shape. But in Mawphlang we found that they can be more strictly said to be 'U'-shaped, in ground plan the bend of the 'U' being the front, the two parallel arms the sides, and a straight line connecting the two ends of the two arms of the 'U' the rear. We found this to be the type of most of the old houses of Mawphlang village. As is well known it is the custom among Khasis for the women of a family to live together, until the number of members increases so much that they cannot be provided with room in a single house. Then new houses are built It is usual for a married couple with children to put up a separate

14:Roy 1-5 (no date) 1938 AR7 Khasi AR7

IV. THE PLACE OF THE KHASI IN THE WORLD.

By

David Roy

131 The Khasi country lies in the hills of the pro-
[614] vince of Assam in North East India. Khasi clans
[611] are exogamous and matrilneal, and the Khasis speak a
[197] MonKhmer language.

121 In speaking of the place of the Khasi in the world I intend to explain the Khasi's own view of his relation to other peoples of the world.*

829 The Khasi is very conscious of his importance. He says a Khasi claims to be the centre of the world. The Khasi has acquired such a feeling of self-importance from his great confidence in himself; and this confidence he has derived from the position in which his relationship-terminology represents him as standing with respect to himself and the world around him. Or, rather, his relationshisp terms and language are an expression of his attitude and notions.

601 The Khasi says—*Ka Kamie* (mother)

U Khun (son) — *Ka Kmie* (mother)

Which is—His mother

Himself (male) — His sister (female)

He calls this the family. Then he says—

Ka Kamie Kha (Father's mother)

U Kpa Kha (Father, Father's brother) (male) — *Ka Nia Kha* Father Father's sister (female)

* [114] The writer of th is article is himself a Khasi (Christian).

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7 •
Garo AR5

K a 121 From the beginning of my field work, my interest lay in a *comparative* study of the two systems, not in preparing a complete monograph of the cultures of the two peoples. I used the period of my field research in working among the two peoples alternately, so that I could constantly check from one field to the other as new problems appeared.

K a • 114 122 The period of my field work was very limited (October, 1955-February, 1956). I did not know the vernacular of either the Garo or the Khasi (Since Garo language has much commonness with Tibetan language which I was used to read and speak, I could quickly get used to follow their speech during my field work, but I failed to do so in Khasi language). I employed altogether five local English-speaking interpreters (out of the five, three were pagan, and all had relatives in the villages where I worked). But I already had experience in studying the economic and social organization of other hill peoples in Assam, having carried out two years (1953-1955) field work among tribes in Tripura State and among the Tangkul Nagas in Manipur State, as also among Himalayan peoples. This all helped me a great deal in my work among the Garo and the Khasi, and is one of the reasons why I could collect such a considerable amount of *data*, in spite of the alove mentioned handicaps of my actual field work. (Later on, I carried out field research for four months among the Nayar of Kerala, to provide further *data* for comparative study.

K a 121 The Garo and the Khasi present very different structures from each other. In order to present a more effective picture of each structure, I have used different ways of presentation, each of which brings out certain important theoretical implications. The emphasis is laid accordingly upon different features: in the case of the Garo, it is the marriage system in relation to the village community; in the case of the Khasi, it is variation in marriage forms related to the structure of descent groups.

K a 122 I wish to express my profound gratitude, first of all, to the Elin Wagner Foundation in Stockholm, by whose generous grant the field work of this study was carried out, and next to Professor C. Lévi-Strauss, who has consistently encouraged me to complete this manuscript and has very kindly given me this opportunity for publication. I am greatly indebted also to: Professor Fred Eggan, Professor Raymond Firth, Professor Meyer Fortes, Professor C. von Fürer-Haimendorf, Dr. E. R. Leach, Dr. Audrey Richards, and Professor D. M. Schneider for much stimulating discussion and helpful comment on the theoretical problems of this study.

I am grateful for invitations from the Department of Anthropology, University of Chicago (1959-1960) and the Department of Cultural Anthropology, School of Oriental and African Studies, University of London (1960-1961), as also for an association with the Department

group of matrilineal and Mon-Khmer-speaking people who claim as their ancestral homeland the present-day United Khasi-Jaintia Hills District (within approximately 90° 4' and 92° 52' E. and 25° 5' and 26° 5' N.). This group includes the Jaintias (also Pnar or Synteng) in the southeast, who differ from the Khasis primarily in their dualoral residence pattern and less virulent forms of sorcery. (The Hadens in eastern Jaintia are a Kuki people.) It also includes the Lyngngams (also spelled Lyngngam) in the west, who practice migratory swidden agriculture and certain peculiar funerary rites, and are said by Eberhards (1958) to be culturally intermediate between Khasis and Garos. Finally, it includes Bhoys, Wars, and upland Khasis, which terms are primarily territorial. Bhoy country is the north-central part of the District, and is culturally complicated by the presence of Mikirs, Lalungs, and Nepalis. War country spans the entire southern length of the District, so that Wars divide into Jaintia Wars and Khasi Wars; of these, the Khasi Wars have traditionally transmitted property to sons as well as to daughters. The upland center of the District is the country of the Khasis proper, those whose culture provides the most useful model for interpreting the variations found elsewhere. For general reference on all categories of Khasi culture, cf. Costa 1938 and 1957, also Gordon 1907, especially for data on regional variations.] **Geography.** The District is 5,984 square miles of hilly tableland, intricately dissected by numerous rivers, and marked by significant ecological variation over very short distances. The tablelands step gently downward north from Shillong Peak, which at 6,445 feet is the highest point in the District, and over about 55 miles east into the Brahmaputra valley where this is some 250 feet above sea level. To the south, the land slopes more steeply downward for about 20 miles, and then drops abruptly, in cliff and steep-slope formations, to the Ganges sea-level delta that begins at its north with Sylhet. The annual southwest monsoons drop torrential rains around Cherrapunji and Mawsynram villages (for Cherrapunji, a record 905 inches in 1961), but then, reaching Shillong 33 miles to the northeast, provide only about 100 inches per year. Rainfall is again greater in Shoi, which shares the Brahmaputra valley climate. Climate is temperate on the high Shillong plateau, where it seldom freezes and never snows. To the north, climate becomes subtropical, forest is jungle, and fauna abound. The climate to the south is also subtropical. [Cf. Hooker 1881, chap. XXIX.] **Linguistic affiliation.** Khasi is one of the major Mon-Khmer languages, related to Mon, Khmer, Semang-Sakai, Nicobarese, and Pataang-Wa. The major Khasi dialects are Khasi, Jaintia, and Lyngngam, to which Grierson adds War. Further minor variations occur from village to village. The Khasis had no script until 1842, when the roman alphabet was successfully applied to the Cherrapunji dialect of Khasi proper. [Cf. Rabel 1961, Grierson 1903-28; Jj Roth 1842.]

MARRIAGE AND FAMILY. **Mode.** According to the traditional courtship pattern, a group of young male relatives and friends made nightly visits to the house of some virgin girl in another village, appraising her through banter while she and her parents appraised them, and staying the night to avoid the dark walk home. Marriage was according to the wishes of the parents after negotiation by a go-between from the boy's side. Girls might be 15, and boys 17, years of age. Girls have now acquired freedom of movement through attending school, however. Premarital sexual play is common, and young people choose their own spouses when the girl is about 19 and the boy 21. The most common mode of marriage is elopement, for Christians and non-Christians alike, but some Christians marry in church, and some Khasis still marry according to the traditional ceremony or some variation on it. There are no preferred or prescribed marriage types, nor is there a bride price or dowry. **Form.** Monogamy is the ideal for all. **Extension of incest taboos.** Sibs are exogamous. Other prohibited marriage partners are real and classificatory FaSi and FaBr, FaBrCh, FaMo, and FaMoMo. The MoBrWi is also prohibited. Roy 584 582 562 178 836 584 583 585 184 583 581 835 [114]

says that the MoBrCh but not the FaSiCh is prohibited (1897: 2), but Gurdon says that the MoBrCh is eligible after the death of MoBr, and that FaSiCh is eligible after the death of Fa (1907: 78). Nowadays both types of marriage occur, whether the linking relative is living or dead. **Residence.** Residence is either duolocal or matrilocal under the roof of the wife's mother until the birth of one or two children. For a man married to a youngest daughter, it then continues to be matrilocal. For men married to other daughters, it becomes uxorilocal; there have also always been cases of virilocal residence, and it is now common to find neolocal residence in Shillong. For non-Christian Jaintias, it is duolocal throughout the marriage. **Domestic unit.** The domestic unit is the elementary family, though for a youngest daughter it may temporarily include also her aged mother, aged father, unmarried siblings, or divorced or widowed brothers. **Inheritance.** Traditionally, after the Khasi mother had helped each of her daughters to build and supply a house when each one married and had children, her only real obligation to help them economically was ended. Everything she possessed, excepting certain personalty that was destroyed in her cremation, was inherited by her youngest daughter. Failing daughters, a woman's property reverted to her next youngest sister's daughter. Today, this pattern is often modified by putting more property into the hands of older daughters and even sons. [Cf. Cantlie 1934; Becker 1924.] **Divorce.** A woman may effect numerous and usually brief separations from her husband by simply closing the door of her house to him, whereupon he returns to the house of his mother or youngest sister. Divorce, however, must be initiated by mutual consent. Divorce is very common, even though women resist it because they do not wish to lose a provider, and men because they do not wish to lose their children. Formerly it was accomplished by a simple ritual in the presence of witnesses, followed by public announcement by a town crier. Now, the witnesses and the public announcement have been dispensed with, and evidence for divorce consists only in the word of the parties concerned.

835 [114] [178] 591 592 428 [178] 586 586 178

SOCIOPOLITICAL ORGANIZATION. **Political organization.** The basic unit of political organization is the village, which is composed of one or more dominant local descent groups plus several others. Village government is by an assembly of all resident adult males, under the informal chairmanship of a headman elected by them from among their number. The membership of any immigrant household into a village is defined by the participation of the household's males in this assembly. Sustained membership in a village is voluntary. Khasi chiefdoms probably arose out of voluntary associations of villages, which occasionally transferred allegiance from one chief to another.

62 174 619

also active, and in that decade one U Kyrhai, a Khasi convert to Presbyterianism, left that church and founded a unique sect that blends something of himself with something of mystical Hinduism and Christianity. The competitors who most seriously threatened the dominance of the Welsh Presbyterians were the Roman Catholic missionaries who arrived in Shillong about 1890. Catholics have since opened a number of high schools, colleges, convents, and orphanages. They also established a technical school, and are now constructing a seminary. At the present time, one estimate is that there are about 100,000 Presbyterians and 80,000 Roman Catholics among Khasis. Members of other Christian sects are comparatively few; adherents to Hinduism and Islam are fewer still, comprised chiefly of Khasi women married to Hindu or Muslim men; U Kyrhai's sect is dying out; and the balance of Khasis are, according to their own term, "Khasi" in religion. [Cf. Lyngdoh 1937; Morris 1910; Ropmay 1940; Singh 1950; Pugh 1951.] **Supernaturals.** The great deities are two, an unnamed masculine God (U Blei) and an unnamed feminine Goddess (Ka Blei Nongsynshar Nonghukum). God created the earth, and in the beginning instructed man in cultivation techniques and also laid down the framework of a moral order that should guide his every move if he wished to join God in heaven after death. This framework was then filled in by the first ancestors, who are therefore the authorities on the subject and are semideified as Ka Iawbei (the mother), U Thawlang (the father), and U Suidñia (the mother's brother). Very early, Goddess undertook to keep account of the numbers of human beings on earth, and this role was so important, relating as it did to the health and the multiplication of the people, that she became of major importance in the Khasi pantheon. When sin beset human society, God activated automatic punishments in the form of natural calamities, and man finally decided that some animal should go and intercede with God on behalf of humans. The cock went, agreed to take upon himself the burden of human sin, and received instruction in the correct divinatory and sacrificial techniques for which he would be one of the main objects of the knife. Again, over a period of time, it was the ancestors who perfected these techniques. Now, God is regarded as powerful and merciful, but passive. His punishments have their own impetus, and the expression of His mercy is solidified in ritual. Goddess is more vaguely conceived, but is much closer to the individual. [But cf. Ehrenfels 1950, who conceives of one double-sexed, great deity among Khasis.] Regarding ancestors, it is never clear from prayers whether supplication is to generalized semideities or to particular first ancestors of a Khasi's own matrilineage, and such a distinction seems not to matter. There are three other categories of minor deities: those who protect places (such as villages, groves, or springs),

clans were very much as we find them at the present day among the Nagas and Kukis, beyond and bordering our present extreme limits, viz. that of constant feud. They are now the quietest, most peaceful, and contented of all the hill people on the eastern frontier.

In my former paper I did not allude to the cairns in these hills, which I am inclined to think are works of greater age than the stone structures. The custom is one that certainly has long since been given up, for I could not obtain any satisfactory account of them. They are only to be seen on the northern side of the Khasi plateau, and Dr. Hooker, in his account of his trips to the Kollong Rock, did not fail to notice them. About Mairaug and towards Nougstoiu they are very numerous, and always stand on commanding situations. On the path leading down the grassy spur to the stone monuments previously described, near Nougshai, is a very fine large example of a cairn, about eight feet high. They are usually plain hemispherical mounds of earth; but this one is faced all round at the base with slabs of stone about four feet high; they are frequently not higher than six feet. A distant view is shown in Plate iii.

Nowhere is there any trace of the earth that forms them having been excavated close by; it must, therefore, have been carried in some short distance, to avoid unsightly hollows near the structure. I should much like to have dug into one of these cairns, but was afraid to hurt the feelings of the people by doing so. They are very probably cineraries of an earlier form to those now made of stone, and this point it might be interesting to clear up.

Beyond the Khasi area no cairns are to be found, at least I had never come across any until visiting North Munipur last winter (1872—73), where, at the head of the Imphal river, on the direct road from Samaguting, are four fine cairns, all faced with large boulders. They are old, and the Nagas now living in the village near said they had been made by another clan of Nagas, who long ago had gone further north, and the site of whose village had been lately re-occupied by Kukis.

Mr. C. B. Clarke, in a paper read lately before your Institute, refers to the different forms of the cinerary in the Khasi Hills; but he has not quite exhausted the subject, or got further than I did, although with regard to the disposal of the ashes of the dead he gives some further interesting particulars.

As I think that drawings are of very great interest, and better exhibit the many different forms of bone depository or cinerary that have been adopted at different periods by tribes inhabiting localities very far apart, and often quite unconnected affinitively,

18: Godwin-Austen G-3 (ca. 1872) 1875 AR7
Khasi AR7

of more scientific value; and the vocabularies given by the author in this paper would, no doubt, be found of great use to comparative philologists. He hoped that the Institute would be favoured with some further information on the races of Borneo from Lieut. de Crespigny.

With regard to the paper by Major Godwin-Austen, he (the President) would say his communications were always welcome to the Institute. He wished that a more detailed account had been given of the intrenchment referred to. There appears to have been a great camp-building period in the life of most races, when neighbouring tribes were constantly at war, and each had its stronghold in case of attack. Such camps are conspicuous amongst the antiquities of nearly all parts of the world, and a comparison of the different sytems of defence adopted, when viewed by the knowledge of the art of castrametation which we possess, affords reliable evidence of psychical connections. In the early British camps of this country he had never seen any evidence of the use of flanking defence except at the entrances; but the description given by Major Austin of this earthwork appeared to indicate that something of the kind was known to these people.

511 It is seen that the per family average annual expenditure is Rs.909·00 nP. in Border areas, Rs.1008 00 nP. in Project area and Rs.828·00 nP. in General area. The per family annual net income in the respective area being Rs.852·86 nP., Rs.988·84 nP, and Rs.949·51 nP. it follows that the budget of the average family is deficit in all the areas. [426] This deficit is usually made up either by restricting the consumption expenditure during the lean months of the agricultural year or by taking loans.

221 511 The field work of the survey was started during the month of February, i.e., hardly after two months, of harvesting of winter paddy and during the harvesting period of cash crops like orange, betelnut, potatoes, etc. During this period people get money through the sale proceeds and naturally they [114] were tempted to spend comparatively higher amount on food. In fact, it was made clear during investigation that as lean months are approaching when people did not have money to purchase food articles, they used to lead a very austere life. This period is particularly very hard for the Border people because unlike people of other two areas they do not have [128] even paddy in store. As the above figures of annual expenditure of a [125] family were calculated on the basis of information collected for one month preceeding the date of investigation, in respect of food and non-food articles, and for one year in respect of miscellaneous items, there is every likelihood of the average per family expenditure on food and non-food articles being over-estimated.

128 511 As in the case of income, consumption of articles produced at home or at farm as well as those received out of the goods, services and gift and loan were valued in money terms on the basis of the local average retail prices in respect of the commodities concerned. Thus even firewood and other wild vegetables and fishes obtained by fishing were valued in terms of money. Of the total average expenditure on food, the food articles obtained in kind and consumed at home account for about 18 per cent in Border area, 53 per cent in Project area and 57 per cent in General area. Thus the share of food articles obtained in kind and consumed at home to the annual expenditure of a family is very low in Border area. This is natural because they depend almost exclusively on cash crop cultivation.

511 Out of the total expenditure, food account for about 68 per cent in Border area, 67 per cent in Project area and 73 per cent in General area. In all the areas cereals alone took the bulk of the expenditure on food, i.e., 66 per cent, 75 per cent and 81 per cent in the respective areas

It is seen that expenditure on pulses, vegetables and milk are very low. In fact only a few of the Tribal villagers take pulses, milk and vegetables. Rice and fish or meat are the only items of the dishes of most of the villages.

Among non-food articles fuel and light accounted for 6 per cent in Border area, 5 per cent in Project area, and 5 per cent in General area. Khasis are heavy chewers of betelnut and this accounted for 5 per cent of total annual expenditure in border area, 4 per cent in Project area and about 3 per cent in General area while tobacco and tea in tea-stall accounted for about 5 per cent, 4 per cent and 4 per cent respectively of the total annual expenditure in the three areas. Expenditure on liquor

I. Introductory Remarks

601
0114

Professor K. P. CHATTOPADHYAY (Calcutta University) published in 1941 an analysis of Khasi kinship terms [1] based on eight genealogies which he collected in the Mawphlang area, about sixteen miles south-west of Shillong [2]. He discussed in this paper a previous publication by Professor HODSON [3] where special features of certain Khasi kinship terms are held to prove the pre-existence of a dual system in a one-time Khasi social order and he quotes also the late RAI BAHADUR S. C. ROY's work on Khasi kinship [4] and lists of Assamese relationship terms, contained in "Census of India Reports" [5] and Khasi terms in U NISSOR SINGH's "Khasi-English Dictionary" [6], P. R. T. GURDON's monograph on the Khasi [7] and in SIR KEITH CANTLIE's "Notes on Khasi Law" [8]. Discussing these previously published papers, CHATTOPADHYAY arrives at the conclusion that HODSON's hypothesis of a dual organization in a hypothetical former Khasi society was not justified [9].

question and indeed has been compiled without knowledge of Professor CHATTOPADHYAY's work, and before he very kindly sent a private copy of this work, which had not been available to me previously. 601 122 128

The present paper offers data on the following subjects:

1. Khasi kinship terms from the Mawshai Khasi plateau-area in the Khyrim State, about 20 to 30 miles south-east of Shillong, which are in some minor details different from the Mawphlang data, collected by CHATTOPADHYAY, south-west of Shillong; 601 101 128
2. Comparative data from the Wár-Khasi;
3. from the plateau-area of Jowai in the Jaintia [10] Hills, and
4. from the Wár-Jaintia;
5. Aspects of the Khasi kinship terms, with special reference to the matrilineal order of society, and to the respective position of women and men there, especially the particular consideration which the biological relationship through the father receives in kinship terminology, in spite of the emphasis on the matrilineal structure in Khasi society (comp. term No. 1 of the list and its discussion in para 3/*b* of the present paper, on p. 408).

The data were collected in field researches to which I was enabled by two Research Grants for comparative studies in matrilineal civilizations of India, given by the Viking Fund Inc. (now: Wenner-Gren Foundation for Anthropological Research) in New York, during the periods 1949-50 and 1951-52. My gratefulness to the foundation for enabling me to carry out these field researches, as well as to the University of Madras, for granting me Sabbathical leaves for the same purpose, is here once more recorded. 122 [114]

My research programme was based on the first tentative working hypothesis, laid down in my book "Mother-right in India" [11], but includes also various other aspects of study which have not been pre-planned, or even considered there [12], as for instance also the present comparative study of kinship terms in areas of four Khasi dialects and their special significance to the Khasi matrilineal social system. The material was collected during a five weeks house-to-house study in the recently founded Plateau Khasi village Maw Syn Jri, during April and May 1950. This village consisted mostly of houses, owned by Khasi elder sisters and inhabited by them, with their families, after they had left the ancestral home in the main village Kharang, about one mile across the valley on the western side of the new settlement. The ancestral family houses there were in the possession of either the mother, or, if she was no more alive, the youngest daughter of the family, the *ka khun khaddu* [13]. 121 114 101 621 [601]

[10] Jaintia, (Pnár or "Synteng") are the Khasi speaking eastern neighbours of the Khasi proper. As among the Khasi, so also among Jaintia the people in the cool plateau highlands are in many ways different from those who settled in the luscious tropical rainforests of the southern slopes, now situated just north of the East Pakistan frontier: — the so-called Wár-country, where economy is mainly based on pan-leaf gardening.

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

105 It will here be recalled that the Khasi are a matrilineal agricultural
[175] people, pre-litterate until the advent of the British in the sixth decade of
[197] the 19th century, organized under democratically ruling *siem*, or Khasi
144 princes and chieftains and speaking an Austro-Asiatic language [14]. Their physical affinities are unmistakably mongoloid and quite distinct from the Assamese speaking plains-Indians, — but not from the other mountaineers of Assam, Nepal and even Burmah or China, with whom they feel to be more closely related, as with the Indian plainspeople, as some of the tribal designations in the following lists of terms for Non-Khasi testifies (comp. No. 41 as against No. 42, 43 and 43/*a-e*).

114 In the collection of the material, I was hampered by my inability to
122 pick up the Khasi language sufficiently quickly, for conversation without the help of an interpreter, but on the other hand greatly eased by generous and voluntary assistance on the part of several Khasi friends, especially U Ekiman Singh, the President, Unitarian Union, Khasi- and Jaintai Hills and his (Khasi) wife, Ka Austria [15], who offered me hospitality in their house at Maw Syn Jri, during my stay there. Dr. H. LYNGDOH, Shillong, the author of detailed accounts on Khasi religious ceremonial and institutions [16], U Jeeban Roy, a leading Pnár gentleman of Jowei in the Jaintia Hills, Ka Ellen Giri, Principal, Govt. Basic Education Training Centre, Malki, Shillong, Ka Kongmen, Shillong, and U David Roy, Prime Minister (retd.), and a number of hospitable Wár Khasi and Wár-Jaintia pan-leaf cultivators in the southern slopes of the Khasi- and Jaintia Hills, especially from the villages Mawlat and Padu, also helped me greatly in my task. My thanks are due to all of them.

101 The data, submitted and briefly described in this paper were thus
114 collected in four different areas.

1. The South-eastern corner of the Khasi-Hills (plateau-area),
2. the southern slopes of the Khasi Hills, the "Wár-Khasi country" between the Khasi plateau proper and the northern boundary of East Pakistan,
3. the central plateau of the Jaintia Hills, round its capital market Jowei, and
4. the southern slopes of the Jaintia Hills, the "Wár-Jaintia country" between these and a section of the northern boundary of East Pakistan, further to the East than area 2.

197 Slightly different Khasi dialects are spoken in these four regions, Jaintia (Pnár or "Synteng") and Wár-Jaintia being more akin to each other, similarly as Plateau-Khasi and Wár-Khasi are.

101 The Pnár or Jaintias ("Synteng" is a slightly opprobious designation,
175 used by the Plateau-Khasi for these, their eastern neighbours) look back

[14] SCHMIDT (1906).

[553] [15] So named, because Austria was much in the news at the time of her birth, during the first world war; — a fact which illustrates the Khasi peculiarity to use either ad hoc inventions as names for children, or to adopt such, from the Khasi point of view, outlandish words like: "Ka Austria" or "Ka Mediterranean Sea" as names for their children.

[16] LYNGDOH (1937).

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

III. Explanations

1. General

124 Most of my informants were illiterate. The spelling of the terms was
128 checked and corrected by my English-speaking and writing Khasi- and
601 Pnár- friends, mentioned in para one, to whom thanks are being here once more expressed. All responsibility for spelling mistakes, however, which may have slipped into this list has of course to be borne by me.

Blanks (—) or question marks (?) in one of the columns do not necessarily mean that there is no word used, by the respective group, for the particular term. They more often indicate that my informants did not use, or know, the particular term, or that I failed to enquire about it in a
[114] manner sufficiently clear to my informants. This is particularly true of general terms, partly or fully corresponding to English general terms, such as parents or grand-parents, or the terms No. 9/*a* and *b*, 13, 15/*a*, 19-21, and 26, which were partly explained to me, by Khasi friends in Shillong, where I stayed some time after completion of field-work during the rainy season. Hence I could no more return for verification to the little accessible Wár-villages in the steep southern slopes. Although I am planning to utilise a future opportunity for such checking up, I am yet publishing the present results in the hope that they may thus become accessible to field-workers among other S. E.-Asiatic, and especially Austro-Asiatic speaking peoples.

193 All terms which are equal for both sexes (cf. Nos. 10, 11, 18, 19, etc.)
601 are used with *ka* and *u* respectively. These sexdetermining preposed articles,
128 as also the honorific *i* are specially mentioned in the list, only if this is essential for the understanding of the respective terms as in Nos. 3-5, 7, 8, or 10.

2. Special

601 Term No. 1 — to give birth or beget (*kha*) signifies also relatives on the paternal side as in *para kha* (paternal cousins No. 9/*c*), in contradistinction to *para kur*, 9/*b*, (lit.: cousins of the clan), i. e. maternal cousins, since the clan is a matrilineal unit. This usage of the word *kha* appears also
[842] significantly in the terms 15/*a*, 17, 18/*b*, 20, 22, 32 and, as an integral part of the Khasi kinship terminology, renders it highly improbable that the Khasi matrilineal system could lave originated in ignorance of the biological function of the father. It is a significant feature in the matrilineal social system.

The terms 3 to 3/*b* refer to unmarried but biologically marriageable youths.
[881] It will be noted that there are (and were in 1914) no indications of puberty-
[584] rites for either girls or boys. There is also no child-marriage among Khasi. The use of special terms for mature, unmarried youths is therefore significant.

Term 6 — *i* as honorific article, is at the same time indicative of
[428] diminution [23], which is remarkable for two reasons: (firstly) the diminution is used for the oldest and most respected family members, like the diminution

[23] NISSOR SINGH (1906), p. 84.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

589 dition that she does not remarry; the idea being that as long as
765 the bones remain in the widow's keeping, the spirit of her husband is still with her. On this account many wives who revere their husband's memories, and who do not contemplate
587 remarriage, purposely keep the bones for a long time. If a
765 widow marries, even after the customary taboo period of one year, whilst her deceased husband's bones are still in her keeping,
[346] she is generally looked down upon. Her children in such a case perform the ceremony of handing over the bones of their father to his clan in a building specially erected for the purpose. The widow cannot enter therein, or even go near it, whilst the ceremony is proceeding, no matter whether the *jing sang*, or the price for removing the taboo after a husband's death, has been
595 paid to the husband's clan or not. There is no evidence to show that polyandry ever existed amongst the Khasis. Unlike the Thibetans, the Khasi women seem to have contented themselves always with one husband, at any rate with one at a time. Certainly at the present day they are monandrists. Polygamy does not exist amongst the Khasis; such a practice would naturally not be in vogue amongst a people who observe the matriarchate. There are instances, however, of men having wives other than those they have regularly married, and in the War country children by such wives enjoy rights to their father's acquired property equally with the children by the legally
582 married wife. As the clans are strictly exogamous, a Khasi
688 cannot take a wife from his own clan; to do this would entail
764 the most disastrous religious, as well as social consequences. For to marry within the clan is the greatest sin a Khasi can commit, and would cause excommunication by his kinsfolk and the refusal of funeral ceremonies at death, and his bones would
[115] not be allowed a resting-place in the sepulchre of the clan. To
614 give a list of all the Khasi exogamous clans would perhaps serve no useful purpose, but I have prepared from information, kindly
582 furnished me by the Siems of Khyrim and Cherrapunji, a list of the clans in those States which will be found in Appendices A and B. These will suffice as examples. It will be seen from the Cherra list that the different divisions of the Diengdoh clan, viz. Lalu, Diengdoh-bah, Diengdoh-kylla, are prohibited from intermarriage; this is due to those branches of the clan being

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

787 even if *i* lies with its outside downwards. If, however, *j* lies with its outside downwards, this is not a good sign.

3. If there are a number of pieces of egg-shell lying in a line, as at *k*, this is an evil prognostic, the line of shell fragments indicating the road to the funeral pyre. Such a line of shell fragments is called *ki'leng rah thang*. This sign is a harbinger of death.

4. If all the fragments of shell on both sides of the board, excepting the boat, lie with their insides downwards, the question asked by the egg-breaker is not answered. If *a* or *l* fall with their outsides downwards, this is a bad sign.

5. If the portion of a shell at *f* falls with the outside downwards, this indicates that some god needs appeasing by sacrifice.

6. If there are a number of small fragments lying around the boat, as in the diagram, these mean that there are many reasons for the illness, which cannot be ascertained.

7. If the portion of shell marked *s* is detached from the boat, this indicates that the goddess is very angry.

8. If four fragments lie around the boat so as to form a square, as *c*, *e*, *h*, *j*, these mean that the patient is at the point of death. These are called *ki leng sher thang*.

8. If there are no fragments, as at *d*, *e*, *f*, *g*, *h*, *i*, it is a puzzle. *ka leng kymtip*.

[115] *Note*.—The above information was obtained from U Sarup Singh, of Mairong; U Thum, of Laitlyngkot, and U Bud, of Jowai. Different egg-breakers have somewhat different methods of reading the signs, but the main points are usually the same.

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

nounce the hard G; and in all words of Hindustani origin this letter has the sound of K. 101 [197]

They are called by the tribes of Kúkis and Nágás on the west "Káro", the name they themselves have for the whole mass of hill people on their western side, the Gāros, though as we pass towards their confines, we find the names of local clans giving way to this general term which was not known to some of the villagers of West Nongstoin, who call the Gāros "Dékor."

The Gāro appellation for the Khāsis is "Dikkil" or "Digil"; and it was very interesting to find, after visiting the villages of both, that they mutually fear each other, and consequently border raids never occur. The Gāros owned that they feared the bow and arrow of their neighbour, a weapon they themselves are unacquainted with the use of.

The Khāsis always point to the east as the quarter from which they emigrated, but there is very little, if any, similarity with the languages of the people now occupying the hills on that side. [173] [197]

Before entering further on the subject matter of this paper, I must request my hearers or readers to remember that having no knowledge colloquially of the Khasi language, the information I give was obtained from natives who understood either English or Hindustani well. The greater part of the information was given me by a very intelligent man, a native inspector of schools in the district; thus I hope that all errors that exist may be hereafter corrected by others who have been able to elucidate with greater exactness the meaning of their many different rites and superstitions. 115 ●

Certainly the most striking objects of interest in the Khāsi Hills are the upright stone monuments that are to be seen all over the country; these, set up by the wayside, or in the villages, more frequently cutting the sky on prominent hills, with the large slabs horizontally set before them, at once recall the Druidical remains of our own island, northern France, etc., and lead one to marvel at the similarity of the custom, and to inquire its origin and design. Many who visit those hills take it at once for granted that they are the graves of illustrious men, or, after a vain endeavour to get some information from the coolies about them, let the matter rest, or finally believe that the ashes of the dead, to whose memory the monoliths are erected, are buried under the flat kind of altar or dolmen seen in front. 764 211

It is always a very difficult matter to obtain information from semi-civilised people on such a subject as their religious rites, especially if the inquirer is ignorant of their language. A slight knowledge of Hindustani on the part of the Khāsia villager, renders the attempt still more hopeless, and the information given quite erroneous.

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

on a historical past, different from that of the Khasi proper, the former having been ruled by the powerful, but somewhat Hinduised dynasty of the Jaintia Rajas until the Jaintia Wars of the British; the latter by small independent chiefs. Yet Jaintia social organization appears on the whole to preserve the matrilineal social structure clearer and to be less influenced by plains-acculturation, than that of the Khasi, though a few features of Brahmanical religious observances and also some traces of racial admixture are found in the immediate vicinity of Jowei, the former summer residence of the Jaintia Rajas. Stronger no doubt, than this influence, was that exercised by the British and non-Assamese Indians in the provincial capital Shillong since 1866. Methods of agriculture and other aspects of material civilization differ but little in the Jaintia- and Khasi plateau-areas.

The same cannot be said of both: the Wár-Khasi and Wár-Jaintias. Linguistically their affiliations are with the Khasi or Jaintias respectively, in the plateau-areas. Economically, however, both Wár-groups form a separate pan-leaf cultivating unit in the little accessible steep southern slopes of the Khasi- and Jaintia Hill massif. Both Wár-groups live in the environment of luscious tropical flora and fauna, sharply differentiated from the cool, barren plateau with its perennial winds and the heroic, if solitary beauty of its highland heaths, which forms the background of both the Khasi- and Jaintia plateau-groups.

The age of the Wár-Khasi and -Jaintias, as one independent economic, — and two half-independent dialectical linguistic entities, is an intricate problem. The two Wár-groups subsist on pan-leaf cultivation as a money crop, grown in the thick tree-gardens as creepers; not on food-cultivation, as do the plateau-groups, because there is insufficient space on the steep slopes, for vegetable gardens or -fields. The pan-leaf cultivators therefore depend on food, purchased from outside. The slopes seem to have been uninhabited until not long ago. Yet pan-leaf chewing is such an integral part of Khasi life, that until quite recently, and occasionally even now, a distance between two places is not measured by the number of hours used for walking, but by the number of betelnut- and pan-leaf packages, consumed on the way. Also the common benediction among Khasi expresses the wish that so and so may eat pan in the Garden of God. Yet pan-cultivation and the settlements of the Wár-people as pan-leaf cultivators in the southern slopes seem comparatively young. Pan-cultivation on the plateau is impracticable. It is therefore possible that pan was for a long time only a much valued import article from the plains, bartered against Khasi ore and iron tools, though it is now an export article from the Wár-country, brought to the markets of the plains, by both Wár-Khasi and Wár-Jaintia women and men.

According to a tradition, across which I came among the Nonglamin clan of the Nongmuker village, the ancestors of the present Wár people were on the plateau at a time when no pan-cultivation was going on in the slopes and none of the present big estates of pan-tree gardens was yet held by their present (Wár-) owners. A not distant ancestor of a Nonglamin clan-member who about two or three generations ago told the story to U Siang (one of

21: Ehrenfels E-4,5 (1950) 1953 AR7 Khasi AR7

249 173 [115] my informants at Padu), in the year 1933, is said to have begun the cultivation of yam (*shniw*) and millets (*knei*) in the then uncultivated slopes. He and his people used to be, on this account, ridiculed as monkeys (*shrieh*). The Nonglamin clan took later to pan-leaf-, and arecanut-cultivation and became one of the richest landowners of the Wár-country. Others followed and imitated them. This clan (*kur*) is now residing at Nongtalang, about ten miles east of Padu in the Wár-Jaintia slopes.

174 184 601 This possibility of a comparatively recent origin of the now economically independent Wár-groups among the Khasi speaking peoples is of importance to the question of some different terms in kinship terminology which the following lists will show.

184 601 Comments on other features in the relationship terminology, bearing on sociological or historical problems of either among the four Khasi speaking groups under discussion, are being hinted at in the text of the lists itself and further discussed in Part Three of the present paper, following the lists of kinship terms.

[Box 1-3 Contains Pre-Archival Material]

PREFACE.

121 This book is an attempt to give a systematic account of the Khasi people, their manners and customs, their ethnological affinities, their laws and institutions, their religious beliefs, their folk-lore, their theories as to their origin, and their language.

114 This account would perhaps have assumed a more
128 elaborate and ambitious form were it not that the author has been able to give to it only the scanty leisure of a busy district officer. He has been somewhat hampered by the fact that his work forms part of a series of official publications issued at the expense of the Government of Eastern Bengal and Assam, and that it had to be completed within a prescribed period of time.

000 The author gladly takes this opportunity to record his grateful thanks to many kind friends who have helped him either with actual contributions to his material, or with not less valued suggestions and criticisms. The arrangement of the subjects discussed is due to Sir Bampfylde Fuller, lately Lieutenant-Governor of the Province, whose kindly interest in the Khasis will long be remembered by them with affectionate gratitude. The Introduction is from the accomplished pen of Sir Charles Lyall, to whom the author is also indebted for much other help and encou-

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

ragement. It is now many years since Sir Charles Lyall served in Assam, but his continued regard for the Khasi people bears eloquent testimony to the attractiveness of their character, and to the charm which the homely beauty of their native hills exercises over the minds of all who have had the good fortune to know them.

To Mr. N. L. Hallward thanks are due for the revision of the proof sheets, and to the Revd. H. P. Knapton for the large share he took in the preparation of the index. The section dealing with folk-lore could hardly have been written but for the generosity of the Revd. Doctor Roberts, of the Welsh Calvinistic Mission in the Khasi and Jaintia Hills, in placing at the author's disposal his collection of the legends current among the people. Many others have helped, but the following names may be specially mentioned, viz.: Mr. J. H. Shadwell, Mr. S. E. Rita, the Revd. C. H. Jenkins, Mr. C. Shadwell, Mr. Dohory Ropmay, U Hormu Roy Diengdoh, U Rai Mohan Diengdoh, U Job Solomon, U Suttra Singh Bordoloi, U San Mawthoh, U Hajam Kishore Singh, U Nissor Singh, and U Sabor Roy.

A bibliography of the Khasis, which the author has attempted to make as complete as possible, has been added. The coloured plates, with one exception, viz., that taken from a sketch by the late Colonel Woodthorpe, have been reproduced from the pictures of Miss Eirene Scott-O'Connor (Mrs. Philip Rogers). The reproductions are the work of Messrs. W. Griggand Sons, as are also the monochromes from photographs by Mrs. Muriel, Messrs. Ghosal Brothers, and

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

the author. Lastly, the author wishes to express his thanks to Srijut Jagat Chandra Goswami, his painstaking assistant, for his care in arranging the author's somewhat voluminous records, and for his work generally in connection with this monograph.

[P. XIV is blank]

INTRODUCTION.

121 In 1903 Sir Bampfylde Fuller, then Chief Commissioner
122 of Assam, proposed, and the Government of India sanctioned, the preparation of a series of monographs on the more important tribes and castes of the Province, of which this volume is the first. They were to be undertaken by writers who had had special and intimate experience of the races to be described, the accounts of earlier observers being at the same time studied and incorporated; a uniform scheme of treatment was laid down which was to be adhered to in each monograph, and certain limits of size were prescribed.

114 Major Gurdon, the author of the following pages, who is also, as Superintendent of Ethnography in Assam, editor of the whole series, has enjoyed a long and close acquaintance with the Khasi race, whose institutions he has here undertaken to describe. Thoroughly familiar with their language, he has for three years been in charge as Deputy-Commissioner of the district where they dwell, continually moving among them, and visiting every part of the beautiful region which is called
643 by their name. The administration of the Khasi and
101 Jaintia Hills is an exceptionally interesting field of official responsibility. About half of the district, including the country around the capital, Shillong, is outside the limits of British India, consisting of a collection of small states in political relations, regulated by treaty, with the Government of India, which enjoy

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

643 almost complete autonomy in the management of their
101 local affairs. In the remainder, called the Jaintia Hills, which became British in 1835, it has been the wise policy of the Government to maintain the indigenous system of administration through officers named *dolois*, who preside over large areas of country with very little interference. All the British portion of the hills is what is called a "Scheduled District" under Acts XIV and XV of 1874, and legislation which may be inappropriate to the conditions of the people can be, and is, excluded from operation within it. In these circumstances the administration is carried on in a manner well calculated to win the confidence and attachment of the people, who have to bear few of the burdens which press upon the population elsewhere, and, with the peace and protection guaranteed by British rule, are able to develop their institutions upon indigenous lines. It is now more than forty years since any military operations have been necessary within the hills, and the advance of the district in prosperity and civilization during the last half-century has been very striking.

177 The first contact between the British and the
648 inhabitants of the Khasi Hills followed upon the
175 acquisition by the East India Company, in consequence of the grant of the *Dīwānī* of Bengal in 1765, of the district of Sylhet. The Khasis were our neighbours on the north of that district, and to the north-east was the State of Jaintia,* ruled over by a chief of Khasi lineage, whose capital, Jaintiapur, was situated in the plain between the Surma river and the hills. Along this frontier the Khasis, though not averse from trade, and in possession of the quarries which furnished the chief

113 * The previous history of the Khasi State of Jaintia, so far as it can be traced, will be found related in Mr. E. A. Gait's *History of Assam* (1906), pp. 253-262.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

supply of lime to deltaic Bengal, were also known as 177 troublesome marauders, whose raids were a terror to the 648 inhabitants of the plains. Captain R. B. Pemberton, 175 in his Report on the Eastern Frontier (1835), mentions* an attack on Jaintia by a force under Major Henniker in 1774, supposed to have been made in retaliation for aggression by the Raja in Sylhet; and Robert Lindsay, [113] who was Resident and Collector of Sylhet about 1778, has an interesting account of the hill tribes and the Raja of Jaintia in the lively narrative embodied in the "Lives of the Lindsays." † Lindsay, who made a large fortune by working the lime quarries and thus converting into cash the millions of cowries in which the land-revenue of Sylhet was paid, appears to have imagined that the Khasis, whom he calls "a tribe of independent Tartars," were in direct relations with China, and imported thence the silk cloths ‡ which they brought down for sale in the Sylhet markets. A line of forts was established along the foot of the hills to hold the mountaineers in check, and a Regulation, No. 1 of 1799, was passed declaring freedom of trade between them and Sylhet, but prohibiting the supply to them of arms and ammunition, and forbidding any one to pass the Company's frontier towards the hills with arms in his hands.

The outbreak of the first Burma War, in 1824, brought us into closer relations with the Raja of Jaintia, and in April of that year Mr. David Scott, the Governor-General's Agent on the frontier, marched through his territory from Sylhet to Assam, emerging at Raha on the Kalang river, in what is now the Nowgong district. This was the first occasion on which

* P. 211. † Vol. iii., p. 163, 177, &c.

‡ These cloths, which Lindsay calls "*moongadutties*," were really the produce of Assam, and were *dhutis* or waist-cloths of *muga* silk.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

177 Europeans had entered the hill territory of the Khasi
648 tribes, and the account of the march, quoted in
175 Pemberton's Report,* is the earliest authentic information which we possess of the institutions of the Khasi race. Dr. Buchanan-Hamilton, who spent several years at the beginning of the 19th Century in collecting information regarding the people of Eastern India, during which he lived for some time at Goalpara in the Brahmaputra Valley, confused the Khasis with the
[101] Garos, and his descriptions apply only to the latter people. The name Garo, however, is still used by the inhabitants of Kamrup in speaking of their Khasi neighbours to the South, and Hamilton only followed the local usage. In 1826 Mr. David Scott, after the expulsion of the Burmese from Assam and the occupation of that province by the Company, entered the Khasi Hills in order to negotiate for the construction of a road through the territory of the Khasi *Siem* or Chief of Nongkhlāw, which should unite Sylhet with Gauhati. A treaty was concluded with the chief, and the construction of the road began. At Cherrapunji Mr. Scott built for himself a house on the plateau which, two years later, was acquired from the Siem by exchange for land in the plains, as the site of a sanitarium.† Everything seemed to promise well, when the peace was suddenly broken by an attack made, in April 1829, by the people of Nongkhlāw on the survey party engaged in laying out the road, resulting in the massacre of two British officers and between fifty and sixty natives. This led to a general confederacy of

* Pp. 218-220. It appears from p. 219 that Mr. Scott's report is responsible for the erroneous statement (often repeated) that the mountaineers "called by us Cossyahs, denominate themselves Khyee." This second name is in fact the pronunciation current in Sylhet of the word *Khāsi*, *h* being substituted for *s*, and should be written *Khāhi*.

† In Mr. Scott's time it was usual to speak of such a place as a "Sanatary."

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

most of the neighbouring chiefs to resist the British, and a long and harassing war, which was not brought to a close till 1833. Cherrapunji then became the head-quarters of the Sylhet Light Infantry, whose commandant was placed in political charge of the district, including the former dominions in the hills of the Raja of Jaintia, which he voluntarily relinquished in 1835 on the confiscation of his territory in the plains.

Cherrapunji, celebrated as the place which has the greatest measured rainfall on the globe, became a popular station, and the discovery of coal there, and at several other places in the hills, attracted to it many visitors, some of whom published accounts of the country and people. The first detailed description was apparently that of the Rev. W. Lish, a Baptist missionary, which appeared in a missionary journal in 1838. In 1840 Capt. Fisher, an officer of the Survey Department, published in the Journal of the Asiatic Society of Bengal * an account which showed that the leading characteristics of the Khasi race had already been apprehended: he mentions the prevalence of matriarchy or mother-kinship, notes the absence of polyandry, except in so far as its place was taken by facile divorce, describes the religion as a worship of gods of valleys and hills, draws attention to the system of augury used to ascertain the will of the gods, and gives an account of the remarkable megalithic monuments which everywhere stud the higher plateaus. He also recognizes the fact that the Khasis as a race are totally distinct from the neighbouring hill tribes. In 1841 Mr. W. Robinson, Inspector of Schools in Assam, included an account of the Khasis in a volume on that province which was printed at Calcutta. In 1844 Lieut.

* Vol. ix., pp. 833 sqq.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

114 Yule (afterwards Sir Henry Yule) published in the Journal of the Bengal Asiatic Society * a much more detailed description of the hills and their inhabitants than had been given by Fisher. This formed the basis of many subsequent descriptions, the best known of which is the attractive account contained in the second volume of Sir Joseph Hooker's *Himalayan Journals* † published in London in 1854. Sir Joseph visited Cherrapunji in June 1850, and stayed in the hills until the middle of the following November.

797 Meanwhile the Welsh Calvinistic Methodist Mission,
177 originally located at Sylhet, had extended their
175 operations to Cherrapunji, and in 1842 established a branch there. They applied themselves to the study of the Khasi language, for which, after a trial of the Bengali, they resolved to adopt the Roman character. Their system of expressing the sounds of Khasi has since that time continued in use, and after sixty years' prescription it would be difficult to make a change. Their Welsh nationality led them to use the vowel *y* for the obscure sound represented elsewhere in India by a short *a* (the *u* in the English *but*), and for the consonantal *y* to substitute the vowel *i*: *w* is also used as a vowel, but only in diphthongs (*āw*, *ew*, *iw*, *ow*); in other respects the system agrees fairly well with
114 the standard adopted elsewhere. Primers for the study of the language were printed at Calcutta in 1846 and 1852, and in 1855 appeared the excellent "Introduction to the Khasia language, comprising a grammar, selections for reading, and a Khasi-English vocabulary," of the Rev. W. Pryse. There now exists a somewhat extensive literature in Khasi, both religious and secular. An exhaustive grammar, by the Rev. H. Roberts, was

* Vol. xiii., pp. 612 sqq.

† Pp. 272 sqq.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

published in Trübner's series of "Simplified Grammars" 114 in 1891, and there are dictionaries, English-Khasi (1875) and Khasi-English (1906), besides many other aids to the study of the language which need not be mentioned here. It is recognized by the Calcutta University as sufficiently cultivated to be offered for the examinations of that body. Two monthly periodicals are published in it at Shillong, to which place the headquarters of the district were removed from Cherrapunji in 1864, and which has been the permanent seat of the Assam Government since the Province was separated from Bengal in 1874.

The isolation of the Khasi race, in the midst of a great encircling population all of whom belong to the Tibeto-Burman stock, and the remarkable features presented by their language and institutions, soon attracted the attention of comparative philologists and ethnologists. An account of their researches will be found in Dr. Grierson's *Linguistic Survey of India*, vol. ii. Here it will be sufficient to mention the im- 114 portant work of Mr. J. R. Logan, who, in a series of 144 papers published at Singapore between 1850 and 1857 in the *Journal of the Indian Archipelago* (of which he was the editor), demonstrated the relationship which exists between the Khasis and certain peoples of Further India, the chief representatives of whom are the Mōns or Talaings of Pegu and Tenasserim, the Khmērs of Cambodia, and the majority of the inhabitants of Annam. He was even able, through the means of vocabularies furnished to him by the late Bishop Bigandet, to discover the nearest kinsmen of the Khasis in the Palaungs, a tribe inhabiting one of the Shan States to the north-east of Mandalay on the middle Salween. With the progress of research it became apparent that the Mōn-Khmēr group of Indo-

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

114 China thus constituted, to which the Khasis belong, was
144 in some way connected with the large linguistic family in the Indian Peninsula once called Kolarian, but now more generally known as *Mundā*, who inhabit the hilly region of Chutia Nagpur and parts of the Satpura range in the Central Provinces. Of these tribes the principal are the Santhāls, the Mundās, and the Korkus. In physical characters they differ greatly from the Indo-Chinese Khasis, but the points of resemblance in their languages and in some of their institutions cannot be denied; and the exact nature of the relation between them is as yet one of the unsolved problems of ethnology.

114 The work of Logan was carried further by Prof.
197 Ernst Kuhn, of Munich, who in 1883 and 1889 published important contributions to our knowledge of the languages and peoples of Further India. More recently our acquaintance with the phonology of Khasi and its relatives has been still further advanced by the labours of Pater W. Schmidt, of Vienna, whose latest work, *Die Mon-Khmer Völker, ein Bindeglied zwischen Völkern Zentralasiens und Austronesiens* (Braunschweig, 1906), has established the relationship of Khasi not only to the Mōn-Khmēr languages, but also to Nicobarese and several dialects spoken by wild tribes in the Malay Peninsula.

There still remains much to be done before the speech of the Khasi nation can be considered to have been thoroughly investigated. In the *Linguistic Survey* four dialects are dealt with, the standard literary form, founded on the language of Cherrapunji, the *Pnār* or *Synteng*, of Jowai, the *Wār*, spoken in the valleys on the southern face of the hills, and the *Lyngngām*, spoken in the tract adjacent to the Garos on the west. Major Gurdon (p. 203) mentions a fifth, that of Jirang

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

or Mynnār, spoken in the extreme north, and there may be others. A great desideratum for linguistic purposes is a more adequate method of recording sounds, and especially differences of tone, than that adopted for the standard speech, which though sufficient for practical purposes, does not accurately represent either the quantity or the quality of the vowels, and leaves something to be desired as regards the consonants (especially those only faintly sounded or suppressed). These things, no doubt, will come in time. The immense advance which has been made in education by the Khasis during the last half-century has enabled some among them to appreciate the interesting field for exploration and study which their own country and people afford; and there is reason to hope that with European guidance the work of record will progress by the agency of indigenous students.

It remains to summarize briefly the principal distinctive features of this vigorous and sturdy race, who have preserved their independence and their ancestral institutions through many centuries in the face of the attractions offered by the alien forms of culture around them.

In the first place, their social organization presents one of the most perfect examples still surviving of matriarchal institutions, carried out with a logic and thoroughness which, to those accustomed to regard the status and authority of the father as the foundation of society, are exceedingly remarkable. Not only is the mother the head and source, and only bond of union, of the family: in the most primitive part of the hills, the Synteng country, she is the only owner of real property, and through her alone is inheritance transmitted. The father has no kinship with his children, who belong to their mother's clan; what he earns goes

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

614 to his own matriarchal stock, and at his death his bones
764 are deposited in the cromlech of his mother's kin. In
Jowai he neither lives nor eats in his wife's house, but
[591] visits it only after dark (p. 76). In the veneration of
ancestors, which is the foundation of the tribal piety,
769 the primal ancestress (*Ka Iāwbei*) and her brother are
211 the only persons regarded. The flat memorial stones
set up to perpetuate the memory of the dead are called
after the woman who represents the clan (*māw kynthei*,
p. 150), and the standing stones ranged behind them
are dedicated to the male kinsmen on the mother's
side.

776 In harmony with this scheme of ancestor worship,
the other spirits to whom propitiation is offered are
mainly female, though here male personages also figure
(pp. 106—109). The powers of sickness and death are
all female, and these are those most frequently wor-
shipped (p. 107). The two protectors of the household
are goddesses (p. 112), though with them is also revered
the first father of the clan, *U Thāwlang*.

793 Priestesses assist at all sacrifices, and the male
643 officiants are only their deputies (p. 121); in one
important state, Khyrim, the High Priestess and actual
head of the State is a woman, who combines in her
person sacerdotal and regal functions (p. 70).

193 The Khasi language, so far as known, is the only
member of the Mōn-Khmēr family which possesses
a grammatical gender, distinguishing all nouns as
masculine and feminine; and here also the feminine
nouns immensely preponderate (p. 206). The pronouns
of the second (*mē*, *phā*) and third person (*ū*, *kā*) have
separate forms for the sexes in the singular, but in the
plural only one is used (*phī*, *kī*), and this is the plural
form of the feminine singular.

000 It may perhaps be ascribed to the pre-eminence

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

It may perhaps be ascribed to the pre-eminence
accorded by the Khasis to the female sex that successive 162
censuses have shown that the women of this race
considerably exceed the men in number. According
to the census of 1901, there are 1,118 females to every
1,000 male Khasis. This excess, however, is surpassed
by that of the Lushais, 1,191 to 1,000, and it may
possibly be due to the greater risks to life encountered
by the men, who venture far into the plains as traders
and porters, while the women stay at home. Habits of 165
intemperance, which are confined to the male sex, may
also explain a greater mortality among them.

It would be interesting to investigate the effect 161
on reproduction of the system of matriarchy which 163
governs Khasi family life. The increase of the race is
very slow. In the census of 1891 there were enumerated
only 117 children under 5 to every hundred married
women between 15 and 40, and in 1901 this number fell
to 108. It has been suggested that the independence
of the wife, and the facilities which exist for divorce,
lead to restrictions upon child-bearing, and thus keep
the population stationary. The question might with
advantage be examined at the census of 1911.

The next characteristic of the Khasis which marks 787
them out for special notice is their method of divination 782
for ascertaining the causes of misfortune and the
remedies to be applied. All forms of animistic religion
make it their chief business to avert the wrath of the
gods, to which calamities of all kinds—sickness, storm,
murrain, loss of harvest—are ascribed, by some kind of
propitiation; and in this the Khasis are not singular.
But it is somewhat surprising to find among them the 787
identical method of *extispicium* which was in use among 171
the Romans, as well as an analogous development in
the shape of egg-breaking, fully described by Major
Gurdon (p. 221), which seems to have been known to

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

787 diviners in ancient Hellas.* This method has (with
171 much else in Khasi practice) been adopted by the former subjects of the Khasis, the Mikirs; but it does not appear to be prevalent among any other of the animistic tribes within the boundaries of India.

211 The third remarkable feature of Khasi usage is the
171 custom, which prevails to this day, of setting up great
731 memorials of rough stone, of the same style and character as the *menhirs* and *cromlechs* which are found in Western Europe, Northern Africa, and Western Asia. It is very surprising to a visitor, unprepared for the sight by previous information, to find himself on arrival at the plateau in the midst of great groups of standing and table stones exactly like those he may have seen in Brittany, the Channel Islands, the south of England, or the Western Isles. Unfortunately the great earthquake of June 1897 overthrew many of the finest of these megalithic monuments; but several still remain, and of these Major Gurdon has given an excellent description (pp. 144 sqq.), with an explanation of the different forms which they assume and the objects with which they are erected. Other races in India besides the Khasis set up stone memorials; but none, perhaps, to the same extent or with the same systematic purpose and arrangement.

114 In conclusion, I have only to commend this work to the consideration of all interested in the accurate and detailed description of primitive custom. I lived myself for many years among the Khasis, and endeavoured to find out what I could about them; but much of what Major Gurdon records is new to me, though the book generally agrees with what I was able

* Called φασκωνία: one of the lost books of the Orphic cycle was entitled τὰ φασκωνικά.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

to gather of their institutions and characteristics. It is, I think, an excellent example of research, and well fitted to stand at the head of a series which may be expected to make an important contribution to the data of anthropology. 114

C. J. LYALL.

THE KHASIS

SECTION I.

HABITAT.

101 162 The Khasis reside in the Khasi and Jaintia Hills District of Assam. They number 176,614 souls, which total is made up of:—

Khasis	107,[illegible]
Syntengs	47,[illegible]
Christian Khasis	17,[illegible]
Khasis inhabiting other districts	4,[illegible]
	176,614

131 162 563 The Khasi and Jaintia Hills district is situated between 25° 1' and 26° 5' North Latitude, and between 90° 47' and 92° 52' East Longitude. It contains an area of 6,157 square miles, with a total population at the Census of 1901 of 202,250 souls. In addition to the Khasis there are some members of Bodo tribes inhabiting parts of the district.

The Lyngam tribe appears to have been reckoned in 1901 as Khasi, there being no separate record at the last Census of these people.

101 131 [133] 563 The district is split up into two divisions, the Khasi Hills proper and the Jaintia Hills. The Khasi Hills form the western portion of the district and the Jaintia Hills the eastern. The Khasis inhabit the Khasi Hills proper, and the Syntengs, or Pnars, the Jaintia Hills. The latter hills take their name from the Rajas of Jaintia, the former rulers of this part of the country, who had as their capital Jaintiapur, a place situated at the foot of the Jaintia Hills on the southern side, which now falls within the boundaries of the Sylhet

[P.J]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

131 district. The Lyngngam inhabit the western portion of the
131 Khasi Hills proper. A line drawn north and south through
143 the village of Nongtrin may be said to form their eastern boundary, and the Kamrup and Sylhet districts their northern and southern boundaries, respectively. The people known as *Bhoi* in these hills, who are many of them really Mikirs, live in the low hills to the north and north-east of the district, the term "Bhoi" being a territorial name rather than tribal. The eastern boundary of the Lyngngam country may be said to form their north-western boundary. The Wirs inhabit the precipitous slopes and deep valleys to the south of the district. Their country extends along the entire southern boundary of the district to the Jadukata, or Kometi-ong, river where the Lyngngam territory may be said to commence towards the north. There are some Hadem colonies in the extreme eastern portions of the Jaintia Hills. It is these colonies which are sometimes referred to by other writers as "Kuki Colonies." They are settlers from the North Cachar Sub-division of the Cachar district within recent years. It is possible that the title Hadem may have some connection with *Hidimba*, the ancient name for the North Cachar Hills.

APPEARANCE.

142 The colour of the Khasi skin may be described as being usually brown, varying from dark to a light yellowish brown, according to locality. The complexion of the people who inhabit the uplands is of a somewhat lighter shade, and many of the women, especially those who live at Nongkrem, Laitlyngkot, Mawphlang, and other villages of the surrounding high plateaux, possess that pretty gipsy complexion that is seen in the South of Europe amongst the peasants. The people of Cherrapunji village are specially fair. The Syntengs of the Jaintia Hills are darker than the Khasi uplanders. The Wirs who live in the low valleys are frequently more swarthy than the Khasis. The Bhois have the sickly-looking yellow skin of the Mikirs, and the Lyngngam are darker than the Khasis. The Lyngngam are probably the darkest complexioned people in the

142 hills, and if one met them in the plains one would not be able to distinguish them from the ordinary Kachari or Rabha. The nose in the Khasi is somewhat depressed, the nostrils being often large and prominent. The forehead is broad and the 141 space between the eyes is often considerable. The skull may be said to be almost brachy-cephalic, the average cephalic index of 77 Khasi subjects, measured by Col. Waddell and Major Hare, I.M.S., being as high as 77·3 and 77·9, respectively. According to these data the Khasis are more brachy-cephalic than the Aryans, whose measurements appear in Crooke's tables, more brachy-cephalic than the 100 Mundas whose measurements appear in Risley's tables, more brachy-cephalic than the Dravidians, but less brachy-cephalic than the Burmans, whose measurements also appear in Crooke's tables. It would be interesting to compare some head measurements of Khasis with Japanese, but unfortunately the necessary data are not available in the case of the latter people. The Khasi head 142 may be styled sub-brachy-cephalic. Eyes are of medium size, in colour black or brown. In the Jaintia Hills hazel eyes are not uncommon, especially amongst females. Eyelids are somewhat obliquely set, but not so acutely as in the Chinese and some other Mongols. Jaws frequently are prognathous, mouth large, with sometimes rather thick lips. Hair black, straight, and 302 worn long, the hair of people who adopt the old style being caught up in a knot at the back. Some males cut the hair short with the exception of a single lock at the back, which is called *u niuhtrong* or *u niuh-' iawbei* (i.e. the grandmother's lock.) The forepart of the head is often shaven. It is quite the exception to see a beard, although the moustache is not infrequently worn. The Lynngams pull out the hairs of the moustache with the exception of a few hairs on either side of the upper lip.

PHYSICAL AND GENERAL CHARACTERISTICS.

142 The Khasis are usually short in stature, with bodies well [147] nourished, and the males are extremely muscular. The trunk is long in proportion to the rest of the body, and broad at the waist; calves are very highly developed. The women when

142 young are comely, of a buxom type, and, like the men, with highly-developed calves, the latter always being considered a beauty. The children are frequently remarkably pretty. Khasis carry very heavy burdens, it being the custom for the 482 cooly of the country to carry a maund, or 82 lbs. weight, or even more occasionally, on his back, the load being fixed by means of a cane band which is worn across the forehead; women carry almost as heavy loads as the men. The coolies, both male and female, commonly do the journey between Cherrapunji and Shillong, or between Shillong and Jowai, in one day, carrying the heavy loads above mentioned. Each of the above journeys is some thirty miles. They carry their great loads of rice and salt from Therria to Cherrapunji, an ascent of about 4,000 feet in some three to four miles, in the day. The Khasis are probably the best porters in the north of India, and have frequently been requisitioned for transport purposes on military expeditions.

157 The people are cheerful in disposition, and are light-
52 hearted by nature, and, unlike the plains people, seem to thoroughly appreciate a joke. It is pleasant to hear on the road down to Theriaghat from Cherrapunji, in the early morning the whole hillside resounding with the scraps of song and peals of laughter of the coolies, as they run nimbly down the short cuts on their way to market. The women are specially cheerful, and pass the time of day and bandy jokes with passers-
[461] by with quite an absence of reserve. The Khasis are certainly more industrious than the Assamese, are generally good-tempered, but are occasionally prone to sudden outbursts of
[533] anger, accompanied by violence. They are fond of music, and
[797] rapidly learn the hymn tunes which are taught them by the Welsh missionaries. Khasis are devoted to their offspring,
593 and the women make excellent nurses for European children,
463 frequently becoming much attached to their little charges. The people, like the Japanese, are fond of nature. A Khasi
517 loves a day out in the woods, where he thoroughly enjoys
824 himself. If he does not go out shooting or fishing, he is con-
825 tent to sit still and contemplate nature. He has a separate name for each of the commoner birds and flowers. He also has names for many butterflies and moths. These are traits which are not found usually in the people of India.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

000 which are not found usually in the people of India. He[1] is
461 not above manual labour, and even the Khasi clerk in the
333 Government offices is quite ready to take his turn at the hoe
335 in his potato garden. The men make excellent stonemasons and carpenters, and are ready to learn fancy carpentry and
276 mechanical work. They are inveterate chewers of *supari* and
804 the pan leaf (when they can get the latter), both men, women, and children; distances in the interior being often measured by the number of betel-nuts that are usually chewed on a
273 journey. They are not addicted usually to the use of opium or other intoxicating drugs. They are, however, hard drinkers, and consume large quantities of spirit distilled from rice or millet. Rice beer is also manufactured; this is used not only as a beverage, but also for ceremonial purposes. Spirit drinking is confined more to the inhabitants of the high plateaux and to the people of the Wár country, the Bhois and Lynngams
276 being content to partake of rice beer. The Mikirs who inhabit
751 what is known as the "Bhoi" country, lying to the north of the district, consume a good deal of opium, but it must be remembered that they reside in a malarious *terai* country, and that the use of opium, or some other prophylactic, is probably
525 beneficial as a preventive of fever. The Khasis, like other people of Indo-Chinese origin, are much addicted to gambling.
577 The people, and especially those who inhabit the Wár country, are fond of litigation. Col. Bivar remarks, "As regards truthfulness the people do not excel, for they rarely speak the truth unless to suit their own interests." Col. Bivar might have confined this observation to the people who live in the larger centres of population, or who have been much in contact with the denizens of the plains. The inhabitants of the far interior are, as a rule, simple and straightforward people, and are quite as truthful and honest as peasants one meets in other countries. My impression is that the Khasis are not less truthful certainly than other Indian communities. McCosh, writing in 1837, speaks well of the Khasis. The following is his opinion of them:—"They are a powerful, athletic
[147] race of men, rather below the middle size, with a manliness of gait and demeanour. They are fond of their mountains, and look down with contempt upon the degenerate race of the

[1] [the Khasi --- Analyst]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

577 plains, jealous of their power, brave in action, and have an aversion to falsehood."

797 Khasis of the interior who have adopted Christianity are
177 generally cleaner in their persons than the non-Christians,
515 and their women dress better than the latter and have an air
342 of self-respect about them. The houses in a Christian village are also far superior, especially where there are resident European missionaries. Khasis who have become Christians often
771 take to religion with much earnestness (witness the recent
797 religious revival in these hills, which is estimated by the Welsh
794 missionaries to have added between 4,000 and 5,000 converts to Christianity), and are model Sabbatarians, it being a pleasing sight to see men, women, and children trooping to church on a Sunday dressed in their best, and with quite the Sunday expression on their faces one sees in England. It is a pleasure to hear the sound of the distant church bell on the hill-side on a Sunday evening, soon to be succeeded by the beautiful Welsh hymn tunes which, when wafted across the valleys, carry one's thoughts far away. The Welsh missionaries have done, and continue to do, an immense amount of good amongst these people. It would be an evil day for the Khasis if anything should occur to arrest the progress of the mission work in the Khasi Hills.

GEOGRAPHICAL DISTRIBUTION.

162 The Khasis inhabit the Khasi and Jaintia Hills, although
101 there are a few Khasi settlers in the neighbouring plains districts. The Census Report of 1901 gives the following figures of Khasi residents in the plains:—

Cachar	333
Sylhet	3,083
Goalpara	4
Kamrup	191
Darrang	10
Nowgong	29
Sibsagar	62
Lakhimpur	22
Lushai Hills	77
North Cachar	32
Naga Hills	62

(from a photograph by Mrs. Muriel.)

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Garo Hills	117	162
Manipur	69	101
Total	4,091*	

The following information regarding the general aspect of [127] the Khasi and Jaintia Hills district, with some additions, is 133 derived from Sir William Hunter's Statistical Account of Assam. The district consists almost entirely of hills, only a very small portion lying in the plains. The slope of the hills on the southern side is very steep until a table-land is met with at an elevation of about 4,000 feet at Cherrapunji. Higher up there is another plateau at Mawphlang. This is the [361] highest portion of the hills, some villages being found at as high an elevation as close on 6,000 feet above sea level. Fifteen miles to the east of Mawphlang, and in the same range, is situated the civil station of Shillong, at an average elevation of about 4,900 feet. The elevation of the Shillong Peak, the highest hill in the district, is 6,450 feet above sea level. On the northern side of the hills are two plateaux, one between 1,000 and 2,000 feet below the level of Shillong, and another at an elevation of about 2,000 feet above sea level. In general features all these plateaux are much alike, and consist of a succession of undulating downs, broken here and there by the valleys of the larger hill streams. In the higher ranges, where 137 the hills have been denuded of forest, the country is covered 185 with short grass, which becomes longer and more rank in the 374 lower elevations. This denudation of forest has been largely 327 due to the wood being used by the Khasis for fuel for iron smelting in days gone by. The Government, however, has taken steps to protect the remaining forests from further 137 spoliation. A remarkable feature is the presence of numerous sacred groves situated generally just below the brows of the [778] hills. In these woods are to be found principally oak and rhododendron trees. The fir-tree (Pinus Khasia) is first met with on the road from Gauhati to Shillong, at Umsning, at an elevation of about 2,500 feet. In the neighbourhood of Shillong the fir grows profusely, but the finest fir-trees are to be seen

* The figures for Khasi population in the Khasi and Jaintia Hills district will be found under "Habitat."

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

137 in the Jowai sub-division. In the vicinity of Nongpoh is observed the beautiful *nahor* or *nageswar*, the iron-wood tree. The latter is also to be found on the southern slopes of the hills in the Jowai sub-division. There are some *sal* forests to the west and south of Nongpoh, where the *sal* trees are almost as large as those to be found in the Garo Hills. Between Shillong and Jowai there are forests of oak, the country being beautifully wooded. Chestnuts and birches are also fairly common. The low hills on the northern and western sides of the district are clad with dense forests of bamboo, of which there are many varieties. The Pandanus or screw-pine is to
135 be met with on the southern slopes. Regarding the geological
133 formation of the hills, I extract a few general remarks from the Physical and Political Geography of Assam. The Shillong plateau consists of a great mass of gneiss, bare on the northern border, where it is broken into hills, for the most part low and very irregular in outline, with numerous outliers in the Lower Assam Valley, even close up to the Himalayas. In the central region the gneiss is covered by transition or sub-metamorphic rocks, consisting of a strong band of quartzites overlying a mass of earthy schists. In the very centre of the range, where the table-land attains its highest elevation, great masses of intrusive diorite and granite occur; and the latter is found in dykes piercing the gneiss and sub-metamorphic series throughout the southern half of the boundary of the plains. To the south, in contact with the gneiss and sub-metamorphics is a great volcanic outburst of trap, which is stratified, and is brought to the surface with the general rise of elevation along the face of the hills between Shella and Theriaghat south of Cherrapunji. This has been described as the "Sylhet trap." South of the main axis of this metamorphic and volcanic mass are to be found strata of two well defined series: (1) the cretaceous, and (2) nummulitic. The cretaceous contains several important coalfields. The nummulitic series, which overlies the cretaceous, attains a thickness of 900 feet in the Theria river, consisting of alternating strata of compact limestones and sandstones. It is at the exposure of these rocks on their downward dip from the edge of the plateau that are situated the extensive limestone quarries of the Khasi Hills. There are numerous

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

limestone caves and underground water-courses on the southern face of the hills. This series contains coal-beds, e.g. the Cherra-field and that at Lakadong in the Jaintia Hills. Some description of the remarkable Kyllang Rock may not be out of place. Sir Joseph Hooker describes it as a dome of red granite, 5,400 feet above sea level, accessible from the north and east, but almost perpendicular to the southward where the slope is 80° for 600 feet. The elevation is said by Hooker to be 400 feet above the mean level of the surrounding ridges and 700 feet above the bottom of the valleys. The south or steepest side is encumbered with enormous detached blocks, while the north is clothed with forests containing red tree-rhododendrons and oaks. Hooker says that on its skirts grows a "white bushy rhododendron" which he found nowhere else. There is, however, a specimen of it now in the Shillong Lake garden. Numerous orchids are to be found in the Kyllang wood, notably a beautiful white one, called by the Khasis *u'tiw kyllang synrai*, which blooms in the autumn. The view from the top of the rock is very extensive, especially towards the north, where a magnificent panorama of the Himalayas is obtained in the autumn. The most remarkable phenomenon of any kind in the country is undoubtedly the enormous quantity of rain which falls at Cherrapunji.* Practically the whole of the rainfall occurs in the rains, i.e. from May to October. The remainder of the district is less rainy. The climate of the central plateau of the Shillong range is very salubrious, but the low hills in parts of the district are malarious. The effect of the different climates can at once be seen by examining the physique of the inhabitants. The Khasis who live in the high central plateaux are exceptionally healthy and strong, but those who live in the unhealthy "Bhoi country" to the north, and in the Lynngam portion to the west of the district, are often stunted and sickly. Not so, however, the Wárs who live on the southern slopes, for although their country is very hot at certain times of the year, it does not appear to be abnormally unhealthy except in certain

135

147 villages, such as Shella, Borpunji, Umniuh, and in Narpuh in
132 the Jaintia Hills.
361

ORIGIN.

173 The origin of the Khasis is a very vexed question. Although it is probable that the Khasis have inhabited their present abode for at any rate a considerable period, there seems to be a fairly general belief amongst them that they originally came from elsewhere. The Rev. H. Roberts, in the introduction to his Khasi Grammar, states that "tradition, such as it is, connects them politically with the Burmese, to whose king they were up to a comparatively recent date rendering homage, by sending him an annual tribute in the shape of an axe, as an emblem merely of submission." Another tradition points out the north as the direction from which they migrated, and Sylhet as the terminus of their wanderings, from which they were ultimately driven back into their present hill fastnesses by a great flood, after a more or less peaceful occupation of that district. It was on the occasion of this great flood, the legend runs, that the Khasi lost the art of writing, the Khasi losing his book whilst he was swimming at the time of this flood, whereas the Bengali
x [212] managed to preserve his. Owing to the Khasis having possessed no written character before the advent of the Welsh missionaries, there are no histories as is the case with the Ahoms of the Assam Valley, and therefore no record of their journeys.
114 Mr. Shadwell, the oldest living authority we have on the
173 Khasis, and one who has been in close touch with the people for more than half a century, mentions a tradition amongst them that they originally came into Assam from Burma *viâ* the Patkoi range, having followed the route of one of the Burmese invasions. Mr. Shadwell has heard them mention the name Patkoi as a hill they met with on their journey. All this sort of
144 thing is, however, inexpressibly vague. In the chapter dealing
173 with "Affinities" have been given some reasons for supposing that the Khasis and other tribes of the Mon-Anam family, originally occupied a large portion of the Indian continent. Where the actual cradle of the Mon-Anam race was, is as

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

impossible to state, as it is to fix upon the exact tract of country 144
from which the Aryans sprang. With reference to the Khasi 173
branch of the Mon-Anam family, it would seem reasonable to suppose that if they are not the autochthons of a portion of the hills on the southern bank of the Brahmaputra, and if they migrated to Assam from some other country, it is not unlikely that they followed the direction of the different irruptions of foreign peoples into Assam of which we have authentic data, i.e. from south-east to north-west, as was the case with the Ahom invaders of Assam who invaded Assam from their settlements in the Shan States *viâ* the Patkoi range, the different Burmese invasions, the movements of the Khamtis and, again, the Singphos, from the country to the east of the Hukong Valley. Whether the first cousins of the Khasis, the Mons, moved to their present abode from China, whether they are the aborigines of the portion of Burma they at present occupy, or were one of the races "of Turanian origin" who, as Forbes thinks, originally occupied the valley of the Ganges before the Aryan invasion, must be left to others more qualified than myself to determine. Further, it is difficult to clear up the mystery of the survival, in an isolated position, of people like the Ho-Mundas, whose language and certain customs exhibit points of similarity with those of the Khasis, in close proximity to the Dravidian tribes and at a great distance from the Khasis, there being no people who exhibit similar characteristics inhabiting countries situated in between; but we can, I think, reasonably suppose that the Khasis are an offshoot of the Mon people of Further India in the light of the historical fact I have quoted, i.e. that the movements of races into Assam have usually, although not [167] invariably, taken place from the east, and not from the west. The tendency for outside people to move into Assam from the east still continues.

Affinities.

114
The late Mr. S. E. Peal, F.R.G.S., in an interesting and 412
suggestive paper published in the Journal of the Asiatic Society 171
of Bengal in 1896, drew attention to certain illustrations of 144

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[114] 412 171 144

"singular shoulder-headed celts," found only in the Malay Peninsula till the year 1875, when they were also discovered in Chota Nagpur, and figured in the Journal of the Asiatic Society of Bengal for June of that year. These "celts" are, as the name implies, ancient stone implements. Mr. Peal goes on to state the interesting fact that when he was at Ledo and Tikak, Naga villages, east of Makum, on the south-east frontier of the Lakhimpur district of Assam, in 1895, he found iron implements, miniature hoes, used by the Nagas, of a similar shape to the "shoulder-headed celts" which had been found in the Malay Peninsula and Chota Nagpur. Now the peculiarly shaped Khasi hoe or *mo-khiw*, a sketch of which is given, with its far projecting shoulders, is merely an enlarged edition of the Naga hoe described by Peal, and may therefore be regarded as a modern representative in iron, although on an enlarged scale, of the "shoulder-headed celts." Another interesting point is that, according to Forbes, the Burmese name for these stone celts is *mo-gyo*. Now the Khasi name for the hoe is *mo-khiw*. The similarity between the two words seems very strong. Forbes says the name *mo-gyo* in Burmese means "cloud or sky chain," which he interprets "thunderbolt," the popular belief there, as in other countries, being that these palæolithic implements fell from heaven. Although the Khasi name *mo-khiw* has no connection whatsoever with aerolites, it is a singular coincidence that the name for the Khasi hoe of the present day should almost exactly correspond with the Burmese name for the palæolithic implement found in Burma and the Malay Peninsula, and when it is remembered that these stone celts are of a different shape from that of the stone implements which have been found in India (with the exception of Chota Nagpur), there would seem to be some grounds for believing that the

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Khasis are connected with people who inhabited the Malay 412
Peninsula and Chota Nagpur at the time of the Stone 171
Age.* That these people were what Logan calls the Mon-Anam, 144
may possibly be the case. Mr. Peal goes on to state, "the discovery is interesting for other reasons, it possibly amounts to 141
a demonstration that Logan (who it is believed was the first to draw attention to the points of resemblance between the languages of the Mon-Anam or Mon-Khmêr and those of the Mundas and the Khasis), was correct in assuming that at one time the Mon-Anam races and influence extended from the Vindyas all over the Ganges Basin, even over Assam, the northern border of the Ultra Indian Peninsula." Mr. Peal then remarks that the Eastern Nagas of the Tirap, Namstik, and Sonkap group "are strikingly like them (i.e. the Mon-Anam races), in many respects, the women being particularly robust, with pale colour and at times rosy cheeks." The 144
interesting statement follows that the men wear the Khasi- 291
Mikir sleeveless coat. Under the heading of dress this will be 171
found described as a garment which leaves the neck and arms bare, with a fringe at the bottom and with a row of tassels across the chest, the coat being fastened by frogs in front. It is a garment of a distinctive character and cannot be mistaken; it used to be worn largely by the Khasis, and is still used extensively by the Syntengs and Lynngams and by the Mikirs, and that it should have been found amongst these Eastern Nagas is certainly remarkable. It is to be regretted that the 144
investigations of the Ethnographical Survey, as at present 211
conducted, have not extended to these Eastern Nagas, who 171
inhabit tracts either outside British territory or in very remote places on its confines, so that we are at present unable to state whether any of these tribes possess other points of affinity, as

* It is interesting to compare the remarks of M. Aymonier in his volume iii. of "Le Cambodge." He writes as follows:—"Mais en Indo-Chine on trouve, partout disseminé, ce que les indigènes, au Cambodge du moins, appellent, comme les peuples les plus éloignés du globe 'les traits de foudre.' Ce sont ici des haches de l'âge néolithique ou de la pierre polie, dont la plupart appartiennent au type repandu en toute la terre. D'autres de ces celtes, dits épaulés, parcequ'ils possèdent un talon d'une forme particulière, paraissent appartenir en propre à l'Indo-Chine et à la presqu'île dekkhanique. Ils fourniraient donc un premier indice, non négligeable, d'une communauté d'origine des populations primitives des deux péninsules, cis et trans gangétiques."

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

144 regards social customs, with the Khasis; but it will be noticed
211 in the chapter dealing with memorial stones that some of the
171 Naga tribes are in the habit of erecting monoliths somewhat similar in character to those of the Khasis, and that the Mikirs (who wear the Khasi sleeveless coat), erect memorial stones exactly similar to those of the Khasis. The evidence seems to suggest a theory that the Mon-Anam race, including of course the Khasis, occupied at one time a much larger area in the mountainous country to the south of the Brahmaputra in Assam than it does at present. Further references will be found to this
144 point in the section dealing with memorial stones. The fact
171 that the Ho-Mundas of Chota Nagpur also erect memorial stones and that they possess death customs very similar to those of the Khasis, has also been noticed in the same chapter. We have, therefore, the following points of similarity as regards customs between the Khasis on the one hand, certain Eastern Naga tribes, the Mikirs, and the ancient inhabitants of the Malay Peninsula on the other :—

(a) Peculiarly shaped hoe, i.e. the hoe with far projecting shoulders	1. Khasis. 2. Certain Eastern Naga tribes. 3. The ancient inhabitants of the Malay Peninsula. 4. The ancient inhabitants of Chota Nagpur (the Ho-Mundas ?).
(b) Sleeveless coat	1. Khasis. 2. Mikirs. 3. Certain Eastern Naga tribes.
(c) Memorial stones	1. Khasis. 2. Mikirs. 3. Certain Eastern Naga tribes. 4. Ho-Mundas of Chota Nagpur.

197 I wish to draw no definite conclusions from the above facts,
144 but they are certainly worth considering with reference to Logan's theory as stated by Peal; the theory being based on Logan's philological inquiries. Thanks to the labours of Grierson, Logan, and Kuhn in the linguistic field, we know that the languages of the Mon-Khmêr group in Burma and the Malay Peninsula are intimately connected with Khasi. I say, intimately, advisedly, for not only are roots of words seen to be similar, but the order of the words in the sentence is found to be the same, indicating that both these people think in the same order when wishing to express themselves by speech.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

There are also syntactical agreements. We may take it as finally proved by Dr. Grierson and Professor Kuhn that the Mon-Khmêr, Palaung, Wa, and Khasi languages are closely connected. In the section of the Monograph which deals with language some striking similarities between the languages of these tribes will be pointed out. We have not so far been able to discover social customs common to the Palaungs and the Khasis; this is probably due to the conversion of the Palaungs to Buddhism, the change in the religion of the people having possibly caused the abandonment of the primitive customs of the tribe. In a few years' time, if the progressive rate of conversions of Khasis to Christianity continues, probably the greater number of the Khasi social customs will have disappeared and others will have taken their place, so that it cannot be argued that because no manifest social customs can now be found common to the Khasis and the Palaungs, there is no connection between these two tribes. The strong linguistic affinity between these two peoples and the wild *Was* of Burma points to an intimate connection between all three in the past. As knowledge of the habits of the wild *Was* improves, it is quite possible that social customs of this tribe may be found to be held in common with the Khasis. With regard to social affinities it will be interesting to note the Palaung folk-tale of the origin of their Sawbwa, which is reproduced in Sir George Scott's Upper Burma Gazetteer. The Sawbwa, it is related, is descended from the Naga Princess Thusandi who lived in the *Nat* tank on the Mongok hills and who laid three eggs, from one of which was born the ancestor of the Palaung Sawbwa. Here we see how the Palaung regards the egg, and it is noteworthy that the Khasis lay great stress on its potency in divination for the purposes of religious sacrifices, and that at death it is placed on the stomach of the deceased and is afterwards broken at the funeral pyre. Amongst some of the tribes of the Malay Archipelago also the *Gaji-Guru* or medicine-man "can see from the yolk of an egg, broken whilst sacramentally counting from one to seven, from what illness a man is suffering and what has caused it." Here we have an almost exactly parallel case to the Khasi custom of egg-breaking.

In the Palaung folk-tale above referred to the importance of

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

the egg in the eyes of Palaung is demonstrated, and we know how the Khasi regards it. But the folk-tale is also important as suggesting that the ancient people of Pagan were originally serpent-worshippers, i.e. *Nágas*, and it is interesting to note that the Rumai or Palaung women of the present day "wear a dress which is like the skin of the Naga (snake)." Is it possible that the Khasi superstition of the *thlen*, or serpent demon, and its worship, an account of which will be found under the heading of "Human Sacrifices" in the Monograph, has anything to do with the ancient snake-worship of the people of Pagan, and also of the ancient inhabitants of Naga-Dwipa, and that amongst the wild Was the custom of head-hunting may have taken the place of the Khasi human sacrifices to the *thlen?*

Notwithstanding that Sir George Scott says the story has very Burman characteristics, the Palaung folk-tale is further interesting in that it speaks of the Sawbwa of the Palaungs being descended from a *princess*. This might be a suggestion of the matriarchate.

It can well be imagined how important a matter it is also, in the light of Grierson's and Kuhn's linguistic conclusions, to ascertain whether any of the Mon-Khmêr people in Anam and Cambodia and neighbouring countries possess social customs in common with the Khasis. In case it may be possible for French and Siamese ethnologists in Further India to follow up these inquiries at some subsequent date, it may be stated that information regarding social customs is required with reference to the people who speak the following languages in Anam and Cambodia and Cochin China which belong to the Mon-Khmêr group—*Suk*, *Stieng*, *Bahnar*, *Anamese*, *Khamen-Boran*, *Xong*, *Sauro*, *Khmu*, and *Lamet*.

Notwithstanding our failure up till now to find any patent and direct social customs in common between the Khasis and the Palaungs, I am in hopes that we may yet discover some such affinities. Mr. Lowis, the Superintendent of Ethnography in Burma, states that there is no vestige of the matriarchal system among the Palaungs; but there is the folk-tale I have quoted above. In matters of succession, inheritance, &c., the Palaungs, Mr. Lowis, says, profess to follow the Shans, whose customs in this regard have a Buddhistic basis. The Palaungs

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

are devout Buddhists, and, like the Burmans and Shans, bury their lay dead, whereas the Khasis invariably burn. There is nothing in the shape of memorial stones amongst the Palaungs. *Primâ facie* these appear to be points of differentiation between the Palaungs and the Khasis; but they should not, as has already been stated, be regarded as proof positive that the tribes are not connected, and it is possible that under the influence of Buddhism the Palaungs may have almost entirely abandoned their ancient customs, like the Christian Khasis.

Having noticed some similarities as regards birth customs, as described in Dr. Frazer's "Golden Bough," between the Khasis and certain inhabitants of the Dutch East Indies, I wrote to the Dutch authorities in Batavia requesting certain further information. My application was treated with the greatest courtesy, and I am indebted to the kindness of the President, his secretary, and Mr. C. M. Pleyte, Lecturer of Indonesian Ethnology at the Gymnasium of William III., at Batavia, for some interesting as well as valuable information. With reference to possible Malay influence in the countries inhabited by the people who speak the Mon-Khmêr group of languages in Further India, it was thought desirable to ascertain whether any of the people inhabiting the Dutch East Indies possessed anything in common with the Khasis, who also belong to the Mon-Khmêr group. There are, according to Mr. Pleyte, pure matriarchal customs to be found amongst the Minangkabe Malays inhabiting the Padang uplands and adjacent countries, in Sumatra, in Agam, the fifty Kotas, and Tanah Datar, more or less mixed with patriarchal institutions; they are equally followed by the tribes inhabiting parts of Korinchi and other places. The apparently strong survival of the matriarchate in parts of the island of Sumatra, as compared with this corresponding most characteristic feature of the Khasis, is a point for consideration. Mr. Pleyte goes on to state "regarding ancestor-worship, it may be said that this is found everywhere throughout the whole Archipelago; even the tribes that have already adopted Islam, venerate the spirits of their departed." The same might be said of some of the Khasis who have accepted Christianity, and much more of the Japanese. I would here refer the reader to the chapter on "Ancestor-worship." In the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

171 Southern Moluccas the placenta is mixed with salt, placed in
174 a pot, and hung on a tree; a similar custom is observed in Mandeling, on the west coast of Sumatra. This is a custom universally observed amongst the Khasis at births. Tokenomy to some extent prevails amongst some of these Malay tribes as with the Khasis. It will be seen from the above notes that there are some interesting points of affinity between the Khasis and some of the Malay tribes, and if we add that the Khasis are decidedly Malay in appearance, we cannot but wonder whether the Malays have any connection not only with the Mon-Khmer family, but also with the Khasis, with the Ho-Mundas, and with the Naga tribes mentioned by Mr. Peal in his interesting paper published in the *Journal of the Asiatic Society of Bengal*, already referred to. We will study the strong linguistic affinities between these peoples in the section which deals with language.

M. Aymonier in "Le Cambodge" mentions the matriarchate as having been prevalent apparently amongst the primitive races of Cambodia, and notes that the ancient Chinese writers spoke of Qyeens in Fou-nan (Cambodia). If the Khmiers were the ancient people of Cambodia, here we have an important landmark in common between them and the Khasis. M. Aymonier goes on to speak of priestesses, and the Cambodian taboo, *tom or Lemow*, which Mr. Lowin, the Superintendent of Ethnography in Burma, suggests may be akin to the Khasi *nong*.

DRESS.

251 Dress may be divided into two divisions, ancient and modern. It will be convenient to take the former division first. The Khasi males of the interior wear the sleeveless coat or *jymphong*, which is a garment leaving the neck and arms bare, with a fringe at the bottom, and with a row of tassels across
[177] the chest; it is fastened by frogs in front. This coat, however, may be said to be going out of fashion in the Khasi Hills, its place being taken by coats of European pattern in the more civilized centres and by all sorts of nondescript garments in the interior. The sleeveless coat, however, is still worn by many

It Garden E-4, 5 (no date) 1907 AR7 Khasi AR7

Syntengs in the interior and by the Bhoia and Lyngngam. The men in the Khasi Hills wear a cap with ear-flaps. The elderly men, or other men when ceremonies is desired, wear a white turban, which is fairly large and is well tied on the head. Males in the Siemship of Nongstoin and in the North-Western corner of the district wear knitted worsted caps which are often of a red colour. These are sold at Nongstoin market at about 8 or 9 annas each. They are brought to Nongstoin by traders from the Syntengs country, and from Shillong, where they are knitted generally by Syntengs women. A small cloth is worn round the waist and between the legs, one end of which hangs down in front like a small apron. The Syntengs wear a somewhat differently shaped cap, having no ear-flaps and with a high-peaked crown. Both Khasi and Syntengs caps are generally of black cloth, having, as often as not, a thick coating of grease. The old-fashioned Khasi female's dress, which is that worn by people of the cultivator class of the present day, is the following:—Next to the skin is worn a garment called *ka jymphu*, which is a piece of cloth wound round the body and fastened at the loins with a kind of cloth belt, and which hangs down from the waist to the knee or a little above it. Over this is worn a long piece of cloth, sometimes of muga silk, called *ka jaiswen*. This is not worn like the Assamese *mekhela* or Bengali *sari*, for it hangs loosely from the shoulders down to a little above the ankles, and is not caught in at the waist; in fact, Khasi women have no waist. It is kept in position by knotting it over both the shoulders. Over the *jaiswen* another garment called *ka jain hap* is worn. This is thrown over the shoulders like a cloak, the two ends being knotted in front, it hangs loosely down the back and sides to the ankles. It is frequently of some gay colour, the ladies in Mawkhar and Cherrapunji being some pretty shade of French grey or maroon. Over the head and shoulders is worn a wrapper called *ka tap-mak-khlieit*. This, again, is frequently of some bright colour, but is often white. There is a fold in the *jaiswen* which serves as a pocket for keeping odds and ends. Khasi women in cold weather wear gaiters which are often long stockings without feet, or, in the case of the poor, pieces of cloth wound round the legs like puttiee, or cloth gaiters. I have seen

1: Gordon E-4, 5 (no date) 1907 ART Khaki ART

291

[illegible]

Reproduced from a poster by [illegible]

[illegible] p. [illegible]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

women at Nongstoin wearing gaiters of leaves. It was explained to me that these were worn to keep off the leeches. The Khasi women might almost be said to be excessively clothed—they wear the cloak in such a way as to hide entirely the graceful contours of the figure. The women are infinitely more decently clothed than Bengali coolie women, for instance; but their dress cannot be described as becoming or graceful, although they show taste as regards the blending of colours in their different garments.

The dress of the Synteng women is a little different. With them the *jain khywang* takes the place of the Khasi *jainsem*, and is worn by them in the following manner:—One of the two ends is passed under one armpit and its two corners are knotted on the opposite shoulder. The other end is then wound round the body and fastened at the waist, from which it hangs half way down the calf. Over this they wear a sort of apron, generally of *muga* silk. They have the cloak and the head-wrapper just the same as the Khasi women. The Synteng striped cloth may be observed in the picture of the Synteng girl in the plate. Khasi women on festive occasions, such as the annual Nongkrem puja, do not cover the head. The hair is then decked with jewellery or with flowers; but on all ordinary occasions Khasi women cover the head. *Wár* women, however, often have their heads uncovered.

Modern Dress.—The up-to-date Khasi male wears knicker-bockers made by a tailor, stockings, and boots; also a tailor-made coat and waistcoat, a collar without a tie, and a cloth peaked cap. The young lady of fashion dons a chemise, also often a short coat of cloth or velvet, stockings, and smart shoes. Of course she wears the *jainsem* and cloak, but occasionally she may be seen without the latter when the weather is warm. It should be mentioned that the Khasi males are seldom seen without a haversack in which betel-nut, lime, and other odds and ends are kept; and the female has her purse, which, however, is not visible, being concealed within the folds of her lower garment. The haversack of the men is of cloth in the high plateau and in the Bhoi country, but it is of knitted fibre in the *Wár* country. The Syntengs have a cloth bag, which they call *ka ramen*.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

291 The Wár men dress very much the same as the neighbouring Sylheti Hindus. The Wár women, especially the Shell women, wear very pretty yellow and red checked and striped cloths. The cloak is not so frequently worn as amongst Khasis, except in cold weather. The Lynngam dress is very similar to that of the neighbouring Garos. The males wear the sleeveless coat, or *phong marong*, of cotton striped red and blue, red and white, or blue and white, fastened in the same manner as the Khasi coat and with tassels. A small cloth, generally red or blue, is tied between the legs, one end of it being allowed to hang down, as with the Khasis, like an apron in front. A round [354] cap is commonly worn; but the elderly men and people of importance wear turbans. The females wear short cloths of cotton striped red and blue, the cloth reaching just above the knee, like the Garos; married women wear no upper clothing, except in winter, when a red or blue cotton cloth is thrown loosely across the shoulders. The women wear a profusion of blue bead necklaces and brass earrings like the Garos. Unmarried girls wear a cloth tightly tied round the figure, similar to that worn by the Kacharis. A bag of cloth for odds and ends is carried by the men slung across the shoulder. It should be [554] mentioned that even in ancient times great people amongst the Khasis, like Siems, wore waist-cloths, and people of less consequence on great occasions, such as dances. The use of waist-cloths among the Khasis is on the increase, especially among those who live in Shillong and the neighbouring villages, and in Jowai and Cherrapunji.

TATTOOING.

304 None of the Khasis tattoo; the only people in the hills who tattoo are certain tribes of the Bhoi country which are really Mikir. These tattoo females on the forehead when they attain the age of puberty, a straight horizontal line being drawn from the parting of the hair down the forehead and nose. The line is one-eighth to one-quarter of an inch broad. The Lynngams occasionally tattoo a ring round the wrist of females.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

JEWELLERY.

301 The Khasis, as a people, may be said to be fond of jewellery. 326 The women are specially partial to gold and coral bead necklaces. The beads are round and large, and are usually unornamented with filigree or other work. The coral is imported from [435] Calcutta. The gold bead is not solid, but a hollow sphere filled with lac. These necklaces are worn by men as well as women, especially on gala occasions. Some of the necklaces are comparatively valuable, e.g. that in the possession of the Mylliem Siem family. The gold and coral beads are prepared locally by Khasi as well as by foreign goldsmiths. The latter derive considerable profits from the trade. The Assam Census Report of 1901 shows 133 goldsmiths in the Khasi and Jaintia Hills district, but does not distinguish between Khasis and foreigners. There are Khasi goldsmiths to be found in Mawkhar, Cherrapunji, Mawlai, and other villages. Sylheti goldsmiths are, however, more largely employed than Khasi in Mawsynram and certain other places on the south side of the hills. In Mr. Heuniker's monograph on "gold and silver wares of Assam" it is stated that the goldsmiths of Karimganj in Sylhet make specially for Khasis certain articles of jewellery, such as men's and women's earrings, &c. An article of jewellery which is believed to be peculiar to the Khasis is the silver or gold crown. This crown is worn by the young women at 301 dances, such as the annual Nongkrem dance. An illustration of one will be seen by referring to the plate. These crowns are circlets of silver or gold ornamented with filigree work. There is a peak or, strictly speaking, a spike at the back, called *u'kiew-lawbon*, which stands up some six inches above the crown. There are long ropes or tassels of silver hanging from the crown down the back. Earrings are worn both by men and women. The former affect a pattern peculiar to themselves, viz. large gold pendants of a circular or oval shape. Women wear different patterns of earrings, according to locality. An ornament which I believe is also peculiar to the Khasis is the *rupa-tylli*, or silver collar. This is a broad flat silver collar which is allowed to hang down over the neck in front, and which is secured by a fastening behind.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Silver chains are worn by men as well as by women. The 301
men wear them round the waist like a belt, and the women hang them round their necks, the chains being allowed to depend as low as the waist. Bracelets are worn by women; these are either of gold or of silver. The Lynngam [321]
males wear bead necklaces, the beads being sometimes of cornelian gathered from the beds of the local hill streams, and sometimes of glass obtained from the plains markets of Damra and Moiskhola. The cornelian necklaces are much prized by the Lynngams, and are called by them '*pieng blei*, or gods' necklaces. Like the Garos, the Lynngams wear as many brass earrings as possible, the lobes of the ears of the females being frequently greatly distended by their weight. These earrings are made out of brass wire obtained from the plains markets. The Lynngams wear silver armlets above the elbow and also on the wrists. It is only a [554]
man who has given a great feast who can wear silver armlets above the elbows. These armlets are taken off as a sign of [765]
mourning, but never on ordinary occasions. The Lynngams do not wear Khasi jewellery, but jewellery of a pattern to be seen in the Garo Hills. A distinctive feature of the Lynngam women is the very large number of blue bead necklaces they wear. They put on such a large number as to give them almost the appearance of wearing horse collars. These beads are obtained from the plains markets, and are of glass. Further detailed information regarding this subject can be obtained from Mr. Henniker's monograph, which contains a good plate illustrating the different articles of jewellery.

WEAPONS.

The weapons of the Khasis are swords, spears, bows and arrows, 311
and a circular shield which was used formerly for purposes of 314
defence. The swords are usually of wrought iron, occasionally of [326]
steel, and are forged in the local smithies. The Khasi sword is of considerable length, and possesses the peculiarity of not having a handle of different material from that which is used for the blade. In the Khasi sword the handle is never made of wood or bone, or

ltGurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

411 of anything except iron or steel, the result being that the sword
314 is most awkward to hold, and could never have been of much use as a weapon of offence.

The same spear is used for thrusting and casting. The spear is not decorated with wool or hair like the spears of the Naga tribes, but it is nevertheless a serviceable weapon, and would be formidable in the hand of a resolute man at close quarters. The length of the spear is about 6½ feet. The shaft is generally of bamboo, although sometimes of ordinary wood. The spear heads are forged in the local smithies.

The Khasi weapon *par excellence* is the bow. Although no 'Robin Hoods," the Khasis are very fair archers, and they use the bow largely for hunting. The Khasi bow (*ka ryntieh*) is of bamboo, and is about 5 feet in height. The longest bow in use
[141] is said to be about the height of a man, the average height amongst the Khasis being about about 5 feet 2 inches to 5 feet 4 inches. The bowstring is of split bamboo, the bamboos that are used being *u spit*, *u shken*, and *u siej-lieh*.

The arrows (*ki khuam*) are of two kinds: (*a*) the barbed-headed (*ki pliang*), and (*b*) the plain-headed (*sop*). Both are made out of bamboo. The first kind is used for hunting,
[826] the latter for archery matches only. Archery may be styled the Khasi national game. A description of Khasi archery will be found under the heading "Games." The feathers
[825] of the following birds are used for arrows:—Vultures, geese, cranes, cormorants, and hornbills. Arrow-heads are made of iron or steel, and are forged locally. The distance a Khasi arrow will carry, shot from the ordinary bow by a man of medium strength, is 150 to 180 yards. The Khasi
[237] shield is circular in shape, of hide, and studded with brass or silver. In former days shields of rhinoceros hide are said to have been used, but nowadays buffalo skin is used. The shields would stop an arrow or turn aside a spear or sword thrust. The present-day shield is used merely for purposes of display.

389 Before the advent of the British into the hills the Khasis are said to have been acquainted with the art of manufacturing gunpowder, which was prepared in the neighbourhood of Mawsanram, Kynchi, and Cherra. The gunpowder used to be

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

manufactured of saltpetre, sulphur, and charcoal, the three 389
ingredients being pounded together in a mortar. The Jaintia
Rajas possessed cannon, two specimens of which are still to be 713
seen at Jaintiapur. Their dimensions are as follows:—

Length, 9 feet; circumference in the middle, 3 feet 2 inches; diameter of the bore 3 inches. There are some old cannon also at Lyngkyrdem and at Kyndiar in the Khyrim State, of the same description as above. These cannon were captured from the Jaintia Raja by the Siem of Nongkrem. No specimens of the cannon ball used are unfortunately available. There are also small mortars, specimens of which are to be seen in the house of the Siem of Mylliem.

The weapons of the Syntengs are the same as those of the 411
Khasis, although some of them are called by different names. At Nartiang I saw an old Khasi gun, which the people say was fired from the shoulder. I also saw a mortar of the same pattern as the one described amongst the Khasi weapons.

The Wár and Lynngam weapons are also the same, but with different names. The only weapons used by the Bhois (Mikirs) are the spear and bill-hook for cutting down jungle. Butler, writing of the Mikirs 1854, says, "Unlike any other hill [181]
tribes of whom we have any knowledge, the Mikirs seem devoid of anything approaching to a martial spirit. They are a quiet, industrious, race of cultivators, and the only weapons used by them are the spear and *da* hand-bill for cutting down jungle. It is said, after an attempt to revolt from the Assamese rule, they were made to forswear the use of arms, which is the cause of the present generation having no predilection for war."

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

SECTION II.

OCCUPATION.

241 THE greater proportion of the population subsists by cultiva-
463 tion. Cultivation of rice may be divided under two headings,
[162] high land or dry cultivation and low land or wet cultivation. The total number of persons who subsist by agriculture generally in the hills, is given in the last Census Report as 154,907, but the term agriculture includes the cultivation of the potato, the orange, betel-nut and *pán*. A full description of the different forms of agriculture will be given under the
463 heading "Agriculture." A considerable number of Khasis earn
482 their livelihood as porters, carrying potatoes to the markets on
439 the Sylhet side of the district, from whence the crop is conveyed by means of country boats to the different places of call of river-steamers in the Surma Valley, the steamers carrying the potatoes to Calcutta. Potatoes are also largely carried to Shillong by porters, where the tuber is readily bought by Marwari merchants, who load it in carts to be conveyed by road to Gauhati, from which station it is again shipped to
482 Calcutta and Upper Assam. Many persons are also employed in
463 carrying rice up the hill from Theria to Cherrapunji, Shillong,
[466] and on to other places. Salt is also carried by porters by this route. Many Khasis, both male and female, live by daily labour in this way, earning as much as eight annas, and
[162] six annas a day, respectively. The Census Report of 1901 shows some 14,000 "general labourers" in the district, the greater number of whom are porters and coolies, both male
[357] and female, employed on road work and on building. In Shillong the Government Offices and the printing press give employment to a certain number of Khasis. There is also a fair demand for Khasi domestic servants, both among the Europeans and the Bengali and Assamese clerks who are employed at the headquarters of the Administration.

headquarters of the Administration. The manufacture of country spirit gives employment to a considerable number of persons, most of whom are females. At a recent census of the country stills in the district, undertaken by the district officials, the number of stills has been found to be 1,530. There must be at least one person employed at each still, so that the number of distillers is probably not less than 2,000, possibly more. The spirit is distilled both for home consumption and for purposes of sale, in some villages almost entirely for sale. In the Jaintia Hills stock-breeding and dealing in cattle provides occupation for 1,295 people, according to the last census. The cattle are reared in the Jaintia Hills and are driven down to the plains when they reach the age of maturity, where they find a ready market amongst the Sylhetis. Cattle are also driven into Shillong for sale from the Jaintia Hills. Another place for rearing cattle is the Siemship of Nongkhlaw, where there is good pasturage in the neighbourhood of Mairang. These cattle are either sold in Shillong or find their way to the Kamrup district by the old Nongkhlaw road. Cattle-breeding is an industry which is capable of expansion in these hills. There are a few carpenters to be found in Shillong and its neighbourhood. The Khasis are said by Col. Waddell to be unacquainted with the art of weaving; but the fact that a considerable weaving industry exists amongst the Khyrwang villages of the Syntengs, and at Mynso and Suhtnga, has been overlooked by him. The Khyrwangs weave a special pattern of cotton and silk cloth, striped red and white. In Mynso and Suhtnga similar cloths are woven, also the sleeveless coat. In former days this industry is said to have been considerable, but it has been displaced to a large extent of late years by Manchester piece goods. The number of weavers returned at the last census in the district was 533. The Khasis and Mikirs of the low country, or Bhois as they are called, weave cotton cloths which they dye with the leaves of a plant called *u soli*. This is perhaps the wild indigo, or *rum*, of the Shan settlers in the Assam Valley. The weavers are almost always females. An important means of subsistence is road and building work; a considerable number of coolies, both male and female, are employed under Government, practically throughout the year, in

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[499] this manner, the males earning on an average 8 annas and the
463 females 6 annas a day. Col. Bivar writes that in 1875 the
465 wages for ordinary male labourers were 4 to 8 annas a day, and for females 2½ to 4 annas, so that the wages rates have almost doubled in the last thirty years. Contractors, however, often manage to obtain daily labour at lower rates than those paid by Government. Stonemasons and skilled labourers are able to
482 get higher rates. It is easier to obtain coolies in the Khasi
241 than in the Jaintia Hills, where a large proportion of the popu-
461 lation is employed in cultivation. The Khasis are excellent labourers, and cheerful and willing, but they at once resent bad treatment, and are then intractable and hard to manage. Khasis are averse to working in the plains in the hot-weather months.

APICULTURE.

231 I am indebted to Mr. Rita for the following remarks on apiculture in the Khasi and Jaintia Hills.

There are two kinds of indigenous bees in the Khasi Hills, one domesticated, called *u ngap* (*apis Indica*), and the other *u lywai*, which is never domesticated, and is very pugnacious; its hives are difficult of access, being always located in very high cliffs. A few hives of a third class of bee are now-a-days to be found in and around the station of Shillong, i.e. the Italian.
[177] This bee was imported into the hills by Messrs. Dobbie and Rita, and the species became propagated in the following manner. The bees had been just established in a hive, where they had constructed a brood comb, when the hive was robbed by some Khasis for the sake of the *larvæ* it contained, which they wished to consume as food; but the queen bee escaped and established other colonies, one of which was afterwards captured by Mr. Rita, the others establishing themselves at places in the neighbourhood. The hive used by the Khasis is of a very primitive description. It is usually a hollow piece of wood, about 2½ to 3 ft. in length and 10 or 12 in. in diameter. A small door is placed at each end of the log, one for the bees to go in and out, and the other for the removal of the honey when wanted. The honey-combs are broken and the honey is

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

extracted by squeezing the comb with the hand. Wax is 231
obtained by placing the comb in boiling water and allowing it to cool, when the wax floats to the surface. The Khasis do not systematically tend their bees, as they do not understand how to prevent swarming, and as the Khasi bee is a prolific swarmer, hives become weak very soon and a new hive has to be started from a captured natural swarm. The villages in which bees are regularly kept to any large extent in the Khasi and [438]
Jaintia Hills are Thied-dieng, Mawphoo, Nongwar, Mawlong, Pynter, Tyrna, and Kongthong, but most of the Wár villagers rear bees and sell the honey at the neighbouring markets. The collection of the honey of the wild bee, or *u lywai*, is a hazardous occupation, the services of some six or seven persons being required, as the combs of this bee are generally built in the crevices of precipitous rocks, and sometimes weigh more than half a maund each. When such hives are discovered the bees are driven out by the smoke of a smouldering fire lit at the foot of the rock below the hive. Two or three men get to the top of the precipice, leaving two or three of their companions at the base. One of the men on the top of the rock is then lowered down in a sling tied to a strong rope, which is made fast by his companions above to a tree or boulder. The man in the sling is supplied with material to light a torch which gives out a thick smoke, with the aid of which the bees are expelled. The man then cuts out the comb, which he places in a leather bucket or bag, which, when filled, he lowers down to the persons in waiting at the foot of the rock. The wild honey may be distinguished from that of the domestic bee by being of a reddish colour. Honey from the last-mentioned bee is gathered twice or thrice in the year, once in the autumn and once or twice in the spring; that gathered in early spring is not so matured as that collected in autumn The flora of the [137]
Khasi Hills being so numerous, there is no necessity for providing bees with artificial food. The bees are generally able to obtain their sustenance from clover, anemonies, "golden rod," bush honeysuckle, and numerous shrubs such as andromeda, daphne, &c., which abound about Shillong. There seem to be facilities 231
for apiculture on a large scale in these hills, and certainly the 263
honey which is brought round by the Khasis for sale in

231 Shillong is excellent, the flavour being quite as good as that
263 of English honey. Under "Miscellaneous Customs connected with Death" will be found a reference to the statement that the
[764] dead bodies of Siems used to be embalmed in honey. The existence of the custom is generally denied by Khasis, but its former prevalence is probable, as several trustworthy authors have quoted it.

HOUSES.

342 The houses of the people are cleaner than might be supposed
515 after taking into consideration the dirtiness of the clothes and persons of those who inhabit them. They are as a rule substantial thatched cottages with plank or stone walls, and raised on a plinth some 2 to 3 ft. from the ground. The only
354 window is a small opening on one side of the house, which admits but a dim light into the smoke-begrimed interior. The beams are so low that it is impossible for a person of ordinary stature to stand erect within. The fire is always burning on an earthen or stone hearth in the centre. There is no chimney, the smoke finding its exit as best it can. The firewood is placed to dry on a swinging frame above the hearth. In the
343 porch are stacked fuel and odds and ends. The pigs and calves
342 are generally kept in little houses just outside the main building. The Khasi house is oval-shaped, and is divided into three rooms, a porch, a centre room, and a retiring-room.

354 In olden days the Khasis considered nails *sang*, or taboo, and
784 only used a certain kind of timber for the fender which surrounds the hearth; but they are not so particular now-a-days. In Mawkhar, Cherrapunji, and other large villages, the walls of
342 houses are generally of stone. In Cherrapunji the houses are frequently large, but the largest house I have seen in the hills is that of the Doloi of Suhtnga in the Jaintia Hills, which measures 74 ft. in length. The house of the Siem Priestess at Smit in the Khasi Hills is another large one, being 61 ft. long by 30 ft. broad. In front of the Khasi house is a little space fenced in on two sides, but open towards the village street. The

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

342 Syntengs plaster the space in front of the house with red earth and cow-dung, this custom being probably a remnant of Hindu influences. The Khasis have some peculiar customs when they build a new house. When the house is completed they perform a ceremony, *kynjoh-hka-skain*, when they tie three pieces of dried fish to the ridge pole of the house and then jump up and try to pull them down again. Or they kill a pig, cut a piece of the flesh with the skin attached, and fix it to the ridge pole, and then endeavour to dislodge it. The Syntengs at Nartiang worship *U Biskurom* (Biswakarma) and *Ka Siem Synshar* when a house is completed, two fowls being sacrificed, one to the former, the other to the latter. The feathers of the fowls are affixed to the centre post of the house, which must be of *u dieng sning*, a variety of the Khasi oak. The worship of a Hindu god (Biswakarma), the 776 architect of the Hindu gods, alongside the Khasi deity *Ka Siem* 177 *Synshar*, is interesting, and may be explained by the fact that 342 Nartiang was at one time the summer capital of the kings of Jaintia, who were Hindus latterly and disseminated Hindu customs largely amongst the Syntengs. Mr. Rita says that 627 amongst the Syntengs, a house, the walls of which have been 342 plastered with mud, is a sign that the householder has an enemy. The plastering no doubt is executed as a preventive of fire, arson in these hills being a common form of revenge.

342 Amongst the Khasis, when a daughter leaves her mother's house and builds a house in the mother's compound, it is considered *sang*, or taboo, for the daughter's house to be built on the right-hand side of the mother's house, it should be built either on the left hand or at the back of the mother's house.

776 In Nongstoin it is customary to worship a deity called 793 *u'li lap* (Khasi, *u phan*), by nailing up branches of the Khasi oak, interspersed with jaw-bones of cattle and the feathers of fowls, to the principal post, which must be of *u dieng sning*. The Siem priestess of the Nongkrem State at Smit and the ladies of the Siem family perform a ceremonial dance before a large post of oak in the midst of the Siem priestesses' house on the occasion of the annual goat-killing ceremony. This oak post is furnished according to custom by the *lyngskor*

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

776 or official spokesman of the Siem's Durbar. Another post of
793 oak in this house is furnished by the people of the State.

342 The houses of the well-to-do Khasis of the present day in
179 Mawkhar and Cherrapunji are built after the modern style
353 with iron roofs, chimneys, glass windows and doors. In Jowai the well-to-do traders have excellent houses of the European pattern, which are as comfortable as many of the European subordinates' quarters in Shillong. Some up-to-date families in Shillong and at Cherra allow themselves muslin curtains and European furniture.

342 The houses of the Pnar-Wárs are peculiar. The roof, which
[824] is thatched with the leaves of a palm called *u tyaniew*, is hog-backed and the eaves come down almost to the ground. There are three rooms in the Wár as in the Khasi house, although called by different names in the Wár dialect. The hearth is in the centre room. The houses are built flush with the ground
[361] and are made of bamboos. In the Wár villages of Nongjri and
341 Umniuh there are small houses erected in the compounds of
782 the ordinary dwelling-houses called *ieng kwid* (spirit houses). In these houses offerings to the spirits of departed family ancestors are placed at intervals, this practice being very similar to the more ancient form of Shintoism. In some Wár villages
342 there are also separate bachelors' quarters. This custom is in accordance with that of the Naga tribes. There is no such custom amongst the Khasi Uplanders. The Wár houses are similar to those of the Pnar Wárs, except that a portion of the house is generally built on a platform, the main house resting on the hill-side and the portion on the platform projecting therefrom, the object being to obtain more space, the area for houses in the village sites being often limited owing to the steepness of the hill-sides.

The Bhoi and Lyngam houses are practically similar, and may be described together. They are generally built on fairly high platforms of bamboo, are frequently 30 to 40 ft. in length, and are divided into various compartments in order
[354] to suit the needs of the family. The hearth, which is of earth, is in the centre room. There is a platform at the back of the Lyngam house, and in front of the Bhoi house, used for drying paddy, spreading chillies, &c., and for sitting on when the day's

F. Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

work is done. In order to ascend to a Bhoi house, you have to climb up a notched pole. The Bhois sacrifice a he-goat and a fowl to *Rik-ingiong* (Khasi, *Rassiew iing*), the household god, when they build a new house.

VILLAGES.

Unlike the Nagas and Kukis, the Khasis do not build their villages on the extreme summits of hills, but a little below the tops, generally in small depressions, in order to obtain some protection from the strong winds and storms which prevail in these hills at certain times of the year. According to the late U Jeelon Roy, it is *sang*, or taboo, to the Khasis to build a house on the last eminence of a range of hills, this custom having perhaps arisen owing to the necessity of locating villages with reference to their defence against an enemy. Khasis build their houses fairly close together, but not as close as houses in the Bhoi and Lyngngam villages. Khasis seldom change the sites of their villages, to which they are very much attached, where, as a rule, the family tombs are standing and the *mawbynna* or memorial stones. In many villages stone cromlechs and memorial stones are to be seen which from their appearance show that the villages have been there for many generations. During the Jaintia rebellion the village of Jowai was almost entirely destroyed, but as soon as the rebellion was over the people returned to the old site and rebuilt their village. Similarly, after the earthquake, the ancient village sites were not abandoned in many cases, but the people rebuilt their houses in their former positions, although in Shillong and Cherrapunji they rebuilt the walls of the houses of wooden materials instead of stone. There is no such thing as a specially reserved area in the village *i.e.* the Siem and the nobility, all the people, rich or poor, living together in one village, their houses being scattered about indiscriminately. To the democratic Khasi the idea of the Siem living apart from his people would be repugnant. In the vicinity of the Khasi village, often just below the brow of the hill to the leeward side, are to be seen dark woods of oak

1;Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

and other trees. These are the sacred groves. Here the villagers worship *U ryngkew U basa*, the tutelary deity of the village. These groves are taboo, and it is an offence to cut trees therein for any purpose other than for performing funeral obsequies. The groves are generally not more than a few hundred yards away from the villages. The villages of the Syntengs are similar in character to those of the Khasis. The Wár villages nestle on the hill-sides of the southern border, and are to be seen peeping out from the green foliage with which the southern slopes are clad. In the vicinity of, and actually up to the houses, in the Wár villages, are to be observed large groves of areca-nut, often twined with the *pan* creeper, and plantain trees, which much enhance the beauty of the scene. Looking at a Wár village from a distance, a darker shade of green is seen; this denotes the limits of the extensive groves where the justly celebrated Khasi orange is grown, which is the source of so much profit to these people. The houses in the Wár villages are generally closer together than those of the Khasis, probably owing to space being limited, and to the villages being located on the slopes of hills. Generally up the narrow village street, and from house to house, there are rough steep stone steps, the upper portion of a village being frequently situated at as high an elevation as 200 to 300 ft. above the lower. In a convenient spot in a Wár village a clear space is to be seen neatly swept and kept free from weeds, and surrounded with a stone wall, where the village tribunals sit, and the elders meet in solemn conclave. Dances also are held here on festive occasions. At Nongjri village there is a fine rubber tree, under whose hollow trunk there are certain sacred stones where the priest performs the village ceremonies.

The Bhoi and Lyngam villages are built in small clearings in the forest, the houses are close together and are built often in parallel lines, a fairly broad space being reserved between the lines of houses to serve as a street. One misses the pretty gardens of the Wár villages, for Bhois and Lyngams attempt nothing of the sort, probably because, unlike the Khasi, a Bhoi or Lyngam village never remains more than two or three years in one spot; generally the villages of these people are in the vicinity of the forest clearings, sometimes actually in the midst

of them, more especially when the latter are situated in places where jungle is dense, and there is fear of attacks from wild animals. In the Lynngam village is to be seen a high bamboo platform some 20 to 30 ft. from the ground, built in the midst of the village, where the elders sit and gossip in the evening.

All the villages, Khasi, Wár, Lynngam and Bhoi, swarm with pigs, which run about the villages unchecked. The pigs feed on all kinds of filth, and in addition are fed upon the wort and spent wash of the brewings of country spirit, or rice beer, the latter being carefully collected and poured into wooden troughs. The pigs are of the usual black description seen in India. They thrive greatly in the Khasi villages, and frequently attain extreme obesity.

In the Khasi villages of the high plateaux are often nowadays potato gardens, the latter being carefully protected from the inroads of pigs, calves, and goats by dry dikes surmounted by hedges.

I noticed an interesting custom at a Bhoi village in Nongpoh of barricading the path leading to the village from the forest with bamboo palisading and bamboo *chevaux de frise* to keep out the demon of cholera. In the middle of the barricade there was a wooden door over which was nailed the skull of a monkey which had been sacrificed to this demon, which is, as amongst the Syntengs, called *khlam*.

FURNITURE AND HOUSEHOLD UTENSILS.

As in the case of houses, so with reference to furniture, the influence of civilization shows many changes. The Khasi of the present day who lives in Mawkhar * has a comfortable house regularly divided up into rooms in the European style with even some European articles of furniture, but owing probably to the influence of the women, he still possesses several of the articles of furniture which are to be met with in the houses of those who still observe the old style of living. Let us take the furniture of the kitchen to begin with. Above the hearth is slung by ropes of cane a swinging wooden framework

* Mawkhar is a suburb of Shillong, the headquarters station.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

352 blackened with the smoke of years, upon which are spread the
417 faggots of resinous fir-wood used for kindling the fire. Above this again is a wooden framework fixed on to the beams of the house, upon which all sorts of odds and ends are kept. Around
352 the fire are to be seen small wooden stools, upon which the members of the household sit. Up-to-date Khasis have cane chairs, but the women of the family, true to the conservative
915 instincts of the sex, prefer the humble stool to sit upon. Well-to-do Khasis nowadays have, in addition to the ordinary cooking vessels made of iron and earthenware, a number of brass utensils. The writer has seen in a Khasi house in Mawkhar brass drinking vessels of the pattern used in Orissa, of the description used in Manipur, and of the kind which is in vogue in Sylhet. The ordinary cultivator, however, uses a waterpot made from a gourd hollowed out for keeping water and liquor in, and drinks from a bamboo cylinder. Plates, or more properly speaking dishes, are of several kinds in the houses of the rich, the two larger ones being styled *ka pliang kyrthei* (female) and *ka pliang shyrong* (male). Needless to say, the first mentioned is a larger utensil than the latter. The ordinary waterpots, *u khiew phiang kyrthei* and *u khiew phiang shyrong*, are made of brass, the former being a size larger and having a wider mouth than the latter. The pot for cooking vegetables is made of iron. Another utensil is made of earthenware; this is the ordinary cooking pot used in the houses of the poor. Brass spoons of different sizes are used for stirring the contents of the different cooking utensils, also a wooden spoon.

550 [illegible]
573 beds with mattresses and sheets and pillows, clothes being
285 hung upon clothes-racks, which in one house visited were of the same pattern as the English "towel horse." The ordinary cultivator and his wife sleep on mats made of plaited bamboo, which are spread on the bare boards of the house. There are various kinds of mats to be met with in the Khasi houses made of plaited cane, of a kind of reed, and of plaited bamboo.
793 The best kind of mat is prepared from cane. In all Khasi
352 houses are to be seen *ki kwap*, or rain shields, of different sizes and sometimes of somewhat different shapes. The large

shield of Chowiyungi is used as a protection from rain. Those of Mulwem and Mawing are each of a peculiar pattern. Smaller shields are used as protections from the sun or merely for show, and there are specially small sizes for children. Then there are the different kinds of basket (*ki lûsh*) which are carried on the back, along across the forehead by a cane head-strap. These, again, are of different sizes. They are, however, always of the same conical shape, being round and broad-mouthed at the top and gradually tapering to a point at the bottom. A bamboo cover is used to protect the contents of the basket from rain. There is a special kind of basket made of cane or bamboo with a cover, which is used for carrying articles on a journey. These baskets, again, are of different sizes, the largest and best that the writer has seen being manufactured at Ranikai, in the south-western portion of the hills. Paddy is husked in a wooden mortar by means of a heavy wooden pestle. These are to be seen all over the hills. The work of husking paddy is performed by the women. A bamboo sieve is sometimes used for sifting the husked rice, a winnowing fan being applied to separate the husk. The cleaned rice is exposed to the sun in a bamboo tray. Paddy is stored in a separate rice-house in large circular bamboo receptacles. These hold sometimes as much as 30 maunds* of grain. Large baskets are also used for keeping paddy in. In every Khasi house is to be found the net bag which is made out of pineapple fibre, or of a stem, the *Arundinaria* (Bambusaria sinua). These bags are of two sizes, the larger one for keeping cowries in, the cowries in former days having been used instead of current coin in these hills, the smaller for the ever necessary betel-nut. Pân leaves are kept in a bamboo tube, and tobacco leaves in a smaller one. Lime for eating with betel-nut, is kept in a metal box, sometimes of silver, which is made in two separate parts held together by a chain. The box is called *ka shawan*, and is used all over the hills. This box is also used for divination purposes, one end of it being held in the hand, and the other, by means of the chain, being allowed to swing

* The maund is 82 lbs.

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

like a pendulum. An explanation of this method of divination will be found in the paragraph dealing with divination.

There is also a pair of symbols used by the old and medicine for breaking up hard-out. In the houses of the well-to-do is to be seen the ordinary bubble-bubble of India. Outside the houses of cultivators are wooden troughs hollowed out of the trunks of trees, which are used either as drinking troughs for cattle or for feeding pigs. A special set of utensils is used for manufacturing liquor. The Syntung and War articles of furniture and utensils are the same as those of the Khasis, with different names, a remark which applies also to those of the Bhoi and Lyngngam. Both the latter, however, use leaves as plates, the Bhoi using the wild plantain and the Lyngngam a large leaf called *ka la maniang*. The leaves are thrown away after eating, fresh leaves being gathered for each meal. The Lyngngam use a quilt (*ka ryllan*) made out of the bark of a tree of the same name as a bed covering. This tree is perhaps the same as the Garo *simpok*. In the Bhoi and Lyngngam houses the swinging shelf for keeping firewood is not to be seen, nor is the latter to be found amongst the submontane Bodo tribes in Assam.

MUSICAL INSTRUMENTS.

The Khasis have not many musical instruments, and those that they possess, with one or two exceptions, are of very much the same description as those of the Assamese. There are drums made of wood having the head covered with deer-skin; *ka kaing*, which is a cylindrically-shaped drum rather smaller than the Assamese *dhol* (*ka kaing kyrdoi* takes its name from the fact that this drum is beaten when women, *kyrdoi*, dance); *ka pudiah*, a small drum with a handle made of wood; *kathem*, a small circular drum. Khasi drums are usually always made of wood, not of metal, like the drums to be seen in the monasteries of Upper Assam, or of earthenware, as in Lower Assam.

Ka dotara is a guitar with eight silk strings, which is

played with a little wooden bar held in the hand. *Ka maripod* is an instrument much the same as the last, but is played with a bow like a violin. *Ka marynthing* is a kind of guitar with one string, played with the finger.

Ka kingnuri is a wooden pipe, which is played like a flageolet. *Ka lynskiw*, or *shikwiaw*, are cymbals made of bell metal; *ka shiwiti*, or *ka shingwiang*, is a kind of flute made of bamboo. This instrument is played at cremation ceremonies, and when the bones and ashes of a clan are collected and placed in the family tomb, or *mawbah*. This flute is not played on ordinary occasions. In the hill-men portion of the Monograph will be found a tale regarding it. There are other kinds of flutes which are played on ordinary occasions. The Wars of the twenty-five villages in the Khyrim State make a sort of harp out of reed, which is called *ka 'ning diny phong*. The Khasis also play a Jews' harp (*ka niang*), which is made of bamboo.

AGRICULTURE.

The Khasis are industrious cultivators, although they are behindhand in some of their methods of cultivation, (e.g. their failure to adopt the use of the plough in the greater portion of the district); they are thoroughly aware of the uses of manures. Their system of burning the soil, allowing them to dry, then burning them, and raking the ashes over the soil, is much in advance of any system of natural manuring to be seen elsewhere in the Province. The Khasis use the following agricultural implements:—A large hoe (*mukhie hok*), an axe for felling trees (*ka sifia*), a large *da* for felling trees (*ka wait lyngpun*), two kinds of bill-hooks (*ka wait pyut* and *ka wait khmat*), a sickle (*ka lyngkot*), also a harrow (*ka ink mus*). In dealing with agriculture, the lands of the Khasi and Jaintia Hills may be divided into the following classes:—(*a*) Forest land, (*b*) wet paddy land called *hili* or *pyndur*, (*c*) high grass land or *ka ri lum* or *ka ri phlang*, (*d*) homestead land (*ka 'dew kyppi*). Forest lands are cleared by the process known as *jhuming*, the trees being felled early in the winter and allowed to lie till January or February.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

when fire is applied, logs of wood being placed at intervals of a few feet to prevent as far as possible the ashes being blown away by the wind. The lands are not hoed, nor treated any further, paddy and millet being sown broadcast, and the seeds of root crops, as well as of maize and Job's tears, being dibbled into the ground by means of small hoes. No manure, beyond the wood ashes above mentioned, is used on this class of land; there is no irrigation, and no other system of watering is resorted to. The seeds are sown generally when the first rain falls. This style of cultivation, or *jhum*, is largely resorted to by the people inhabiting the eastern and southern portions of the Jaintia Hills, e.g. the Bhoiis and Lalungs, the Lyngams and Garos of the western tracts of the district. Wet paddy land (*kodi* or *pyndhor*) is, as the name implies, the land where the kind of paddy which requires a great deal of water is grown. The bottoms of valleys are divided up into little compartments by means of fairly high banks corresponding to the *Assamese dhis*, and the water is let in at will into these compartments by means of skilfully contrived irrigation channels, sometimes a mile or more in length. The soil is made into a thick paste in the Jaintia Hills by means of the plough, and in the Khasi Hills through the agency of the hoe. Droves of cattle also are driven repeatedly over the paddy-fields until the mud has acquired the right consistency. The seed is then sown broadcast in the wet mud. It is not sown first in a seedling bed and then transplanted, as in Assam and Bengal. When the plants have grown to a height of about four inches, water is let in again; then comes the weeding, which has to be done several times. When the crop is ripe the grain is cut with a sickle (*ka thmoi*) generally, so as to leave almost the entire stalk, and are left in different parts of the field. A peculiarity about the Lyngams and the Khasis and Mikirs of the low hills, or Bhoiis as they are called, is that they reckon it *sang*, or taboo, to use the sickle. They reap their grain by pulling the ear through the hand. The sheaves, after they are dry, are collected and threshed out on the spot, either by beating them against a stone (*shah khet*), or by men and women treading them out (*ioh khet*). Cattle are not used for treading out the grain. The grain is then collected and placed in large bamboo receptacles

(*bi thiar*). The paddy-fields are not manured. The Khasis when cultivating high lands, select a clayey soil if they can. In the early part of the winter the sods are turned over with the hoe, and they are exposed to the action of the atmosphere for a period of about two months. When the sods are dry, they are placed in piles, which are generally in rows in the fields, and by means of ignited bunches of dry grass within the piles a slow fire is kept up, the piles of sods being gradually reduced to ashes. This is the "paring and burning process" used in England. The ashes so obtained are then carefully raked over the field. Sometimes other manure is also applied, but not when paddy is cultivated. The soil is now fit to receive the seed, either high-land paddy, millet, *Job's tears*, or other crops, as the case may be. The homestead lands are plentifully manured, and consequently, with attention, produce good crops. They are cultivated with the hoe.

The cultivation of oranges in the southern portion of the district ranks equally in importance with that of the potato in the northern. The orange, which is known in Calcutta as the Chhatak or Sylhet orange, comes from the warm southern slopes of the hills in this district, where it is cultivated on an extensive scale. Although oranges do best when there is considerable heat, they have been known to do well as high as 5,000 ft.; but the usual limit of elevation for the growth of oranges in this district is probably about 1,000 to 1,500 ft. The orange of the Khasi Hills has always been famous for its excellence, and Sir George Birdwood, in his introduction to the "First Letter Book of the East India Company," page 56, refers to the orange and lemon of Garhwal, Sikkim, and Khasia as having been carried by Arab traders into Spain "whence the Moors helped to gradually propagate them throughout Southern Europe." Therefore, wherever the potato was imported, the orange would appear to be indigenous in these hills.

Nurseries.—The seeds are collected and dried by being exposed to the sun. In the spring nurseries are prepared, the ground being thoroughly hoed and the soil pulverised as far as possible. The nursery is walled with stones. The seeds are then sown, a thin top layer of earth being applied. The

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

247 nurseries are regularly watered, and are covered up with layers of leaves to ensure, as far as possible, the retention of the necessary moisture. When the plants are 3 or 4 in. high, they are transplanted to another and larger nursery, the soil of which has been previously well prepared for the reception of the young plants.

245 An orangery is prepared in the following manner:—

The shrubs, weeds and small trees are cut down, leaving only the big trees for the purpose of shade. The plants from the nurseries are planted from 6 ft. to 9 ft. apart. When they have become young trees, many of the branches of the sheltering trees mentioned above are lopped off, so as to admit the necessary amount of sunlight to the young orange trees. As the orange trees increase in size, the sheltering trees are gradually felled. The orchard requires clearing of jungle once in spring and once in autumn. The Khasis do not manure their orange trees, nor do they dig about and expose the roots. The price of orange plants is from 75 to 100 plants per rupee for plants from 1 to 2 ft. in height, and from fifty to seventy-five plants per rupee for plants from 2 to 5 ft. in height. Orange trees bear fruit when from five to eight years old in ordinary soils. In very fertile soils they sometimes bear after four years. A full-grown tree yields annually as many as 1,000 oranges, but a larger number is not unknown. The larger portion of the produce is exported from the district to the plains, and to fruit markets at the foot of the hills such as Theria, Mowdon, and Phali-Bazar, on the Shella river, whence it finds its way to the Calcutta and Eastern Bengal

244 Potatoes are raised on all classes of land, except *hali*, or wet paddy land. When the land has been properly levelled and hoed, drains are dug about the field. A cultivator (generally a female), with a basket of seed potatoes on her back and with a small hoe in her right hand, digs holes and with the left hand drops two seed-potatoes into each hole. The holes are about 6 in. in diameter, 6 in. deep, and from 6 to 9 in. apart from one another. Another woman, with a load of manure in a basket on her back, throws a little manure over the seed in the hole, and then covers both up with earth.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

After the plants have attained the height of about 6 in., they are earthed up. When the leaves turn yellow, it is a sign that the potatoes are ripe. The different kinds of sweet potatoes grown and the yam and another kind of esculent root—*u sukphlang* (*Ceratopteris cretica Brongn.*) will be noticed under the head of "Crops." 244

The Khasis possess very few agricultural sayings and proverbs, but the following may be quoted as examples:— 241 538

(1) *Wet ju ai thang jingthang ne bet symbai ha uba sniew bti.*

Do not allow plants to be planted or seeds to be sown by one who has a bad hand. [177]

As elsewhere, there is a belief amongst the Khasis that some people's touch as regards agriculture is unlucky. [179]

(2) *Thang diang ne bet symbai haba ngen bnai, ym haba ehai u bnai.*

Plant trees or sow seeds not when the moon is waxing, but when it is on the wane.

(3) *Wei la sow lha la bang ngingi jan mint phin ne ioh jingrung lashai.*

A red sky in the west in the evening is the sign of fine weather to-morrow.

Cf. our English proverb "a red sky in the morning is a shepherd's warning, a red sky at night is a shepherd's delight."

CROPS.

The varieties of rice found in the Khasi Hills are divided [illegible] 243 [illegible] and the other raised in valleys and hollows which are artificially irrigated from hill streams. The lowland rice is more productive than that grown on high lands, the average per acre of the former, according to the agricultural bulletin, as ascertained from the results of 817 experimental crop cuttings carried out during the fifteen years preceding the year 1898, being 11.7 maunds of paddy per acre, as against an average of 9.4 maunds per acre (resulting from 667 cuttings made during the 435

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

243 same period) for the latter.* The average out-turn of both
433 kinds is extremely poor, as compared with that of any description of rice grown in the plains. The rice grown in the hills is said by the Agricultural Department to be of inferior quality, the grain when cleaned being of a red colour, and extremely
244 coarse. The cultivation of potatoes is practically confined to the Khasi Hills, there being little or none in the Jaintia Hills. The normal out-turn of the summer crop sown in February and harvested in June is reported by the Agricultural Department to be five times the quantity of seed used, and that of the winter crop, sown in August and September on the land from which the summer crop has been taken, and harvested in December, twice the quantity of seed. The winter crop is raised chiefly for the purpose of obtaining seed for the spring sowings, as it is found difficult to keep potatoes from the summer crop in good condition till the following spring. The usual quantity of seed used to the acre at each sowing is about 9 maunds, so that the gross out-turn of an acre of land cultivated with potatoes during the year may be taken at 63 maunds, and the net out-turn, after deducting the quantity of seed used, at 45 maunds. The above estimate of the Agricultural Department rests chiefly on the statements of the cultivators, and has not been adequately tested by experiment.

244 Since the appearance of the potato disease in 1885-86 there
439 has been a great decrease in the area under potato cultivation. In 1881-82 the exports of potatoes from the district were as high as 126,961 maunds. From 1886-87 the exports began gradually to decrease until in 1895-96 the very low figure of 8,296 maunds was reached. The figures of export for the last nine years are as follows:—

1896-97	16,728 maunds.
1897-98	7,805 "
1898-99	9,272 "
1899-00	5,422 "
1900-01	29,142 "
1901-02	38,231 "
1902-03	38,047 "
1903-04	30,990 "

* See Bulletin No. 5 of the Agricultural Department of Assam, 1906, pp. 4 and 5.

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

It will be seen that in the three years following the earthquake of 1897 the exports fell very low indeed. Since 1901 the trade has been steadily recovering, and the exports of 1904 reached half a lakh of maunds.

It will be observed that there has been some improvement, but the exports are still not half what they were in 1881-82. There are two kinds of sweet potatoes grown in the district, the Garo potato (*u phan Garo*), which appears to have been introduced from the Garo Hills, and *u phan saulia*, the latter being distinguished from the Garo potato by its having a red skin, the Garo potato possessing a white skin. These kinds of potato are planted on all classes of land except *kali*, they do best on jhumed and homestead lands. The yam proper (*u phan shyarsh*) is also largely grown. The small plant with an edible root called by the Khasis *u sohphang* (*Arunsingia vestita Benth.*), is also largely grown. The roots of the plant after being peeled are eaten raw by the Khasis. As far as we know, this esculent is not cultivated in the adjoining hill districts. Job's tears (*coix lachryma-Jobi*)* are extensively grown, and are planted frequently with the *sohphlang* mentioned above. This cereal forms a substitute for rice amongst the poorer cultivators. Maize or Indian corn (*u riew hadem*) is grown frequently, thriving best on homestead land, and requires heavy manuring; it is grown in rotation with potatoes. Next in importance to rice comes the millet (*u kwai*), as a staple of food amongst the Khasis. There are three varieties of millets generally to be seen in the Khasi Hills:—*u 'wai-sah* (*setaria Italica*), *u 'wai-shan* (Paspalum sanguinale), and *u 'wai-trah* (Eleusine coracana). *U 'wai-shan* is cultivated in rotation with the potato, *u 'wai-sah* and *u 'wai-trah* are generally cultivated on jhumed land, where they thrive well. Millet is sometimes used instead of rice in the manufacture of spirit by the Khasis; *u rymbai-ja* (*phaseolus calcaratus*), and *u rymbai kiung* (*glycine soja*) are beans which are cultivated occasionally. Khasis highly prize the fruit of the plantain, which they give to infants mashed up. The following are the best known varieties:—*K'a kait khán, ka kait siem, ka kait kulkait, ka kait bamon, ka kait shyiang.*

* Khasi *u sah-riew.*

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

245 The most important crop on the southern side of the hills is
304 the orange, which has already been referred to in the paragraph dealing with agriculture.

The oranges are sold by the *epah* or 100, which is not a 100 literally, but somewhat over 3,000 oranges. Different places have different *epahs*. At P'hali Hat, on the Bogapani River, the *epah* is computed as follows:—

1 Hali = 4 oranges.
8 Halis = 1 Bhar.
100 Bhars = 1 ki epah (one hundred).
= 3,200 oranges.

At Shel, the computation is slightly different, being as follows:—

1 Gai = 8 oranges.
5 Gais + 4 oranges = 32 oranges.
4 Bhars = 1 hola = 128 oranges.
27 holas + 1 bhara = 1 ki epah (100)
= 3,520 oranges.

By another method of calculation the *epah* consists of 3,240 oranges.

[135] The price per *epah* varies from about 10 annas in good years to Rs. 40, when the orange harvest has been a poor one.

245 The lime is also cultivated, not separately, but along with the orange. The lime can be grown with success at a higher altitude than the orange. There is extensive betel-nut and *pân* cultivation on the southern slopes of the hills. The betel-nut tree is cultivated in the same manner as in the plains, except that the trees are planted nearer to one another. The trees bear when eight to ten years old. A portion of the crop is sold just after it has been plucked; this is called a '*nâi khiar*, and is for winter consumption. The remainder of the crop is kept in large baskets, which are placed in tanks containing water, the baskets being completely immersed. This kind of betel-nut is called a '*nâi ran*.' The Khasis, like the Assamese, prefer the fresh betel-nut. They do not relish the dry *supari* so much.

The principal *pân* gardens are on the south side of the hills, *pân* not being grown on the northern slopes, except in the neighbourhood of Jirang. The *pân* creepers are raised from cuttings, the latter being planted close to the trees up which they are to be trained. The creeper is manured with leaf

mould. The plant[2/1] is watered by means of small bamboo aqueducts which are constructed along the hill-sides, the water being conducted along them often considerable distances. As in the plains, the leaves of the *pán* creeper are collected throughout the year.

The bay leaf (*la tyrpád*, or *tezpát*) is classified in the *Agricultural Bulletin* as *Cinnamomum tamala*, and there is a note in the column of remarks that "this tree, as well as one or two others of the same genus, yields two distinct products, *tezpát* (bay leaf) and cinnamon bark." The bay leaf is gathered for export from the extensive gardens in Maharam, Malaisohmat, Mawsynram, and other Khasi States. The plants are raised from seed, although there are no regular nurseries, the young seedlings being transplanted from the jungle, where they have germinated, to regular gardens. Bay leaf gardens are cleared of jungle and weeds periodically; otherwise no care is taken of them. The leaf-gathering season is from November to March. The leaves are allowed to dry for a day or two in the sun, and then packed in large baskets for export. The gathering of bay leaf begins when the trees are about four years old.

The following are the other minor crops which are grown in the Khasi and Jaintia Hills:—

Pineapples, turmeric, ginger, pumpkins and gourds, the egg plant, chillies, sesamum, and a little sugar-cane. The arum* (*la shirin*) is also extensively grown in the hills, and forms one of the principal articles of food amongst the poorer classes; it is generally raised in rotation with potatoes, or is planted along with *Job's tears*. The stem of the arum is sometimes used as a vegetable, also for feeding pigs.

In the Jowai Sub-Division, notably at Nartiang, there are fairly good mangoes, which are more free from worms than those grown in the plains of Assam.

The Bhois and Lynngams cultivate lac. They plant *arhar dal*, *u landoo*, in their fields, and rear the lac insect on this plant. Last year the price of lac at Gauhati and Palasbari markets rose as high as Rs. 50 per maund of 82 lbs., it is said, but the price at the outlying markets of Singra and Boko was

* Colocasia esculenta, Beng. Kacho.

2/1 [i.e., the pán ... Ed.]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

about Rs. 30. The price of lac has risen a good deal of late years. Formerly the price was about Rs. 15 to Rs. 20 a maund. The lac trade in the Jaintia Hills and in the southern portion of the Khyrim State is a valuable one. The profits, however, go largely to middle-men, who in the Jaintia Hills are Syntengs from Jowai, who give out advances to the Bhoi cultivators on the condition that they will be repaid in lac. The Marwari merchants from the plains attend all the plains markets which are frequented by the hill-men, and buy up the lac and export it to Calcutta. The whole of the lac is of the kind known as stick-lac.

HUNTING.

The weapons used by the Khasis for hunting are bows and arrows, the latter with barbed iron heads, and spears which are used both for casting and thrusting. Before proceeding on a hunting expedition the hunters break eggs, in order to ascertain whether they will be successful or not, and to which jungle they should proceed. Offerings are also made to certain village deities, *e.g. U. Byuglew*, *u Bosa*, and *u Bosa ki mráli*. A lucky day having been selected and the deities propitiated, the hunters start with a number of dogs trained to the chase, the latter being held on leashes by a party of men called *ki nongsi-kaw*. When the dogs have picked up the scent some hunters are placed as "stops" (*ki khem*), at points of vantage in the jungle, and the drive commences with loud shouts from the hunters, the same being continued until the object of the chase breaks into the open. The man who draws the first blood is called *u nongsiat*, and the second man who scores a hit *u nongkan*. These two men get larger shares of the flesh than the others. The *nongsiat* obtains the lower half of the body of the animal, thighs and feet excepted, called *ka tdong*, and the *nongkan* one of the forequarters called *ka tabla*. The other hunters obtain a string of flesh each, and each hound gets a string of flesh to itself. These hunting parties pursue deer sometimes for many miles, and are indefatigable in the chase, the latter lasting occasionally more than one day. In the Jaintia Hills, at the end of the chase, the quarry is carried to

the house of the *nongsiat*, where a *puja* is performed to some local deity, before the flesh is distributed. At Shangpung, when a tiger or a mithan is killed, the head is cut off, and is carried in triumph to a hill in the neighbourhood where there is a *duscan*, or altar, at the foot of an oak tree (*dieng sning*). The head is displayed on the altar, and worship offered to *u 'lei lyngdoh*, the God of the doloiship.

The Khasis make use of an ingenious species of spring gun for killing game, the spring gun being laid alongside a deer path in the jungle. A string stretched across the path, when touched, releases a bolt and spring, which latter impels a bamboo arrow with great force across the path. This spring gun is called *ka riam siat*. A pit-fall, with bamboo spikes at the bottom, is called *u 'lie lep*, and a trap of the pattern of the ordinary leopard trap is called *ka riam slung*. A noose attached to a long rope laid in a deer run is named *riam syrwiah*.

There is also *ka riam pep*, the principle of which is that an animal is attracted by a bait to walk on to a platform; the platform sinks under the weight of the animal, and a bolt is released which brings down a heavy roof from above weighted with stones, which crush the animal to death.

There are several means employed in snaring birds; one of the most common is to smear pieces of bamboo with the gum of the jack-tree, the former being tied to the branches of some wild fruit tree, upon which, when the fruit is ripe, the birds light and are caught by the bird lime. This is called *ka riam thit*. Another is a kind of spring bow made of bamboo which is laid on the ground in marshy places, such as are frequented by snipe and woodcock. This form of snare is unfortunately most common. A third is a cage into which birds are lured by means of a bait, the cage being hidden in the grass, and the entrance being so contrived that the birds can hop in but not out again. This is called *ka riam sim*.

FISHING.

Although there are some Khasis who fish with rod and line, it may be said that the national method of fishing is to poison

1:Gurdon E-4.5 (no date) 1907 AR7 Khasi AR7

226 the streams. Khasis, except the Wárs and the people of Shella, unlike the Assamese and Bengalis, do not fish with nets, nor do they use the bamboo-work device known by the Assamese as *pala* (পলা) and *jak* (জাক). The method of fish-poisoning of the Khasis is the same as that described by Soppitt in his account of the tribes inhabiting North Cachar. The following is a description of how Khasis poison fish in the western portion of the district; it may be taken as a sample of the whole. A [204] large quantity of the bark of the tree *ka nyata* and the creeper *u khariew* is first brought to the river-side to a place on the stream a little above the pool which it is proposed to poison, where it is thoroughly beaten with sticks till the juice exudes and flows into the water, the juice being of a milky white colour. In a few minutes the fish begin to rise and splash about, and, becoming stupefied, allow themselves to be caught in the shallows. If the beating of the bark has been well carried out, many of the fish soon die and after a time float on the surface of the water. A large number of Khasis stand on the banks armed with bamboo scoops shaped like small landing nets, to catch the fish, and fish traps (*ki khowar*) Assamese *khoki* (খোকা) are laid between the stones in the rapids to secure [204] any fish that may escape the fishing party. Another fish poison is the berry *u soh lew*, the juice of which is beaten out in the same manner as described above.

226 Soppitt says, certain fish do not appear to be susceptible to 136 the poison, and not nearly the destruction takes place that is popularly supposed. The mahseer and the carp family generally do not suffer much, whereas, on the other hand, the river shark, the *bagh mas* of the Bengalis, is killed in large numbers. It is impossible, however, in the opinion of the writer, that the mahseer fry, which abound in these hill rivers in the spring and early summer months, can escape being destroyed in great numbers when the streams are frequently poisoned. In the neighbourhood of lime quarries and other large works where dynamite is used for blasting, this explosive is sometimes 226 employed for killing fish. The practice, however, has been strictly prohibited, and there have been some cases in which the offenders have been punished in the courts. Fish-poisoning is bad enough, but dynamiting is still worse, as with an effective

cartridge all the fish within a certain area are killed, none escape. When poisons are used, however, some fish are not affected by them, and others are only stupefied for the time being and afterwards recover.

FOOD.

The Khasi and Syntengs ordinarily take two meals a day, one in the early morning and the other in the evening, but labourers and others who have to work hard in the open take a midday meal as well, consisting of cold boiled rice wrapped in a leaf (*ka já-sang*), cakes (*ki kpu*) and a tuberous root (*u sohphlang*) which is eaten raw. They are fond of all kinds of meat, especially pork and beef, although some of the Syntengs, owing to Hindu influence, abstain from eating the latter. Unlike the neighbouring Naga, Garo and Kuki tribes, the Khasis abstain from the flesh of the dog. Both Bivar and Shadwell say the reason why the Khasis do not eat the flesh of the dog is because he is in a certain sense a sacred animal amongst them. There is a Khasi folk-tale relating how the dog came to be regarded as the friend of man. It is, however, quite possible that the Khasis may never have eaten the flesh of the dog from remote times, and it is nothing extraordinary that the Khasis should differ in a detail of diet from the neighbouring Thibeto-Burman tribes which are so dissimilar to them in many respects. The Khasis, except some of the Christian community and some of the people of the Mawkhar, do not use milk, butter, or ghee as articles of food. In this respect they do not differ from the Kachari and Rabhas of the plains or the Garos of the hills. The Mongolian race in its millions as a rule does not use milk for food, although the Tibetans and some of the Turcoman tribes are exceptions. Before fowls or animals are killed for food, prayers must be said, and rice sprinkled on the body of the animal. The staple food of the Khasis is rice and dried fish. When rice cannot be obtained or is scarce, millet or Job's tears are used instead. The latter are boiled, and a sort of porridge is obtained, which is eaten either hot or cold according to fancy. Khasis eat the flesh of nearly all wild animals, they

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

262 also eat field rats and one kind of monkey (*u shrik*). The Syntengs and Lyngams are fond of tadpoles, and the Khasis consider a curry made from a kind of green frog, called *ka japieh*, a *bonne bouche*. They, however, do not eat ordinary frogs (*jakoid*). The Khasis of Mariao, Maharam, Nongstoin and some other Siemships eat the hairy caterpillar, *u'thiang phlang*.

262 A staple food which must not be forgotten is the inner por-
252 tion of the bark of the sago palm tree, *ka thái*, which grows wild in the forest and attains a large size. The tree is felled and the outer bark removed, the soft inner part is cut into slices, dried in the sun, pounded in a mortar and then passed through a fine bamboo sieve. A reddish flour is obtained, of sweet taste, which is boiled with rice. This flour is said to make good cakes and puddings.

262 Although the Khasis are such varied feeders, there are some
614 clans amongst them which are prohibited by the ordinance of *sang*, or taboo, from eating certain articles. The following are some instances:—

The Cherra Siem family cannot eat dried fish (*'thá-pinh*); the *Nongs* of Mylliem must not eat the gourd (*u pathiw*); a fish called *ka'thá-lani* is taboo to some of the *Siem-lik* clan. Some of the *Wair* people must not eat *ka khung* (perverted fish), and the clan *'khar-um-o-kiá* in Khyrim is debarred from the pleasure of partaking of pork. The flesh of the *sow* is *sang* to the *'khar* clan, although that of the male pig may be eaten.

DRINK.

273 The Khasis are in the habit of regularly drinking considerable quantities either of a spirit distilled from rice or millet (*ka'iad pudkha*), or of rice-beer, which is of two kinds (1) *ka'iad kiar*, (2) *ka'iad um*. Both of these are made from rice and, in some places, from millet, and the root of a plant called *u khawiang*. *Ka'iad kiar* is made by boiling the rice or millet. It is then taken out and spread over a mat, and, when it cools, fragments of the yeast (*u khawiang*) are sprinkled over it. After this it is placed in a basket, which is put in a wooden bowl. The

basket is covered tightly with a cloth so as to be air-tight, and it is allowed to remain in this condition for a couple of days, during which time the liquor has oozed out into the bowl. To make *ka'iad wa* the material, the rice or millet from which the *ka'iad kiar* was brewed, is made use of. It is placed in a large earthen pot and allowed to remain there for about five days to ferment, after which the liquor is strained off. *Ka'iad kiar* is said to be stronger than *ka'iad wa*. The former is used frequently by distillers of country spirit for mixing with the wort so as to set up fermentation. The people of the high plateaux generally prefer rice spirit, and the Wárs of the southern slopes of the Khasi and Jaintia Hills customarily partake of it also. The Khasis of the western hills, e.g. of the Nongstoin Siemship, and the Lyngngams, Bhoiés, Lalungs, and Hadems almost invariably drink rice-beer, but the Syntengs, like the Khasi uplanders, drink rice-spirit. Rice-beer (*ka'iad wa*) is a necessary article for practically all Khasi and Synteng religious ceremonies of importance, it being the custom for the officiating priest to pour out libations of liquor from a hollow gourd (*u Kiang*) to the gods on these occasions. As there is no Excise in the district, except within a five-mile radius of Shillong, liquor of both the above descriptions can be possessed and sold without restriction.

According to some Khasi traditions, the Khasis in ancient times used not to drink spirits, but confined themselves to rice-beer. It is only in the last couple of generations that the habit of drinking spirits has crept in, according to them. From Khasi accounts, the use of spirits is on the increase, but there is no means of testing these statements. There can be no doubt, however, that at the present time a very large amount of spirit is manufactured and consumed in the district. The spirit is distilled both for home consumption and for purposes of sale; in some villages, e.g. Mawlai and Marbiew, near Shillong, where there are fifty-nine and forty-nine stills respectively, there being a still almost in every house. Mawlai village supplies a great deal of the spirit which is drunk in Shillong, and from Marbiew spirit is carried for sale to various parts of the hills. Other large distilling centres are Cherrapunji, with forty-seven stills; Jowai, with thirty-one stills; Laitkynsew, with fifty-four stills;

A KHASI ARCHERY MEETING

(From a photograph by Mrs. Marriot.)

Gordon E-d,5 (no date) 1907 ART Khasi ART

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Nongwar, thirty-one stills; and Rangthang, thirty-seven stills.

From what has been stated above some idea may be gathered how very large the number of stills in the Khasi and Jaintia Hills is. I am not in a position to state with any degree of accuracy what is the amount of spirit manufactured or consumed in the year, but it is very considerable. The out-turn of a Khasi still has been reckoned at from four to eight bottles per day. From this estimate, and the fact that there are 1,530 stills in the district, it may be roughly calculated what is the consumption annually. Practically the whole of the spirit is consumed within the district. The liquor which is manufactured is far stronger than the spirit distilled in the ordinary out-stills in the plains. It has been stated by an expert analyst that the Khasi spirit contains 60 to 80 per cent. of proof spirit, and that it possesses "an exceptionally nice flavour and taste." The usual price at which it is sold is 4 to 6 annas a quart bottle, a second quality being sometimes sold for 3 annas. It will be seen that the liquor is exceedingly cheap. A Khasi in the villages of the interior can get drunk for 2 annas,* or a quarter of an ordinary coolie's daily wage. Drunkenness prevails on every market day at Cherrapunji, Jowai, and other large hats, and on occasions when there are gatherings of the people for various purposes. This cheap but strong spirit is demoralizing the people, and some restriction of its use would be welcomed by many. In the Khasi Welsh Methodist Church abstention from liquor is made a condition of Church membership, but the vast number of stills and the facilities with which liquor can be obtained are a constant source of temptation to the Christian community, and cause many defections.

GAMES.

The Khasis have many games, but their principal game is archery, this may be said to be the national game, and is a very popular form of recreation amongst them, the sport being indulged in from about the beginning of January to the end of

* About threepence.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

May each year. The following is a description of a Khasi archery meeting, for the details of which I am largely indebted to U Job Solomon. By way of introduction it should be stated that the Khasis claim that arrow-shooting originated at the beginning of creation. The Khasi Eve (*Ka-mai-ka-nongkakaw*) had two sons to whom she taught the toxophilite art, at the same time she warned them never to lose their tempers over the game. At the present day villages have regular archery meetings, the men of one village challenging those of another. There are men on both sides called *nong khan kiwan* (lit., he who stops the arrow). This man, by uttering spells, and reciting the shortcomings of the opposite side, is supposed to possess the power of preventing the arrows of the opposing party hitting the mark. These men also, to some extent, may be said to perform the duties of umpires. They may be styled umpires for the sake of convenience in this account. Before the match commences conditions are laid down by the umpires of both sides, such as (*a*) the day on which the contest is to take place; (*b*) the place of the meeting; (*c*) the number of arrows to be shot by each archer; (*d*) the distinguishing marks to be given to the arrows of either side; (*e*) the amounts of the stakes on each side; (*f*) the number of times the competitors are to shoot on the day of the archery meeting, and many other conditions too numerous to mention here. The targets are generally small bundles of grass called "u ulwen," about 1 ft. long by 4 in. in diameter, fastened on a small pole. Sometimes targets are made from the root of a plant called *ka sah pdung*. The distances from the point where the marksmen stand to the targets are some 40 to 50 yards. Each side has its own target, the different targets being placed in a line, and the competitors taking up their positions in a straight line at right angles to the line of fire, and facing the targets; each side in turn then shoots at its own target. Early in the morning of the day fixed for the contest the umpire of each side sits in front of his target with a hollow bamboo full of water in his hand, the bows and arrows being laid on the ground alongside the targets. The umpire then repeats all the conditions of the contest, invokes the aid of the primeval woman (*ka mai ka nong kakaw*) aforesaid, goes through

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

525 certain incantations freely adhering to the many faults of the opposite side, and pours water at intervals from the bamboo in front of the target. This business lasts about two hours. Then they exhort the competitors of their respective sides, and the match commences amidst loud shouts. Every time there is a hit there are loud cheers, the competitors leaping high into the air, the umpires muttering their incantations all the while. At the end of each turn the number of hits are counted by representatives of both sides. At the close of the day the side with the greatest number of hits wins the match, the successful party returning home, dancing and shouting. The young women adherents of both sides assemble, and dispense refreshments to the competitors, taking a keen interest in the proceedings withal. Frequently large wagers
525 are made on either side. In the *Khadar Blong* portion of the
526 Nongkrem State as much as Rs. 500 are occasionally wagered on either side. In Jowai the practice is also to bet a lump-sum, the amount being raised by subscription from amongst the competitors. More usual bets are, however, about one anna a head. The *sang Blong Khasia* and the men who prepare the targets receive presents from their respective sides. The Khasi bow carries a considerable distance, as some shot over 180 yards being within the personal knowledge of the writer. It is believed that Khasi bows wielded by experts carry up to 200 yards. The average range may be said, however, to be 120 to 140 yards.

524 Yule mentions peg-top spinning amongst Khasi children as
177 being indigenous and not an importation, but Rivett thinks that the game is of foreign introduction. I am, however, inclined to agree with Yule that peg-top spinning is indigenous, inasmuch as this game could not have been copied from the Syiemsie or the Awanong of the plains, who do not indulge in it. As the British had only recently established themselves in the hills when Yule wrote, they would scarcely have had time or opportunity to introduce an English children's game. Khasi
524 children also play a kind of "leap scotch" (*Hopscotch* under *skills* and *games of skill*), and Yule writes, "Another of their recreations is an old acquaintance also, which we are surprised to meet with in the Far East. A very tall, thick bamboo is planted in

It Gordon E-4, 5 (no date) 1907 ART Khasi ART

the ground and well oiled. A silver ornament, or a few rupees, placed at the top, reward the successful climber." A leg of mutton, or a piece of pork fixed at the top of this pole would render the pastime identical with the "greasy-pole" climbing of English villages. The following are some other Khasi games:—

Wrestling; two persons grasping each other's hands with the fingers interlocked, and then trying to push one another down; tug-of-war with a piece of stick, the two combatants placing their feet one against the other; butting at one another like bulls, and trying to upset each other (in two sorts); long jump; high jump; blind-man's buff; flying kites; pitching cowries into a hole in the ground; a game like marbles, only played with round pebbles, and others.

MANUFACTURES.

The manufactures of the Khasis are few in number, and do not seem to show any tendency to increase. On the contrary, two of the most important industries, the smelting of iron ore and the forging of iron implements therefrom, and the cotton-spinning industries at Nongpoh and Sohbiang, show signs of dying out. Ploughshares and hoes and bill-hooks can now be obtained more cheaply from the plains than from the forges in the hills, and Manchester piece goods are largely taking the place of cloths of local manufacture. The iron industry in former days was an important one, and there is abundant evidence that the workings were on a considerable scale, e.g. at Nongkrem and Lailyngkot, in the shape of large granite boulders which have fallen to the ground from the sides of the hills owing to the softer rock which filled the interstices between the boulders having been worked out by the iron-workers, their process being to dig out the softer ferruginous rock, and then extract the iron ore from it by means of washing. The softer rock having been removed, the heavier portions fell by their own weight, and rolled down to the bottom of the slopes, the result being the great number of boulders to be seen near the sites of these workings.

1:Garden E-4, 5 (no date) 1907 AR? Khasi AR?

327 Colonel Lister, writing in 1855, estimated that 20,000 maunds of iron were exported from the hills in the shape of hoes to the Assam Valley, and in bumps of pig iron to the Surma Valley, where it was used by boat-builders for clamps. Nowadays the smelting of iron is carried on in very few places. There are still smelting-houses at Nongkrem and Nongpyrung, but these are practically the only places left where smelting of iron ore goes on; there are many forges where rough iron brought from the plains is melted down and forged into bill-hooks and hoes. Messrs. Yule and Cawcroft have described the native process of smelting iron, and it is only necessary to refer to their papers if information is required on the subject. Yule's account is a very full one, and is to be found at page 452, vol. vi, part ii, of the Journal of the Asiatic Society of Bengal. The system pursued, both in the extraction and in the subsequent smelting of the ore, is the same at the present day as that described by Yule. Dr. Oldham, writing in 1862, says, "The quality of this Khasi iron is excellent for all such purposes as Swedish iron is now used for. The impurity of the blooms or masses of the metal in a molten state, however, as they are sent to market, is a great objection to its use, and the waste consequent thereon renders it expensive. It would also form steel or wootz (Indian steel) of excellent quality. I have no doubt that the manufacture could be greatly improved and possibly extended." Dr. Oldham, however, goes on to remark that the manufacture of iron could not be very much extended, owing to the scanty dissemination of the ore in the rocks, and the consequent high cost of obtaining it. At present the want of any permanent supply of water prevents the natives from working for more than a few days during the year, while the rains are heavy, and they can readily obtain sufficient force of water for the washing of the ore from its matrix. The export of iron in any form from the district has now almost died out, only a few hoes being brought down by the Khasis from Laitlum, in Khaliengdoh, to the Dudhnoi and Pilobari markets in the Kamrup District of the Assam Valley. Iron of Kolkata manufacture has, of course, much cheapened the market, but probably the fact that the parts of the country in the neighbourhood of the rocks which contain the metal have

I: Gardon E-4, 5 (no date) 1907 AR7 Khasi AR7

been denuded completely of timber, charcoal being necessary for smelting, has affected the production almost as much as the presence of cheap iron in the market.

MANUFACTURE OF ERI SILK CLOTHS AND COTTON CLOTHS IN THE JAINTIA HILLS.

The number of weavers in the district at the last Census was 333. This number in the Census Report is ascribed to the cotton industry, no mention being made of weavers of silk. The spinning of Eri silk thread, and weaving it into cloths is, however, a fairly considerable industry amongst the Khyrwang and Nongtung villages of the Jaintia Hills. The Nongtungs and Khyrwangs rear their own Eri worms, and spin the silk from the cocoons. The late Mr. Stack, in his admirable note on silk in Assam, says, "Throughout the whole range of the southern hills, from the Nikir country, Eri thread is in great request for weaving those striped cloths, in which the mountaineers delight," but this observation should have been confined to the Jaintia Hills portion of this district, the Khasis not weaving themselves either in silk or cotton. The Khasis obtain their silk cloths from the Assam Valley, and from the Nongtung or Khyrwang villages in Jaintia. The latter villages have given the name to the striped cloth, *ka jiin Khyrwang*, which is almost invariably worn by the Syntengs. Mr. Stack has given in detail a description of the silk industry in Assam, and it is not therefore necessary to go over the same ground here. The Khyrwang cloth is red and white, mauve and white, or chocolate and white, the cloth being worn by both men and women. The Khyrwang cloths vary in price from Rs. 5 to Rs. 25, according to size and texture. These cloths are the bridal wear of women alone, and a woman working every day regularly will take six months to manufacture a cloth valued at Rs. 25; but, as a rule, in the leisurely manner in which they work, it takes a year to complete it.

COTTON CLOTHS.

In the Jaintia Hills at Myrsu cotton is spun into thread, and weaving is carried on there, but on a limited scale. The Myrsu people weave the small strips of cloth worn by the men to serve the purpose of the *Assamese langti* or *Hindi langoti*. In Nongpoh the people import cotton thread from Myrsu and weave the (*ingki*) or shawlless coat, peculiar to the district; these coats are dyed red and blue. The dark blue or black dye is obtained from the leaf of a plant called *u sylu*, which Mr. Kitts has classified as *strobilanthes kunthiana*, which grows in the gardens round the homesteads. The leaves are dried, then reduced to powder, mixed with hot water, and the skeins of thread are steeped in the liquid. The colour is permanent. The red dye is obtained from the mixture of the dry bark of two shrubs, *ka lyngdong* (*symplocos racemosa*, Roxb.) and *ka lawong* (*morinda citrifolia*, Roxb.), the latter being the same as the Assamese *al* (*morinda tinctoria*, Roxb.). The bark is dried, then pounded, and the two sorts are mixed together and made into a paste with hot water. The skeins are steeped in this mixture for twenty-four hours, then taken out and divided, and again steeped for another twenty-four hours. The Lalungs and Hajongs and Lyngngams all weave cotton cloths, which are generally dyed blue, sometimes striped blue and red. The Wins weave cotton cloths which are dyed red and yellow, the cloths being woven in checks. Mr. Dutch remarks that the cotton grown in the Jaintia Hills is said to be the best cotton produced in the province. Its thread can be more closely woven than that of other kinds. This statement, however, is not borne out by Mr. Allen writing in 1908, who says that the cotton is of inferior quality, the staple being short and woolly. The cotton cloths woven by the Khasis are called *ryna*.

POTTERY.

The Census Report of 1901 gave the number of persons who are supported by the manufacture of pottery at 14 only. Pottery is manufactured at one place only in the Jaintia Hills.

1: Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

§22 Lawai. The Lawai potters make many of the earthen pots to be found in the Khasi houses called *khiew rawi*, or sometimes *khiew Lawai*. Mr. Gait says, "These potters use two kinds of clay mixed, one is of a dark blue colour, 'dewsiang, and the other of a greyish colour, 'dew khiaid. These clays seem to correspond closely with the *kwaiir maiti* and *khiew maiti* of the Brahmaputra Valley."

§23 The clay at Lawai is well beaten out upon a hide, or upon a
¶25 flat disc of wood; the women fashion the pots by hand, they do
¶25 not use the potter's wheel. The pots are sun-dried and then fired. They are painted black with an infusion of a bark called *sohliya*. The Lawai potters also make flower-pots which are sold in Shillong at from 2 annas to 4 annas each, the price of the ordinary pot or *khiew rawai* varying from 2 pice to 4 annas each. A water-pot (*khiew um*) is also fashioned, which is sometimes used in the manufacture of liquor, price 4 annas to 6 annas each.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

SECTION III.

LAWS AND CUSTOMS.

TRIBAL ORGANIZATION.

120 [41] The inhabitants of the Khasi and Jaintia Hills may be said to be divided into the following sections:—Khasi, Syntengs or Pnar, Wáir, Bhoi, and Lyngpem. These divisions represent collections of people inhabiting several tracts of country and speaking dialects which, although often deriving their origin from the Khasi roots, are frequently so dissimilar to the standard language as to be almost unrecognizable. The above sections may be sub-divided as follows:—The Khasis into the inhabitants of the central high plateau, Cherra and Nongstoin, Mahadan, Maria, Nongkhlaw, and the neighbouring Siemships. The Syntengs or Pnars may be divided as follows:—Into Syntengs proper, Nongtungs, and Khorwangs; the Wáirs into Wáir proper, and Wáir Pnar; the Bhois into Jinthongs, Mynris, Synykhongs, and the Khasi-Bhois, i.e. Khasis who inhabit the low country to the north of the district, which is called generally the "Bhoi." The Lyngpems are a separate division. They must not be confused with the Dkas or Hanas who are Garos. It must, however, be remembered that the Jinthongs, Mynri, and Synykhong sub-divisions of the Bhoi division are not Khasi, but Mikir, i.e. they belong to the Bodo or Boro group. The Lyngpems are half Khasis and half Garos, and the Dkas or
121 Hanas are Garos who observe the Khasi custom of erecting
Sec. 4 (1) memorial stones. The above tribes and sub-tribes are not strictly endogamous, nor are they strictly exogamous, but they are more endogamous than exogamous; for instance, Syntengs more often marry Syntengs than Khasis, and vice versâ, and it would be usually considered derogatory for a

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Khasi of the Uplands to marry a Bhoi or War woman, and 101
a disgrace to marry a Lyngam. These divisions are sub- 55a
divided into a number of septs, taking Mr. Risley's definition of 614
"sept" as being the largest exogamous division of the tribe. It will, however, be more convenient to speak of these septs as "clans," the word "clan" having been used in other parts of this Monograph and by other writers.

Many of the clans trace their descent from ancestresses or 614
hiew (grandmothers), who are styled *ki Iawbei-Tyrwai*, lit. grandmothers of the root (i.e. the root of the tree of the clan). In some of the clans, the name of this ancestress survives; take as instances the Mylliem-ngap and Mylliem-pdah clans of the Khyrim State, the names of the ancestresses of the clans being *ka ngap* (honey, i.e. the sweet one), and *ka pdah* respectively. This tribal ancestress, as will be seen in the paragraph of the [116] monograph dealing with ancestor-worship, is greatly reverenced, in fact, she may almost be said to be deified. The descendants of one ancestress of the clan, *Ka Iawbei Tyrwai*, are called *shi kur* or one clan. We then come to the division of the *kpah* or sub-clan, all the descendants of one great grandmother (*ka Iawbei Tyrwan*), being styled *shi kpah*. The next division is the *iing* (lit. house) or family. It is almost in- [512] variably the case that the grandmother, her daughters and the daughter's children, live together under one roof, the grandmother during her life-time being the head of the house. The grandmother is styled *ka Iawbei Khynraw*, or the young grandmother, to distinguish her from the other two grandmothers, *ka Iawbei-tyrwai* and *ka Iawbei-tyrwan* who have been mentioned above. The young grandmother, her daughters and their children are said to belong to *shi iing*, one house, the word *iing* in this instance possessing amongst the Khasis the same significance as the English word *family*.

We will now see how the Khasi clan (*kur* or *jaid*) grew out 614
of the Khasi family (*iing*). Let us take the example of the 773
great Diangdoh clan of Cherra. Disregarding the myth that the Diangdohs are descended from a mermaid, it may be stated that there seems to be a fairly general belief amongst the Diangdohs that their first ancestress or *hiew* came from the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

614
773

country beyond the Kopili river (some go so far as to say that she came from the Assam Valley), to the Jaintia Hills, where she found a husband. Legend relates that it was one of the peculiarities of this woman that she was able to accommodate herself in an earthen jar or *lala*, which fact gave rise to the name *Lala* by which she and her children were called by the Syntengs. The family prospered during the time when a powerful chief of the Malngiang clan held sway in the Jaintia Hills. On the death of this king a civil war arose, and the *Lala* family, together with many others, beat a retreat across the river Kopili. Here they lived in prosperity for some generations until a plague arose and carried off the whole family except one female, called *Ka Law-Law*, who became the sole owner of the family wealth. Many desired to marry her for her possessions, and it was owing to their importunities that she fled to *Jowai* to the house of a *lyngdoh* or priest. The *lyngdoh*, under pressure from his wife, tried to sell Ka Law-Law as a slave, but no one would offer more than 20 *cowries* for her (*shi-bdi*); this decided the *lyngdoh* to keep her. Out of gratitude for this kindness, Ka Law-Law brought her wealth from beyond the Kopili to the *lyngdoh's* house, where the son of the lyngdoh was given her in marriage. They lived happily for some time, when some adventurers from beyond the Kopili came to *Jowai* with the intention of carrying off this rich bride. The lyngdoh, however, having received warning of their intent, arranged for the escape of Ka Law-Law, and they fled to Sohphokkyntum, a place near Nongkrem in the Khasi Hills, where she established a village. Here Ka Law-Law was called *Ka Law-shibdi*, because she paid every man who was engaged by her in founding a market there 20 *cowries* (*shibdi*) per day for their labours. Here also she is credited with having first introduced the art of smelting iron, and she is said to have made various iron implements which she exported to the plains. She is also said to have kept a large herd of pigs which she fed in a large trough hollowed out of a *diengdoh* tree; it is to this fact that the Diengdoh clan owes its name. After *Ka Law-shibdi* and her children had lived for some years in prosperity at Sohphokkyntum, they were attacked by the Syntengs Raja (the Atom King), U Long

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Raja (probably the Raja of Jaintia), and the Assamese Barphukan. They fled to a place called Lyndiangumthli, near Lyngkyrdem. Finding this place unsuitable as a home, the family split up into four divisions. One division returned to Jowai, where it increased and multiplied and afterwards grew into the Lalu clan, another went to Nongkhlaw and became the Diengdoh Kylla clan; another went to Mawiong and formed what is now known as the Pariong clan; the fourth, after some vicissitudes of fortune, went to Rangiyrteh and Cherra, at which place it established the powerful Diengdohbah clan, and became afterwards one of the chief *mantri* or minister clans of this state. I have quoted the history of the origin of the Diengdoh clan at some length, to show what I consider to be an example of the Khasi conceptions of how the clan was formed, i.e. from a common ancestress, all of the clans having traditions more or less of descent from some particular *Kiaw* or ancestress. This story moreover is remarkable as pointing to a Khasi migration from beyond the Kopili river to their present abode. The clans of the present day are nothing more or less than overgrown families, they are bound together by the religious tie of ancestor-worship in common, and of a common tribal sepulchre, except in cases of clans which have, owing to their size, split up into several sub-divisions, like the Diengdoh clan; each sub-divisions possessing their own cemeteries. Ancestor-worship in common and tribal sepulchres in common seem to indicate that the original unit was the family and not the tribe, for there would be no reason for the members of a clan to worship the same household gods and to deposit the remains of the clan members in the same tomb unless there was some strong tie, such as that of consanguinity, binding them together. It has been already mentioned that each of these clans is strictly exogamous; this again supports the family origin theory. A Khasi can commit no greater sin than to marry within the tribe. Some of the clans are prohibited moreover from intermarriage with other clans, because of each clans being of common descent. If the titles (see Appendix) are carefully examined, it will be seen that some of them bear the names of animals, such as the *Sheich* or monkey clan, the *Thow* or crab clan, or of trees, such as the Diengdoh clan (already referred to). The

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

614 members of these clans do not apparently regard the animals or natural objects, from which they derive their names, as totems, inasmuch as they do not abstain from killing, eating or utilizing them. The names of these objects are connected generally with some story, concerning the history of the clan, but there is no evidence to show that the clans-folk ever regarded the above animals or objects as their tribal totems. If the lists of the Khyrim and Cherra clans are examined, it will be seen what a large number bear the name of *Dikhar* or its abbreviation *'Khar*. The word *dikhar* is that applied by a Khasi to an inhabitant of the plains. We come across names such as *'khar-mukhi*, *khar sowali*, the first word being an abbreviation of *dikhar*, and *mukhi* being the common Bengali name which occurs in Chandra Mukhi, Surjya Mukhi, &c. Sowali (*sharwali*) is the common Assamese word for a girl. The ancestresses of these tribes were plains women, carried off, no doubt, in the raids made by the Khasis over the border into Assam and Sylhet. The word *Jaep* in the list of tribes is a Syntengi synonym of *lyer* or *jaid*, and the Wair word *khamp*, which will often be found in the names of the tribes of the twenty-five villages of the Khyrim State, is merely a corruption of *jaep* or *iaep*, the Syntengi word for clan. Let us now see how the State or Khasi Township was formed out of a collection of these clans, how these clans obtained political power, how some clans became more powerful than others, and how a Khasi King or Siem is appointed.

STATE ORGANIZATION.

693 We have studied in the preceding chapter the formation of
692 the clan from the family, and how the former established villages. Let us now turn to the constitution of the Khasi State, which, it will be seen, has been formed, in more than one instance, by the voluntary association of villages, or groups of villages. The head of the Khasi State is the Siem or chief. A Khasi state is a limited monarchy, the Siem's powers
693 being much circumscribed. According to custom, he can per-
695 form no act of any importance without first consulting and obtaining the approval of his durbar, upon which the state

I: Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

mantrie sit. This durbar must not be confused with the 643
electoral durbar which will be referred to later. It is 645
an executive council over which the Siem presides, and
also possesses judicial powers (for a description of a judicial [693]
durbar, see page 91 of the monograph). The form of summons [694]
to appear before this durbar used to be a knotted piece of
string or cane, the number of knots denoting the degree of
urgency of the summons, not a piece of pork, as one writer has
said. Pork is a luxury which is not usually distributed gratis.
The Siem manages the State business through his *mantrie*,
although it is true that in some States the members of the 644
Siem family have been allowed a considerable share of the
State management. This latter arrangement is, however, a
departure from the ordinary rule in the Siemships, and is
regarded as unconstitutional. In some States there are village 622
headmen, styled Sirdars, who settle cases, collect labour, and 657
assess and receive for the chief the *pynsah*, which may be
literally translated as "gratification." In Nongstoin there is
an official styled *lyngdoh*, who is the superior of a number of
village sirdars, and who acts as the Siem's deputy-governor. 644
651
In the Khasi Hills there is no land revenue, nor are there any
tithes or other imposts levied upon the cultivator's produce. 643
The land, to a great extent, is the property of the different clans [423]
and villages, although in some instances there are estates owned
by private persons. The chief is entitled to receive the income
that arises from what are known as the *raj* or State lands only.
All that the Siem usually receives from his people in the
way of direct revenue is the State subscription, or *pynsah*,
mentioned above. Even this is supposed to be a voluntary
contribution, and it is not demanded in some States. This
tax is nominally a collection to meet the expenses of the State
ceremonies, but is really a means of increasing the chief's
private income. The contribution varies in amount according
to the means of the villagers. The Siem's principal source of 643
income, however, in all the Khasi States is the toll (*khwang*), 651
which he takes from those who sell at the markets in his 443
territory. As the Khasis are great traders these tolls are often
at the larger markets fairly valuable. The chief raises no
excise revenue, the manufacture of both fermented and distilled

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

643 liquor being subject to no fiscal restrictions whatsoever. In a
651 few States the Siems are commencing to levy registration fees,
443 but the amounts are insignificant. Judicial fines are divided between the chief and the members of the durbar. In some States the Siems' incomes amount to a few hundreds a year only. Generally speaking, the Khasi chiefs are necessarily a very impecunious set of persons, and many of them are in-
643 debted to, comparatively speaking, large amounts. The Siem
631 is appointed from the Siem family, there being such a family in each of the fifteen Khasi States. The most important States are Khyrim, Mylliem, Cherra, Nongstoin, and Nongkhlaw. There are a few other petty States presided over by Lyngdoh, Sirdar, or Wahadadar. A fact which is of universal application is, that heirship to the Siemship lies through the female side. The customary line of succession is uniform in all cases, except in Khyrim, save that in some instances cousins rank with brothers, or are preferred to
643 grand-nephews, instead of being postponed to them. The
425 difference between the rule of succession and the rule of inheritance to real property should be noted. In the former case the sons of the eldest uterine sister inherit in order of priority of birth, although it is true that this rule has sometimes been disregarded. In cases of succession to realty, however, the inheritance goes to the youngest daughter of the deceased's mother, and after her to her youngest daughter. In successions to the Siemship, in the absence of male heirs from the eldest sister the succession passes, by what has been aptly described as the "knight's move," to the male children of the next eldest sister. In Khyrim the custom of succession is peculiar, there being a High Priestess, and heirship being
643 limited to her male relatives. Generally speaking, it would
644 appear that succession was originally controlled by a small
773 electoral body constituted of the heads (*lyngdohs*) of certain priestly clans, who, it is presumed, exercised their authority in select candidates, when necessary, mainly on religious grounds. There has, however, been a distinct tendency towards the broadening of the elective basis. In the large State of Khyrim the number of the electoral body has been greatly increased by the inclusion of the representative headmen of certain dominant but non-priestly clans (*mantris*).

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

certain dominant but non-priestly clans (*mantrie*). In other States the Council has been widened by the addition to it of village headmen (*si-dare*), or the chief superintendents (*bonne*) of the village markets, tolls from which constitute the chief item in the public receipts of these States. A further step towards the recognition of the public will in the nomination of a Siem has been the introduction of popular elections, at which all the adult males vote. Such popular elections were very greatly due to the views held by Colonel Rivar, who was Deputy-Commissioner of the Khasi and Jaintia Hills from 1865 to 1877. These elections have been, in many States, an innovation which is hardly in accord with public sentiment, and in many cases the voters have done no more than confirm the selection of a special electoral body. It is, however, clear that the idea of popular elections is not one with which the people are unfamiliar, *e.g.* in Langrin State, where all the adult males customarily vote at an election of a Siem. Popular election has also been customary in the Nobosohpoh and Bhowal States, in cases where a special electoral body has been unable to agree upon a nomination, and also in Nongpoung, if a Council of five *lyngdoh*, which has in this State authority to declare who is the rightful heir, but not to disqualify him, cannot come to an unanimous decision. The Siems are appointed by an assembly, or *durbar*, which will be described later. The chiefs, having been thus chosen by the *durbar*, which is supposed by the people to be an institution of Divine origin, are styled, *ki Siem u Blei*, or Siems of God. In most States the Siem is the religious as well as the secular head, *e.g.* in the Chera State, where the Siem is also *lyngdoh*. In Khyrim State the Siem has sacerdotal duties to perform at different religious ceremonies, especially at the time of the annual Nongkrem dance. It is the custom for the Siem to consult the augurs with the soothsayers for the good of the State. The Siem in matters judicial acts as a judge, the whole body of the *durbar* being the jury. In olden days the Siem marched to war at the head of his army. It is not customary to recognise an heir-apparent, and the young men of the Siem family pursue the ordinary avocations of a Khasi, not comparing themselves in the least like scions of royalty. In quite

[illegible] the Siem --[illegible]

1:Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

692 recent years there have been instances of Siems having been summoned, like the Roman Cincinnatus, from quite humble positions, to undertake the duties of chief. We will now turn to
693 an examination of the systems in the different Siemships. In
793 the Kyrim or Nongkrem State there is a spiritual head, i.e. a High Priestess, *Ka Siem Sad*, who is responsible for the due performance of the State religious ceremonies, although, as already stated, the Siem also performs some of these duties. The temporal power here is delegated by the High Priestess to a Siem, who is her son or her nephew, or occasionally some
[695] more distant male descendant. It is the duty of an official called a *lyngdoh*, who is the official spokesman of the Siem's *durbar*, to propose a new Siem to the six *lyngdohs*, or priests, and to the heads of the twenty-four *mantri* clans. The latter then decide in *durbar* whether the proposed Siem should be appointed. In the event of their disapproving of the *lyngdoh's* nomination they proceed to elect another Siem. The High Priestess is appointed by the above electors, the order of succession to the post being as follows:—She is succeeded by her eldest surviving daughter; failing daughters, by the eldest daughter of her eldest daughter; failing daughters of her eldest daughter, by the eldest daughter of her second daughter, and so on. If there are no daughters or grand-daughters, as above, she is succeeded by her eldest sister. In the absence of sisters, she is succeeded by the eldest daughter of her mother's eldest sister, and so on. In this State the tradition runs that the first High Priestess was Ka Pah Syntiew, i.e. the flower-lined one. Ka Pah
[777] Syntiew was a beautiful maiden who had as her abode a cave at Mawsi, near Nongkrem, whence she was enticed by a man of the Mylliem-ngap clan by means of a flower. She was taken by him to be his bride, and she became not only the first High Priestess, but also the mother of the Siems of Nongkrem.* In Nongkrem the electors may disqualify the first, or any, heir to the Siemship for sufficient reason according to the Khasi religion and custom, such as bad character, physical disability, change of religion, &c. If the first heir be disqualified, the next in order must be appointed
694 Siem, unless he be disqualified, and so on. In this State there

* For the story in detail see the Folk-lore section of the monograph.

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

are six divisions, each of which is known as a *raj*. In each 631
raj there is a *durbar*, to which are submitted for approval 631
the elections of the heads of the *mantri* class. These elec-
tions are subject to the approval of the Siem. The Siem, sitting 643
with the *durbar* of the *raj* concerned, may dismiss a *lyngdoh*, 644
lyngskor, or *mantri*, for bad conduct, or on account of physical
disability, in which case another *lyngdoh*, *lyngskor*, or *mantri*
would be appointed, as stated above. The Mylliem State 631
originally formed a portion of the Nongkrem State, but owing 643
to a quarrel between one of the Siems and his nephew there
was a partition. In this State the electors are the heads of five
mantri class, eleven *matchors*, or heads of class, and certain
lessoo, and other heads of class. A majority of the electors is
sufficient for the election of a Siem. A Siem is succeeded by
the eldest of his uterine brothers; failing such brothers, by the
eldest of his sisters' sons; failing such nephews, by the eldest
of the sons of his sisters' daughters; failing such grand-
nephews, by the eldest of the sons of his mother's sisters; and,
failing such first cousins, by the eldest of his male cousins on
the female side, other than first cousins, those nearest in degree
of relationship having prior claim. If there were no heirs
male, as above, he would be succeeded by the eldest of his
uterine sisters; in the absence of such sisters, by the eldest of
his sister's daughters; failing such nieces, by the eldest of the
daughters of his sisters' daughters; failing such grand-nieces,
by the eldest of the daughters of his mother's sisters; and
failing such first cousins, by the eldest of his female cousins on
the female side, other than first cousins, those nearest in degree
of relationship having prior claim. A female Siem would be
succeeded by her eldest son, and so on. As in the Khyrim
State, the first, or any other subsequent heir, may be dis-
qualified by the electors for sufficient reason. An elector is
succeeded by the eldest of his brothers; failing brothers, by the
eldest of the sons of his sisters, and so on. An elector can be
dismissed by the Siem, but only for good cause and with the
consent of his *durbar*.

In the Nongpoh State there is a tradition that the first 647
Siem originally came from Siumong* Dungapur. The name, 773

* Siumong is the Garo name for the river Someshwari.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

643 Sualong Dwarpar, of the place at the foot of the Garo Hills in
723 the Mymensing district, may be a corruption of the former. The Siems are supposed to be descended from a stag, possibly a relic of totemism in this family. In this State there is a large
631 elected durbar consisting of 2 *mantrie*, 31 *lyngdohs*, 25
622 *sirdars*, 1 *lyngdoh*, and 1 *bawa*. The *lyngdohs* are the heads of the priestly clans, by whom they are chosen. The sirdars of villages are appointed by the Siem in conjunction with the adult males of the different villages. There are two *lyngdohs* and two *bawas* in the State, but one *lyngdoh* and one *bawa* only at present are members of the *durbar* which nominates the Siem. A *lyngdoh* is the Siem's agent for the
[639] purpose of governing a collection of villages. He is appointed by the Siem with the consent of the adult males of the villages
643 which he is to supervise. The Siem family of Nongkhlaw, or Khadawphra, is believed to have been founded by a Syateng of the name of U Shajer, who left the Jowai hills with his sister, Ka Shaphlong, because she had failed to obtain her share of the family property in Jaintia. This man is said to have purchased certain lands in Sardwar in Kasarup. Apparently he did not obtain possession of this estate, for he came up into the Khasi Hills, and finding there certain villages without a ruler, he, at the wish of the *lyngdohs* of these villages, consolidated them into a state over which he ruled as a Siem. He was succeeded by his sister's son, U Syntiew, who further extended his territories until he obtained possession of other villages. U Syntiew is said to have delegated a portion of his powers to his two sisters, Ka Jem and Ka Sangkar, who ruled at Sohiong and Nongkhlaw respectively, succeeding rulers
[726] further extended the Nongkhlaw territory. In 1829, U Tirot Singh rebelled against the East India Company and carried on for four years a successful guerilla warfare. He was finally captured and was imprisoned for life by the British Govern-
643 ment. According to the statement of Raja Kiar Singh, it would
681 seem that formerly the heads of five clans had the right to appoint
[614] the Siem, i.e. the heads of 3 *lyngdoh* clans and of the *Jaid* Dkhar, and Dkhar clans. In the Cherra State the electors are the male adults of the State, who are represented on the [illegible] by the *mantrie* of the 12 aristocratic clans, known as the [illegible] and certain representative chiefs.

4 [i.e. the Nongstoin State --- Analyst]

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

as the *khadar kur*, and certain representative elders. This State 643
is divided for electoral purposes into the following divisions:— 631

I. Cherra, or Sohra, consisting of 8 villages, inclusive of Cherra, which is the capital. These villages return the heads of the 12 tribes, as well as 5 elders, as their representatives on the electoral durbar.

II. The "five" villages, or 5 tribes. This division now consists of 17 villages, which return 5 representative elders.

III. The "twelve" villages, comprising now 38 villages, which return 12 representative elders.

IV. The "four" villages, comprising now 5 villages, which return 4 elders.

V. The "sixteen" villages, which return 6 representative elders.

VI. Three villages, which return 3 and 4 sirdars and 2 elders respectively.

In this State it is the custom for a Siem to cremate the body 643
of his predecessor. Unless he performs the cremation ceremony, 766
he is not considered to be Siem according to the Khasi religion. U Hajon Manik Siem failed to cremate the body of his predecessor, U Ram Singh, whose remains still repose in a wooden coffin which is kept in the house of the Siem family. The remains of Siems in this state are preserved by a peculiar process of embalming which will be found described elsewhere in this monograph. U Hajon Manik died not long ago, and his body also is awaiting cremation. U Ram Singh's remains, however, have been awaiting the funeral pyre for more than thirty years; but arrangements are being made by the present Siem U Roba Singh for the cremation ceremony. The cremation of Siems in the state is attended by a very great deal of expense, a large amount of money being spent on the feasting which then takes place. The Maharam State was ruled until 1875 by two Siems, 643
called, respectively, the "white" and the "black" Siems. In this State originally there were five *lyngdoh* who appointed the Siems, but as in certain other States the number of the electors has been expanded by the inclusion of *mantris*, *sirdars*, and *lanum*. The electors now number seventy-two persons. There is much the same state of things in the Mariaw Siemship as regards the electorate. In Rambrai, on a vacancy

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

643 occurring in the Siemship, three *lyngdohs* and two *mantris* assemble and decide who is to be Siem. They then summon the sirdars of villages to meet them in *durbar* and obtain the approval of the latter to their nomination. If the sirdars do not approve, the combined *durbar* then decides who is to become
173 Siem. In Nongspung there is a tradition that two sisters, Ka
643 Jah and Ka Jem, came to the village of Nongspung, which was then ruled by two *lyngdohs*, and that the latter, having ascertained that the two sisters were of royal birth, married them. They then travelled to other villages and obtained the consent of the *lyngdohs* of these villages to the formation of all their villages into a State of which Nongspung became the capital, and over which U Sugi Shaflong, the son of Ka Jem, was appointed Siem by the five principal *lyngdohs*. After some generations the lyngdoh of Mairang with his villages became subject to the Siem of Nongkhlaw, an event which finds mention in the annals of the Nongkhlaw State as the conquest of the territory of the "Black" Siem of Nongspung. Another lyngdoh was appointed in place of the one whose territory had been thus annexed.

643 In the Mawiong State the ancient custom was that six *basans*
[643] appointed the Siem, subject to the approval of the people of the
614 Siemship. In the Nokseohpoh State there are two Siem families, the "Black" and the "White," from either of which it has apparently been the custom for the people to select a Siem, as they wished. In Mawsynram the electors of the Siem are the heads of the four principal clans in the State. On a recent occasion, the electors being equally divided regarding the appointment of a Siem, it was necessary to appeal to the people of the State. In Langrin there are, as in Maharam and Nokseohpoh, two main branches of the Siem family, i.e. the
[641] "Black" and the "White" Siems. Here there is no special electoral body; all the adults of the state have the right to vote at the election of a Siem. In Bhawal State Siems are appointed by the heads of eight clans whose decision is apparently final, provided that it is unanimous. In Malai-Sohmat a bare majority of the heads of six clans would be sufficient for the election of a Siem. Presumably both in Bhawal and Malai-Sohmat, if the electors were equally divided, there would be an appeal to the people.

an appeal to the people. Mention has been made above of States over which *lyngdohs* possess temporal as well as spiritual powers. The States of Sohiong, Mawphlang, and Lyniong may be quoted as examples. Here the *lyngdoh* is elected from the *lyngdoh* clan by all the adult males of the state. Some small States, such as Maodon and Pomsanngut, are presided over by Sirdars, a name which has probably been introduced during the British era of supremacy in these hills. The Sirdar is elected by the adult males of the State. In Mawlong there are a Sirdar, a *lyngdoh*, and a *doloi* who govern the State. These two latter officials are elected by the people as in the case of Sirdars. In the Shella Confederacy there are four officials who are styled *Wahadadar*, the name being probably a corruption of the Persian *'ahda-dar*.* These officials are elected for periods of three years each by the people.

The Jaintia Hills, which are British territory, are divided up into twenty doloiships, the doloi being an officer elected by the people, the Government reserving the right of approval or the reverse to the doloi's appointment. The doloiships, under the rules for the administration of justice in the Khasi and Jaintia Hills, as well as the Sirdars of the British villages in the Khasi Hills, possess certain judicial powers. They are assisted by officials known as *pators*, *basans*, and *sangots* in the performance of their duties. This administration, on the whole, works well, and its success shows the wisdom of the Government in having made use of the indigenous agency it found to hand when the Jaintia territory was annexed. In the Jaintia Hills there are also three Sirdarships, the office being filled by election as in the case of doloiships.

In conclusion it should be stated that it has been attempted here to give but a brief *résumé* of the Khasi political system as it exists at the present time. The above account of the procedure at elections is based on existing usage. The procedure should not, however, be regarded as stereotyped, for it will no doubt be open to such revision as may on occasion be suggested by the legitimate evolution of tribal customs.

MARRIAGE.

591 It is proposed in this section to consider marriage from its social side, the religious aspect thereof being reserved for another paragraph. The most remarkable feature of the Khasi marriage is that it is usual for the husband to live with his wife in his mother-in-law's house, and not for him to take his bride home, as is the case in other communities. This arrangement amongst the Khasis is no doubt due to the prevalence of the matriarchate. As long as the wife lives in her mother's house, all her earnings go to her mother, who expends them on the maintenance of the family. Amongst the Khasis, after one or two children are born, and if a married couple get on well together, the husband frequently removes his wife and family to a home of his own, and from the time the wife leaves her mother's house she and her husband pool their earnings,
591 which are expended for the support of the family. Amongst
576 the Syntengs, however, and the people of Maoshai, the case is different, for with them the husband does not go and live in his mother-in-law's house, he only visits her there. In Jowai some people admitted to me that the husband came to his mother-in-law's house only after dark, and that he did not eat, smoke, or even partake of betel-nut there, the idea being that because none of his earnings go to support this house, therefore it is not etiquette for him to partake of food or other refreshment there. If a Syntengs house is visited, it is unusual to find the husbands of any of the married daughters there, although the sons of the family may be seen in the house when they have returned from work. Generally in the day-time you will find in a Syntengs dwelling an old crone, who is the grandmother or even the great-grandmother, of the family, also grandchildren or great-grandchildren; but the husbands of the
796 married daughters are not there. The Syntengs seem to have
611 more closely preserved the customs of the matriarchate than the Khasis, and the Syntengs claim that their mien or religious ceremonies are purer, *i.e.* that they more closely correspond to what they were in ancient times than those of the
589 Khasis. Amongst the Syntengs, occasionally, a widow is
765 allowed to keep her husband's bones after his death, on cer-

In Gordon E-4, 9 (no date) 1907 AR? Khasi AR?

589 dices that she does not remarry, the idea being that as long as
765 the house remains in the widow's keeping, the spirit of her husband is still with her. On this account many wives who revere their husband's memories and who do not contemplate remarriage, purposely keep the house for a long time. If a
589 widow marries even after the customary taboo period of one
765 year, whilst her deceased husband's house are still in her keeping, she is generally looked down upon. Her children in such a case perform the ceremony of handing over the house of their father to his clan in a building specially erected for the purpose. The widow cannot enter therein, or even go near it, while the ceremony is proceeding, no matter whether the *jing sang* or the price for removing the taboo after a husband's death, has been
596 paid to the husband's clan or not. There is no evidence to show that polyandry ever existed amongst the Khasis. Unlike the Thibetans, the Khasi women seem to have contented themselves always with one husband, at any rate with one at a time. Certainly at the present day they are monandrists. Polygamy does not exist amongst the Khasis; such a practice would naturally not be in vogue amongst a people who observe the matriarchate. There are instances, however, of men having wives other than those they have regularly married, and in the War country children by such wives enjoy rights to their father's acquired property equally with the children by the legally
582 married wife. As the clans are strictly exogamous, a Khasi
688 cannot take a wife from his own clan; to do this would entail
764 the most disastrous religious, as well as social consequences. For to marry within the clan is the greatest sin a Khasi can commit, and would cause excommunication by his kinsfolk and the refusal of funeral ceremonies at death, and his bones would
[15] not be allowed a resting-place in the sepulchre of the clan. To
614 give a list of all the Khasi exogamous clans would perhaps serve
582 no useful purpose, but I have prepared from information, kindly furnished me by the Siems of Khyrim and Cherrapunji, a list of the clans in those States which will be found in Appendices A and B. These will suffice as examples. It will be seen from the Cherra list that the different divisions of the Diengdoh clan, viz. Lain, Diengdoh-bah, Diengdoh-kylla, are prohibited from intermarriage; this is due to those branches of the clan being

In Gordon E-4, 5 (no date) 1907 AR? Khasi AR?

[illegible] descended from a common ancestress. There are other instances of clans being connected with one another, such connection being called by the Khasis *iaiok kur*. Whenever such connection exists, intermarriage is strictly prohibited, and is considered to be *sang*. There is no custom of hypergamy. A Khasi cannot marry his maternal uncle's daughter during the lifetime of the maternal uncle. This is probably due to the fact that the maternal uncle, or *kni*, in a Khasi household is regarded more in the light of a father than of an uncle. His children, however, would belong to the clan of his wife, and there would, therefore, in ordinary cases be no bar to the nephew marrying one of them. Marriage with the daughters of a father's sister is not allowed during the lifetime of the father, but after the latter's death there is no religious bar, although such unions are looked upon with disfavour by the Khasis. In the War country, however, such marriages are totally prohibited. A Khasi cannot marry two sisters, but he can marry his deceased wife's sister after the expiry of one year from the wife's death, on payment of *jing sang* (price of *sang*, or taboo) to the wife's clan. A Khasi cannot marry the daughter of his father's brother, she is his *pyrsa kha* (lit. birth sister). Similarly he cannot marry the daughter of his father's paternal uncle. He can, however, marry the daughter of his mother's brother, provided that the brother is dead. This somewhat paradoxical state of affairs is explained by the fact that the children of the mother's brother belong to a different clan to that of the mother, i.e. to the mother's brother's wife's clan. The Khasi, Synteng, War, and Lyngam divisions are not strictly endogamous groups, and there is nothing to prevent intermarriage between them. For instance, it has been the custom in the Nongkhlaw Siem family to obtain husbands for the princesses of the state from the War country. There is no custom amongst the Khasis of two men exchanging daughters, i.e. each marrying his son to the other's daughter. Notwithstanding the existence of the matriarchate, and the fact that all ancestral property is vested in the mother, it would be a mistake to suppose that the father is a nobody in the Khasi house. It is true that the *kni*, or mother's elder brother, is the head of the house, but the father is the executive head of the new home, where, after children

U Gordon E-8, 5 (no date) 1937 ART Khasi ART

have been born to him, his wife and children live with him. It is he who faces the dangers of the jungles and risks his life for his wife and children. In his wife's clan he occupies a very high place, he is second to none but a Doi, the maternal uncle, while in his own family circle a father and husband is nearer to his children and his wife than a Doi. The Khasi saying is, "*a Kyo ulu lah hay Doi, a Doi ulu tang ha ka ing ha im,*" which may be translated freely as, "the father bears the heat and burden of the day, the maternal uncle only comes when it is a question of life or death." The Khasi father is revered not only when living, but also after death as U Thawlang, and special ceremonies are performed to propitiate his shade. Further remarks on the subject of marriage will be found in the Section which deals with religion.

DIVORCE.

Divorce amongst the Khasis is common, and may occur for a variety of reasons, such as adultery, barrenness, incompatibility of temperament, &c. The rule amongst the Khasis is that both parties must agree, but amongst the Wars, especially the people of Shella, the party who divorces the other without his or her consent must pay compensation, which is called *ka sepumia*, or *ka thawn*. Amongst the Khasis it is not the custom to enforce restitution of conjugal rights; as a rule, when husband and wife cannot live together amicably, they agree to divorce one another; but occasionally it happens that either the husband or the wife will not agree to a divorce. Usually the husband would be willing to live with his wife; but when the latter consents neither to live with her husband nor to accept a divorce, a difficult situation arises, and it is in the event of such a contingency happening that the necessity of according *ka sepumia*, or *ka thawn* (compensation), occurs. The latter is computed by the village elders. Parties who have been divorced cannot afterwards remarry one another, but they are at liberty to marry into other families. A woman cannot be divorced during pregnancy. The following description of the divorce ceremony is taken from U Joylon Roy's note on the

1:Gordon E-4, 9 (no date) 1987 ART Khasi ART

Khasi religion. If the marriage has been celebrated according to the *pynkhar synjiat* rite, a *lniang* (go-between) is necessary on each side, also the *kni*, or maternal uncle of the parties, to witness the divorce. In other cases the presence of the *lniang* is unnecessary, but some acquaintances and friends as well as the relatives on both sides should witness the ceremony. The husband and the wife each bring five cowries (*shii*), or, more commonly nowadays, five pice. The wife gives her five cowries or pice to her husband, who places them with his, and then returns the five cowries or coins to his wife, together with his own five. The wife then returns the ten shells or coins to the husband who throws them on the ground. A crier (*u sing pyrta*) accompanied then goes round the village to proclaim the divorce, using the following words:—

"Ka—hear, oh villagers, that U—— and K—— have become separated in the presence of the elders. But! then, oh, young man, cannot go and make love to Ka—— for she is now unmarried (*khpawar*), and then, oh, spinster, cannot make love to U——. But! there is no lot or hindrance from heaven-earth." Among the Khasis divorce must be by mutual consent, and the ceremony must take place in the open air. Until the divorce ceremony has been performed as above described, neither husband nor wife can marry again, but after it has taken place, either can remarry, but not within the family of the divorced husband or wife. In the event of a husband or wife being absent for a long period, say ten years, without any communication having been received from either of them, a divorce ceremony is performed by the relatives on his or her behalf. It is stated by U *Joshua Roy* that the rule of monogamy is not so strict for the husband as it is for the wife, he can contract an informal alliance with another woman, the only prohibition being that she must not belong to the original wife's village. Such a wife is called *ka synjai tuk*, literally, stolen wife, in contradistinction to the legally married wife (*ka synjai kmai*). The children by the unmarried wife are called *ki khaw kliar* (children from the top). By children from the top, is understood to mean children from the branches not from the root (*kmai*) of the tree. Such children cannot claim ancestral property [illegible] in the lineage.

See page 12. "Ka Niam Khasi." (U Joshua Roy.)

Ir Gordon E-4, 5 (no date) 1907 ART Khasi ART

ancestral property, except in the *Wiar* country. In the event of a divorce the mother is always allowed the custody of the children. Divorces amongst both Khasis and Syntengs are of common occurrence, the result being that the children in many cases are ignorant of even the names of their fathers. For the mother, on the other hand, the children cherish a very strong affection, all their sympathies and affections binding them closely to the mother's kin. Divorce amongst the Syntengs, though resting on the same principle as that of the Khasis, differs in detail, and must be described separately. It is as follows:—In the first place it is not necessary for both husband and wife to be consenting parties, as is the case with the Khasis. In the Nongkhlih dolooiship divorce takes place before the relatives of the parties. The man has to give eight annas as a sign of the divorce, and clothes worth Rs. 3/- or Rs. 5/- to the wife. There is a similar custom in the Sohtinga and Amwi dolooiships. In the *Jowai* dolooiship the divorce takes place in the presence of a village official called *U hawar*. The husband or the wife gives the *hawar* an eight annas piece, the latter gives this either to the wife or to the husband, as the case may be. The *hawar's* share of the eight annas is two pice, the remainder being spent on liquor. The *hawar* is entitled to a further fee of one anna from the man. If a wife does not agree to accept divorce, she is entitled to receive two pieces of cloth from the husband to the value of Rs. 5/-. This compensation is called *thaw*. The divorce then takes place. If a wife wishes to divorce her husband, and the latter is unwilling, before she can obtain divorce, she must pay *thaw* to the value of the whole amount the husband has spent on her and her children during the marriage. Divorce customs in Nartiang and Nongjinghi dolooiships are much the same, only the amounts tendered by the parties and that of compensation differing.

In conclusion it should be stated that, the great drawback attaching to divorce in ordinary communities, i.e. the effect that it has on the lives of the children of the marriage, does not apply to the Khasis, for with them the children always live with their mother and their mother's family, which latter would be bound to maintain them in the event of a divorce.

I:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

INHERITANCE.

The Khasi and Syntengu laws of inheritance are practically the same, although in some of the dolonships in the Jaintia Hills there are some slight differences. The War law of inheritance differs greatly from that of the Khasis, and the customs of the Bhoi or Mikirs, who inhabit the Bhoi dolonship of the Jaintia Hills, are totally different from those of the Khasis, thereby supplying another link in the chain of evidence in support of the conclusion that the Bhoi, or, more correctly speaking, the Mikirs, are of Dado origin, and not Khasi or Mon-Anam. The Lyngngam follow the Khasi law of inheritance. It will be convenient to describe the Khasi law first, and then to pass on to the special customs in vogue in the different dolonships in the Jaintia Hills, and, finally, to describe the War, Bhoi and Lyngngam customs.

The Khasi saying is, "*kong jaid ne ka kyntiei*" (from the woman sprang the clan). The Khasis, when reckoning descent, count from the mother only; they speak of a family of brothers and sisters, who are the great grandchildren of one great grandmother, as *shi kpah*, which, being literally translated, is one womb, i.e. the issue of one womb. The man is nobody. If he is a brother, *u bor*, a brother being taken to mean an uterine brother, or a cousin-german, he will be lost to the family or clan directly he marries. If he be a husband, he is looked upon merely as *u shong kha*, a begetter. In some of the War villages a newly married man is spoken of by the bride's family as, "*u khun ki briew*," some one else's son. It is, perhaps, somewhat of a paradox under the circumstances that wives should address their husbands as "*kyncad*," or lord. There is, however, no gainsaying the fact that the husband, at least in theory, is a stranger in his wife's home, and it is certain that he can take no part in the rites and ceremonies of his wife's family, and that his ashes after death can find no place within the wife's family tomb, except, in certain cases, amongst the Syntengs. Further, the ceremonial religion amongst Khasis, especially that of the home, is in the hands of the women. It is, therefore, perhaps not to be wondered at, considering the important status assigned to women by the Khasis, that women

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

should inherit the property and not men. The rule amongst the Khasis is that the youngest daughter "holds" the religion, "*ka lad ka niam.*" Her house is called, "*ka iing sung,*" and it is here that the members of the family assemble to witness her performance of the family ceremonies. Here is, therefore, the largest share of the family property, because it is she whose duty it is to perform the family ceremonies, and propitiate the family ancestors. The other daughters, however, on their mother's death are entitled, each of them, to a share of their mother's property, although the youngest daughter gets the lion's share, e.g. the family jewellery, and the family house, and the greater part of what it contains. The youngest daughter cannot dispose of the house without the unanimous consent of her sisters. If the youngest daughter dies, she is succeeded by the next youngest daughter, and so on. All the daughters are bound to repair the house of the youngest daughter free of cost. In the event of the youngest daughter changing her religion, or committing an act of *sung*, or taboo, she loses her position in the family, and is succeeded by her next youngest sister, as in the case of a death. Failing daughters, inheritance would pass by the "knight's move" to the sister's youngest daughter, who would be succeeded by her youngest daughter, and so on. Failing sister's daughters succession would revert to the mother's sisters and their female descendants. In the Jaintia Hills the inheritance of all real property passes from mother to youngest daughter. No man in the uplands of the Jaintia Hills can possess landed property, unless it is self-acquired property. In the Jaintia Hills, if a man dies and leaves acquired property, his heir will be his mother, if alive, excluding wife, sons, and daughters. If the wife, however, undertakes not to re-marry, she will inherit half of her husband's property, which at her death will descend to her youngest daughter by him.

Amongst Khasis all property which has been acquired by a man before marriage is considered to belong to his mother; indeed it may be said to belong to the man's *kur*, or clan, such property being called by Khasis, "*ka mai iing kur*" (the earnings of the house of the clan). After marriage, if there are children, the case is different, provided that the property

1:Gurdon E-4, 5 (no date) 1907 AR? Khasi AR?

[127] 428 has been acquired by the man after marriage. Here the wife and children would inherit the acquired property, the youngest daughter obtaining the largest share of such property on the death of the wife. If there were no daughter, the acquired property would be equally divided amongst the sons.

[127] 428 The following examples of the Syntengi law of inheritance are taken from the exhaustive diaries recorded by the late Mr. Heath, who was for some years Sub-Divisional Officer of Jowai. In the Nongkli dolooloi ancestral land passes from mother to her youngest daughter; again, if a youngest daughter who has no acquired dies, the next youngest in point of age succeeds. Should such direct female succession fail, the family tree has to be looked up for the nearest branch, in which the youngest female, or her youngest female descendant, succeeds. Thus, respecting ancestral land, the youngest daughter, or youngest female descendant of youngest female heir, is virtually heir to entailed property. If a woman dies leaving acquired property, her youngest daughter or youngest granddaughter of that youngest daughter succeeds to all. In default, next youngest daughter, and so on. In default of daughters, the youngest son inherits. A man can hardly, in any circumstances, possess ancestral land; his property must almost necessarily be self-acquired. If a man dies leaving acquired property, his heir will be his mother, if alive, excluding wife, sons, and daughters. If the wife undertakes, however, not to marry again, she will get half, which will descend to her youngest daughter by her deceased husband. The mother, who thus gets the whole or half of her son's property, leaves it to her youngest daughter, or youngest daughter of that daughter, and so on, as described above in the case of a woman leaving ancestral or acquired property. If there is no mother, the man's youngest sister stands next heir with the same right as her mother. If there is no mother or sister, then the sister's female descendants stand in the man's mother's place. If there are none of these, then the man's youngest daughter succeeds to all. Ancestral property cannot be alienated without the consent of all the heirs in the entail. A gift of self-acquired property to any amount can be made by a donor during his lifetime. Acquired property cannot, however, be left by will out of the course sanctioned by

cultivation. In the Amwi doloiship a widow who commits to pay the costs of her husband's funeral, provided she agrees not to re-marry, inherits half of her husband's acquired property.

In the *Wai* country the children inherit both ancestral and acquired property in equal shares, both males and females, with the exception that the youngest daughter is given something in addition to her share, although not such a large share of the property as amongst the Khasis. Amongst the Mikir-Thoris, i.e. the Mikirs who inhabit the Thori doloiship of the Jaintia Hills, the law of inheritance is totally different from that of the Khasis, for males succeed to all property, whether ancestral or acquired. Thus, if a man dies, leaving son, mother, wife, and daughters, the son takes all. If there are several sons, they divide. If there are no sons, the property goes to the nearest male heir. If a woman dies, leaving husband and children, the husband takes all. If the husband is dead, and there are sons and daughters, the former inherit. The great difference in the custom of inheritance between Khasis and Thoris is, as I have already pointed out, part of the evidence that these people are of different origin.

The Lyngam law of inheritance is the same as that of the Khasis. The youngest daughter obtains the largest share of the ancestral property, the remainder being divided between the remaining daughters. The sons do not get any share. The rule is also said to apply with regard to acquired property.

ADOPTION.

Both Khasis and Syntengs observe a custom known as *'rep iing* (an abbreviation for *ia rep iing*, literally, to help the house). This is practically adoption. If in a family the female members have died out, the male members of the family are allowed by custom to call (*khot*) a girl from some other family, to act as *ka'rep iing*, and to perform the family religious ceremonies, and therefore to inherit the family ancestral property. The female so introduced into the family then takes her place as *ka khen khaddah*, or youngest daughter, and becomes the head of the house (*ka trai iing*). The

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

The
577 adoption of a female obviates the family dying out (*iap duk*),
428 which to the Khasi is a very serious matter, inasmuch as there
764 will then be no one qualified to place the bones of its members within the family tomb (*ka ka thap shiong wawbah*), and to
577 perform the requisite funeral ceremonies. Amongst the Khasis no particular ceremonies are performed at the time of
242 adoption; but some of the Syntengs observe a religious cere-
782 mony which consists largely of a feast to the clans-folk, at which liquor, rice, dried fish, and ginger are partaken of. Before the feast commences, each clansman is provided with a small gourd (*u blangi*) filled with liquor, a little of the latter is then thrown on the ground from the gourd, and the following words are uttered:—

"Oh, God! oh, Lord! oh, ruling king Binkurem, now the *pynsap iing* ceremony is about to be performed, let the ceremony be propitious, and let males and females (of the clan) increase in numbers, so that the clan may become great, and respected, and that intelligent male members may spring up." No such ceremony is, however, observed, it is understood, in the Nartiang and Rulong di-hoikhips.

577 In the case of a family being *iap duk* (extinct), the family
428 property, according to Khasi custom, passes to the Siem.
421 Therefore it is to the interest of the members of families to adopt a female, when such necessity arises. As there is no religious ceremony which is compulsory to the Khasis on the occasion of an adoption, perhaps we are almost justified in concluding that in former times the adoption customs did not exist, more especially as the Khasis possess a special word, *iap duk*, for describing a family the females of which have all died out; and it is admittedly the custom for the Siem to succeed to the
177 property of such a family. The Synteng custom of *'sap iing*
797 may have been borrowed from the Hindus, when the Rajas of Jaintia became converts to that religion.

TENURE OF LAND AND LAWS REGARDING LAND.

423 Land in the Khasi Hills proper, i.e. land in the high plateau, is held somewhat differently from land in the Jaintia Hills and

the War country, it will be necessary to describe the land tenures and laws regarding land of each of these divisions separately. As land is always jhumed by the Bhoiis and Lyngngams from year to year, customs regarding land with these people are naturally very simple. Taking land in the high plateau of the Khasi Hills first:—The lands are classified under two main divisions, (a) public and (b) private lands. The following are the different descriptions of lands in the first division:—

Ka ri Raj, or *ka ri Siem*, which are Siem's, or Crown lands. These lands are intended for the support of the Siem family, they cannot be alienated. The Siems are, however, precluded by custom from levying a land tax on persons who cultivate such lands, the relation of landlord and tenant between the latter and their chiefs being unknown.

Ka ri Lynphok.—These lands are for the support of the Lynphohs or priests of the State. In some Siemships, as in Mawiang Siemship, paddy is grown on these lands from which rice is obtained for the State pujas.

Ri shnong, or village lands.—These lands are set apart to provide a supply of firewood, thatching grass, &c., and are the property of the village. The inhabitants of other villages are not allowed to enjoy the produce of such lands. Such lands can be cultivated by ryots of the village, but the latter possess only occupancy rights, and cannot transfer them.

Ri Raskynteng.—These are sacred groves, situated generally near the summit of hills, composed of oak and rhododendron trees, which are held sacred (*kynteng*), it being an offence, or *sang*, for any one to cut timber in the grove, except for cremation purposes. These groves are the property of the villages.

(b.) Private Lands. These may be subdivided into *ri-kur* or lands which are the property of the clan, and *ri kynti*, family, or acquired landed property. In the Khasi Hills proper a very large proportion, certainly of the high lands, is the property of the clan; for instance, the high lands at Laitkor, which are the property of the Khar kungor and Kur kulang clans, whose ancestors the large memorial stones close to the Laitkor road commemorate, also the lands of the Thang khew clan, and many others.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

923 Thang khiew clan, and many others. It has been explained,
629 in a previous paragraph, how the clan grew out of the family. The clan lands originally, when population was sparse, were owned by families, but as the members of the family increased and a clan was formed, the lands became the property of the clan instead of the family. Such clan lands are properly demarcated by stone boundary marks. The manager of the clan lands is the *kni* (maternal uncle of the youngest daughter of the main family, or branch of the clan), whose house "*ka iing khadduh*," or last house, is the place for performing all the religious ceremonies of the clan, and is also called *ka iing ong*. All the members of the clan are, however, entitled
(623) to share in the produce of any of the clan lands they may cultivate. No clan lands can be alienated without the consent of a darbar of the whole clan.

923 *Ki lyndi* are private lands which have been either acquired
928 by a man or woman individually, or, in the case of a woman, inherited from her mother; such lands must be entirely distinguished from the lands of the clan. In portions of the Jaintia Hills, if a man purchases a piece of land, at his death it passes to his mother, to the exclusion of his children; but in the Khasi Hills nowadays a man may leave such lands, provided they were acquired after marriage, either formally by will, or informally, to his children for their support. In land customs as well as other customs the Syntengs seem to preserve more closely than the Khasis what are probably the ancient usages of the race. It must be clearly understood, however, that all land acquired by inheritance must follow the Khasi law of entail, by which property descends from the mother to the youngest daughter, and again from the latter to her youngest daughter. Ancestral landed property must therefore be always owned by women. The male members of the family may cultivate such lands, but they must carry all the produce to the house of their mother, who will divide it amongst the members of the family. Daughters, other than youngest daughters, are entitled to maintenance from the produce of such family lands.

923 In the Jaintia Hills lands are classified as follows:—

I: Gordon E-4, 5 (no date) 1907 AR? Khasi AR?

HALI LANDS OR IRRIGATED PADDY LANDS.

(1) *Raj* lands, which used to be the property of the Raja of Jaintiapur, now the property of Government, which are assessed to land revenue.

(2) Service lands, which are lands given rent free to doloiis, pators, and other officers who carry on the administration.

(3) Village puja lands, being land the occupants of which pay rent to the doloi or lyngdoh, which are set apart in each village for purposes of worship. These lands are not assessed to revenue.

(4) Private lands held by individuals, and which have been transferred from time to time by mortgage sale or otherwise at the will of the owner. These lands are not assessed to revenue.

High lands are sub-divided into (1) Private lands, held like *hali* private lands. (2) Unclaimed land, or Government Waste.

Up till now the Government has not assessed revenue on the high lands which are its own property. Surveys have been made from time to time of the Government *Raj hali* lands in the Jaintia Hills, but the maps require bringing up to date. The revenue on such lands is assessed at an uniform rate, viz. at 10 annas a bigha, and the leases have been issued so as to expire contemporaneously. A list of service lands of doloiis and others, showing the number of plots held by each official and their approximate total area in bighas, is kept in the Deputy Commissioner's Office. Puja lands are plots of lands set apart entirely for the support of the lyngdohs and other persons who perform the pujas of the doloiships. These lands are generally leased out by the doloiis, but in some doloiships they are under the management of the lyngdohs. The occupants of the puja lands have either to present annually sacrificial animals or objects, e.g. bulls, goats, fowls, or pigs, rice, liquor, &c., or make a payment in cash. In the War country in the Jaintia Hills, orange, *pan*, and betel-nut gardens, are held as private property except in a few villages where there are some Raj *pan* gardens which have been assessed to land revenue at the same rates as Government *hali* lands. The various gardens are distinguishable by means of boundary stones or stone cairns, by

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

prominent trees on the boundary lines, or by natural boundaries such as streams.

92] 69 In the *Wer* country to the West of Cherra, notably the country between the heights of Laitkynsew and the plains, considerable portions of the hill-sides are the property of communities known as *sengs*. A *seng* may be defined as a collection of families sprung from some common ancestress or ancestor. As an instance of these *sengs* I may describe the community known as the *lai seng* which owns land in the neighbourhood of Laitkynsew, the area owned being known as the "*ri lai seng*," or land of the three clans. These clans are descended from three sons, U Kynta, U Nalein, and U Tangrai, it being remarkable that in this case descent is traced originally from male ancestors and not from females. The three ancestors are said to have owned a large tract of land, and they had as their abode the village of Laitmawria close to Laitkynsew; but owing to an epidemic, or some such cause, they deserted the village of Laitmawria and went with their families to live in some of the surrounding *Wer* villages, viz. in Tyrna, Nongkrah, Nongwar, Mawsh, and Mawlong. The descendants of the three sons above-mentioned possess a genealogical table, showing their descent from the original three founders of the *seng*. They claim a large tract of country lying to the south and south-east of the Laitkynsew plateau, containing not only orange gardens, but also valuable lime quarries. There are other *seng* communities also in the neighbourhood, e.g. the *khawiew phew seng*, or sixty *sengs*, who put forward claims to other tracts of land. The boundaries of the *ri lai seng* are identifiable on the ground. [693] The business of the *seng* community is managed by a durbar, an elder or other influential person being chosen as president.

923 [927] 692 In the country of the Lyngams the crop belongs to the person who cultivates it but the land belongs to the *kur* or family. The Lyngam villages, like those in the Khasi Siemships, do not pay any rent to the Siem. If outsiders cultivate within the areas set apart for the different Lyngam villages, all of them, including women, have to pay eight annas each to the people of the village in whose circle they cultivate. There is usually a mutual understanding between inhabitants of Lyngam villages that certain tracts of land belong to the

II Gordon E-4,5 (no date) 1907 ART Khasi ART

competing villages; sometimes, however, there are disputes regarding these lands between the different villages. Such disputes are settled by the Lyngdoh Siedare of villages or by the Siedare sitting with the two Lyngdohs of the Siemship. If the disputes cannot be settled by these officials to the satisfaction of the parties, the latter are taken by the Lyngdohs and Siedare to the Siem of Nongstoin, who tries the case with the aid of the State mantrin.

LAWS REGARDING OTHER PROPERTY.

There is no separate law applying to personal property, as opposed to real property, amongst the Khasis.

DECISION OF DISPUTES.

Khasi Courts of Judicature.

In the first place a complaint is made before the Siem or chief, against a certain party or parties. The facts and circumstances of the case are then detailed before the chief and his headmen, the ostensible object being to attempt to bring about a compromise between the parties. If no reconciliation can be effected, a crier (*u nong pyrta shnong*), or in the Jaintia Hills a *ensnpt*, is sent out to proclaim at the top of his voice the durbar which is to assemble the following evening. He proceeds to cry the durbar in the evening when all the inhabitants have returned to the village from their usual daily pursuits. With a loud pressmatory yell the crier makes use of the following formula *:—

"*Kaw!* thou, a fellow-villager; thou, a fellow-creature; thou, an old man; thou, who art grown up; thou, who art young, thou, a boy; thou, a child; thou, an infant; thou, who art little; thou, who art great. *Hei!* because there is a contest. *Hei!* for to cause to sit together. *Hei!* for to cause to deliberate. *Hei!* for to give intelligence together. *Hei!* about to assemble in durbar. *Hei!* for to listen attentively. *Hei!* ye are forbidden. *Hei!* ye are stopped to draw water then

* What follows is a literal translation of the Khasi.

L. Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

643
645

KHASI DURBAR AT NWIT

on the occasion of the installation of U Dukhar Singh, Siem of Khyrim, with the usual of appointment.

(from a photograph by Khasi Bandhava.)

[PACING P. 92]

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

203 not to cut firewood then; *Hei!* to go as coolies then; *Hei!*
694 to go to work then; *Hei!* to go a journey then; *Hei!* to descend to the valley then; *Hei!* he who has a pouch. *Hei!* he who has a bag. *Hei!* now come forth. *Hei!* now appear. *Hei!* the hearing then is to be all in company. *Hei!* the listening attentively then is to be all together. *Hei!* for his own king. *Hei!* for his own lord, lest destruction has come; lest wearing away has overtaken us. *Kaw!* come forth now fellow mates."

This proclamation is called *khang shnong*, and by it all are stopped from going anywhere from the village the following day.
[187] Anybody who disregards the prohibition is liable to fine.
695 The following day, towards evening, all the grown-up males of the village assemble at the durbar ground, the site of which is marked in some villages by rows of flat stones, arranged in an irregular circle, upon which the durbaris sit. The proceedings are opened by one of the headmen, who makes a long speech; then others follow, touching upon all sorts of irrelevant matters, but throwing out hints, now and then, bearing on the subject of accusation. By degrees the debate waxes warmer, and the parties get nearer the point. Then the complainant and the defendant each of them throw down on the ground a turban, or a bag containing betul and *pán*, lime, &c., in front of the durbar. These are regarded as the pledges of the respective parties and their representatives in the suit; they receive the name of *mamla* (hence the Khasi term *ar liang mamla* for the two contending parties in the suit). There are pleaders on both sides called *'riw said*, who address the durbar in lengthy speeches, the Siem being the judge and the whole body of the durbar the jury. Witnesses are examined by the parties; in former times they were sworn on a pinch of salt placed on a sword. The most sacred and most binding form of oath, however, is sworn on *u klong* (a hollow gourd containing liquor). As, however, the latter form of oath is regarded by the Khasis as a most serious ordeal, it will be described separately. The
695 durbar sometimes goes on for several days. At length the
702 finding of the durbar is taken, after the Siem has summed up, and sentence is pronounced, which generally consists of a fine in money, almost always accompanied by an order to the losing

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

695 party to present a pig. The pig is supposed to be sacrificed
782 to a goddess, *Ka 'lei synshar*, i.e. the goddess of the State,
[776] but it is invariably eaten by the Siem and the members of the durbar. The Siem then calls out "*kumta mo khynraw*" (is it not so, young people?) The members of the durbar then reply, "*haoid kumta khein khynraw*" (yea, it is so, young
681 ones). Sentences of fine are more often resorted to than other
697 punishments nowadays, probably because very few of the Siems possess jails for the reception of criminals. The condemned one in a criminal case frequently serves his time by working for the Siem as a menial servant. The above description, which is based on the account given by the Rev. W. Lewis, with some modifications, may be taken as the usual form of procedure of the Khasi durbar.

682 Under the heading of decision of disputes we may perhaps
782 give a short description of some of the punishments which were inflicted by the Siems and their durbars in criminal cases in ancient times. Murder was punishable by beating the culprit to death with clubs (*ki tangon ki lymban*). The killing, however, of a *nong shoh noh*, i.e. a man who seeks for human victims to sacrifice to the monster, *u thlen*, is not considered murder, even now by the Khasis, and the slayer of the *nong shoh noh* only has to inform the Siem and deposit Rs. 5, and one pig in the Siem's court. The slaying of a robber also is dealt with in like manner.

684 The punishment of adultery was imprisonment for life (*ka sah dain mur*), or a fine of Rs. 1,100, and one pig (*ka khadwei spah wei doh*). Whether such a heavy fine was ever paid is perhaps doubtful, and probably some other form of punishment was substituted for it. A husband finding his wife and a man in *flagrante delicto* could, as under the law of the ancients, kill both adulterer and adulteress without punishment for murder. He was, however, bound to deposit Rs. 5, and the conventional pig in the Siem's durbar. The punishment for rape (*kaba khniot tynga*) was imprisonment for life in the case of the woman being married, and a heavy fine and one pig if the
685 woman was a spinster. Arson was punishable with imprison-
683 ment for life, or a heavy fine. The punishment for causing people to be possessed by devils (*ka ba ai-ksuid briew*) was

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

683 exile (*pyrangkang par*); but if a person so possessed died, the
685 sorcerer was hurled down a precipice (*pynnoh khongpong*). The punishment for robbery and theft was the stocks (*ka pyndait diengsong*), the imposition of fetters, or a punishment known as *kaba s'ang sohmynken*, by which the culprit was compelled to sit on a bamboo platform under which chillies were burnt. The result of such torture can be better imagined than described.

684 Incest, or *sang*, which, amongst the Khasis means cohabiting
626 with a member of a man's or woman's own clan, was punishable with exile or a fine of Rs. 550/- and one pig. It is believed by the Khasis that the evils resultant from incestuous connection are very great; the following are some of them: being struck by lightning, being killed by a tiger, dying in childbirth, &c.

DECISION OF CASES BY ORDEAL.

1.—*Water Ordeal.*

695 In ancient times the Khasis used to decide certain cases by means of water ordeal (*ka ngam um*). Yule, writing in 1844, mentions a water ordeal, and one of my Khasi friends remembers to have seen one during his boyhood. There were two kinds of such ordeals. The first, called *ka ngam ksih*, was as follows:—The two disputants in a case would each of them fix a spear under water in some deep pool. They would then dive and catch hold of the spear. The man who remained longest under water without returning to the surface was adjudged by the Siem and durbar to have won the case. Colonel Maxwell, late Superintendent of the Manipur State, witnessed a similar ordeal in the Manipur State in the year 1903, when two Manipuris dived to the bottom of a river and held on to stones, the result being that one man, who remained under water in the most determined way, was very nearly drowned. Amongst the Khasis sometimes the supporters of the contending parties used to compel the divers to remain under water by holding them down with their spears. Another form of trial was to place two pots, each of them containing a piece of gold and a piece of silver wrapped up in cloths, in shallow water. The two contending parties

f: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

were then directed to plunge their hands into the water and take up, each of them, one of the packets. The party who brought up a piece of gold was adjudged the victor. If both parties brought up either gold or silver, then the case was amicably settled by the Durbar, and if it was a land case, the land was equally divided between the parties. No instances of trial of cases by such ordeals have come to notice of late years. Yule, referring to water ordeals, says: "I have been told that it was lawful to use the services of practised attorneys in this mode of trial; so that long-winded lawyers have as decided a preference in these regions as they have elsewhere."

2.—*Ordeal by U Klong, or by U Klong U Khnam, in the Wár Country.*

Of all the ordeals these are the most dreaded by the Khasis. They believe that if a person swears falsely by *u klong* or *u klong u khnam*, he will die or, if he represents his family (i.e. wife and children) or his clan (*kur*), that his family and his clan will die out. Siems, Wahadadars, Lyngdohs, &c., do not order litigants, or even propose to them, to have their cases decided by this ordeal, fearing to incur blame for choosing it, owing to possible evil consequence thereafter to the parties. One of the parties must propose and the other must accept the ordeal, of their own accord and in open Court or Durbar. A gourd (*u klong*) containing fermented rice (*ka sohpoh*) is provided, and a feathered arrow with a barbed iron head is planted in the fermented rice. The following is the procedure:—

The person who wishes to take the oath brings a gourd of fermented rice, or a gourd with an arrow stuck in it, as the case may be, and makes it over to the judge, or a deputy appointed by such judge for this duty. The latter, before returning it to him, invokes the goddess as follows:—

"Come down, and bear witness, thou goddess who reignest above and below, who createst man, who placest him (on earth), who judgest the right and the wrong, who givest him being and stature, (i.e.) life. Thou goddess of the State, thou goddess of the place, who preservest the village, who preservest the State,

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

695 come down and judge. If this man's cause be unrighteous, then shall he lose his stature (being), he shall lose his age (life), he shall lose his clan, he shall lose his wife and children; only the posts of his house shall remain, only the walls of his house shall remain, only the small posts and the stones of the fireplace shall remain; he shall be afflicted with colic, he shall be racked with excruciating pains, he shall fall on the piercing arrow, he shall fall on the lacerating arrow, his dead body shall be carried off by kites, it shall be carried off by the crows, his family and his clan shall not find it; he shall become a dog, he shall become a cat, he shall creep in dung, he shall creep in urine, and he shall receive punishment at thy hands, oh, goddess, and at the hands of man. If, on the other hand, his cause be righteous (lit. *lada u kren hok*) he shall be well, he shall be prosperous, he shall live long, he shall live to be an elder, he shall rise to be a defender and preserver of his clan, he shall be a master of tens and a master of hundreds (immensely rich), and all the world shall see it. Hear, oh, goddess, thou who judgest." (The whole of this invocation is uttered while a libation is poured out from *u klong*.)

U klong is next invoked as follows:—

"Thou, *u klong*, with whose assistance—according to our religion and our custom, a man when he is born into the world is named—hear and judge. If he speaks falsely (his cause be false), his name shall be cut off (by thee) and he shall surely die."

The fermented rice is then invoked as follows:—

"Thou yeast, thou charcoal, thou rice of the plough, thou rice of the yoke, thou, too, hear and judge. If he speaks falsely, eat off his tongue, eat away his mouth."

The arrow is lastly invoked as follows:—

"Thou piercing and lacerating arrow, as thou hast been ordained by the goddess, who creates man, who appoints man to occupy a pre-eminent place in war and in controversy, do thou hear and judge. If he (i.e. the man taking the oath) speaks falsely, let him fall upon thee, let him be cut and be torn, and let him be afflicted with shooting and pricking pains." The man then takes *u klong* or, *u klong u khnam*, and holds it on his head, and while in that posture utters the same

invocation. *U klong* is then made over to the judge (the Siem 695
or the Sirdar as the case may be, &c.).

The person who undergoes the above ordeal wins the case, the production of evidence being unnecessary.

WAR.

Although the Khasis, unlike the Nagas, the Garos, the wild 721
Was of Burma, the Dayaks of Borneo, and other head-hunting tribes, cannot be said to have indulged in head-hunting in ancient times, as far as we know, merely for the sake of collecting heads as trophies, there seems to be some reference to a custom of head-hunting in a description of the worship of [776]
the god *u Syngkai Bámon*, one of the principal gods of war amongst the Khasis. This god is described in one of the folk tales (I have obtained it through the kindness of Dr. Roberts, [797]
the Welsh missionary at Cherrapunji) as being the deity who gives the heads of the enemy to the successful warriors. To 726
this god, as well as to *Ka Rám Shandi*, they offer a cock. 782
Before sacrifice the warriors dance round an altar, upon which are placed a plume of cock's feathers (*u thuia*), a sword, a shield, a bow, an arrow, a quiver, *pán* leaves, and flowers. After the cock has been sacrificed, they fix its head on the point of a sword and shout three times. The fixing of the cock's head on the point of a sword is said to have been symbolical of the fixing of the human head of an enemy killed in battle, on the top of the *soh-lang* tree. Mr. Shadwell, of Cherrapunji, whose memory carries him back to the time when the British first occupied the Khasi Hills, has a recollection of a Khasi dance at Cherra, round an altar, upon which the heads of some *Dykhars*, or plains people, killed in a frontier raid had been placed. The Khasis used to sacrifice to a number of other gods also for success in battle. An interesting feature of 726
the ancient combats between the people of different Siemships was the challenge. When the respective armies had arrived at a little distance from one another, they used to stop to hear each other shout the *'tien-Blei*, or challenge, to the other side. This custom was called *pyrta 'tien-Blei*, or shouting out the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[411] 726 challenge. From the records available of the military operations of the Khasis against the British, the former appear to have relied principally on bows and arrows, ambushes and surprises, when they fought against us at the time of our first occupation of the hills. During the Jaintia rebellion firearms were used, to some extent, by the Syntengs. The military records do not, however, disclose any peculiar battle customs as having been prevalent amongst those hill people then. Both Khasis and Syntengs seem to have fought much in the same manner as other savage hill-men have fought against a foe armed with superior weapons.

HUMAN SACRIFICES.

The Thlen Superstition.

825 782 773 776 There is a superstition among the Khasis concerning *thlen*, a gigantic snake which requires to be appeased by the sacrifice of human victims, and for whose sake murders have even in fairly recent times been committed. The following account, the substance of which appeared in the *Assam Gazette*, in August, 1882, but to which considerable additions have been made, will illustrate this interesting superstition:—"The tradition is that there was once in a cave near Cherrapunji,* a gigantic snake, or *thlen*, who committed great havoc among men and animals. At last one man, bolder than his fellows, took with him a herd of goats, and set himself down by the cave, and offered them one by one to the *thlen*. By degrees the monster became friendly, and learnt to open his mouth at a word from the man, to receive the lump of flesh which was then thrown in. When confidence was thoroughly established, the man, acting under the advice of a god called *U Suid-noh*,† (who has as his abode a grove near Sohrarim),

* This cave is at Pomdalai, some five miles west of Cherrapunji, close to a great waterfall called *Noh Ka Likai*, i.e. the place where Ka Likai jumped down the precipice (for a full account of this story see Section V. of the monograph), where there is a large block of stone, with some cuts over it, known as *Dain Thlen*, i.e. the snake cutting (place).

† In another account it is said to have been U Suid-noh himself who did this.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

having heated a lump of iron red hot in a furnace, induced the snake, at the usual signal, to open his mouth, and then threw in the red-hot lump, and so killed him. He proceeded to cut up the body, and sent pieces in every direction, with orders that the people were to eat them. Wherever the order was obeyed, the country became free of the *thlen*, but one small piece remained which no one would eat, and from this sprang a multitude of *thlens*, which infest the residents of Cherra and its neighbourhood. When a *thlen* takes up its abode in a family there is no means of getting rid of it, though it occasionally leaves of its own accord, and often follows family property that is given away or sold. The *thlen* attaches itself to property, and brings prosperity and wealth to the owners, but on the condition that it is supplied *with blood*. Its craving comes on at uncertain intervals, and manifests itself by sickness, by misadventure, or by increasing poverty befalling the family that owns the property. It can only be appeased by the murder of a human being." The murderer cuts off the tips of the hair of the victim with silver scissors, also the finger nails, and extracts from the nostril a little blood caught in a bamboo tube, and offers these to the *thlen*. The murderer, who is called *u nongshohnoh*, literally, "the beater," before he sets out on his unholy mission, drinks a special kind of liquor called, *ka 'iad tang-shi-snem* (literally, liquor which has been kept for a year). This liquor, it is thought, gives the murderer courage, and the power of selecting suitable victims for the *thlen*. The *nongshohnoh* then sets out armed with a short club, with which to slay the victim, hence his name *nongshohnoh*, i.e. one who beats; for it is forbidden to kill a victim on these occasions with any weapon made of iron, inasmuch as iron was the metal which proved fatal to the *thlen*. He also takes the pair of silver scissors above mentioned, a silver lancet to pierce the inside of the nostrils of the deceased, and a small bamboo or cylinder to receive the blood drawn therefrom. The *nongshohnoh* also provides himself with rice called "*u 'khaw tyndep*," i.e. rice mixed with turmeric after certain incantations have taken place. The murderer throws a little of this rice over his intended victim, the effect of which is to stupefy the

525 782 773 776 825 782 776 [273]

1:Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

825 782 776 [761]

latter, who then falls an easy prey to the *nongshohnoh*. It is not, however, always possible to kill the victim outright for various reasons, and then the *nongshohnoh* resorts to the following subterfuge:—He cuts off a little of the hair, or the hem of the garment, of a victim, and offers these up to the *thlen*. The effect of cutting off the hair or the hem of the garment of a person by a *nongshohnoh*, to offer up to the *thlen*, is disastrous to the unfortunate victim, who soon falls ill, and gradually wastes away and dies. The *nongshohnoh* also sometimes contents himself with merely throwing stones at the victim, or with knocking at the door of his house at night, and then returns home, and, after invoking the *thlen*, informs the master that he has tried his best to secure him a prey, but has been unsuccessful. This is thought to appease the *thlen* for a time, but the demon does not remain inactive long, and soon manifests his displeasure for the failure of his keeper to supply him with human blood, by causing one of the latter's family to fall sick. The *thlen* has the power of reducing himself to the size of a thread, which renders it convenient for the *nong-ri thlen*, or *thlen* keeper, to place him for safety in an earthen pot, or in a basket which is kept in some secure place in the house. When the time for making an offering to the *thlen* comes, an hour is selected, generally at dead of night, costly cloths are spread on the floor of the house of the *thlen* keeper, all the doors are opened, and a brass plate is laid on the ground in which is deposited the blood, or the hair, or a piece of the cloth of the victim. All the family then gathers round, and an elderly member commences to beat a small drum, and invokes the *thlen*, saying, "*ko kni ko kpa* (oh, maternal uncle, father), come out, here is some food for you; we have done everything we could to satisfy you, and now we have been successful; give us thy blessing, that we may attain health and prosperity." The *thlen* then crawls out from its hiding-place and commences to expand, and when it has attained its full serpent shape, it comes near the plate and remains expectant. The spirit of the victim then appears, and stands on the plate, laughing. The *thlen* begins to swallow the figure, commencing at its feet, the victim laughing the while. By degrees the whole figure

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

is disposed of by the boa constrictor. If the spirit be that of a person from whom the hair, or a piece of his or her cloth, has been cut, directly the *thlen* has swallowed the spirit, the person expires. Many families in these hills are known, or suspected, to be keepers of a *thlen*, and are dreaded or avoided in consequence. This superstition is deep-rooted amongst these people, and even nowadays, in places like Shillong or Cherrapunji, Khasis are afraid to walk alone after dark, for fear of being attacked by a *nongshohnoh*. In order to drive away the *thlen* from a house or family all the money, ornaments, and property of that house or family must be thrown away, as is the case with persons possessed by the demon *Ka Taroh*, in the Jaintia Hills. None dare touch any of the property, for fear that the *thlen* should follow it. It is believed that a *thlen* can never enter the Siem's or chief's clan, or the Siem's house; it follows, therefore, that the property of the *thlen* keeper can be appropriated by the Siem. A Mohammedan servant, not long ago in Shillong, fell a victim to the charms of a Khasi girl, and went to live with her. He told the following story to one of his fellow-servants, which may be set down here to show that the *thlen* superstition is by no means dying out. In the course of his married life he came to know that the mother of his Khasi wife kept in the house what he called a *bhut* (devil). He asked his wife many, many times to allow him to see the *bhut*, but she was obdurate; however, after a long time, and after extracting many promises from him not to tell, she confided to him the secret, and took him to the corner of the house, and showed him a little box in which was coiled a tiny snake, like the hair spring of a watch. She passed her hands over it, and it grew in size, till at last it became a huge cobra, with hood erected. The husband, terrified, begged his wife to lay the spirit. She passed her hands down its body, and it gradually shrank within its box.

It may be stated that the greater number of the Khasis, especially in certain Siemships, viz. Cherra, Nongkrem, and Mylliem, still regard the *thlen*, and the persons who are thought to keep *thlens*, with the very greatest awe, and that they will not utter even the names of the latter for fear some ill may befall

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

them. The superstition is probably of very ancient origin, and it is possible that the Khasi sacrifices to the *thlen* demon may be connected with the primæval serpent-worship which characterized the Cambodians, which Forbes says was "undoubtedly the earliest religion of the Mons." But it must be remembered that snake-worship is of very ancient origin, not only in Further India, but also in the nearer peninsula, where the serpent race or Nagas, who may have given their name to the town of Nagpur, were long held in superstitious reverence. Mr. Gait, in the Journal of the Asiatic Society of Bengal, vol. i. of 1898, gives some account of the human sacrifices of the Jaintias or Syntengs. He writes as follows:—

"It appears that human sacrifices were offered annually on the *Sandhi* day in the month of Ashwin (Sukla paksha) at the sacred *pitha*, in the Faljur pargana. They were also occasionally offered at the shrine of Jainteswari, at Nijpat, i.e. at Jaintiapur, the capital of the country. As stated in the *Haft Iqlim* to have been the case in Koch Behar, so also in Jaintia, persons frequently voluntarily came forward as victims. This they generally did by appearing before the Raja on the last day of Shravan, and declaring that the goddess had called them. After due inquiry, if the would-be victim, or *Bhoge khaora*, were deemed suitable, it was customary for the Raja to present him with a golden anklet, and to give him permission to live as he chose, and to do whatever he pleased, compensation for any damage done by him being paid from the royal treasury. But this enjoyment of these privileges was very short. On the Navami day of the Durga Puja, the *Bhoge khaora*, after bathing and purifying himself, was dressed in new attire, daubed with red sandal-wood and vermilion, and bedecked with garlands. Thus arrayed, the victim sat on a raised daïs in front of the goddess, and spent some time in meditation (*japa*), and in uttering *mantras*. Having done this, he made a sign with his finger, and the executioner, after uttering the usual sacrificial *mantras*, cut off his head, which was placed before the goddess on a golden plate. The lungs were cooked and eaten by such *Kandra Yogis* as were present, and it is said that the royal family partook of a small quantity of rice cooked in the blood of the victim. The ceremony was

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

usually witnessed by large crowds of spectators from all parts 782
of the Jaintia pardganas.

"Sometimes the supply of voluntary victims fell short, or 782
victims were needed for some special sacrifice promised in the 721
event of some desired occurrence, such as the birth of a son, coming to pass. On such occasions, emissaries were sent to kidnap strangers from outside the Jaintia Raj, and it was this practice that eventually led to the annexation of the country by the British. In 1821, an attempt was made to kidnap a native of Sylhet proper, and while the agents employed were punished, the Raja was warned not to allow such an atrocity to occur again. Eleven years later, however, four British subjects were kidnapped in the Nowgong district, and taken to Jaintia. Three of them were actually sacrificed, but the fourth escaped, and reported the matter to the authorities. The Raja of Jaintia was called on to deliver up the culprits, but he failed to do so, and his dominions were in consequence annexed in 1835."[1]

There seems to be an idea generally prevalent that the Raja 782
of Jaintia, owing to his conversion to Hinduism, and especially 776
owing to his having become a devotee of the goddess Kali, took 823
to sacrificing human victims; but I find that human victims were formerly sacrificed by the Jaintias to the Kopili River, which the Jaintias worshipped as a goddess. Two persons were sacrificed every year to the Kopili in the months *U' naiwing* and *U' nai prah* (November and December). They were first taken to the *hat* Mawshai, or Shang-pung market, where they were allowed to take any eatables they wished. Then they were conducted to Sumer, and thence to Ka Ieu Ksih, where a stone on the bank of a small river which falls into the Kopili is pointed out as having been the place where the victims were sacrificed to the Kopili river goddess. Others say that the sacrificial stone was situated on the bank of the Kopili River itself. A special clan in the Raliang doloiship used to carry out the executions. It seems probable that the practice of sacrificing human victims in Jaintia was of long standing, and was originally unconnected with Hinduism, although when the Royal family became converts to Hinduism, the goddess Kali may easily have taken the place of the Kopili

1 Quote from Gait, Journal of the Asiatic Society of Bengal, Vol. I. 1898 -- Analyst

1:Gurdon E-4, 5 (no date 1907 AR7 Khasi AR7

782 River goddess. Many of the Syntengs regard the River Kopili
776 to this day with superstitious reverence. Some of these people
823 will not cross the river at all, others can do so after having performed a sacrifice with goats and fowls. Any traveller who wishes to cross the river must leave behind him the rice which
[485] he has taken for the journey, and any other food supplies he may have brought with him. This superstition often results in serious inconvenience to travellers between the Jaintia Hills and North Cachar, unless they have arranged for another batch of coolies to meet them on the Cachar side of the River Kopili, for the Synteng coolies throw down their loads at the river side, and nothing will induce them to cross the river. The Kopili is propitiated by pujas in many parts of the Jaintia Hills, and at Nartiang a tank where sacrifices are regularly performed is called Ka Umkoi Kopili.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

SECTION IV.

RELIGION.

GENERAL CHARACTER OF POPULAR BELIEFS.

THE Khasis have a vague belief in a God the Creator, *U Blei Nong-thaw*, although this deity, owing, no doubt, to the influences of the matriarchate, is frequently given the attribute of the feminine gender, cf., *Ka lei Synshar*. The Khasis cannot, however, be said to worship the Supreme God, although it is true that they sometimes invoke him when sacrificing and in times of trouble. The religion of the Khasis may be described as animism or spirit-worship, or rather, the propitiation of spirits both good and evil on certain occasions, principally in times of trouble. The propitiation of these spirits is carried out either by priests (*lyngdohs*), or by old men well versed in the arts of necromancy, and as the *lyngdoh* or wise man deals with good as well as evil spirits, and, as often as not, with the good spirits of ancestors, the propitiation of these spirits may be said to partake of the nature of Shamanism. A very prominent feature of the Khasi beliefs is the propitiation of ancestors; but this will be described separately. There is a vague belief amongst the Khasi of a future state. It is believed that the spirits of the dead, whose funeral ceremonies have been duly performed, go to the house or garden of God, where there are groves of betel-nut trees; hence the expression for the departed, *uba bam kwai ha iing u blei* (he who is eating betel-nut in God's house), the idea of supreme happiness to the Khasi being to eat betel-nut uninterruptedly. The spirits of those whose funeral ceremonies have not been duly performed are believed to take the forms of animals, birds, or

776 771 782 791 793 769 775 276 764 775 764 825

P. 105

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

insects, and to roam on this earth; but this idea of transmigration of souls has been probably borrowed from the Hindus. Bivar writes that although the ideas of a Godhead are not clearly grasped, yet a supreme creator is acknowledged, and that the following is the tradition relating to the creation of man. "God in the beginning having created man, placed him on the earth, but on returning to look at him, found he had been destroyed by the evil spirit. This happened a second time, whereupon the Deity created first a dog, then a man; and the dog, who kept watch, prevented the devil from destroying the man, and the work of the Deity was thus preserved." The Khasis, apparently, do not believe in punishment after death, at least, there is no idea of hell, although the spirits of those who have died under the ban of *sang* remain uneasy, being obliged to wander about the earth in different forms, as noted above. The spirits worshipped by the Khasis are many in number, those of the Syntengs being specially numerous. The particular spirit to be propitiated is ascertained by egg-breaking. The offering acceptable to the spirit is similarly ascertained and is then made. If the particular sacrifice does not produce the result desired, a fowl is sacrificed; the entrails being then examined, an augury is drawn, and the sacrifice begins afresh. As the process of egg-breaking is believed to be peculiar * to the Khasis amongst the Assam hill tribes, a separate description of it is given in the Appendix. It should be remarked that the Khasis never symbolize their gods by means of images, their worship being offered to the spirit only. The following are some of the principal spirits worshipped by the Khasis and Syntengs, omitting the spirits of deceased ancestors such as *Ka Iawebi*, *u Thawlang*, and *u Suidnia*, which will be described under the heading of ancestor-worship.

Ulei mulak—the god of the State, who is propitiated yearly by the sacrifice of a goat and a cock.

Ulei umtong—the god of water, used for drinking and cooking purposes. This god is similarly propitiated once a year, so that the water supply may remain pure.

* Sir Charles Lyall has pointed out that the Mikirs possess this custom; it is probably borrowed from the Khasis.

1: Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

U lei longspah—the god of wealth. This god is propitiated with a view to obtaining increased prosperity. 776 782

U Ryngkew, or *u Basa shnong*, is the tutelary deity of the village. This godling is propitiated by sacrifices whenever they are thought to be necessary.

U Phan u kyrpad is a similar godling to the above.

Then follows a list of minor deities, or, rather, evil spirits, e.g. *Ka Rih*, the malarial fever devil; *ka Khlam*, the demon of cholera; *ka Duba*, the fever devil which is said to haunt the neighbourhood of Theriaghat.

Bivar says "the Khasi religion may be thus briefly defined as forms used to cure diseases and to avert misfortunes, by ascertaining the name of the demon, as the author of the evil, and the kind of sacrifice necessary to appease it." We may accept this description as substantially correct. In the Jaintia Hills, there is a peculiar superstition regarding a she devil, called "*ka Taroh*," which is supposed to cause delirium in cases of fever. When such cases occur, it is believed that "*ka Taroh*" has caused them, and inquiries are made by means of breaking eggs to find out in whose person the demon has obtained a lodgment; or sometimes the sick person is asked to reveal this. When in either of these ways the name of the person possessed by "*ka Taroh*" is known, the sick person is taken to the house of the possessed, and ashes and bits of broken pots are cast into the enclosure, after which, if the sick person recovers, the party indicated is denounced as possessed by the demon; but if the patient dies, it is concluded that the person possessed has not been properly ascertained. If people are satisfied that some one is really possessed, they denounce the person, who is then out-casted. The only way for him to regain his position is to exorcise the demon by divesting himself of all his property. He pulls down his house, burns the materials, his clothes, and all his other worldly goods. Lands, flocks, and herds are sold, the money realized by the sale being thrown away. No one dares touch this money, for fear he should become possessed by *ka Taroh*. It will be observed that, as in the case of the *thlen*, the demon is believed to follow the property. [771] 776 753 787 957 425

Mr. Jenkins, in his interesting little work on "Life and 000

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Mr. Jenkins, in his interesting little work on "Life and
753 Work in Khasia," gives a slightly different account of the
776 superstition, in that he states that it is the sick person who
826 is possessed by *ka Taroh*. The above belief is perhaps a
164 Synteng development of the Khasi *thlen* superstition. In
177 the Jaintia Hills "the small-pox" is believed to be a goddess, and is reverenced accordingly. Syntengs regard it as an honour to have had small-pox, calling the marks left by the disease the "kiss of the goddess"; the more violent the attack and the deeper the marks, the more highly honoured is the person affected. Mr. Jenkins says, "When the goddess has entered a house, and smitten any person or persons with this disease, a trough of clean water is placed outside the door, in order that every one before entering may wash their feet therein, the house being considered sacred." Mr. Rita mentions cases of women washing their hair in water used by a small-pox patient, in order that they may contract the disease, and women have been known actually to bring their little children into the house of a small-pox patient, in order that they may become infected and thus receive the kiss of the goddess. It is possible that the Syntengs, who were for some time under Hindu influences, may in their ignorance have adopted this degraded form of worship of the Hindu goddess, "Sitala Devi," who is adored as a divine mother under different names by Hindus all over India: cf., her name *mari-amman*, or mother of death, in the South of India, and the name Ai, mother, of the Assamese.

In the Khasi Hills the god of small-pox is known under the name of *u Siem ñiang thylliew*. He is not, however, appeased in any way, the people calling on two other spirits, *Thynrei* and *Sapa*, to whom a fowl or a goat is offered.

776 This section cannot be closed without some reference to the
773 household gods of the Syntengs. The legend is that in ancient times there came a woman "from the end of heaven to the borders of the country of *u Truh*" (the country of the plains people at a distance from the foot of the Khasi and Jaintia Hills). The name of the woman was Ka Taben, and she was accompanied by her children. She offered herself to *u Dkhar*, the plains man, as a household goddess, but he rejected her. She then went to the Khasis, who were ploughing their fields,

1: Gurdon E-4 5 (no date) 1907 AR7 Khasi AR7

and offered to help them with their cultivation. The Khasis also refused her, saying they were capable of managing their own cultivation, and at the same time told her to go to the country of the Bhois and Syntengs, i.e. the Jaintia Hills. Acting on this advice, she went to the village of Nongphyllud in the Jaintia Hills, where the people again turned a deaf ear to her. She proceeded to Mulagula village in Jaintia, at the foot of the Jaintia Hills, and ascended from thence to Rymbai, where she met a man who conducted her to the house of the Siem, who consented that she and her children should live with him. Ka Taben then apportioned to her children various duties in the house of the Siem as follows:—Ka Rasong was to look after the young unmarried folk, and was to supervise their daily labour and to prosper their trading operations at the markets. Next Ka Rasong was given a place at the foot of the king post, *trai rishot*, and her duty was to befriend young men in battle. Then came *Ka Longkhuinruid*, alias *ka Thab-bulong*, who said, "There are no more rooms in the house for my occupation, so I will go and live in the forest, and him who turns not his coat when I meet him I will make mad." Finally came *U Lamsymphud*, who elected to live with his youngest sister inside the house.

There are special sacrifices offered to these household deities. The leaves of the *sning*, or Khasi oak, are wrapped round the post of the house, and a fowl is sacrificed and other formalities are observed which it would be tedious to describe in detail. The legend of the arrival of Ka Taben with her children in the Synteng country from a distant clime is interesting in that it perhaps indicates the possibility of the migration of these people, i.e. the Syntengs, in ancient times from some distant place to their present abode.

ANCESTOR-WORSHIP.

The Khasis not only revere the memories of deceased ancestors, but they adore them by means of offerings, which are sometimes periodical, and sometimes made when thought neces-

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

769 sary, as in times of trouble. These offerings take the shape of articles of food which are theoretically partaken of by the shades of the deceased ancestors, the idea of making such offerings being very similar to that of the Hindus when they offer the "*pinda*," or cake, to nine generations of ancestors, i.e. to propitiate the shades of the departed, and to obtain their help thereby. U Hormu Rai Diengdoh writes that, "the real religious demand" amongst the Khasis is the *ei ben*, or giving of food to the spirits of deceased ancestors, in order that the latter may aid the living members of the clan with their help, and bless them. To honour dead ancestors is the duty of every Khasi, and he who wilfully neglects this duty, it is believed, will neither receive their help, nor be defended from the influence of the numerous spirits of evil in which the Khasis believe. Amongst the Syntengs, a few days after depositing the bones in the ancestral tomb, the ceremony of feeding the spirits of the dead is performed. At this ceremony there are some families which give two pigs for each person of the family who is dead, and there are some who give one. The pigs are taken to the *iing-seng*, or puja house of the clan. Presumably, pigs are usually offered to the shades only of
[211] those members of the family whose remains have been recently
[764] deposited in the clan cromlech. In the chapter dealing with memorial stones the reader will notice how many of them are erected to the memory of deceased ancestors, and how they bear the names of such ancestors, e.g. *Ka Iawbei* (the first grandmother), *U Suidnia*, or *U lui rangbah* (the first maternal uncle). It was the custom in former days to make offerings of food upon the flat table-stones to the spirits of the deceased ancestors, and this is still the case in places in the interior of the district. This practice, however, may be said to be largely dying out, it being now commonly the custom to make the offerings in the house, either annually, or at times when it is thought necessary to invoke the aid of the departed. Such acts of devotion may well be said to partake of the
769 nature of worship. As has been the case in other countries,
171 and amongst other people, it is possible that the Khasi gods of
776 to-day are merely the spirits of glorified deceased ancestors transfigured, as has happened with some of the gods of the

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Shinto Pantheon of Japan. It may be interesting to note that the ancient Shinto cult of Japan possesses some features in common with the ancestor-worship of the Khasis. Take the funeral ceremonies. With both people we find the dead laid out in the house, food placed before the corpse, and the funeral ceremonies taking place, accompanied by music and dancing. Mr. Lafcadio Hearn, in an interesting book on Japan, writes "that in ancient times the Japanese performed ceremonies at regular intervals at the tombs of deceased members of the family, and food and drink were then served to the spirits;" this is exactly what the Khasis used to do at their cenotaphs. This, apparently, was the practice in Japan before the "spirit tablet" had been introduced from China, when the worship of the ancestors was transferred from the tomb to the home. We have an exactly similar instance of evolution amongst the Khasis of the present day, i.e. the transfer of the ancestor cult from the flat table-stones erected in honour of deceased ancestors to the home. Last, but not least, is the idea common to both people, that no family or clan can prosper which does not duly perform the worship of deceased ancestors; this, as Hearn puts it, is "the fundamental idea underlying every persistent ancestor-worship, i.e. that the welfare of the living depends upon the welfare of the dead." The "Khasi Mynta," in an interesting article, notes some further points of resemblance between the methods of ancestor-worship adopted by the two people. The following instances may be quoted. Amongst the Japanese the spirits of those who fall in battle are said to help their fellow-warriors who are still fighting. The "Khasi Mynta" quotes a similar belief as having existed amongst the Khasis in former days. The remains of Japanese warriors who die in battle are said to be reverently taken to the warrior's home at the first opportunity. The Khasis do likewise, the clothing in default of the ashes of Khasi transport coolies, who were employed on military expeditions on the North-Eastern Frontier, having been carried home by the survivors to present to the dead men's relations, who then performed the ceremonies prescribed by custom for those who have died violent or unnatural deaths. Of all deceased ancestors the Khasis revere *Ka Jawbei* the most, the word *Jawbei* being made up of

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

769 'iaw, short for *kiaw* (grandmother), and *bei*, mother. *Ka Iawbei*
171 is the primeval ancestress of the clan. She is to the Khasis what the "tribal mother" was to old Celtic and Teutonic genealogists, and we have an interesting parallel to the reverence of the Khasis for *Ka Iawbei* in the Celtic goddess Brigit, the tribal mother of the Brigantes. Later on, like Ka Iawbei, she was canonized, and became St. Bridget.*

769 The greater number of the flat table-stones we see in front
of the standing monoliths in these hills are erected in honour
578 of *Ka Iawbei*. In former times, it was the custom to offer
787 food to her on these stones. In cases of family quarrels,
776 or dissensions amongst the members of the same clan, which it is desired to bring to a peaceful settlement, it is customary to perform a sacrifice to the first mother, "*Ka Iawbei*." They first of all take an augury by breaking eggs, and if it appears from the broken egg-shells that *Ka Iawbei* is offended, they offer to her a cotton cloth, and sacrifice a hen.
[534] On these occasions incantations are muttered, and a small drum, called, "*Ka 'sing ding dong*," is beaten. It is not unlikely that the Khasi household deities, *Ka lei iing*, and *Ka ksuy ka jirngam*, to whom pujas are offered for the welfare of the house, are also *Ka Iawbei* in disguise. Notwithstanding the strong influence of the matriarchate, we find that *U Thawlang*, the first father and the husband of *Ka Iawbei*, is also revered. To him on occasions of domestic trouble a cock is
[591] sacrificed, and a *jymphong*, or sleeveless coat is offered. This puja is called *kaba tap Thawlang*, i.e. covering the grandfather. The following incantation to *U Thawlang* is then chanted:—
"Oh, father Thawlang, who hast enabled me to be born, who hast given me my stature and my life, I have wronged thee, oh father, be not offended, for I have given thee a pledge and a sign, i.e. a red and white sleeveless coat. Do not deliver me into the power of (the goddess of) illness, I have offered thee the propitiatory cock that thou mayest carry me in thine arms, and that I may be aware of thee, my father Thawlang."
769 We see clearly from the above prayer that the Khasi idea is
171 that the spirit of the deceased male ancestor is capable of

* Karl Pearson's essay on "mother age civilization."

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

being in a position to help his descendant in times of trouble. 769
The same thought underlies the extreme reverence with which 171
Ka Iawbei is regarded. Thus we see a striking point of resemblance between the Khasi ancestor-worship and the ancient Shinto cult of Japan, as described by Mr. Lafcadio Hearn. *U Suid-Nia*, or *u Kni Rangbah*, the first maternal uncle, i.e. the elder brother of *Ka Iawbei*, is also much revered. It will also be noticed under the heading of memorial stones that the great central upright monolith of the *máwbynna*, or memorial stones, is erected in his honour. The influence of 604
the *kni*, or mother's elder brother, in the Khasi family is very 764
great, for it is he who is the manager on behalf of the mother, 211
his position in the Khasi family being very similar to that of the *karta* in the Hindu joint family. It is on this account that he is so much revered, and is honoured with a stone which is larger than the other up-right memorial stones after death. It will be seen in the article dealing with "the disposal of the dead," that at Cherra, on the occasion of the bestowal of the ashes in the cinerarium of the clan, a part of the attendant ceremonies consists of the preparation of two effigies called *Ka Puron* and *U Tyngshop*, intended to represent *Ka Iawbei* (the first mother) and *U Suid-Nia* (the first maternal uncle). The Wárs of Nongjri have a custom peculiar to themselves. 344
They erect small thatched houses in their compounds, which 769
they call *iing ksuid*. When they worship their ancestors they 211
deposit offerings of food in these houses, the idea being that 171
the ancestors will feed on the offerings. These Wárs do not erect memorial stones, nor do they collect the ashes of the clan in a common sepulchre; they deposit the ashes in circular cineraria, each family, or *iing*, possessing one. It should further be noted with reference to the Khasi custom of *ai bam*, or giving food to the spirits of deceased ancestors, that Dr. Frazer, in his "Golden Bough," has mentioned numerous instances of firstfruits being offered to the spirits of deceased ancestors by the tribes inhabiting the Malay Archipelago. (See pages 462-463 of the "Golden Bough.") Some other points of similarity in customs have already been noticed between the Khasis and certain Malay tribes.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

WORSHIP OF NATURAL FORCES AND OF DEITIES.

133 In the Khasi Hills, especially on the southern side, there are numerous rivers, sometimes of considerable size, which find their way to the Sylhet plains through very deep valleys, the rivers flowing through narrow channels flanked by beetling cliffs which rise to considerable altitudes. The scenery in the neighbourhood of these beautiful rivers is of the most romantic description, and the traveller might imagine himself in Switzerland were it not for the absence of the snowy ranges. Of such a description is the scenery on the banks of the river Keuchi-
823 yong, the Jádukátá * or Punatit of the plains. It is in the bed
776 of the river, a few miles below Rilang, that there is the
782 curiously-arched cavity in the rock which resembles an upturned boat, which the Khasis call *Ka lieng blei* (the god's boat), and the plains people Basbanya's ship. Near to this, on the opposite side of the river, there is a rock bearing a Persian inscription, but so defaced by the action of the water as to be impossible to decipher. Like other inhabitants of mountainous countries, the Khasis reverence the spirits of fell and fall, and
226 propitiate them with offerings at stated times. A brief descrip-
782 tion of the ceremonies which are performed at Rilang, on the
776 occasion when the annual fishing in the river Punatit takes
787 place, may be of interest. The three Siems of Nongstoin, Langrin, and Nobosohpoh each sacrifice a goat to *Ka blei sam um* (the goddess of the river) before the boatmen can cast in their nets. In former times they say the passage up the river was obstructed by the goddess, who took the form of an immense crocodile: but she was propitiated by the gift of a goat, and the boatmen were then allowed to pass up the river in their boats. Hence it became necessary for the owners of the fishery to sacrifice annually a goat each to the goddess. At the time of my visit each Siem's party erected an altar in the bed of the river, in the midst of which a bough of the Khasi oak (*dieng sning*) was planted. The goats were then decapitated, it being considered an essential that the head

* Lit.: Cut by magic.

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

should be severed with one blow. As soon as the head was cut 226
off there was a rush on the part of the sacrificers to see in 782
which direction the head faced. If the head faced towards the 776
north or west, it was considered an evil omen; if it faced towards 787
the south or east, a good omen. The east is a lucky quarter [823]
amongst the Assamese also. The people ended up the proceed-
ings by giving a long-drawn-out, deep-toned chant, or *kynhoi*. [171]
Immediately after the ceremony was concluded hundreds of boats shot out from the numerous creeks, where they had been lying, and fished the river all night, the result being an immense haul, to the delight of the Lynngams, who were seen next morning roasting the fish whole on bamboo stakes, after which they consumed them, the entrails being eaten with great [262]
gusto. Such is the worship of the goddess of the Punatit.

Similar pujas take place among the people of Wár-ding (the 823
valley of fire) before they fish in the Khai-mara river and else- 782
where in the Khasi Hills. In the Jaintia Hills there is the 776
Synteng-worship of the Kopili river, which used to be accompanied by human sacrifices, as has been mentioned above, pp. 102-104. The Myntang river, a tributary of the Kopili, must also be annually appeased by the sacrifice of a he-goat. Numerous hills also are worshipped, or rather the spirits which are said to inhabit them. One of the best known hill godlings is the deity who is thought to inhabit the little wood close to the summit of the Shillong Peak. This deity is said to have been discovered by a man named "U Shillong," who gave his name to the Shillong Peak, and indirectly to our beautiful hill station. The Siems of Mylliem and Nongkrem reverence *U'lei Shillong*, and there are certain clans who perform periodical sacrifices to this god. Probably the origin of the superstitious reverence with which U'lei Shillong is held by the Siems of Nongkrem [773]
and Mylliem is that their fabled ancestress "Ka Pah Syntiew," of whom an account will be found in the folk-lore section, took her origin from a rock not far from the Shillong Peak in the Nongkrem direction.

Rableng Hill, which is within full view of the Shillong Peak in an easterly direction, is also said to be the abode of a minor god who is periodically propitiated by the members of the Máwthoh clan of the Khyrim State with a he-goat and a cock.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

823 Apparently no special puja is performed to U Kyllang (the
776 Kyllang Rock) nowadays.

782 The picturesque hill of Symper, which rises abruptly from the plain in the Siemship of Maharam, is visible for many miles. It is in shape not unlike the Kyllang. Symper is said to be the abode of a god called "U Symper." There is a folk-tale
[773] that Kyllang and Symper fought a great battle, and that the numerous holes in the rocks at the base of the Symper hill are evidences of their strife. At the base of Symper there is a great cave, where many cattle find shelter in rainy weather. The people of Mawsymram propitiate the god of Symper in cases of sickness by sacrificing a he-goat or a bull. Symper, like *U'lei Shillong*, is one of the minor deities of the Khasis.

Close to Shangpung, in the Jaintia Hills, there is a small hill called "*u lúm pyddieng blai lyngdoh*," where sacrifices are offered on an altar at seed time and when the corn comes into ear. This altar used to be overshadowed by a large oak tree. The tree is now dead.

823 The Wars of Nongjri worship "*u'lei lyngdoh*," the tutelary
776 deity of the village, under the spreading roots of a large rubber tree which gives its name to this village Nongjri. This village worship is performed by a village priest (*lyngdoh*) at stated intervals, or whenever it is considered necessary. There are numerous other instances of hills and rivers being regarded as the abode of godlings, but those quoted above are sufficient for purposes of illustration.

RELIGIOUS RITES AND SACRIFICES, DIVINATION.

776 The Khasis, as has been explained already, worship numerous
782 gods and goddesses. These gods and goddesses are supposed to
753 exercise good or evil influence over human beings according
787 to whether they are propitiated with sacrifices or not. They are even supposed to possess the power of life and death, over men and women, subject to the control of *u Blei Nongtháw*, God the Creator. Thus illness, for example, is thought to be caused by one or more of the spirits on account of some act or omission, and health can only be

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

restored by the due propitiation of the offended spirits. 776
In order to ascertain which is the offended spirit, a system 782
of divination by means of cowries, breaking eggs, or 753
examining the entrails of animals and birds, was instituted. 787
The Khasi method of obtaining auguries by examining the viscera of animals and birds may be compared with that of the Roman *haruspex*. Some description of these modes of divination has been given at the end of this chapter. The 771
Khasi religion has been described by Bivar as "demon worship, 773
or a jumble of enchantments muttered by priests who are 783
sorcerers." But even a religion which is thus unflatteringly 825
described is based on the cardinal doctrines of sin and sacrifice for sin. Tradition amongst the Khasis states that in the beginning (*mynnyngkong ka sngi*) there was no sin, heaven and earth were near each other, and man had direct intercourse with God. How man fell into sin is not stated, but it is certain that he did fall. Experts at "egg healing" never forget to repeat the formula "*nga briéw nga la pop*" (I man have sinned). The cock then appears as a mediator between God and man. The cock is styled "*u khún ka blei uba kit ryndang ba shah ryndang na ka bynta jong nga u briéw*," i.e. the son of god who lays down his neck (life) for me man. The use of the feminine *ka blei* is no doubt due to matriarchal influences. There is another prayer in which the Khasis say, "*ap jutang me u blei ieng rangbah me u briéw*" (oh god do not forget the covenant, arise oh man). The idea is that man has fallen into sins of omission and commission (*ka pop, ka lait ka let*) but that God is nevertheless expected to spare him, and to accept a substitute for him according to the covenant (*jutang*). By this covenant God is supposed to have accepted in exchange the cock as a substitute for man. How the cock came to occupy such an 771
important position, tradition is vague and self-conflicting. The 825
fact remains that the covenant of the cock is the foundation 171
of the Khasi religion. It is of interest to mention that amongst the Ahoms the tradition is that Khunlung and Khunlái brought down from heaven the *kái-chán-mung*,* or pair of heavenly fowls, and that to this day the sacrifice of the

* In Ahom *kái* = fowl, *chán* = beautiful, *mung* = country. Therefore *Kái-chán-mung* = fowl of a beautiful country (heaven).

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

771 fowl is considered by the Deodhais, or priest-soothsayers of the
825 Ahoms, a most important feature of the ancient Ahom ritual.
[171] But amongst the Ahoms there is the difference that auguries are obtained, not from the entrails, but by examining the legs of the fowls. The Ahoms are Shans belonging to the Tai branch, another great division of the Indo-Chinese group of the human race.

787 The covenant of the cock as thus explained shows the im-
825 portance of this sacrifice to the Khasis. The large intestine of a fowl has two pea-like protuberances, one close to the other. One is symbolically called *u blei* or god, and the other is styled *u briéw* or man, they are connected by a thin membrane. Directly the bird has been disembowelled the sacrificer throws a few grains of rice on the entrails and then watches their convulsive movements. If the portion of the entrail called *u blei* moves towards that portion which represents man, it is considered proof positive that the god has heard the prayer of the sacrificer, but if the movement proceeds in the opposite direction, then the reverse is the case and the omen is bad. If the entrails are full and healthy, having no spots (*brai*), or blood marks (*thung*), and if the membrane between the two protuberances has not been fractured, these are favourable signs. If the intestines are empty, wrinkled, or spotted, and the membrane mentioned above is fractured, these are bad signs. Auguries also are drawn by examining the livers, the lungs and spleens and gall bladders of pigs, goats, and cattle. If the liver of a pig is healthy and without spot, the augury is good; if the reverse, it is bad. The spleen must not be unduly distended, otherwise the omen is unfavourable and the gall bladder must not be over full. Invocations to deduce omens from the appearance of the entrails are quoted on page 11 of Col. Bivar's Report. From the first invocation quoted by him it appears that the method of drawing the augury from the fowl differs slightly in detail from that which has been described to me by certain Khasis, but both descriptions agree in the main, and the slight dissimilarity in detail may be due to the methods of obtaining auguries varying slightly in different localities. Divination by breaking eggs and by other means, although not strictly sacrifice with the Khasis, partakes

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

of the nature of a religious ceremony. Such divinations are of almost every-day occurrence in a Khasi house, and always precede sacrifices. The Khasis, moreover, do nothing of what they consider to be of even the least importance without breaking eggs. When a Khasi builds a new house, or before he proceeds on a journey, he always breaks eggs to see whether the building or the journey will be lucky or not. The description of egg-breaking given by Shadwell in his account of the Khasis is not altogether correct. A detailed description of this method of divination will be found in Appendix C. The description can be depended upon, as it is the result of my personal observations of egg-breaking on several occasions. A board of the shape shown in the diagram (Appendix C) is placed on the ground, the egg-breakers' position being that indicated in the diagram. After the egg has been smeared with red earth, it is thrown violently down and the contents and the fragments of egg-shell fall on the board. Auguries are drawn from the positions of the fragments of shell on the board, and from the fact of their lying with the inner sides facing upwards or downwards. Another method of egg-breaking is for the diviner to wrap up the egg in a plantain leaf with the point uppermost, or merely to hold the egg in his hand in this position without wrapping it up, and then to press another egg down upon it. If the end of the egg so pressed breaks at once, this is a good sign, but if it remains unbroken, the egg has a god in it, and the omen is bad.

A common method of divination is by means of the *shanam*, or lime-case. The diviner holds the lime-case by the end of its chain, and addresses the god. He then asks the lime-case a question, and if it swings, this is supposed to be an answer in the affirmative; if it does not move, this is a negative reply. This seems to be a very simple trick, for the diviner can impart movement to the lime-case by means of the hand. A similar way of consulting the oracle is by the bow, which is held in the hand by the middle of the string. A simple method of divining is by means of cowries or grains of rice. The diviner plunges his hand into a bag or basket after asking the god a question. If the number of cowries or grains of rice comes out odd, the omen is good; if it comes out even, the reverse is the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

787 [791] case. The Khasi word for consulting the omens is *khan*, and a diviner is called a *nongkhan*. Another method of obtaining omens is by dropping two leaves into a pool of water or on a stone, the position of the leaves as they fall, either right side uppermost or upside down, signifying good or evil as the case may be; this is called *khan-sla*.

PRIESTHOOD.

793 104 The Khasi priest is usually called *Lyngdoh*, or *langdoh*; he is always appointed from the lyngdoh clan. The etymology of the word *lyngdoh* is said by certain lyngdohs of the Khyrim State to be *lang*=together and *doh*=flesh. A *lyngdoh*, or *langdoh*, is one who collects sacrificial victims, i.e. flesh for the purpose of sacrificing. It must be confessed, however, that this definition is doubtful, owing to the absence in the word *lyngdoh* of the prefix *nong* which is the sign of the agent in Khasi. Besides *lyngdohs* there are persons called *soh-blei* or *soh-sla*, who may 793 also be said to be priests. The Khasis, unlike the Hindus, have [604] no *purohit* or priest to perform the family ceremonies. Such duties fall to the lot of the head of the family or clan, who 782 carries them out generally through the agency of the *kni*, or maternal uncle. Old Khasis are frequently well versed in the details of sacrifices, and in the art of obtaining auguries by examining the viscera of sacrificial victims. Apart from family and clan sacrifices, there are the sacrifices for the good of the State or community at large; it is these sacrifices that it is the duty of the *lyngdoh* to perform. He may be said to be the priest of the communal religion, although he has certain duties in connection with offences committed against the social law of marriage, and with regard to the casting out of evil spirits from houses which may be thought to be infested with them. The lyngdohs of the Khasis may be likened to the Roman *pontifices*. 793 In the different Khasi States there is, as a rule, more 631 than one *lyngdoh*; sometimes there is quite a number of such priests, as in Nongkrem where there is a *lyngdoh* for each *raj* 793 or division of the state. There are a few Khasi States where 643 the priest altogether takes the place of the Siem, and rules the community with the help of his elders in addition to perform-

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

ing the usual spiritual offices. The duties of lyngdohs, their methods of sacrificing, and the gods to whom they sacrifice, vary in the different Siemships, but there is one point in which we find agreement everywhere, i.e. that the *lyngdoh* must be assisted at the time of performing sacrifices by a female priestess, called *ka soh-blei, ka soh-sla,* or simply *ka lyngdoh.* This female collects all the *puja* articles and places them ready to the *lyngdoh's* hand at the time of sacrifice. He merely acts as her deputy when sacrificing. The female *soh-blei* is without doubt a survival of the time when, under the matriarchate, the priestess was the agent for the performance of all religious ceremonies. Another such survival is the High Priestess of Nongkrem, who still has many religious duties to perform; not only so, but she is the actual head of the State in this Siemship, although she delegates her temporal powers to one of her sons or nephews, who thus becomes Siem. A similar survival of the ancient matriarchal religious system is the *Siem sad,* or priestess, at Mawsynram, who, on the appointment of a new Siem or chief, has to assist at certain sacrifices. Here we may compare Karl Pearson's remark, when dealing with matriarchal-customs, that "according to the evidence of Roman historians, not only the seers but the sacrificers among the early Teutons were women." The duties of the *lyngdohs,* as regards communal worship, consist chiefly of sacrificing at times of epidemics of cholera, and such-like visitations of sickness (*jing iap khlam*). In the Khyrim State there is a goddess of each *raj,* or division, of the state, to whom sacrifices are offered on such occasions. To the goddess are sacrificed a goat and hen, powdered rice (*u kpu*), and a gourd of fermented liquor; the leaves of the *dieng sning,* or Khasi oak, are also used at this ceremony. The *lyngdoh* is assisted by a priestess called *ka soh-sla,* who is his mother, or his sister, or niece, or some other maternal relation. It is the duty of the priestess to prepare all the sacrificial articles, and without her assistance the sacrifice cannot take place. Sacrifices are also performed by the *lyngdoh* to *u Lei Lyngdoh,* alias *u Ryngkew.* This used to be the tutelary deity in times of war, but in less troublous times the Khasi *lyngdoh* sacrifices to him for success in tribal or State litigation. A pig and a cock, with the usual accessories, are sacrificed by the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

793 *lyngdoh* to this god. As in the case of sacrifices to *Ka lei*
776 *Raj*, the services of a priestess are indispensable.

A *lyngdoh* is a *lyngdoh* for life. When a lyngdoh dies and
793 his successor is appointed, certain rather elaborate ceremonies are observed in the Nongkrem *raj* of the Khyrim State. The
535 funeral ceremonies of the old *lyngdoh* having been completed,
782 the *lyngdoh* clan appoints his successor. The latter then, after performing his ablutions, proceeds, accompanied by the assembled members of the *lyngdoh* clan, to the top of the Shillong Peak. The lyngdoh and his clansmen advance along the road dancing, this dancing being carried on all the way from the *lyngdoh's* house to the Shillong Peak. All are clad in the distinctive Khasi dancing dress. Having reached the Peak, they pick the leaves of a tree called *ka 'la phiah*, which they spread on the ground. A goat and a cock are then sacrificed, the new *lyngdoh* acting as the sacrificer. There are the usual accessories, including branches of the Khasi *sning* or oak. Nine portions (*dykhot*) are cut from different parts of the victims and are offered to the god of the Shillong Peak, *U lei Shillong*. The *lyngdoh* and his companions then perform obeisance three times to the god, and the lyngdoh walks backwards some paces. The puja is then over, and they return dancing to the lyngdoh's house. On another day the *lyngdoh* performs a puja to *u lei Lyngdoh*, alias *u Ramjah*. Undoubtedly the most interesting feature of the ceremonies on these occasions is the dancing. This dancing is carried out by the *lyngdoh* and his companions armed with sword and shield, a fly-flap made of goat's hair (*symphiah*) being also sometimes held in one hand, a quiver of arrows being slung on the back, and a plume of black and white cocks' feathers (*u thuya*) fixed in the turban. The dance is executed in a regular figure, the dancers advancing and retiring in an orderly and methodical manner, and finally clashing their swords together in mock combat. The dance of the present day is not unlikely the survival of a war dance of ancient times. The lyngdohs say they dance in honour of *U lei Lyngdoh*, to whom such dances are thought to be pleasing. The dance of the lyngdohs on these occasions may be compared with that of the Roman *salii*, who, in the month of March, performed a war dance in honour of Mars.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

The above and other similar sacrifices to the gods of the State 793
or divisions of the State may be said to be the communal 782
religious duties of the *lyngdohs*. The duties of *lyngdohs* with 588
reference to private persons may now be mentioned. When it is found that any two people have made an incestuous marriage, that is to say a marriage within the exogamous group of the *kur*, or clan, the parties at fault are taken before the *lyngdoh* by their clansmen, who request him to sacrifice in order to ward off the injurious effects of the *sang*, or taboo, of such a connection from the kinsfolk. On this occasion a pig is sacrificed to *u'lei lyngdoh* and a goat to *ka lei long raj*. The parties at fault are then outcasted. As mentioned in another [684] place, the sin of incest admits of no expiation for the offenders themselves. In the Khyrim State, it is said by the *lyngdohs* 793
themselves, although not by the Siem or the myntries, that 428
they are the reversionary legatees of all the persons who [643]
die without leaving female heirs (*iap duh*). In other Siem- 776
ships such property passes to the Siem. The *lyngdoh* of Nongkrem can also take possession of the property of persons who have been found to harbour an evil spirit (*jingbih*) in their houses. It appears that in such cases the house and furniture are burnt, as in the case of the *Taroh* superstition in the Jaintia Hills, the *lyngdoh*, however, taking possession of jewellery or anything else of value. The only practical service the *lyngdoh* renders in return is to build the afflicted person a new house; unless, indeed, we take into account the casting forth of the devil by the *lyngdoh*. Mr. Jenkins, of Shangpung, in the Jaintia Hills, writes: "Such is the belief of the people in the evil spirits, that they are completely under the influence of the priests and spend large sums of money in order to secure their favour. They live in constant dread lest by the least transgression or omission they should offend these avaricious men and so bring upon themselves the wrath of the demons." The 793
influence of the *lyngdohs* over the people in the Jaintia Hills 241
seems to be stronger than in the Khasi Hills. For instance, 797
it came to my notice in Raliang that crops cannot be cut until the *lyngdoh* has seen them, in other words, until the *lyngdoh* has claimed and obtained his share of the produce. In many places, however, in the Khasi Hills the *lyngdoh* is much discredited, owing, no doubt, to the advance of Christianity and education.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

000 credited, owing, no doubt, to the advance of Christianity and education.

CEREMONIES AND CUSTOMS ATTENDING BIRTH AND NAMING OF CHILDREN.

844 The Khasi birth ceremonies and customs are as follows:—
[784] When a child is born the umbilical cord is cut by a sharp
782 splinter of bamboo; no knife can be used on this occasion. The Mundas of Chota Nagpur similarly taboo a metal instrument for this purpose. The child is then bathed in hot water from a red earthen pot. The placenta is carefully preserved in an earthen vessel in the house till after the naming ceremony has taken place. When the umbilical cord, after being tied, falls off, a puja is performed with eggs to certain water deities (*ka blei sam-um* and *ka niangriang*),* also to a forest spirit
553 (*u'suid bri* or *u'suid khláw*). The naming ceremony of the child
386 is performed the next morning after the birth. Certain females are invited to come and pound rice in a mortar into flour. The flour when ready is placed on a bamboo winnower (*u prah*). Fermented rice is mixed with water and is placed in a gourd. Some powdered turmeric is also provided, and is kept ready in a plantain leaf, also five pieces of *'kha piah*, or dried fish. The earthen pot containing the placenta is then placed in the *nongpei*, or centre room of the house. If the child is a male, they place near him a bow and three arrows (the implements of a Khasi warrior); if a female, a *da* and *u star*, or cane
553 head-strap for carrying burdens. An elderly man, who knows
782 how to perform the naming puja, which is called by the Khasis "*kaba jer khun*," places a plantain-leaf on the floor and sprinkles some water on it. He takes the gourd in his hand and calls a god to witness. The people assembled then mention a number of names for the child, and ask the man who is performing the puja to repeat them. This he does, and at the same time pours a little liquor from the gourd on to the ground. As he goes on pouring, the liquor by degrees becomes exhausted, and finally only a few drops remain. The name at the repeat-

* A spirit which is supposed to have the power of causing a disease of the navel of a child.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

ing of which the last drop of liquor remains adhering to the 553
spout of the gourd is the name selected for the child. Then 782
the puja performer invokes the god to grant good luck to the child. The father takes the pot containing the placenta, after having previously placed rice flour and fermented rice therein, and waves it three times over the child, and then walks out with it through the main entrance of the house and hangs up the pot to a tree outside the village. When he returns from this duty, before he re-enters the house, another throws water over the father's feet. The father, being thus cleansed, enters, and holds the rice flour to his mouth three times. Two people then, holding the dried fish by their two ends, break them in two. The powdered turmeric mixed with rice flour [386]
and water is applied to the right foot of the father, the mother [302]
and the child receiving the same treatment. The friends and relations are then anointed, the turmeric being applied, however, to their left feet. The bow, arrows, *da*, and *u star* are carefully placed inside the inner surface of the thatch on the roof, and the 553
ceremony is over. Rice flour is then distributed to all who 304
are present, and the male adults are given liquor to drink. After two or three months the ears of the child are bored and ear-rings are inserted. These ear-rings are called *ki shashkor iawbei* (i.e. the ear-rings of the great-grandmother). Mr. Jenkins mentions that the naming ceremony amongst the 553
Syntengs is performed by the "eldest aunt," presumably on the [604]
mother's side. A basket of eggs is placed in the centre of the room, and before the ceremony begins one egg has to be broken. Then the aunt of the child takes two sticks, and, raising them to her shoulder, lets them fall to the ground. Before they fall she shouts, "What name do you give the child?" The name is mentioned, and if, on falling upon the ground, one stick crosses the other, it is a proof that the name has won the approval of the spirit. If the sticks do not fall in this position, another egg is broken and another name is chosen, and the sticks are dropped as before until they fall in the required position, when it is understood by the performers that the name is a good one. Mr. Jenkins was informed by a young man "who had renounced heathenism" that some of the more cunning women cross the sticks before lifting them, and that

1:Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

553 when they do this they invariably fall crossed to the ground. "They thus save their eggs, save time and trouble, get the
553 name they desire for the child. . . ." It is noteworthy that
844 the Khasis consider it necessary to preserve the placenta until the ceremony of naming the child is over, and that the pot containing the placenta is waved over the head of the child before it is removed and hung up in a tree.

844 Dr. Fraser, at page 53 *et seq.* of the "Golden Bough," when
171 dealing with the subject of sympathetic magic, refers to the navel string and the placenta as parts which are commonly believed amongst certain people to remain in sympathetic union with the body after the physical connection has been severed, and it is interesting to note that in the Babar Archipelago, between New Guinea and Celebes, the placenta is mixed with ashes and put in a small basket, which seven women, each of them armed with a sword, hang up on a tree of a peculiar kind (*citrus hystrix*). The women carry the swords for the purpose of frightening the evil spirits, otherwise the latter might get hold of the placenta and make the child sick. Mr. C. M. Pleyte, Lecturer on Indonesian Ethnology, at the Gymnasium William III. at Batavia, who has most courteously furnished me with some interesting information on this subject, states that it is especially in the Southern Moluccas that the placenta is mixed with ashes and hung in a tree. Wider spread is the custom of placing the after-birth on a small bamboo raft in a river "in order that it may be caught by crocodiles, incarnations of the ancestors, who will guard it till the person to whom it has belonged dies. Then the soul of the placenta is once more united with that of the dead man, and together they go to the realms of the dead. During lifetime the connection between men and their placentas is never withdrawn." The Khasis, although they cannot explain the meaning of the presence of the placenta at the naming ceremony, and the care with which they remove it and hang it up in a tree, are probably really actuated by the same sentiments as the inhabitants of the Southern Moluccas, i.e. they believe that there is, as Dr. Frazer puts it, a sympathetic union with the body after the physical
846 connection with the child has been severed. There is no fixed
784 period of *sang*, or taboo, after a birth, but the parents of the

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

child are prohibited by custom from crossing a stream or washing their clothes until the navel-string falls off, for fear that the child should be attacked by the demons of the hills and the vales. 846 784

The Wár birth customs are substantially the same as those of the Khasis, but there is the difference that a Wár family after a birth is *sang*, or taboo, for seven days, whereas amongst the Khasis the only prohibition is that the parents must not cross a stream or wash their clothes until they have propitiated the spirits. A twin birth is *sang*, or taboo. The Khasis argue that as there is but one *Ka Iawbei* (first ancestress), and one *U Thawlang* (first ancestor), so one child, either male or female, should be born at a time. A twin birth is accordingly regarded as a visitation from God for some *sang*, or transgression, committed by some member of the clan. When the twins are of opposite sexes the *sang* is considered to be extremely serious, the Khasi idea being that defilement has taken place within the womb. The case is treated as one of *shong kur*, or marriage within the clan, and the bones of the twins cannot be placed in the sepulchre of the clan. 844 846 845 773 [766]

There are no special birth customs amongst the Lynngams. 844

There is no trace of the *couvade* amongst the Khasis. 846

MARRIAGE.

We now come to consider marriage amongst the Khasis from a religious point of view. Shadwell has said that marriage amongst the Khasis "is purely a civil contract." This statement is not correct, for there is an elaborate religious ceremony at which God the creator, *U'lei thaw briew man briew*, the god or goddess of the State, U or *ka'lei Synshar*, and, what is probably more important, the ancestress and ancestor of the clan, *Ka Iawbei-tymmen* and *U Thawlang*, are invoked. There are three marriage ceremonies prevalent amongst the Khasis, which are (*a*) *Pynhiarsynjat*, (*b*) *Lamdoh*, and (*c*) *Iadih-kiad*, respectively. The first and second forms above mentioned are considered the more respectable; the last-named is resorted to by the very poor who cannot afford the greater expense entailed by the first two ceremonies. 585 776

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

The bridegroom then sets out with this man and a number of followers, clothed in clean garments and wearing either white or red pagris (a black pagri not being considered a fitting head-dress on this occasion), to the house of the bride, where a feast has been prepared, and fermented rice-beer (*ka-kiad-hiar*) in gourds (*klong*) placed ready. The bride, her female attendants, and her mother and aunts have collected in the meantime, dressed in their best, wearing their jewellery, and with their heads uncovered, for it is not thought proper for the females to cover their heads on the marriage day. On the side of the bride, also, a *ksiang* (go-between) has been appointed, and it is his duty to manage all the business of the marriage on behalf of her family. Some young men of the bride's party go to meet the bridegroom's contingent by way of doing them honour. When they have reached the bride's house, the *ksiang* of the bridegroom enters first, followed by the bridegroom, and after him the bridegroom's party. The *ksiang* then hands over the bridegroom to the maternal uncle (*kni*) of the bride, or to the bride's father. Either of the latter then provides the bridegroom with a seat next the bride. The bride and bridegroom exchange bags of betel-nut, and where the custom of investiture of the ring is in vogue, these tokens are interchanged. The *ksiangs* of the bridegroom and bride recite the marriage contract in lengthy formulae, which may be found on pages 6, 7, 8 of the late U Jeebon Roy's interesting notes on the Khasi religion. The two *ksiangs* then take up, each of them, a gourd containing fermented liquor from the gourd provided by the contracting party, and give them to an old man who is versed in sacrificial lore, who solemnly mixes the contents together. Three dried fish are produced, and are placed on the floor of the house. The priest thus appointed then solemnly adjures the gods in the following words :—

Hei, oh god from above; oh god from below; oh *'lei synshar*; oh god who hast created man; as thou hast ordained this marriage, the ring has been given this day; thou wilt know; thou wilt hear; from the clear firmament above that . . . . have been married this day. Thou wilt bless them; thou wilt grant them prosperity; thou wilt show them the way; thou wilt show them the road, that they may be well, that they may obtain dwellings and houses,

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

565 that they may prosper, that they may obtain rice and fish, that
788 they may possess hundreds and thousands; thus, oh god." The priest then pours liquor on the ground three times from the gourd, counting "one, two, three." He then continues the invocation thus, "*Hei*, thou, oh mother; oh grandmother; oh maternal uncle; oh father: oh *Suid-nia;* oh younger grandmother; oh elder grandmother; oh younger grandfather; oh elder grandfather. As the flesh has fallen (on the floor, i.e. the feast has been prepared), the ring has been put on, the three strips of flesh are ready (alluding to the three dried fish already mentioned), you will all of you (ancestors) give ear, you will continue giving strength and spirit (i.e. to the married pair) that they may be well" (and so on, as written in the first invocation). He then pours out the liquor three times as before. He then adjures the Siem, the elders, and all the people who do not belong to either of the two clans, and pours out liquor three times as before. The three pieces of dried fish are first placed on the *tympan*, the high rack above the fire-place, then removed and tied to the ridge-pole of the house, amidst shouts of
585 *Ho, hoi, hoi, hoi.* The poor then sacrifice a fowl, and the
769 rich a pig without blemish (*uba tlem*), to *u Suid nia* and *ka Jaw-bei* (the spirits of deceased ancestors of the family), and present them with *dykhot*, or pieces of flesh. Two or three days afterwards, the bride, accompanied by her female relatives, pays a visit to the bridegroom at his house, and after this they go and come as they like to one another's houses.
591 After two or three children have been born, they take down the
782 pieces of dried fish from the roof and sacrifice two pigs, one on behalf of the husband and another on behalf of the wife. Then they say there can be no possible *sang*, and husband and wife use each other's things and pool their earnings, and if the husband has a house of his own, the wife can go and live with him; this, however, is not the custom amongst many of the Syntengs, who more strictly observe the principles of the
585 matriarchate. The cost of the marriage ceremonies amongst
435 Khasis, Syntengs and Wárs, may be put down at between Rs. 50 and Rs. 200 according to the position of the parties.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

LAMDOH CEREMONY.

This ceremony is identical with that of *Pynhiar synjat*, except that the bride and bridegroom do not interchange rings, and that there is no sacrifice of the pig. The parties merely buy some pig's flesh and perform a puja with a small portion of the flesh of the legs of the animal. Amongst the poor, fish sometimes takes the place of pork at the *Iadih-kiad* ceremony. The latter consists of a drinking bout mingled with muttered sentences by a *nongkinia* (sacrificer), the invocations and prayers being the same as at the *Pynhiar synjat*. The *Lamdoh* and *Iadih-kiad* ceremonies take the place of the more elaborate *Pynhiar synjat* in most places now-a-days. 585 782 273

LYNNGAM MARRIAGES.

The ritual observed at these marriages is described as under: —First of all a proposal is made in the following manner. A *ksiang*, or go-between, is sent, with the brother of the girl for whom a husband is required, to the house of the father of the young man (not to the house of the mother as is the case with the Khasis). If the proposal is accepted, the father of the young man kills a pig, and gives a feast to the people of the village of his father-in-law elect; also to the go-between and the *borany* (brother of the bride). The father of the bride then gives a similar feast. A sum of Rs. 1 each is given as a present to the go-between by the fathers of the bride and bridegroom, and the father of the bride pays from Rs. 5 to Rs. 15 to the father of the bridegroom. Further feasting ensues at the house of the father of the bride. The go-betweens then sacrifice a pig and two fowls at the house of the bridegroom, and afterwards perform the same sacrifice at the house of the bride. At the house of the bride, after the fowls and the pig have been sacrificed, the go-between, after drinking liquor himself, pours out some on the floor of the house and then gives some to the bride and bridegroom to drink. The killing of the fowls, the sacrifice of the pig, and the libation of liquor are essentials at a Lynngam marriage. The sacrifice of the fowls is also an essential feature 584 585 574 782 [431] 585 782

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

585 of a Garo marriage. The Lyngams, unlike the Garos, do not
982 observe which way the beaks of the fowls turn when they are
thrown on the ground after being sacrificed. The Lyngams,
787 like the Khasis, take auguries from the entrails of the fowls and
the pig. After these ceremonies are over, the Lyngam pair
are allowed to cohabit. The cost of an ordinary Lyngam
585 marriage is from Rs. 30 to Rs. 40. The marriage system in
435 vogue among the Lyngams may be described as a mixture
of the Khasi and Garo customs. As has already been stated,
101 the Lyngams are a mongrel breed of Khasis and Garos.

CEREMONIES ATTENDING DEATH.

764 The death customs of the Khasis are not only very elaborate,
but possess a significance of their own, it is, therefore, necessary
to describe them in detail; they are as follows:—

763 A member of the family bends down towards the ear
of the apparently deceased person and calls him or her by
name three times, to make sure that death has occurred.
If no answer comes, the family laments, for it is then con-
964 cluded that the person is really dead. The body is then bathed
291 in warm water from three earthen pots and is reverently
laid on a mat (*jopung*), where it is dressed in white cloth, a
peculiar feature of the dressing being that the waist-cloth and
turban are folded from left to right, and not from right to left,
as in the case of the living. An egg called *u'long kpuh*
764 is placed on the stomach of the deceased, and nine fried grains,
of rice bodom, or Indian corn, are tied round the head with a
string. The rich place ear-rings in the ears and other jewellery
on the body of the deceased, it being necessary that this
jewellery should be specially made for the occasion, and they
[775] deck the corpse with valuable clothes. A cock, *u'ioe kynd kpati*
(literally the cock that scratches the way), is sacrificed, the idea
being that a cock will scratch a path for the spirit to the next
world. A sacrifice of a bull, or of a cow in case the deceased is
a woman, (*u* or *ka mawi pynsem*,) follows. Portions of the left
leg of the fowl and the lower part of the jaw of the bull or cow
are kept, to be placed afterwards in the *mawshiong*, or bone,

R Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

receptacle. A small basket (*ka shong*) is hung up over the head of the corpse, the basket containing pieces (*dykhet*) of the sacrificed animals. A dish containing eatables, and betel-nut, and a jar of water are placed near the head of the corpse by way of offering refreshment to the spirit of the departed. The food is given each morning and evening that the corpse remains in the house; this is called *ái ja máit ja síep*. Each night the corpse remains in the house guns are fired, drums are beaten and flutes (*shárái*) are played. It is a noteworthy custom that the body is not retained in the house for an even number of nights, the usual time being three nights. If it is intended to burn the body on a masonry pyre (*jingthang*), a bull (*u masi kynroh*) is sacrificed. If the body is placed in a coffin (*ka skynpóid*), a pig named *u'siang skynpóid* is sacrificed, and if it is intended to adorn the pyre with flags, a fowl called *u'iar hait* is sacrificed. On the day of the funeral procession pigs are sacrificed by the relatives and friends of the deceased; those who cannot afford pigs bring liquor (*ka'iad sóng*), a small portion of which they pour on the funeral pyre. The coffin is laid on a bamboo bier (*ka kreng*), money being placed close to the corpse, so that the spirit of the deceased may possess the wherewithal to buy food on its journey. Cotton, or, in the case of the rich, silk cloths are tied cross-ways over the bier, if the deceased is a male, and in the form of a parallelogram, if it is a female. Before lifting the bier a handful of rice and water from a jar are thrown outside, and a goat (*u'lang sait kwód*) is sacrificed. These are purificatory ceremonies. The funeral procession then forms up and slowly passes along the way to the plaintive music of flutes (*shárái*) and the beating of drums. At intervals, in the case of the rich, salutes from guns are fired. Copper coins are also scattered along the route. On nearing the pyre the dead body is exposed to view, and the pieces of flesh of the sacrificial animals, which are with the corpse, are thrown away. They make ready three baked loaves (*ki kpo*), an egg, the lower jaw-bones of the animals which have been sacrificed, the left leg of the fowl (*u'iar kwad kpati*), a jar of water, eatables in a dish, and a bow and three arrows. A goat is then sacrificed, *u'lang mawkjat*. The corpse is laid on the pyre, inside the coffin, if one is used, with the head to the west and the feet to the east. Logs of

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

764 wood are placed around the body, and the egg; "*u'leng kpoh*," is broken, not over the stomach of the deceased, as has been sometimes supposed, but by being thrown on the pyre in the direction of the feet of the corpse. Fire is applied to the pyre, first by the *kur*, or members of the clan, and then by the children, if any, of the [782] deceased. Another fowl, "*u'iar padat*," is sacrificed, its blood being smeared round the pyre three times, and across the corpse three times. The bier is then broken to pieces, the cloths having been removed from it previously. The eatables and the jaw-bones of the sacrificial animals are then placed at the head of the pyre. After the fowl (*u'iar padat*) has been sacrificed, the three arrows already mentioned are shot from the bow, one to the north, another to the south, and the third to the east. These arrows are called *ki 'nam tympem*. It is, perhaps, significant that the [844] arrows which are shot at death correspond in numbers with those which are used at the time of the birth ceremony. When [782] the fire has blazed up, another goat, "*u'lang dholia*," is sacrificed. In some cases all the clothes of the deceased are burnt with the body, in others the clothes are merely held over the fire and then taken away, after which they can be used (this is only in the case of poor persons). Before leaving the burning-place the relatives and friends of the deceased place betel-nuts on the pyre and bid farewell to the deceased, saying "*Khublei khie leit bam kwai sha iing u Blei ho*" (good-bye, go and eat betel-nut in 765 the house of god). When the body has been thoroughly burnt, 764 the fire is extinguished with water, and the uncalcined bones are collected by the relatives in three trips. The collectors are not allowed to turn back and pick up a bone which has been forgotten in any one of these trips. The bones thus collected are carefully wrapped in a piece of white cloth by the female relatives, and an old member of the family throws on the ground some powdered rice from a leaf, at the same time adjuring the spirit of the deceased not to trouble the *kur*, or the family, as the funeral ceremonies have been duly performed. The party then sets out to the [226] bone repository, or *mawshieng*. In front walks one who strews along the line of route leaves of the tree known by the Khasis as *dieng shit* (the berries of which are used for fishing with), and grains of rice, all the way from the pyre to the cairn.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

765 If any stream has to be crossed, a rough bridge is made of
764 branches and grass. This trail of leaves and the bridges are intended to guide the spirit of the deceased to the cairn. The person who carries the bones is not allowed to turn round, or to the right, or to the left, but must proceed straight to the cairn. On reaching it, a *nongknia*, or sacrificer, washes the bones three times and then places them in an earthen pot, tying up the mouth with a white cloth. Then, having taken three pieces of the hard yolk of an egg, three loaves of bread, the leg of the fowl, "*u'iar krad lynti*," and the lower jaw-bones of the animals which have been sacrificed, he places them inside the cairn and shuts the door. Eatables and
765 betel-nut are then placed on the top of the cairn. Early next
787 morning the relatives and friends go to the cairn with fresh food and water, and look about for new foot-prints, the idea being
[775] that from these foot-prints they can foretell future events. This they do until the third night after the cremation. During these three nights the front door of the house formerly occupied by the deceased is never closed, it being thought that the spirit may wish to return and visit its earthly abode. The whole family is moreover *sang*, or taboo, during this period, and no manner of work can be done. When the three nights are over, it is called the *lait ia*, i.e. the days (of mourning) are passed, and three eggs are broken to ascertain what was the cause of the death. After this the family goes to bathe, and
[783] the clothes and mats in the house are washed. When this has been done, the taboo is removed and the family can go to work. After a month a pig or a fowl is sacrificed, the ceremony
782 being called "*ai bam lait bnai*." It will be observed that *three*
765 seems to be the lucky number throughout these funeral
801 ceremonies. The number seems to bear a similar significance in other matters of Khasi ritual, e.g. the pouring out of libations, which is always done three times.

587 It is *sang* or taboo for a Khasi widow to re-marry within one
428 year from the death of her husband, there is a similar prohibition for a husband re-marrying; but such *sang* can be got over by the payment of a fine to the clan of the deceased. After the expiration of one year the fine is reduced in amount. Khasi widows do not as a rule re-marry, according to U Jeebon Roy,

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

587 unless they have no female children, in which case the clan
428 urges them to re-marry, so that the chain of inheritance may not be broken, inheritance amongst the Khasis always passing in the female line.

CUSTOMS IN CONNECTION WITH DEATHS BY VIOLENCE OR ACCIDENT.

766 These customs are interesting enough to deserve a separate
782 description; they are as follows:—

If a man dies by the sword, before his body can be burnt,
776 a sacrifice of a black hen must be offered to *Ka Tyrut*, the goddess of death. The bones are then placed in a stone cairn. Again they are removed, and, after eggs have been broken, are taken to a river bank and there washed. If there is no river at hand, a tank is dug for the purpose, which is called *umkoi*. There are various such *umkois* in different parts of the district, e.g. near Raliang and Nartiang. A sacrifice of a goat is offered to the god *U Syngkai Bamon*, and a sow to *Ka Ramshandi*, both of whom are evil deities. Another sow is sacrificed to *Ka Tyrut*. After this the bones are placed in another newly-built cairn. The ceremony of placing the bones in one and
[787] then removing them to another cairn is usually performed three times; but unless the auspices, as deduced from the eggs, are favourable, the relatives must go on sacrificing and removing the bones until they are so. These ceremonies having been completed, they erect a flat table-stone, or *mawkynthei*, for the ghost of the departed to sit upon, and return home, where they propitiate their ancestors with offerings of food. In the case of the murdered victims of the *thlen* superstition the same ceremonies are observed. For people who have died by drowning, or been killed by wild animals, and for women who have died in child-birth, similar pujas are
766 offered, except that a sacrifice to *U Syngkai Bamon* does not take place. In the case of one who has died at a distance from
782 his home, e.g. in a foreign country, whose body has not been burnt in accordance with custom, and whose bones have not been collected, the members of his clan, or his children, take three or five seeds or cowries (*sbai*) to a place where three roads meet. Here they summon the spirit of the departed in a loud voice,

and throw up the seeds or cowries into the air, and when they fall to the ground they say, "*to alle noh ba ngin sa lum sa kynshew noh ia phi,*" come now we will collect you (the idea being that the seeds represent the bones of the deceased). Having collected the seeds, they place them on a bier and perform the service for the dead just in the same way as if a real dead body were to hand. If possible, a portion of the dead person's clothes should be burnt with the seeds in the bier, and it is with this view that the coats or cloths of Khasi coolies, who die when employed as porters on military expeditions at a distance from their homes, are brought back by their friends to give to the relatives. If a person dies of cholera, small-pox, or other such infectious or contagious disease, the body is buried, but is dug up again and burnt with all the customary rites when fear of infection or contagion is over. In parts of the district upright stones called *maw-umkoi* are erected along the line of route when the remains of a person who has met with an accidental death are brought home. This is stated to be the case in the Rambrai Siemship.

MISCELLANEOUS CUSTOMS IN CONNECTION WITH DEATH.

In Nongjri, a large village in the Wár Country, the dead body is placed on a bier near the door of the house, a turban being tied about the head, the face being left bare and turned towards the door. In some of the Shella villages a second cremation is performed, in which a bamboo frame-work represents the corpse. This second cremation takes place when the body has been disposed of without the requisite ceremonies. The bones and ashes of the dead in Shella are in some cases kept in a cavity hollowed out of a post erected for the purpose. The bones and ashes find a temporary resting-place here, but are afterwards removed to a cromlech.

At Nartiang, in the Jaintia Hills, the head of the corpse is shaved, but a tuft of hair in the middle of the head is left; this is called (*u'niuh Iawbei*), the great grandmother's lock. At Nartiang betel-nut, which has been chewed by one of the mourners, is put into the mouth of the corpse, also cooked rice. There is

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

764 a similar custom prevalent amongst the Khyrwangs. The Nongtungs, in the Jaintia Hills, keep dead bodies sometimes as
[535] long as a month, until the *phur* or ceremonial dance has been performed. Hence they are called *Nong-tung*, or "stinkers." Amongst the Lynngams the dead body is kept for sometimes three or four months, or up to the time when a bull can be
[231] procured for a feast to the villagers. This feast is an essential, and, cattle being scarce in the Lynngam country, there is often great delay in disposing of the body. Lynngam villages at such a time are best avoided. The Lynngams of Nongsohbar bury the unburnt bones of the deceased within the village, and in front of the house occupied by the deceased when alive, the bones being placed in a hole in the ground, over which is laid a stone, a bamboo mat being nailed over the stone. A bamboo fence three or four feet high is erected round the grave. Other Lynngams bury the uncalcined bones and ashes in a gourd in the jungle near the burning-place. On their way home, the members of the clan of the deceased who have come from other villages to witness the funeral obsequies, put up a stone on the path in honour of the deceased, a turban being tied round the
[211] top of the stone. The Garos or Dkos, who live at the foot of the hills on the Kamrup border, and are called by the Assamese *Hana* (spear-men), erect memorial stones in honour of the deceased, the lower jaw-bones of sacrificial animals and other articles being hung on the stones. The stones are also swathed in cloths, and turbans are tied round the tops. The death customs of the Lynngams, and, indeed, other customs also, are partly Khasi and partly Garo, it being difficult to say that the
[197] Lynngams are more Khasi than Garo, or more Garo than Khasi in this respect; their language, however, has been found by Dr. Grierson to be a corruption of Khasi. In Nongstoin, Mawlih, and Mariaw villages, the inhabitants of which profess to be Khasis, the bones and ashes of the deceased are not collected and placed in repositories, as at Cherrapunji. At Mariaw and Nongstoin a large wooden coffin is used, painted white, with ornamentations on the outside, and standing on four legs.
764 This coffin is not burnt on the funeral pyre. In the
643 family of the chiefs of Cherra, the body of a deceased Siem is
766 subjected to the following process:—It is wrapped in a cloth

1. Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

and placed in the hollowed-out trunk of a tree, *ka-shyngoid*, 764 there being a small hole with a plug at the bottom of this 643 receptacle. Spirit is then poured into the *shyngoid* until the 766 whole body is immersed, the liquor being allowed to stand for three days. After the body has been thus steeped, the liquor is allowed to run out, and the body is washed with warm water, after which it is allowed to dry for a day. Then a quantity of lime-juice is poured in, the latter being obtained from the fresh fruit of the lime (*u soh jew*). The body is thus exposed to a process of pickling, which continues until the whole is thoroughly dry and becomes like that of a mummy. It is then placed in a coffin, which is kept in the house of the Siem family until it is time to perform the funeral obsequies. These ceremonies entail a very large amount of expense, and it sometimes happens that they cannot be completed for some years after the death of a Siem. The body of a deceased Siem according to the Cherra custom should be burnt by his successor; otherwise the latter is not Siem according to the Khasi religion. The last Siem of Cherra, U Hajon Manik, did not perform the funeral obsequies of his predecessor, U Ram Singh, and it is stated that many of his subjects did not regard him as Siem, according to the Khasi religion, in consequence. There are at the present time the corpses of two Siems of Cherra which have been preserved in the manner described above, awaiting cremation. The first Siem, U Ram Singh, died as far back as 1875, and the second, U Hajon Manik, died in 1901.

Sir Joseph Hooker and other authorities have stated that the 263 bodies of deceased Siems of Cherra used to be embalmed in 766 honey, and an amusing story is told regarding the necessity of 643 exercising caution in purchasing honey from Cherra (honey being plentiful in this neighbourhood), except in the comb, for fear of honey which has been used for embalming purposes being passed off on the unwary purchaser. But the members of the Siem family and the old residents deny that honey is used for this purpose nowadays, possibly in the interests of the trade. It is, however, not unlikely that honey was so utilized in days gone by, as it is a well-known agent for embalming. The bodies of priests in Burmah are said to be embalmed in honey, *vide* Yule's "Embassy to Ava."

1;Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

THE DISPOSAL OF THE DEAD.

764 The collection of the uncalcined bones and ashes of the deceased members of the clan and their bestowal in the *mawbah*, or great *cinerarium* of the clan, is without doubt the most important religious ceremony that the Khasis perform. That this ceremony is now but seldom celebrated, is due partly to the difficulty that exists in obtaining general agreement amongst the members of the clans, and partly to the considerable expense it entails. The information I have obtained regarding the ceremony, although differing to some extent in detail from that recorded by the late U Jeebon Roy, agrees with the latter's account as regards the main facts. The information may now be set down as follows. By way of premise it may be stated that the bones and ashes of the deceased are kept after cremation in small stone cairns, or *mawshieng*. From these small cairns the bones and ashes are removed to larger bone repositories called *mawphew*, each branch of a clan possessing a repository of its own. The ceremony attending the removal of the bones and ashes from the small cairns to the larger repository, or *mawphew*, and the ceremony attached to the removal of these remains from the *mawphew* to the sepulchre of the clan are practically the same, except that when the bones are removed to the *mawphew*, no female dancing takes place. First of all, the members of the various branches of the clan collect the bones from the different subsidiary repositories, when a ceremony called "*khot ia u lor u kap*," which it is not necessary to describe here, is performed. The bones of the deceased males and females are kept separately, and preparations are made to bring them to the sepulchre of the clan. Before, however, anything further can be done, it must be ascertained that the members of the clan are at peace with one another and no differences exist. If all differences are settled, a sacrificer offers up a prayer that the sins of the clans-folk may be forgiven, and then breaks eggs and sacrifices a cock to ascertain which will be a propitious day for depositing the bones in the sepulchre. A lucky day having been thus ascertained, the bones and ashes are brought to the *iing seng*, or clan puja-house,

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

the bones of males and females being kept in separate bundles 764
wrapped in white cloth, two women of the clan reverently carrying them in their arms, holding the bundles of bones to their breasts. One female carries the bones of the males and the other those of the females. In front of these women walks an 764
old man who scatters along the way leaves of the *dieng-shit* tree 782
and grains of rice, and when it is necessary to cross any stream or river, he ties a thread from one side of the bank to the other, [775]
this is for the spirit of the departed to cross the water. Sometimes *u'nam tohrih*, a kind of long grass, is used instead of thread for the above purpose. On arrival at the clan puja-house, the bones of the males are laid on one bed and those of the females on another, the beds being bedecked with rich hangings. A cock, *u'iar kradlynti* (lit.: "the cock which scratches the way"), is sacrificed, this sacrifice being considered by the Khasis to be of peculiar significance. A pig, a cock, and a bull are then sacrificed, and portions of the above are offered to the spirits of the deceased. These offerings are known by the name of *ai-bam*, and are placed in a basket which is hung up in the house, together with the left thigh of the fowl and the lower jaw-bone of the bullock. A dance is performed that night, first [535]
in the house by two women, one belonging to the clan and the other an outsider, and afterwards in a specially prepared place outside the house called "*lympung*." The *sharati*, or flute, which is played at funerals is sounded, drums are beaten, and bombs are exploded. This dancing lasts from one to nine days, the limit being always an uneven number of days. At Cherra two effigies called *Ka Puron* and *U Tyngshop* are prepared and [776]
dressed up; the former is intended to represent *Ka Iawbei*, the first ancestress, and the other *U Suidnia*, the first maternal uncle of the clan. These effigies are held in the hands of the dancers. In the meantime two lines of upright stones consisting of three each, with a table stone in front of each line, have been set up. These are called *mawkjat* or 764
mawlynti, and are intended to serve as resting-places for the spirits of the dead on their way to the tomb of the clan. These stones are generally not more than three feet in height, and must not be confounded with the larger stones or *mawbynna*. On the night before it is proposed to deposit the

1:Gurdon E-4,5 (no date) 1907 AR7 Khasi AR7

764 bones, a ceremony called "*Beh-tympew*" is performed, which consists of driving out the devils from the house, so that they may not interf with the peace of the spirits of the departed whilst they rest in the house, and on their journey to the tomb. All the men after they have performed this ceremony are given [273] a drink of rice-beer known as *'iad nonglieh*. Another cock is sacrificed, and a small bamboo ladder of three rungs is prepared for the use of the spirits when climbing into the tomb. Rice is then thrown outside the door. The next morning they perform further sacrifices, which need not be detailed here, and let loose [783] a bull whose horns have been cased in silver. They dig two shallow tanks called *umkoi*, into which is poured water supposed [766] to possess the virtue of purifying the bones of any deceased clansmen who have died violent or unnatural deaths, or at places far away from their homes, where it was not possible to perform their funeral ceremonies according to custom. Three vertical stones are also erected, called *maw umkoi*. A bamboo with a white flag, and a plantain tree are set up; to the bamboo are attached three bamboo rings (*kyrwoh*), which are supposed to act as summonses to the spirits of the departed who have not received the benefits of a proper funeral ceremony. It may be explained that this ring of bamboo or cane is the form of summons used by the Khasi chiefs to their subjects when they wish to call them before them. Then a cock, *u'iar umkoi*, is sacrificed as a vicarious victim to bear the sins of the departed. When the procession reaches the *mawkjat* or *mawlynti* (the upright stones which have been erected), a goat called *u'lang mawlynti* is sacrificed. Then a bamboo is fixed to the centre one of the three upright stones, to which is attached the lower jaw-bone of one of the cattle sacrificed in the puja-house; this is called *u masi mawlynti*. A special ceremony called *ka-* [766] *lyngka-pongrei* is then performed for those of the clan who have died childless. We now come to the actual ceremony of placing the bones in the tomb of the clan. Having arrived at the tomb, the bones are washed three times in a dish (this is a Cherra custom). In Mawshai, the bones are exposed to the heat of a fire kindled on a small *jingthang*, or burning-platform. The stone door of the *cinerarium* is then opened, and the bones of the females are placed in an earthen pot inside the tomb

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

close to the wall which is farthest away from the door, the bones of the males being deposited in a pot inside the tomb nearest the door. Some clans keep the pot containing the bones of the males on the right, and the vessel containing those of the females on the left hand. Then offerings of food and libations of liquor are offered to the ancestors on a stone in front of the tomb. The males then perform a ceremonial dance with swords and shields, three times, and the door of the sepulchre is closed, a flag being fixed to the tomb. All the clansfolk then depart except three men. One of these sacrifices a cock (*iar-tanding*) in front of the tomb, a second sits behind the sacrificer, holding three firebrands, and a third sits behind the tomb. The man with the firebrands shakes them about, and then crows like a cock three times. The man behind the tomb listens attentively for any fancied noise within it, the superstition being that if the ceremonies detailed above have not been properly performed, the whole tomb will quake. If the three watchers are satisfied that there is no commotion within the tomb, then all is well, and they return and report the result to the clanspeople. This ceremony is called *tanding*, or the fire test. Next morning the woman who is the head of the *iing-seng*, or puja-house, distributes to all those who have taken part in these sacrifices the hinder portions of the sacrificial animals. She then blesses one by one the assembled clansfolk. The latter are not permitted by custom to go to work until after three days from the time of the ceremony; the third day being called *ka sngi lait ia*. The ceremony described above is a symbolical one. The massive stone sepulchre is regarded as a symbol of a secure place of rest for the departed spirits. If the spirits of the dead are not, however, appeased by the due performance of the ceremonies attending the bestowal of the remains in the clan *cinerarium*, it is believed that they roam about and haunt their relations on earth, and plague them with various misfortunes. It may be interesting to note here, that Mr. Moberly, the Superintendent of Ethnography in Bengal, reports that the ashes of deceased Hos, after being sprinkled with water by means of peepul branches, are collected, dried, and placed in a new earthen pot, and kept in the house until the day of burial, which may take place, as with

KHASI STONEHENGE.
(from a photograph by Mrs. Muriel.)

211
764

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

764 the Khasis, long afterwards. The bones are buried in the
171 village under a large slab of stone (cf. the Khasi stone *cinerarium*), and a monolith is erected outside the village to commemorate the deceased.

KHASI MEMORIAL STONES.

211 Probably one of the first objects which strikes the eye of a
764 visitor to the Khasi Hills is the very large number of monoliths, table-stones, and cromlechs that are to be met with almost everywhere in that country. Yule, Dalton, and other writers have incidentally referred to them, but, as far as is known at present, no attempt has been made to explain in any detail what is the peculiar significance of these objects to the Khasis. These stones are rightly styled memorial stones; *kynmaw*, literally "to mark with a stone," is the word in the Khasi language for "to remember." The memorial stone, in the ordinary sense of the word, is a memorial to the dead; but we have such names of places in these hills as *Maomluh*, the salt stone (the eating of salt off the blade of a sword being one of the Khasi forms of oath), *Maosmai*, the oath stone, *Maophlang*, the grassy stone, and others. To commemorate with a stone an important event has been a constant custom amongst many people in many places, and the erection of grave-stones, to mark the spot where the remains of the dead are buried, is an almost universal practice amongst the Western nations, as indeed amongst some of the Eastern also. But the Khasi menhirs are no more grave-stones, in the sense of marking the place where the remains of the dead lie, than some of the memorials of Westminster Abbey and other fanes; the Khasi stones are cenotaphs, the remains of the dead being carefully preserved in stone sepulchres, which are often some distance apart from the memorial stones. It is proposed to treat this subject under the following heading:—

(1) A general description of the memorial stones in the Khasi Hills, showing that they are very similar in shape to monoliths, table-stones, or cromlechs in other parts of the world and of India.

(2) A comparison between Khasi memorial stones and those of the Ho-Mundas, the stones near Belgaum, those of

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

the Mikirs, the monoliths at Willong in the Manipur Hills, and the Dimapur monoliths.

(3) The meaning of the stones.

(4) The method of their erection.

With regard to the first heading, the stones may be divided into (*a*) menhirs, or vertical stones; (*b*) table-stones, or dolmens, and (*c*) stone cromlechs, or cairns, which serve the purpose of *cineraria*. Taking the different stones in order, the menhirs are large upright stones varying in height from 2 or 3 ft. to 12 or 14 ft., but in exceptional instances rising to a more considerable elevation, the great monolith at Nartiang, in the Jaintia Hills, being 27 ft. high, and 2½ ft. thick. A photograph of this stone has been included. These menhirs are erected all in one line which nearly always consists of an uneven number of stones. Three is the commonest number of menhirs, but five together are frequently to be found, and there are some instances of seven stones; at Laitkor nine stones are standing, an illustration of which will be found in this book. The stones are of hewn gneiss granite, or sandstone, to be met with in many places in these hills. They are rough hewn, and generally taper gradually to their tops, which are sometimes neatly rounded off. The tallest stone is usually in the middle, and is occasionally ornamented with a small stone, through the middle of which a hole has been drilled so that it may fit on the top of the other. At Nongkrem there is a centre stone with a regularly carved top, evidently intended to represent the head of a man. At Umstow, some two miles from Cherrapunji by the cart road, stood two rows of fine monoliths, each row five in number, and standing on either side of the old bridle road. All of these stones except one were thrown down by the earthquake shock of June, 1897. The centre stone, or *mawkni*, of one of these rows was surmounted by a carved stone covering shaped like a hat, but having a rim with indented edges, the intention being evidently to represent a crown. This stone crown was riveted to the top of the large centre stone. All the stones, including the *mawkynthei*, or dolmen, have been very neatly hewn. They appear to be of granite. Stones with top coverings or carved heads are however rare.

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

211
764

In front of the line of menhirs is a large flat table-stone resting on stone supports, the top of the uppermost plane being some 2 to 2½ ft. from the ground; this flat stone is sometimes as much as a foot or more thick. The largest table-stones are to be seen at Nartiang, in the Jaintia Hills, and Laitlyngkot in the Khasi Hills. The Laitlyngkot stone measures 28½ by 13¾ ft., and that at Nartiang 16½ by 14¾ ft. The Laitlyngkot stone is 1 ft. 8 in. thick. Sometimes two table-stones are found parallel to one another. The table-stones are always placed towards the centre of the group, generally in front of the great central menhir. These groups of stones are usually situated alongside roads, or close to well-known lines of route, where they readily attract the attention of passers-by. They do not necessarily face in any particular direction, but are to be found fronting all points of the compass. There is nothing therefore to show that they were erected so as to face the direction of the sun-rise, or of any particular planet's. We will now pass on to the numerous stone cromlechs which are to be found, frequently in proximity to the menhirs and table-stones. These stone cromlechs contain the bones of the dead, and the menhirs and table-stones are intimately connected with them, inasmuch as memorial stones to deceased ancestors are erected when the ceremony of depositing bones in the *cineraria* has been completed. The *cineraria* are built of blocks of stone, sometimes on stone platforms, and sometimes resting on the ground. They are frequently of considerable size. The cromlech is opened by removing one of the heavy stone slabs in front. There are no windows such as are to be seen in some of the illustrations of dolmens or cromlechs in France and Circassia in Waring's book of "Stone Monuments, Tumuli, and Ornaments of Remote Ages," probably because the Khasi idea was to confine the spirits and not allow them to escape from the tomb and haunt the living. The cromlechs are generally square or oblong, but are sometimes circular in shape also. Let us now compare the Khasi menhirs with some to be found in other parts of the world. In Lord Avebury's "Prehistoric Times," Fergusson's work, and Waring's collection of plates of stone monuments, there are numerous illustrations of menhirs and dolmens

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

211
764

to be found in other parts of the world, which may be said to resemble those of the Khasis in appearance; but this is by no means a matter for surprise, for, given like conditions, amongst primitive peoples, totally unconnected with one another as regards race, and living in countries far remote from one another, the results, i.e. the erection of stones as memorials of important persons, or events, are probably the same all the world over. Waring in his book gives an illustration of several lines of stone monuments with two table-stones, either in front or in rear according to the position of the photographer or draftsman in taking the picture, which would appear to be very similar to the lines of menhirs we find in the Khasi Hills. In plate XLII., fig. 6, of Waring's book, are the lines of stones to which I refer. They may be said to be almost exactly similar to the lines of Khasi memorial stones, except that the stones depicted by Waring have circles or ovals painted on them, which are said to signify that certain sacrifices of animals have been performed. Now the Khasis perform such sacrifices, but they do not mark their performance thus on the stones. Fergusson on page 447 of his "Rude Stone Monuments" apparently refers to these stones, which are near Belgaum in the Bombay Presidency, and he is of opinion that "they were dedicated or vowed to the spirits of deceased ancestors"; further it is stated that these stones are always in uneven numbers, a striking point of similarity to the Khasi stones. We know, for a fact, that the Khasi memorial stones were dedicated to the same objects as those of the Belgaum stones, i.e. to the worship of ancestors; so that we have not only similarity in appearance, in conformation, and invariable unevenness of number, but identity of purpose, if Fergusson's conclusion is correct. It is, however, a far cry from Shillong to Belgaum, and it may, perhaps, be thought more reasonable if we look for stones nearer at hand. Bradley Birt in his interesting book on Chota Nagpur has given a photograph of certain Ho memorial stones, which would appear to resemble greatly the Khasi menhirs, and if his photograph is carefully examined, it will be seen that there are in rear of the stones what would seem to be stone cairns, very similar in appearance to the Khasi *cisteraria*. The funeral ceremonies of the Hos as described by Bradley

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

211
764

Birt, viz. the cremation of the body, the collection of the ashes, their consignment to a grave, and the offering of food to the spirit of the deceased, are similar to those of the Khasis. Although not wishing to lay too much stress on what may be merely a coincidence, I think that the above similarity in death customs is well worth considering with regard to the view, based on linguistic affinity, that the Khasis and the Ho-Mundas were originally descended from a common stock, i.e. the Mon-Khmêr or Mon-Anam family, as has been postulated by Logan.

But there are other tribes in Assam which erect memorial stones, e.g. the Mikirs and certain Naga tribes. The Mikirs erect memorial stones in a line, the taller stone being sometimes in the centre, as in the case of the Khasi memorial stones. Such stones are set up by the Mikirs only in memory of important personages, such as *mauzadars* or leading *gaonburas* (village headmen). Besides the standing stones (*long-chong*), a flat stone (*long-pak*) is also erected in honour of the deceased. I understand that the Mikir stones, like the Khasi, are mere cenotaphs, the ashes of deceased Mikirs being left at the burning places which are generally by the sides of rivers, and the memorial stones not being necessarily anywhere near the burning grounds. Unlike the Khasis, the Mikirs do not collect and carefully keep the bones in stone cairns. Before erecting memorial stones, they dig a small tank; cf. the Khasi custom of digging similar tanks (*um-koi*), before erecting memorial stones (*maur umkoi*), to those of the clan who have died unnatural deaths. As with the Khasis, feasts and entertainments are given when the stones of the Mikirs are erected; but they need not necessarily consist of uneven numbers, it appears. It is possible that the Mikirs may have obtained the custom of erecting memorial stones from their near neighbours, the Khasis.

Then there is the interesting collection of stones at Willong in the Manipur Naga Hills, for a description of which I am indebted to the kindness of Colonel Maxwell, the late Political Agent and Superintendent of the State. It is said that about 300 or 400 years ago these stones were erected by the rich men of the village as memorials (probably to deceased ancestors). It is the custom of the Willong village that any person who

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

KHASI BURNING PLATFORM.

[Facing p. 184]

764

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

wishes to erect such a stone should, with the members of his family, abstain from food; but liquor and ginger are allowed to them. Having chosen what he thinks is a suitable stone, the Naga cuts off a flake of it, returns home, and sleeps on it with a view to dreaming of the stone. If his dreams are favourable, he brings it in, otherwise not. From the day of the selection of the stone, until it is brought in and erected, he must fast. Women are taboo to him for the space of one year from the date of its erection. The custom of erecting memorial stones is not therefore peculiar to the Khasis amongst the hill tribes in Assam. An incidental reference should, I think, be made to the interesting carved monoliths at Dimapur, regarding the meaning of which there has been so much doubt. These Dimapur stones are remarkably similar in shape to the carved wooden *kima* posts of the Garos, another hill tribe speaking a language which is undoubtedly connected with the great Boro group of languages in North Eastern India. The Garo *kima* posts, like the Khasi stones, are erected to commemorate deceased ancestors. Some of the other Naga tribes, besides the Willong Nagas, are in the habit of erecting what are called *gessa* stones, a description of which will, we hope, be given in a subsequent Naga monograph. The object of the erection of such stones is certainly to show reverence to the memories of deceased ancestors amongst the Khasis, and Garos, and not improbably among the Nagas also.

It is only with the very greatest difficulty that it has been possible to obtain any intelligible information regarding the Khasi monoliths. Whether through feelings of delicacy in revealing the secrets of their religious system to a foreigner, or through ignorance or apathy (there being but few Khasis nowadays who observe the ancient ritual), it has been no easy task to extract information from people about these stones. As far as my information goes at present, I am inclined to classify the stones as follows:—

(*a*) *Mawlynti*, or *mawbjat*, the stones which are erected to serve as seats for the spirits of departed clansfolk on their way to the tomb of the clan, *i.e.* when their remains are carried by their relations to the clan cromlech (see the section entitled "The Disposal of the Dead").

MEMORIAL STONES AT LAITKOR.
(From a photograph by Mrs. Wood.)

769
211

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

764 211 (*b*) *Mawbynna*, or *mawnam*, which are stones erected to commemorate a parent or some other near relation.

(*c*) *Maw-umkoi*, which are put up to mark the position of tanks or *umkoi*, the water of which is supposed to cleanse the [766] ashes and bones of those who have died unnatural deaths.

(*d*) *Maw-shongthait*, or flat table-stones, often accompanied [485] by vertical stones, which are placed in the market-places and by the side of roads to serve as seats for weary travellers. Taking the above main divisions seriatim, *mawlynti*, or *mawkjat*, may be described as follows. These generally consist of three upright stones, the tallest being in the centre, and a flat table-stone being placed in front. There are, however, some clans which erect more than three upright stones, as *mawlynti*, or *mawkjat*. As already stated, the clansfolk used to erect these stones, *mawlynti* (the stone of the way), or *mawkjat* (the stone of the leg), at each place at which they halted for the night on their way to deposit the bones of their deceased maternal relations in the clan sepulchre, or *mawbah*. The stones are called *mawkjat*, or stones of the leg, because it is supposed that the spirits of the departed sit and rest their limbs on the flat table-stones. The upright stones are not as a rule more than 3 or 4 ft. high, and are not massive like the great mawbynna, or memorial stones. They are to be found in great numbers all along the roads or paths which lead to the clan cromlechs. These stones, unlike the *mawbynna*, have no names.

769 211 (*b*) *Mawbynna*, or *mawnam*, are erected to commemorate deceased parents or deceased ancestors, and consist of 3, 5, 7, 9, or even, in an exceptional case, 11, upright stones with flat table-stones in front. The upright stones are called *maw-shynrang*, or male stones, and the flat table-stones *maw-kyathei*, or female stones. Turning to the plate of the Laitkor stones, it will be observed that there are nine upright stones, and one large flat table-stone in front. Counting from right to left, stone No. 5 is called *u maw kni*, or the maternal uncle's stone, and the stones to the right and left of it, *ki maw pyrsa ki para*, i.e. the stones of the maternal brothers and nephews. The table-stone is called *ka Iawbei tynrai*, or *ka Iawbei tymmen*, literally the grandmother of the root, or the old grandmother, in contradistinction to *ka*

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

769 *Iawbei khynraw*, or *ka Iawbei kpoh* (the grandmother of the
211 family, or branch of the family). It frequently happens that there are two flat-table-stones in front of the upright stones, the one on the left being *ka Iawbei tynrai*, or the first ancestress, and the one on the right *ka Iawbei longkpoh*, the grandmother of the branch of the clan to which the memorialists belong, or *ka Iawbei khynraw*, the young grandmother, i.e. the grandmother of the actual family to which the memorialists belong. In olden days it used to be the custom for the clans-
[782] people to place offerings of food on the flat table-stones for the shades of the departed ancestors, and this is sometimes the case still; but now it is more frequently the custom to make these offerings in the *iing-seng*, or clan puja-house. The flat table-stones are some 2 to 2½ ft. from the ground, and it is difficult to resist the impression that they were originally sacrificial stones, i.e. that animals or even human beings were actually
773 sacrificed upon them. In connection with this theory I would
782 refer to the interesting folk-tale about the Kopili river. It is here related that in olden days human victims were sacrificed
211 to the Kopili goddess on the flat table-stone (*maw-kynthei*) at a place called *Iew Ksih*, close to the Kopili river. A careful search has been made for this stone, with the result that a flat table-stone has been found near the above village, where goats are still annually sacrificed to the Kopili. The *doloi* reports that this is an ancient custom. None can remember, however, having heard that human victims were ever sacrificed there. Yet I do not think it at all unlikely that this is the stone, locally called *Mynlep*, which is referred to in the folk-tale. At Jaintiapur and Nartiang, both of which places were the headquarters of the kings of Jaintia, there are very large table-stones. We know for a fact that human sacrifices used to take place at Jaintiapur. Is it possible that human beings were immolated on these table-stones? It would be unsafe to base any conclusion on the solitary folk-tale about the *Iew Ksih* table-stone; but the tale certainly furnishes food for reflection. The Khasis borrowed their
[177] religious customs largely from the Synteng inhabitants of
782 Jaintia, and it is possible that they may have obtained the
211 custom of erecting the table-stones from the Syntengs also,
769 and that the latter were originally used for both of them for sacrificing human victims.

(from a photograph by the author.)

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

782 and that the latter were originally used by both of them
211 for sacrificing human victims. Sometimes, immediately on either
769 side of the *mawkni*, or large central stone, there are two much smaller stones called *mawksing*, or the stone of the drum, and *mawkait*, the stone of the plantain; the drum being used in all religious ceremonies by the Khasis, and the plantain relating to their custom of feeding young children on plantains. The *mawnam* must be described separately from the *mawbynna*, because they differ from them in an important particular, i.e. that the former may be erected to commemorate the father, while the latter are set up to perpetuate the memory of the ancestors on the female side of the family. *Mawnam* consist of three upright stones and one flat table-stone in front. The large central stone is called *u maw thawlang*, or the stone of the father, and the upright stones on either side are meant to represent the father's brothers or nephews. The flat table-stone is *ka Iawbei*, i.e. the grandmother of the father, not the first grandmother of the clan, as in the case of the *mawbynna*.

211 (*c*) The *maw umkoi* have already been described. They
783 are erected to mark the sites of purificatory tanks, which
766 have been dug so that the remains of deceased persons may be cleansed from the impurities attending an unnatural death, and to counteract the adverse influence upon the clan of *Ka Tyrut*, or the goddess of death. These stones are sometimes called *mawtyrut*.

(*d*) *Maw-shongthait*, or stones upon which weary travellers
211 sit, are to be found alongside all the principal lines of commu-
485 nication in the district. It may serve as an example of these stones to describe the very interesting collection of stones at Nartiang *hát*, or market. A reference is invited to the plate which gives a representation of some of the Nartiang stones. The great height of the upright stone will at once be seen; it is 27 ft. in height and 2½ ft. thick. This stone is the largest erect stone in the Khasi and Jaintia Hills at the present day, and is a very fine specimen. The upright stones and the flat table-stones at Nartiang are called "*ki maw jong Siem*." There is no separate designation for each of them. These stones are popularly supposed to have been erected long ago by two men,

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

211 U Lah Laskor and U Mar Phalyngki, to commemorate the
485 establishment of Nartiang market, which is called Iew Mawlong. "Laskor" is the Synteng equivalent of the Khasi *lyngskor*, or prime minister. "Mar" is a Synteng word meaning a giant, the idea amongst the people being that in the olden days there were giants in the land who performed marvellous feats of strength, e.g. the erection of the megalithic remains at Nartiang and elsewhere. A puja is performed upon a great flat stone by the *doloi* and his officers in honour of the founders of the market, but no animals are sacrificed, rice and *rynsi* (balls of rice) only being offered. In the days of the Jaintia kings only the Raja could sit upon the great flat stone; hence the name *maw jong Siem* (or Siem's stone). The great upright stone is said to have been brought by U Lah Laskor and a great number
211 of people from Suriang, a place near Nartiang. With reference
782 to the Nartiang stones I would refer to my theory, formu-
491 lated above, that they were originally connected with human sacrifices. It may be mentioned that at Nartiang there is a bridge constructed out of a single stone, which is also said to have been set in position by U Lah Laskor. Near Suhtnga there is a group of stones, said to have been originally thirty in number, together with *maw shongthait*, or stones to seat the weary, which were erected to the memory of a woman, Ka Kampatwat, who in generations past is alleged to have had no less than *thirty* husbands. The lady is not supposed to have been polyandrous, nor nine-lived, but to have divorced one husband after another. As she probably established a record
211 for divorce, her descendants afterwards commemorated her in
[731] the manner described. There is another very large stone at Nongkseh, which unfortunately fell to the ground in the great earthquake shock of 1897. This stone must have stood over 20 ft. above the ground. It is called *u mawkni Siem*, the stone of the Siem's maternal uncle, and it used to form the central stone, or *mawkni*, of a line of stones. These stones belong to the clan of the *basans* of Nongkseh, which furnishes the *sohblei*, or head sacrificer, of the Siems of Khyrim. The stones at Mawsmai, which in ancient days used to be the head-
211 quarters of a Siem, are some of the best carved in the hills.
171 At Mawrongjong, in the Jaintia sub-division, is a stone upon

THE SACRIFICE OF THE GOATS AT SMIT.
(from a photograph by Ghosal Brothers.)

762

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

211 which a figure, evidently of a Hindu god, has been carved, without
171 doubt after the erection of the stone. Here we have a striking parallel case to the painted and carved menhir near Tregastel in Brittany, upon which has been carved the representation of a crucifix. There are also some carved stones near Nartiang (said to represent two women) called *mawthawdur briew*.

211 The Khasis say that these great stones were brought
483 sometimes from considerable distances. After being hewn, the stones were laid on a large, wooden trolley and dragged
283 across country by means of ropes of cane, of which plenty can be had from the War country on the southern side of the district, and then placed in position by means of ropes and levers. It seems little short of marvellous that these stones, which sometimes weighed many tons, were placed in position by such primitive means, especially when we consider the great trouble there was to re-erect one of the fallen stones at Stonehenge lately. Nowadays only comparatively small stones are erected, which are generally hewn and erected on the spot, so that there is no necessity for any conveyance.

000 In conclusion, it may be remarked that the subject of the Khasi monoliths is in reality a large one, on which a great deal could be written, but owing to considerations of space it has been found necessary to compress the account within its present limits.

FESTIVITIES, DOMESTIC AND TRIBAL.

535 Dancing forms the principal part of all the Khasi festivities,
776 and is an important adjunct of some of their religious
796 ceremonies. One of the greatest festivals in the Khasi Hills is the Nongkrem dance; it may be said to be as important
789 an event to the Khasis as the *Beh dieng-khlam* festivities are to
782 the Syntengs.

The Nongkrem dance is really part of what is known as the *pom-blang*, or goat-killing ceremony, performed by the Siem of Khyrim (or Nongkrem) with the aid of his *soh-blei* (high priest) and the various *lyngdohs* (or priests) to Ka Blei Synshar (the ruling goddess), that the crops may prosper and that there may

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

535 be a successful era in store for the people of the State. The
776 goddess on this occasion may be regarded as a Khasi Demeter,
796 although no mysteries form part of her services as at the
789 Grecian Eleusis. The Nongkrem ceremony and dance (now
782 held at Smit) take place in the late spring, generally in the month of May. A lucky day having been fixed, the Siem sends a ring of cane (*kyrwoh*) by way of a summons to the people of every village in the State, at the same time informing them of the date of the puja, and requesting them to attend with their offerings, consisting of goats and different articles of food. In the meantime various pujas have been taking place in the house of *Ka Siem Sad*, the Siem priestess, which it would be tedious to describe in detail. The more interesting points only will be mentioned. A fortnight before the puja and dance at Smit the *soh-blei*, or high priest, pours out libations of liquor in the *kyram-blang*, or place where the sacrificial goats are kept, and in front of the great post (of *dieng sning*, or Khasi oak), in the house of the Siem priestess. Dancing then takes place in front of the post. Later on the Siem, with the high priest and other attendant priests, walks with extremely slow gait to a small hill where a stone altar has been prepared, and sacrifices a cock in honour of *u'lei Shillong*, or the god of the Shillong Peak. A silver dish with powdered rice, liquor in a gourd (*ka'iad um*), betel-nut, and some leaves of the Khasi oak (*dieng sning*), are also necessary adjuncts of the puja. A goat is then sacrificed, and the sacrifice is followed by a dance of twenty-two men armed with swords and shields and chowries (fly-flaps). Having danced before the altar, the party returns to the house of the Siem priestess and executes another dance in the great courtyard. The Siem and certain selected persons dance in front of the *rishot blei*, or holy post
[242] of Khasi oak inside the house of the Siem priestess, the dancers being entertained with dried fish and ginger. Then follows the great dance of girls and men in front of her
782 house. The girls dance in the centre, taking such tiny
796 steps, that the lifting of their feet from the ground is hardly
535 perceptible, the arms held down to the sides and the eyes
301 demurely downcast. It is on this occasion that they wear the
302 peculiar silver (and sometimes gold) crowns illustrated in the

301 plate. The hair is worn tied in a knot behind the head, but with
302 a long tail hanging down the back. Rich silk cloths are worn
535 by the girls, who present the appearance of being, if any-
[292] thing, over-clothed, or, as Yule aptly puts it, of "perfect
796 parallelograms." They wear a profusion of gold and coral
782 bead necklaces, silver and gold chains, bracelets, ear-rings of gold, and any other jewellery they can lay hands on. Not only is the whole of the family jewellery requisitioned by the fair *débutante* (it is only the unmarried girls who dance), but she borrows from her friends. The men dance round the outside of the circle, waving fly-flaps and prancing (often nowadays wear-
[534] ing huge boots) with ungainly strides. The music necessary for the dance consists of *tangmuri* (pipes), drums, and cymbals.
[292] This is *ka shad kynthei*, or the dance of the women. Then there is *ka shad mastich*, or the dance of the men, who are gaily dressed, wearing plumes of black and white cock's feathers (*u thuiyah*) and hold swords and shields. After gyrating for some time, two men at a time rapidly approach one another and clash their swords together in mock combat. They then retire, and, after again revolving for a period, repeat the process; then other couples follow and take their place. This goes on until the dancers get tired or are told to stop.

535 The above description may be taken as applicable to all
764 the Khasi dances. Dancing forms part of the ceremony of placing the ashes in the sepulchre of the clan. Dancing also forms a part of certain ceremonies performed at markets for the prosperity of the State and for the good of trade.

535 When I was at Mawsynram, at the time of the appointment of a Siem, I witnessed a very pretty dance called *ka shad lymmoh*, performed by men who held the leafy branches of trees in their hands. This is most effective. Then
[301] followed a dance of some forty young girls, very well dressed, covered with the usual gold and coral beads and silver chains, and wearing the silver crown, or *pansngiat*. The young women danced with great spirit, and with an absence of all shyness, but still with the greatest decorum. Many of the women, spectators as well as dancers, were observed to be without the usual *tap moh khlih*, or head-cloth, the absence of which is always a sign amongst the Khasi women of merry-making. There were

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

535 women from the Wár country, wearing their picturesque dress, amongst whom was the wife of the Siem of Bohwal with her little daughter. The dance was a pretty sight, and I have [752] seldom seen such evidence of unaffected happiness as was exhibited by the people on this occasion. Dancing may be described as one of the characteristic features of Khasi life.

796 The Synteng *Beh-dieng-khlam* festival takes place annually 789 at Jowai and elsewhere in the Jaintia Hills in the deep water moon month (*u Jyllieu*, or June). *Khlam* is the Khasi word for plague or pestilence, and *beh-dieng* signifies to drive away with sticks. The festival may be described as follows:—The males rise betimes on the day fixed and beat the roof with sticks, calling upon the plague-demon to leave the house. Having done this, later on in the day they go down to the stream where the goddess "Aitan" dwells. Then poles of great length, which have been newly cut, are held across the stream. The people jump on the poles and try to break them; when they succeed in doing so, a great shout is given. After all these poles have been broken, a very large pole is fixed across the stream. The people then divide themselves into two parties, and contend for the possession of the tree. The contest, however, is a good-humoured one, and although many buffets are given and received, these are not regarded seriously, and there [291] are seldom any fights. Col. Bivar says the contending villagers, in their excitement, sometimes relapse into a state of almost complete nudity. The party which succeeds in obtaining possession of this post is supposed to gain health and prosperity [976] during the coming year. Col. Bivar remarks that the origin of this so-called ceremony is said to be that the god of thunder, "*u'lei pyrthat*," and Ka Aitan, the goddess of the stream, enjoined its performance. Many innovations, however, have crept in. People disguise themselves as giants and wild beasts, they also parade images of serpents, elephants, tigers, peacocks, [535] &c. Dancing is carried on with enthusiasm by the males, the [526] girls, clad in their best attire, remaining on-lookers. Before the meeting breaks up the males play a sort of game of hockey with wooden balls.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

GENNA.

784 The word *genna* is one in common use amongst the Naga tribes. It seems to be a matter of doubt whether the word belongs to any of the numerous languages or dialects spoken by these tribes; but for our purposes it may be taken to mean *taboo*. The Khasi word *sang*, which implies an interdiction either religious or social from doing any particular thing, might have been employed; but as the word *genna* is so commonly used when speaking of taboos amongst the hill tribes of this province, I have thought fit to employ it here. The word *genna*, or taboo, may be held to include the Khasi *sang*. Taboos amongst the Khasis, Wárs and Lynngams may be divided into
784 two sections; (*a*) general, and (*b*) special. Instances of general
609 taboo have not been found amongst the Khasis, but the follow-
688 ing taboo called *Ka sang kla* amongst the Wár villages of Sohbar and Nongjri is peculiar, and therefore worthy of description. Its chief peculiarity is that during the time the *sang kla* continues, the inhabitants of these two villages are not allowed to associate with foreigners. This *genna* takes place twice a year, in the months of June and November, and lasts for a month each time. During the *genna* foreigners are not allowed to stay the night in these two villages, and the villagers must not sleep the night outside their villages. If they do not return home for the night, they are subjected to a fine. There is a prohibition against eating, smoking, or chewing betel-nut with foreigners
784 during the period. The above is the only instance of general
609 taboo that I have been able to find amongst the Wárs, but in
582 the Lynngam villages there is a taboo on all outsiders at the time of the village pujas. Such a taboo amongst the Lynngams is not to be wondered at, as they have probably imbibed the notion from their Garo mothers, intermarriages between Lynngams and Garos being common. The Garos, like other Thibeto-Burmans, have numerous taboos. There are numerous
582 instances of special taboos among the Khasis. *Kaba*
784 *shong sang*, or marrying within the *kur* or clan, is the
783 most important taboo of all, and is regarded as the most
764 serious offence a Khasi can commit. It admits of no expiation, and the bones and ashes of the offender cannot be placed in the family tomb.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

be placed in the family tomb. There are special taboos for certain clans, of which the following are some examples. The clan Nongtathiang cannot eat the lemon, the Khar-umnuid clan must abstain from pork, the Cherra Siem family cannot eat dried fish, and the Siem family of Mylliem taboo the pumpkin. Possibly these taboos may be relics of totemism amongst these communities. The following are some of the other taboos, although some of them are but lightly regarded now-a-days.

(i.) To build a house with stone walls on all four sides.
(ii.) To use nails in building a house.
(iii.) To use more than one kind of timber in building the hearth.
(iv.) To build a house with resinous timber. Only the Siem family can use such timber.
(v.) To cut trees from a sacred forest.
(vi.) To take or give anything with the left hand.
(vii.) To step over any one's body.
(viii.) To kill any animal or bird without first throwing rice over its body.
(ix.) To drink the milk of a cow or goat.
(x.) To talk with any one, except with one of a man's or woman's fellow-workers, when the thrashing of paddy is going on.

There are the following special taboos for pregnant women.

(*a*) To accompany a funeral procession.

(*b*) To finish any sewing she may have commenced before she became *enceinte*. There is a similar prohibition regarding the finishing of the plaiting of wicker baskets.

(*c*) It is *sang* for the husband of a pregnant woman to thatch the ridge of the house at such a time, or to fix a handle to an axe or a *dao*.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

SECTION V.

FOLK-TALES, TRADITIONS AND SUPERSTITIONS.

FOLK-TALES.

773 THE Khasis possess a considerable amount of folk-lore. The
128 tales which will be found reproduced in the original Khasi have been obtained from a collection which was in the possession of the Rev. Dr. Roberts, of Cherrapunji, who very kindly placed it at my disposal. The translations are by U Nissor Singh, Sub-Inspector of Schools, and the author of a Khasi English Dictionary as well as certain other educational works in that language. Dr. Roberts's collections would fill a book; so I have selected only a few of what I consider typical tales. At the instance of Sir Charles Lyall, I have given the Khasi and English side by side. The stories will speak for themselves,
133 but I add a few explanatory notes. The water-fall of Ka Likai
773 is a magnificent cascade in the rainy season; it can best be viewed from the heights of Laitkynsew. The water-fall is situated close to the village of Nongriat, which is approached by a succession of stone steps from the village of Tyrna, just below the Cherrapunji Laitkynsew bridle-path. "Dingiei," which is mentioned in the second tale, is the high hill to be seen on the right-hand side of the Shillong-Cherrapunji road soon after leaving Shillong. The highest point of the range is over 6,000 ft. The third tale contains the well-known story of Ka Pah Syntiew, the fabled ancestress of the Khyrim and Mylliem Siem families. The cave where Ka Pah Syntiew is said to have made her abode is still to be seen in the neighbourhood of Nongkrem. The story of the origin of the Siems of Suhtnga, who afterwards became the Rajas of Jaintiapur, is a well-known tale in the Jaintia Hills. A description of the

P. 160

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

wonderful mass of granite known by the name of the Kyllang Rock will be found in the section of the monograph which deals with geographical distribution. I have also added a photograph of the rock. The Syntengs have a story that when the strong west wind blows in the spring this is due to the advent of *U Kyllang*, who comes to visit his wife, the river *Umngot*, at that season: amongst the Khasis hills are all of them masculine, but to rivers is usually attributed the feminine gender. U Symper is another isolated rocky eminence rising from the Maharam plain close to the village of K'mawan. The best view of the hill is obtainable from Laitmawsiang on the path to Mawsynram. The village of Mawsmai every traveller from Therria to Cherrapunji knows. It is chiefly remarkable for a fairly large limestone cave, and its fine memorial stones. The Khasi theory to explain how the moon got its spots is, I believe, original, but is no more extraordinary than our own nursery tale about the "man in the moon." The *Sohpet Byneng* hill is the first hill of any size that the traveller sees on the Gauhati road when journeying to Shillong. It is close to Umsning Dak Bungalow. There are caves in the hill which are tenanted by bears. Strange to say, according to Khasi ideas, this is one of the highest points in the hills; in reality *Sophet Byneng* is some 2,000 ft. lower than the Shillong Peak. As mentioned elsewhere, the Khasis are very fond of dogs; so I have given their version of how the dog came to live with man. The well-known *thlen* superstition will be found fully described under the heading of "Human sacrifices." I have, however, thought the tale of sufficient interest to reproduce at length here. The story of the river Rupatylli is a pretty tale, and is just such a one as would appeal to the imagination of mountaineers like the Khasis. The Kopili story is important, in that it indicates the origin of human sacrifices in the Jaintia Hills; it also throws, perhaps, some light on the question of the use to which the flat table memorial stones were put in years gone by. The superstition about the crossing of the Kopili can be vouched for by many who have taken the journey from the Jaintia Hills to North Cachar by the Kopili route. Mawpunkyrtiang is a small village close to Cherrapunji. The weird tale about the Siem of Malyniang is the pride of the Maskut people, for in olden days their King,

k: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

773 i.e. the Siem of Malyniang, is supposed to have been a very powerful monarch amongst the Khasis. The story of Manick [534] Raitong is interesting, in that it explains the origin of the use of the *sharati*, a bamboo flute of special make which is played only at funerals. The pool of water, which was formed after U [144] Manick and the erring queen were burnt, may be connected with the *Umkoi*, or tank, which is dug to cleanse the souls of those who have died violent deaths. The idea of the bamboo, which bore leaves that grew upside-down, springing up from the buried flute, is also to be found in the Synteng tale regarding U Loh Ryndi's fishing-rod. Owing to considerations of space, I have had to curtail largely the folk-lore section. I have, however, kept the materials by me, and if at any future time there is reason to believe that the reproduction of more Khasi folk-lore is called for, I shall be glad to try to arrange that some of the other folk-tales be printed.

The Water-fall of Ka Likai.

539 [133] The water-fall of Ka Likai is one of the most beautiful water-falls in the Khasi Hills. Its stream flows from a certain river from the village of Rangjirteh and passes by the village of Nongriat. The fall can be seen distinctly from the village of Laitkynsew. What a beautiful fall it is when viewed in the autumn. It is also a very high fall. There was in olden days in the village of Rangjirteh a woman called Ka Likai. She was a poor woman who had a husband. When she had given birth to a child, the husband died. Whilst the child was yet a baby, she experienced much trouble in taking care of it on account of her poverty. After the child was able to walk, what a pleasure it was to her to see it growing, and able to play with other children. Then that woman married

another man; but he did not love the little child, and many a time he got angry because she could not take care of him more, on account of that child.

One day when she went to carry iron ore, her husband took the child and killed it. When he had cut up the body into pieces, he prepared curry with it, and placed the curry where the mother would come and eat it. When he had finished doing so, he threw the head and the bones of the child far away, but he forgot to throw away the fingers, which he had placed in a basket where the betel-nut was kept. When the mother returned from her journey, she inquired "Where is the child?" "She has just gone somewhere, I don't know where," he said. She remained silent awhile; then she said, "Is there any rice and curry?" He said "Yes, it is ready," and went out at the same time. When she ate, she found the curry very tasty, and she thought that he had got the flesh of a young pig from some one who had performed a sacrifice. When she had finished eating, she took up the betel-nut basket, but found the fingers of her child there. She shrieked and threw herself down, and then ran to the precipice and cast herself down it. All the villagers wondered, but no one ventured to prevent her as she held a da in her hand. From that time the waterfall was called the "Fall of Ka Likai."

The Dingiei Hill.

539 [133] country, resembling in height and size the Shillong "Peak" which lies opposite and to the north of it. There are many villages on this hill belonging to the Shillong Siem. In olden days on the top of this hill grew a gigantic tree overshadowing the whole world, the name of that tree was "ka Dingiei." The Khasis came to a determination that if this tree were cut down (lit. destroyed) the world would become good and would have light, for as long as it (the tree) remained standing, the world remained dark and unfruitful. They accordingly came to an unanimous decision to fell it. When they cut (the tree) during the day and went back next morning, they found that the marks of cutting had been obliterated. Thus they cut each day, and next morning they found that the marks had disappeared. This was the case always. Then they marvelled why this thing was thus. They asked questions and they investigated; ka phreid (a very small bird) said "all this has happened because a tiger comes every night to (the foot of) the tree and licks the part of the tree which has been cut." Thereupon the men, having plied their axes and knives the whole day in cutting the tree (instead of carrying them away as usual), tied them to the incisions, with their edges pointing outwards. So when the tiger went as usual at night to lick the incisions, the sharp blades of the axes and knives cut his tongue. Thenceforth the tiger ceased to go to the tree; and as the tiger ceased

to lick the interior, the mark was not obliterated as before. So their work went on progressing every day until ka Dingiei fell. Then the world received light, and cultivation thrives, and there was nothing more to stand in the way of the light of the sun and the moon. It was for that reason that the name of "U Lum Dingiei" was given to the hill. Nobody knows what became of the tree, for since the time it fell its species has died out and there is no seed of it (to be found) anywhere on the earth from which it can be grown.

Concerning the Origin of the Siems of Shillong.

The Siem of Shilling is a very great and powerful chief in the Khasi Hills. He is generally known throughout the Khasi Hills as the "god king." By the term "god king" is meant that God has been pleased to give over to him the largest portion of the Khasi country, i.e. the kingdom of Shilling, to rule. If you seek for the origin of these "god kings," you will find there is great uncertainty about it. At any rate there is a tradition amongst the Khasis to the following effect. In olden days a rumour got abroad that there was a woman in a cave called Marai, which is situated near the present village of Pomlakrai, at the source of the river Umiew or Umiam. She was a young and very

519 beautiful damsel. Of the reality of the damsel's existence there is no question. Many tried to catch her, but they could not, owing to the narrowness of the cave. There came, however, a certain very clever man who went to entice her by showing her a flower called "u tiew-jalyngkieng." The damsel then came (out) near to snatch the flower, but the man went on holding back his hand until she came out into a more open place, when he seized her. He then brought her to his house and carefully tended her, and afterwards he married her. That damsel was called "*Ka Pah Syntiew*, the flower-lured one," because that man caught her by coaxing and enticing her with a flower. That man, who came from the village of Nongjri in the Bhoi country, was called the Nongjri Kongor. After she had given birth to daughters and sons, she returned to the same place whence she had been captured, and from that time forth she never came out again, however much her husband and children called and implored her. Her children increased in stature and in wisdom, and the people hearing of the wonderful origin of their mother, came from all parts of the country to look at them. The children also were very clever at showing their humility and good manners in the presence of the elders. All the people (in return) loved them and considered them to be the children of the gods, and did homage to them. It occurred to the nobles and leaders of the Shillong Raj to appoint them Siems, because dang met samla haba bhabriew shibain ah. (they said) the children had been born of a wonderful woman, who, it seemed very clear, was the daughter of the "god Shillong." Therefore they gladly decided to appoint them Siems in the country of Shillong (i.e. the present Khyrim and Mylliem States). The children thus became Siems, and they were called "Ki Siem-Blei" (the god kings) of Shillong.*

U Loh Ryndi and Ka Lin Donkha.

The Syntengs give the following explanation of the origin of the Siems of Sohtinga. There was a man from Wár Umwi named U Loh Ryndi. He went one day to fish in the Umwi stream. When he had caught only one fish, he returned home. He roasted the fish and placed it on the *tyngir* (a swinging shelf above the hearth). He forgot that it was there, and did not remember to eat it. The next morning he went out for a walk to the hill. When he returned home in the evening, he found his house had been swept and locked after, and that the rice had been cooked. He was much surprised at this. The next day the same thing happened. When this state of things continued to occur, he made a pretence of going for a walk to the hill and he called his dog. But he concealed himself the whole day outside the village, and when it was

* The Shillong Peak is thought to be the seat of a powerful bint or god who has his abode in the wood close to the top of the "Peak." Another folk-tale will be found concerning this god.

[Ka]

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

539 time for cooking rice (evening), he returned home. When he saw that smoke was rising from the house, he crept up stealthily in order that he might suddenly enter the house. Finding a woman there, he said, "Who art thou?" She replied, "I am Ka Lih Dohkha. I am the fish whom thou didst catch and forget to eat." She forthwith added, "Thou must not let any one know. I have many relatives. Come, let us go and fetch them to come here." So U Loh Ryndi bade his mother take care of the house until his return from his journey. They went together and arrived at the place where he had caught her, and she jumped into the water and he remained on the dry land. After a while she returned, bringing with her her relatives, but how many of them there were is not known. They all went to the house of U Loh Ryndi. When Ka Lih Dohkha began to enter the house, and was about to cross the threshold, she saw a broom which his mother had placed on the threshold. She therefore abruptly turned back with all her relatives to the river. After that U Loh Ryndi saw in a dream that Ka Lih Dohkha had gone by the river Umwai Khyrwi to a village called Suhtnga. (Since that time all the fish have left the river up to the present day.) He accordingly went to angle for her in that stream, and when he had caught her, he found that she looked after him just the same as before. After that he married Ka Lih Dohkha and she bore him twelve daughters and a son. When the children tydem ding ha ieng u la syntiat bha biang ba un ioh rung kynsan bluit hapoh. Kyllang and Symper.

Kyllang is a hill which is near the village of Mawnai in Khadsawphra, and Symper is a hill which is situated in the Siemship of Maharam. The old folks say that there are gods which inhabit these hills, which are called U Kyllang and U Symper. These gods had a quarrel for some reason that we mortals do not know. They fought by throwing mud at one another. After they had fought, once or twice, U Kyllang proved victorious. So U Symper, having been humiliated, sits quietly in his own place to this day, and U Kyllang sits very proudly because he was victorious in the fight. The holes which are like tanks in U Symper's sides remain to this day; it is said that U Kyllang made those holes during the battle.

* Another version is that it was U Kyrphei, another hill in Nongpoing territory, who fought with U Symper.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

539 [133] stands a hill; it is a very beautiful hill. From a distance it looks like the hump of a bull. It has big trees growing on it, as people are afraid to cut them because they believe that the god "Ryngkew" is there, who takes care of and protects the country. This hill has two names, U Mawlong Siem and U Lyngkrem. U Mawlong Siem is the smaller (peak) on the southern side, and U Lyngkrem the taller one, in which there is a cave. The 539 Mawsmai people sacrifice once 776 or twice a year according to 782 the god's demand. The Mawsmai people have, besides U Mawlong Siem, other village gods (called "Ryngkew"). The name of the one is "U Rangjadong," and the name of the other "U Ramsong." Sacrifices are offered to these two 539 also. U Mawlong Siem is a very great and stern god. The other gods dare not engage in battle with him. He has a daughter called "Ka Khmat Kharai" (i.e. the mouth of the abyss). The god of the Umwai people fell in love with this daughter, but he was unable to obtain her in marriage, as U Mawlong Siem did not like him. It is not possible to know the exact reason why the name of U Mawlong Siem was given to him, but at any rate it appears that the name arose from the fact that in olden days before the death of a Siem there used to be heard at "Mawlong Siem" a great noise of beating of drums. The Mawsmai and the Mawmluh people used to hear it, and they attributed it to the god "Mawlong Siem," who beat the drum for his sepngi na ka shnong. Une u lúm uba i-tynnad shibún. Why there are Spots on the Moon.

In olden days there was a woman who had four children, three girls and one boy. Their names were these, Ka Sngi (sun), Ka Um (water), Ka Ding (fire), and U Bynai (moon). These four children belonged to rich gentle folk. The Moon was a wicked young man, for he began to make love to his elder sister, Ka Sngi. In the beginning the Moon was as bright as the Sun. When the Sun became aware of his bad intentions, she was very angry. She took some ashes in her hand and said to him, "do you harbour such an incestuous and wicked intention against me, your elder sister, who has taken care of you and held you in her arms, and carried you on her back like a mother does; now I will cover your brow with ashes, you wicked and shameless one; begone from the house." Then the Moon felt very much ashamed, and from that time he gave out a white light because the Sun had covered him with ashes. What we see like a cloud (on the Moon) when it is full, are the ashes which adhered from the time the Sun covered him with them. The three daughters, however, remained at home to take care of their mother, until she grew old and died.

"Sohpet Byneng" Hill.

539 In olden days, when the earth was very young, they say that heaven and earth were very near to one another, because the navel-string of heaven drew the earth very close to it. This navel-string of heaven, resembling flesh, linked a hill near Sumer with heaven. At that time all the subjects of the Siem of Mylliem throughout his kingdom came to one decision, i.e. to sever the navel-string from that hill. After they had cut it, the navel-string became short; and, as soon as it shortened, heaven then ascended high. It was since that time that heaven became so high, and it is for that reason that they call that hill which is near Sumer "U Sohpet Byneng."

U Lúm Sohpet Byneng.

How the Dog came to live with Man.

In olden days, when the world was young, all the beasts lived happily together, and they bought and sold together, and they jointly built markets. The largest market where all the beasts used to take their articles for sale was "Luri-Lura," in the Bhoi country. To that market the dog came to sell rotten peas. No animal would buy that stinking stuff. Whenever any beast passed by his stall, he used to say "Please buy this stuff." When they looked at it and smelt it, it gave out a bad odour. When many animals had collected together

near the stall of the dog, they took offence at him, and they said to him, "Why have you come to sell this evil-smelling, dirty stuff?" They then kicked his ware and trampled it under foot. The dog then complained to the principal beasts and also to the tiger, who was at that time the priest of the market. But they condemned him, saying, "You will be fined for coming to sell such dirty stuff in the market." So they acted despitefully towards him by kicking and trampling upon his wares. When the dog perceived that there was no one to give ear to his complaint, he went to man, who said, "Come and live with me, and I will arise with you to seek revenge on all the animals who have wronged you." The dog agreed and went to live with man from that time. Then man began to hunt with the assistance of the dog. The dog knows well also how to follow the tracks of the animals, because he can scent in their footprints the smell of the rotten pea stuff which they trod under foot at Luri-Lura market.

The "Thlen."

In olden days there was a market in the village of Langhiang Kongkhen, and there was a bridge sacred to the gods there. All the children of men used to frequent that heavenly market. They used to pass by

539 Rangjirteh, where there is a cave which was tenanted by a gigantic "thlen." When they went to that market, as soon as they arrived at Rangjirteh they were swallowed up by the "thlen." The "thlen" did this in obedience to an order he had received. If ten people went there, five of them were swallowed up half of them he devoured, and half of them he let go. But any one who went alone was no touched by the "thlen," for it was necessary for him to leave untouched half (of the number of those who went). When many people had been devoured, and when they saw that all the children of men would be destroyed, whether they were Khasis or plains people, they held a great durbar at Sunnai market to which both Khasis and plains people went. They considered together as to how to devise a means by which they could slay the "thlen" which had devoured the children of men. After they had deliberated for a long time theydecided to adopt the following plan. In the grove that is close to Laitryngew, which iscalled "the grove of U Suidnoi," there was a man called "U Suidnoh." They counselled together to get "U Suidnoh" to make friends with the "thlen." This Suidnoh was a courageous man who did not care for any one. He used always to walk alone; so when he went to the "thlen," the latter did not eat him because there was no one else with him who could be let go. The people advised U Suidnoh that he should go and give the "thlen" flesh every

day, either goats, or pigs, or cattle. After he had done this for a long time, the "thlen" became tame, and was great friends with U Suidnoh. When both of them became very intimate thus, the children of men advised U Suidnoh to build a smelting house. So he built a smelting house and made the iron red-hot, and, holding it with a pair of tongs, took it to the "thlen." When he arrived he said to the "thlen," "Open your mouth, open your mouth, brother-in-law, here is some flesh." As soon as he opened his mouth, he threw the red-hot iron down his throat. The monster then struggled and wriggled so violently in its death agony that the earth shook as if there had been an earthquake. When U Suidnoh saw the death struggle of the "thlen," he fainted (from excitement). The quaking of the earth startled all the children of men, and they thought that something had happened. When U Suidnoh did not return home his family went to look for him, for they knew that he had gone to feed the "thlen" with red-hot iron. They found him there lying in a faint. When they had revived him, they asked him why he had fainted thus. He replied, "When I was feeding the 'thlen' with red-hot iron, he struggled and wriggled and I fainted. Come, let us go and see what has become of him." They then went and found that the "thlen" was dead. They then published abroad all over the world that the "thlen" was dead, and they convened a durbar to decide about eating dang sáw dang khluid bha u la leit lam ha U Thlen. 539 him. In the durbar they came to the following understanding, i.e. that the Khasis should eat half, and the plains people half (of the body). After they had come to this decision in the durbar, they then went to take him out of the cave, and they lifted him on to a rock. They there cut into pieces the "thlen's" carcase. The plains people from the East, being more numerous, ate up their share entirely, not leaving anything—for this reason there are no "thlens" in the plains; but the Khasis from the West, being fewer in numbers, could not eat up the whole of their share; they left a little of it. Thus, because they did not eat it all, the "thlen" has remained with them. U Suidnoh gained for himself fame and honour, which he enjoys up to the present day. The Khasis, therefore, when they find that the hair or the clothes of any one belonging to them have been cut, refer the matter to U Suidnoh, and they sacrifice to him. The Syntengs also have their "thlen," but he differs much from the Khasi "thlen." The Syntengs also believe he is a kind of serpent, and there are some families and clans who keep him and worship him like a god. They sacrifice to him a pig only; they do not propitiate him with human blood as the Khasis do.*

Dylhar. Hinrei ki Khasi, na sepngi namar ba ki kham duna briew ki'm shym lah ba'n bam lut ia la ka bynta, ki la pynsah katto katne. Kumta namar ba ki'm shym bám lut, U Thlen u dang sah. * For further details regarding the Khasi superstition of the "thlen," the reader is referred to the portion of the monograph dealing with human sacrifices. It may be mentioned that the "thlen's" cave is at a place called Pom Doloi in the territory of the Siem of Cherra, where there is also a rock called "Dain Thlen" (the cutting of the "thlen"). Another version of the story explaining why there are still "thlens" in the Khasi Hills is that there was an old woman who lived at a place called Mawphu, a village in a valley to the west of Cherrapunji. This old woman forgot to eat her share of the "thlen's" flesh, the result being that the species became repropagated.

About the river "Rupatylli" at Duwara.

In ancient times, when the world was still young, there were two river goddesses who lived on the Shillong Peak; perhaps really they were the daughters of the god of the Peak. These two wagered one against the other that each would be the first to arrive in the Sylhet plains by cutting a channel for herself. They agreed to start from Shillong Peak. One followed the channel of the Umngot, and the other that of Umiew or Umiam. The one that followed the channel of Umngot chose a soft and easy bed, and although the way was a longer one, she did not find it a trouble to go by a circuitous route. When she reached the Sylhet plains she was called "Shengurkhat," and she then flowed past Chhatak and so reached Duwara. She looked round to see where Umiam was, but she could not descry her anywhere. So out of playfulness she flowed slowly, and she formed a channel like a necklace (*rupatylli*) by way of waiting to see where Umiam was. Umiew was very proud, she felt strong enough to make the channel she chose, and although it was through the midst of hills and rocks, she cared not a bit; so she wasted time by digging through the hills and boulders. When she reached Shella, she thought she could easily beat Umngot, for the course she had taken was a very straight one. When she got a little below Shella she saw Umngot shouting for joy with foaming waves

The Kupli (Kopili).

539 133 484 782 The Kopili river rises in the "Black Mountains," † and flows northwards into the Brahmaputra. It is the boundary between the country of the Syntengs and that of the Hadems. ‡ Any traveller who wishes to cross this river must leave behind him the rice which he has taken for his journey, and any other food that he may have taken with him. If he does not do so, even if he crosses the river at an unforbidden point, he is liable to offer a sacrifice to the Kopili goddess. The people offer to her three fowls and three goats outside the village, i.e. one to the goddess herself, and the other two to her sons, U Shyngkram and U Jali; and five fowls, that

* Both rivers, Umngot and Umiew, or Umiam, have their sources in or close to the Shillong Peak. The word "*Rupatylli*" signifies in Khasi a solid silver necklace of a peculiar shape. In order to appreciate this pretty tale thoroughly, the reader ought to view the river "Rupatylli" from the heights of Laitkynsew, or Mahadeo, whence it is to be seen glistening in the sun like a veritable *rupatylli* or silver necklace.

† These mountains are the high hills which lie to the east of the Jowai Sub-Division, and which form part of the boundary line between the Khasi and Jaintia Hills District and North Cachar.

‡ The word Hadem is possibly a corruption of "Hidimba," the old name for North Cachar.

[101]

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

they may all three feast together; this is in the case of one transgression only. But in the case of a man who has committed more than one, it is not possible to say how many goats and fowls must be sacrificed, because the river often demands offerings on account of a man's parents or relatives having crossed the river at some time or other.

From the time of the old Siem to that of U Ram Singh Siem, they used to sacrifice to this great goddess two persons during the months of November and December at the time of offering a sacrifice at Jaintiapur. After a ceremony performed by the Brahmins at Jaintiapur, the victims are led to the Mawshai (Shangpung) market, where they are allowed to take and eat anything they like. After that they conduct them to Sumer; but some say that the stone on which the victims are beheaded is situated below the village of Ka Iew Ksi, near a stream which falls into the Kopili, and where there is a *mawkynthei* (flat table-stone) close to that sacred river.

They place the victims on that stone, where the executioner beheads them with a terrible sword. After that they throw the dead bodies and their heads into the river. But in the days of U Markuhain (U Raj Indro Singh) "who was our contemporary," they have ceased to do so out of fear of the East India Company. The victims are known by the name of "Mugha Khara."

At that time all the people of the territory of the twelve dolois were in a great state of

The Village of Maw-pun-ka-Rytiang (Mawpunkyrtiang).

539 There was in olden days a woman called Ka Rytiang of the Siem clan. Whilst she was still a spinster, she used to go to catch fish in a stream over which there is to the present day a bridge made of a single stone, called Mawpun ka Rytiang. Whilst she was catching fish in the midst of the stream, a fit of drowsiness overtook her. At that very moment there approached her a very handsome young man, who thus addressed her: "Take this drumful of money; do not marry, and thou shalt nevertheless bear children. Thou must throw a bridge built of a single stone across this stream, thou must build thy house entirely of stone, the beams must be all of stone. Thou must spend all the money I have given thee, and if it does not suffice for thy expenditure, I shall bring more. Thou wilt remember all that I say?" She replied "yes." As soon as he

had finished speaking to her, she awoke from her fit of drowsiness and found herself holding a drumful of money. On her way home she pondered over what he had said to her, and her heart was full of joy that she had met a god who had given her so much money, and who had spoken such words to her. She then constructed a bridge over that stream with a single stone, which remains till this day.* When she was about to build her house, it happened that she got married notwithstanding; she gave birth to a blind child, and died shortly afterwards. So the people called the village "Maw-pun-ka-Rytiang," or, when abbreviated, "Mawpunkyrtiang."

The Siem of Malyniang.

The Siem of Malyniang was one of those kings who, people said, was one of the "god-kings." He lived in the village of Madur, which is now in the Maskut doloiship. There arose from the royal family of Malyniang a king whose name was Kyllong Raja. His manner was very peculiar, but he was at the same time both stern and courageous. He made up his mind to conquer the whole of the Synteng country as well as the territory of the Siem of Shillong, in order to extend his own kingdom of Madur. This Kyllong did not require many followers when he went to war

539 because he was a very strong man and a man whom nobody could kill, for, if he was killed he came to life again immediately. The Synteng king once chopped him up into pieces and threw his hands and feet far away, and thought he would not come to life again. Nevertheless, next morning he came to life just the same, and he stalked along all the paths and by-ways to intercept his enemies. The Synteng king was in great trouble on his account, and was at a loss for a plan how to overcome him, because, having been killed once or twice, he came to life again.

When the Synteng king had thought well over the matter, he hit on a device which he thought a very good one, by which he could ascertain by what manner of means he came to life again after having once been killed. The Synteng king's stratagem was the following. He selected the most beautiful girl in the Synteng country, he put on her ornaments of gold and of silver and royal raiment of great price, and he said to her, "All these will I give thee, and more besides, if thou canst obtain for me the secret of Kyllong Raja, and canst inform me how he brings himself to life again after being killed. Now I will send thee to the market there, and if Kyllong Raja takes a fancy to thee, and if he is willing to take thee to wife, thou wilt go, and thou wilt pretend to love him as far as is in thy power. Afterwards thou wilt inquire regarding all his secrets and wisdom, i.e. how he comes to life again after he has been killed; and after thou hast by'm jiw don uba lah ba'n pyniap ia u. La ki pyniap ruh u im pat kumne-kumne. U Siem Synteng u la pom ia u tukra-tukra, u la bred ia ki kyjat ki kti sha jingngai, bad u la tharai ba u'n ym im shuh, pynban tang la mynstep u la im hi kumjuh, u la laid ia ki lad ki dong ban sywait ia ki nongshun. U Siem Synteng u la shitom shibun ia u bad u la duh buit ruh da kumno yn leh ba'n jop ia u, haba shi sin ar sin la pyniap u shu im pat kumjuh pakumjuh. Te haba u Siem Synteng u la pyrkhat bha u la shem kawei ka buit kaba u tharai ba ka long kaba bha tam bad kaba u lah ban tip da kano ka rukom ne ka jingstad ba u im pat haba la pyniap ia u. Ka buit jong u Siem Synteng ka la long kumne. U la shim kawei ka samla kaba bhábriew tam na ka ri Synteng baroh, u pyndeng ki jingdeng ksiar ki jingdeng rupa, bad u pynkup ki jain Siem kiba kordor eh, bad u ong ha ka "ngan ai ia pha kine baroh, bad ngan ai shuh ruh nalor kine lada pha'n ioh ia ka buit u Kyllong Raja ban iathuh ha nga da kumno u lah ban pynim pat ia lade haba pom ia u. Te mynta nga'n phah ia pha sha ieu shato, lada une u Kyllong Raja u i-bha ia pha, bud u'n shim ia-pha ban long ka tynga jong u, phan leit, bad phan leh ieit ia u katba lah. Hadin sa kylli ia ka buit ka jingstad baroh, da kumno u im pat haba la pom ruh, bad ynda pha la tip ia kita baroh sa pyntip sha nga ba nga'n sa jop ia u. Te lada pha'n leh kumta nga'n ai buskit ia pha shibun ho. Kumta u phah iew soit ia ka. Te une U Kyllong Raja u la

539

found out all these things, thou wilt inform me, so that I may overcome him. Then, if thou art successful in thy mission, I will give thee a great reward." He then sent her to the market. Kyllong Raja saw her and fell in love with her, and he took her to wife and kept her at Madur. Then that damsel pretended to love him exceedingly, and she repeatedly asked him his secret, how he came to life again. Then Kyllong Raja, fancying that she really loved him, confessed all to her. He said, "My life depends upon these things. I must bathe every day and must wash my entrails" (hence the appellation of "the king who washes his inside" which they gave him), "after that I take my food, and there is no one on earth who can kill me unless he obtains possession of my entrails. Thus my life hangs only on my entrails."

When, therefore, that damsel who had become his wife had learnt all these things, she sent word to the Synteng king that he should send one of his elders, to whom she might reveal the secret of U Kyllong's existence. When the Synteng king heard this, he sent his elders to her. She then told all those things that U Kyllong had confessed to her. When the Synteng king had heard everything, he gave orders to the people to be on the watch so as to get hold of U Kyllong Raja. They found him one day bathing, with his entrails placed on one side of the bathing-place, so that afterwards he might wash them. Thereupon a man from Ralliang seized the entrails and iohih ia ka, bad u la i-bha shisha ia ka, bad u shim iaka ba'n long ka tynga jong u. U boh ia ka ha Madur. U Manik Raitong and his Flute.

In the northern portion of the Khasi Hills which borders on the Bhoi country there lived a man, by name U Manik. The people nicknamed him "U Manik Raitong," because he was an orphan, his parents, his brothers and sisters, and the whole of his clansfolk having died. He was very poor in addition. U Manik Raitong was filled with grief night and day. He used to weep and deeply groan on account of his orphanhood and state of beggary. He did not care about going out for a walk, or playing like his fellow youths. He used to smear himself with ashes and dust. He used to pass his days only in weeping and groaning, because he felt the strain of his misery to such an extent. He made a flute upon which to play a pathetic and mournful tune. By day he used to work as a ploughman, whenever he was called upon to do so. If nobody called him, he used to sit inactive at home, weeping and groaning and smearing his rags with dust

and ashes. At night he used to bathe and dress himself well, and, after having eaten his food, he used to take his flute and play on it till morning. This was always his practice. He was a very skilful player. He had twelve principal tunes. There lived in the same village a queen. Her husband, the Siem, used to be absent from home for long intervals in connection with his public duties. One night, when the queen heard the strains of U Raitong's flute, she listened to them with very great pleasure, and she felt so much compassion for him that she arose from her couch at midnight and went to visit him. When she reached his house, she asked him to open the door, so that she might pay him a call. U Raitong said, "I can't open the door, as this is not the time to pay visits," and he went on playing his flute and dancing to the music, with tears in his eyes. Then the queen peeped through one of the chinks of the wall and saw him, and she was beside herself, and breaking open the door she entered in. Then U Raitong, having stopped playing, was annoyed that, to add to his misfortunes, this woman had come to trouble him thus. When she tried to beguile him, U Raitong admonished her and sent her away. She departed just before daybreak. U Raitong then took off his fine clothes, and putting on his rags, sprinkled himself with dust and ashes, and went to plough as was his wont. The queen, however, ensnared him by another device, and whilst the king was still away in the

539 plains, she gave birth to a male child. When the Siam returned, he was much surprised to find that she had borne a child during his absence, and however much he asked her to confess, she would not do so. So the king called the elders and young men to judge the case, and when no proof was found concerning this business, the king appointed another day, when all the males (in the State) should appear, each man holding a plantain. On the appointed day, all the males of the State having appeared, the king told them all to sit in a circle and to show their plantains, and said, "We will place this child in the midst, and to whomsoever the child goes, he is his father, and the adulterer. We will beat him to death with clubs according to the law." Accordingly, when all the people sat in a circle, and the child was placed in the midst, he went to no one, and, although the king called and coaxed him much, he nevertheless refused to go. Then the king said, "Remember who is absent." All replied, "There is no one else except U Manik Rutong." The Siam replied, "Call, then, U Rutong." Some of the people said, "It is somewhat [illegible] who is like a dog or a cat; leave him alone, ob king." The king replied, "No, go and call him, for every man must come." So they called him, and when he arrived and the child saw him, the child laughed and followed "U Rutong." Then the people showed that it was U Rutong who had committed adultery with the queen. The had u la lait pyaiur muai. Hinnei kane ka mahabri ka la ram ia u da kawei pat ka lait. ting and his ministers then ordered that U Ratong should be put to death outside the village. U Ratong said, "Be pleased to prepare a funeral pyre, and I will burn myself thereon, wicked man that I am." They agreed to his request. U Ratong said to those who were preparing the funeral pyre, "When I arrive near the funeral pyre, set fire to it beforehand, and I will throw myself in, and you stand at a distance." Then U Ratong went and bathed, dressed himself well, and, taking his flute, played on it as he walked backwards to the funeral pyre; and when he arrived close to it, they lighted it as he had told them to do. He walked three times round the pyre, and then planted his flute in the earth and threw himself into the flames. The queen, too, ran quickly and threw herself on the pyre also. After U Ratong and the queen had been burned, a pool of water formed in the foundations of the pyre, and a bamboo sprang up whose leaves grew upside-down. From U Ratong's time it has become the practice to play the flute at funerals as a sign of mourning for the departed.

SECTION VI.

MISCELLANEOUS.

TERMINOLOGY.

551 The Khasis, like the Alfoors of Poso in Celebes, seem to be somewhat reluctant to utter the names of their own immediate relations, and of other people's also. Parents are very frequently called the mother of so and so (the child's name being mentioned), or the father of so and so, cf. *Ka bud ka Wan, U kpa u Philip*. The actual names of the parents, after falling into desuetude, are often entirely forgotten. The origin of the practice may be that the Khasis, like the Alfoors, were reluctant to mention their parents by name for fear of attracting the notice of evil spirits. The practice of *tabooing*, however, is not confined to the Khasis or the Alfoors of Celebes (see footnote to page 422 of the "Golden Bough"). The custom is also believed to have been prevalent to some extent not long ago in some parts of Ireland.

777 The advent of the Welsh Missionaries and the partial dis-
177 semination of English education has in some cases produced
551 rather peculiar names. I quote some instances :—

U Wasis Kingdom, Ka Mediterranean Sea, Ka Red Sea; U Shakewell Bosan, U Overland, Ka Brindisi, Ka Medina, Ka Mary Jones, U Mission, and Ka India.

SIMPLE METHOD OF CALCULATING TIME.

505 The Khasis adopt the lunar month, *u lynai*, twelve of which go to the year *ka snem*. They have no system of reckoning cycles, as is the custom with some of the Shan tribes. The following are the names of the months :—

505 *U Iylla-Iynglot*, corresponding to January. This month in
173. the Khasi Hills is the coldest in the year. The Khasis turn

1: Gurdon E-4.5 (no date) 1907 AR7 Khasi AR7

(*hylla*) the fire-brand (*lynghot*) in order to keep themselves warm in this month, hence its name *hylla-lynghot*. 805 132

U Symphang, the windy month, corresponding with February.

U Lyhor, March. In this month the hills are again clothed with verdure, and the grass sprouts up (*lyhor*), hence the name of the month, *u Lyhor*.

U Iaiong, April. This name may possibly be a corruption of *u Byneé-iong*, i.e. the black moon, the changeable weather month.

U Jymmang, May. This is the month when the plant called by the Khasis *u'ksu jymmang*, or snake-plant, blooms, hence the name.

U Jyllieu. The deep water month, the word *jyllieu* meaning deep. This corresponds to June.

U nalliang. The evil-smelling month, when the vegetation rots owing to excessive moisture. This corresponds with July.

U'nailar. The month when the weather is supposed to become clear, *synlar*, and when the plant called *ja'nailar* blooms. This is August.

U'nai-lar. September. The month for weeding the ground.

U Bi-sáw. The month when the Autumn tints first appear, literally, when the country, *ri*, becomes red, *saw*. This is October.

U'nói wiong. The month when cultivators fry the produce of their fields in *wiong* or earthen pots, corresponding with November.

U Nak-peik. The month when the *peik* or baskets for carrying the crops are put away (*bak nok*). Another interpretation given by Bivar is "the month of the fall of the leaf." December.

The Khasi week has the peculiarity that it almost universally consists of eight days. The reason of the eight-day week is [illegible] eighth day. The names of the days of the week are not those of planets, but of places where the principal markets are held, or used to be held, in the Khasi and Jaintia Hills. The following are the names of the days of the week and of the principal markets in the district :—

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Khasi Hills.	Jaintia Hills.
1. Lyngkhi (Sarpani or Khawang)	Kylla. (Sohtinga).
2. Nongkrem	Pyrung.
3. Umdeng (Maolong the but at Lahan)	Maolong. (Narting).
4. Bangkey (Iso-lah at Chorra) (Mawtawar in Mylliem) (Umsaw in Nongkhlaw)	Maoniang. (Jowai).
5. Shillong (Laitlingkot)	Mawhai. (Shangpung).
6. Pomsih or Pomsiah (Mawkhar, small market)	Pyshat. (Myntri).
7. Umsih	Thyrn-lista.
8. Umdah (Mawkhar, large market)	Ka-lat. (Jaintiapur).

In the War country, markets are usually held every fourth day, e.g. at Nongjri, Mawlong, Tyllep, and Shella. At Thoria the market is held every Friday, and at Hat-mojai, or Bholaganj, every Tuesday.

THE LYNGAMS.

Although mention has been made incidentally in various parts of this monograph of Lyngam customs, it has been thought necessary to give the Lyngams a separate chapter, as these people differ so very greatly from the Khasis in their manner of life, and in their customs. *Lyngam* is the Khasi name; the Garo name for the Lyngams is *Mopon*. There are several *Mopon* villages in the north-eastern corner of the Garo Hills district, and there is regular communication kept up between these villages and the Lyngam inhabitants of the Khasi Hills district. The Lyngams must not be confused with the *Bhoi* or *Nindaniya* Garos who inhabit the low hills to the north of the Khasi Hills district, and are called by the Khasis *Bhoi*. All Lyngams claim to be Khasis, they dislike being called Garos; but although it is true they speak what may be called a dialect of Khasi, and observe some of the Khasi customs, the Lyngams are more Garo than Khasi. Before proceeding further, it should be stated that the *Amanaus* of Boko call the Lyngams *Nindaniya* Garos, all hill people being Garos to the *Amanaus* of that region, without distinction

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

or difference. It is owing to these three different names being 101
used for the same people that there has been so much confusion about Lyungams previously; e.g. at one census they were named *Lyungam*, at another they received the appellation of Garo, and at a third enumeration they were called Khasis. In Section I. 131
the habitat of the Lyungams has been roughly defined. It is 361
impossible to define the Lyungam country exactly, because 173
these people are continually shifting their village sites owing to the exigencies of *jhum* cultivation, which has been described in Section II. Some of the Lyungams preserve a tradition that they originally came from the Kamrup plains. It is interesting that a people, like the Garos in so many respects, should have the same idea as the Garos as to the hills on the south bank of the Brahmaputra not always having been their abode. The Garo legend is that they dwelt for 173
some years in the Goalpara and Kamrup plains after they 361
descended from Thibet, and before they moved to the Garo 199
Hills; and there is unmistakable evidence of their occupation of both districts in the shape of certain Garo villages on both banks of the Brahmaputra for some little distance up the river. If, as I suspect, the Lyungams are an offshoot of the Garos, it is, perhaps, possible that they entered the Khasi Hills much in the same way as the Garos entered the hill district to which they have given their name. The Lyungams are much darker 192
than the Khasis, and possess the Thibeto-Burman type of 197
feature often to a marked degree. It is not extraordinary that they should have adopted some of the Khasi customs, for the Khasis, being the stronger people, would in course of time be bound to influence them in this respect. That the Lyungams 411
observe the matriarchate and erect (some class) memorial 211
stones is not peculiar, because the Garos, like the Khasis, are 764
also a matriarchal people (to a limited degree), and the custom of erecting memorial stones is not confined to the Khasis, for other hill tribes in Assam observe the practice, e.g. certain Naga tribes and the Mikirs; and the Garos themselves put up carved posts, called *kima*, in honour of the departed. Although 582
there is not much intermarriage between the Khasis and the 101
Lyungams nowadays, perhaps in days gone by there was a 197
mixture of blood, the result being the hybrid race we are now

considering. Some of the leading characteristics of the Lyngams will now be detailed. The Lyngams are by complexion swarthy, with features of Mongolian type. The men are of middle height and the women remarkably short, both being not nearly so robust as the Khasis, a result due probably to climatic influences, for the Lyngams live in fever-haunted jungles. The men have very little hair about the face, although a scanty moustache is sometimes seen, the hairs in the centre being carefully plucked out, the result being two tufts on either side. Beards are never seen. The women are ill-favoured, and wear very little clothing. The men wear the sleeveless coat of the Khasi and Mikir pattern, called *phongmarong*, which is made of cotton dyed red, blue, and white. This custom may have been borrowed from the Khasis. They do not grow their own cotton, but obtain it from the plains. They make their own dyes, *changlong* (red) and *kar sai-iong* (black). A cotton cloth, barely enough for purposes of decency, is tied between the legs, the ends being allowed to hang down in front and behind. Sometimes an apron is worn in front. At the present day the men wear knitted woollen caps, generally black or red, of the Nongstoin pattern (a sort of fisherman's cap), but the elderly men and head-men wear turbans. The females wear a cotton cloth about eighteen inches broad round the loins, sometimes striped red and blue, but more often only dark blue. A blue or red cloth is thrown loosely across the shoulders by unmarried girls, but married women only wear the waist-cloth, like the Garos. A cloth is tied round the head by married women, sometimes, Garo fashion. The women wear quantities of blue beads as necklaces, like their Garo sisters. They obtain the beads from the Garo markets at the foot of the hills. Brass ear-rings are worn by both sexes; the women, like the Garos, load their ears to such an extent with brass rings as to distend the holes greatly. Silver armlets are worn by the head-men only, or by those who possess the means to give a great feast to the villagers. This is the custom of the Garo *nokmas*, or head-men. Both sexes wear bracelets. The men also wear necklaces of beads. The rich wear necklaces of cornelian and another stone which is thought by the Lyngams to be valuable. A necklace of such stones is called *u'piong blei* (god's necklace).

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

301 This stone is apparently some rough gem which may be picked up by the Lyungams in the river beds. A rich man amongst
556 them, however, is one who possesses a number of metal gongs,
534 which they call *wiang*. For these they pay very high prices.
426 Rs. 100 being quite a moderate sum for one of them. Being curious to see one of these gongs, I asked a *sirdar*, or head-man, to show me one. He replied that he would do so, but it would take time, as he always buried his
[534] gongs in the jungle for fear of thieves. Next morning he brought me a gong of bell metal, with carvings of animals engraved thereon. The gong when struck gave out a rich deep note like that of Burmese or Thibetan gongs. These gongs have a regular currency in this part of the hills, and represent to the Lyungams "Bank of England" notes. It would be interesting to try to ascertain what is their history, for no one in the Lyungam country makes them in these days. Is it possible that the Garos brought them with them when
534 they migrated from Thibet? The gongs are well known in the
622 Garo Hills, and I hear that when a *sokma*, or head-man, there
778 dies his corpse is laid out upon them. They thus possess also an element of sanctity, besides being valuable for what they will fetch to the Garos or Lyungams. We may hope to hear more about them in Captain Playfair's account of the Garos.

309 The Lyungams do not tattoo. Their weapons are the large-
411 headed Garo spear, the dao, and the shield. They do not usually
243 carry bows and arrows, although there are some who possess them. They are by occupation cultivators. They sow two kinds of hill rice, red and white, on the hill-sides. They have no wet paddy cultivation, and they do not cultivate in terraces like the Nagas. They burn the jungle about February, after cutting down some of the trees and clearing away some of the debris, and then sow the paddy broadcast, without cultivating the ground in any way. They also cultivate millet and Job's-tears in the same way. With the paddy vhillies are sown the
241 first year. The egg plant, arum, ginger, turmeric, and sweet
231 potatoes of several varieties are grown by them in a similar
754 manner. Those that rear the lac insect plant *laadoo* trees (Hindi *achal dal*) in the forest clearings, and rear the insect thereon. Some of these people, however, are prohibited by a

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

241 custom of their own from cultivating the *landoo*, in which
231 case they plant certain other trees favourable to the growth of
784 the lac insec. The villages are situated near their patches of cultivation i the forest. The villages are constantly shifting,
36 owing to the necessity of burning fresh tracts of forest every
241 two years. The houses are entirely built of bamboo, and, for such temporary structures, are very well built. In front, the
342 houses are raised some 3 or 4 ft. from the ground on platforms, being generally built on the side of a fairly steep hill, one end of the house resting on the ground, and the other on bamboo posts. The back end of the house is sometimes some 8 or 9 ft. from the ground. At the end of the house farthest away from the village path is a platform used for sitting out in the evening, and for spreading chillies and
342 other articles to dry. Some Lyngam houses have only one
354 room in which men, women, and children are all huddled
231 together, the hearth being in the centre, and, underneath the platform, th pigs. Well-to-do people, however, possess a retiring room, where husband and wife sleep. A house I
342 measured a Nongsdilar village was of the following dimensions:—Length, 42 ft.; breadth, 16 ft.; height of house from the ground to the eaves, front, 9 ft.; back 18 ft. Houses are built with a portion of the thatch hanging over the eaves in front. No explanation could be given me for this. It is probably a Garo custom. In some Lyngam villages there are houses in th centre of the village where the young unmarried men sleep, here male guests are accommodated, and where the
[171] village festivities go on. These are similar to the *dekhabang* or bachelors' club-houses of the Mikirs, Garos, and Lalungs, and to the *morung*, the Nagas. This is a custom of the Thibet-Burman tribes in Assam, and is not a Khasi institution. There
[577] are also high platforms, some 12 ft. or 15 ft. in height, in Lyngam villages, where the elders sit of an evening in the hot
[556] weather and take the air. Lyngam houses and villages are usually much cleaner than the ordinary Khasi villages, and although the Lyngams keep pigs, they do not seem to be so
352 much *en évidence* as in the Khasi village. There is little
513 or no furniture in a Lyngam house. The Lyngam sleeps on
287 a mat on the floor, and in cold weather covers himself with a

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

quilt, made out of the bark of a tree, which is beaten out and then carefully woven, several layers of flattened bark being used before the right thickness is attained. This quilt is called by the Lyungams "*Ka sylkar*" (Garo *simpak*). Food is cooked in earthen pots, but no plates are used, the broad leaves of the *mariang* tree taking their place. The leaves are thrown away after use, a fresh supply being required for each meal. 352 513 287 252 415

The Lyungams brew rice beer, they do not distil spirit; the beer is brewed according to the Khasi method. Games they have none, and there are no jovial archery meetings like those of the Khasis. The Lyungam methods of hunting are setting spring guns and digging pitfalls for game. The people say that now the Government and the Siem of Nongstoin have prohibited both of these methods of destroying game, they no longer employ them. But I came across a pitfall for deer not long ago in the neighbourhood of a village in the Lyungam country. The people declared it to be a very old one; but this I very much doubt, and I fear that these objectionable methods of hunting are still used. The Lyungams fish to a small extent with nets, but their idea of fishing, *par excellence*, is poisoning the streams, an account of which has already been given in this monograph. The Lyungams are omnivorous feeders, they may be said to eat everything except dogs, snakes, the *bulok* monkey, and lizards. They like rice, when they can get it; for sometimes the out-turn of their fields does not last them more than a few months. They then have to fall back on Job's tears and millet. They eat arums largely, and for vegetables they cook wild plantains and the young shoots of bamboos and cane plants. The Lyungams are divided up into exogamous clans in the same manner as the Khasis. The clans are overgrown families. The Lyungams have some stories regarding the founders of these clans, of which the following is a specimen:—"A woman was asleep under a *sohbar* tree in the jungle, a flower from which fell on her, and she conceived and bore a female child who was the ancestress of the Nongsohbar clan." Some of the stories of the origins of other clans do not bear repeating. There do not appear to be any hypergamous groups. As with the Khasis, it is a deadly sin to 274 526 224 226 262 614 773 582 614

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

582 marry any one belonging to your own *kur*, or clan. Unlike the
614 Khasis, however, a Lyngam can marry two sisters at a time.
595 The Lyngam marriages are arranged by *ksiangs*, or go-betweens,
584 much in the same way as Khasi marriages; but the ritual
582 observed is less elaborate, and shows a mixture of Khasi and Garo customs (see Section III.). The Lyngams intermarry
583 with the Garos. It appears that sometimes the parents of girls exact bride-money, and marriages by capture have been heard of. Both of these customs are more characteristic of the Bodo
849 tribes of the plains than of the Khasis. There are no special birth
762 customs, as with the Khasis, except that when the umbilical cord
553 falls a fowl is sacrificed, and the child is brought outside the house. Children are named without any special ceremony.
764 The death customs of the Lyngams have been described in Section III. A peculiar characteristic is the keeping of the dead body in the house for days, sometimes even for several months, before it is buried. The putrefying corpse inside the house seems to cause these people no inconvenience, for whilst it remains there, they eat, carry on their ordinary avocations, and sleep there, regardless of what would be
791 considered by others an intolerable nuisance. The religion of these people consists of a mixture of ancestor-worship and the propitiation of the spirits of fell and fall, which are, most of them, believed to be of evil influence, as is the case with other savage
786 races. As with the people of Nongstoin, the primaeval ancestress, "*Ka Iaw bei*," is worshipped for the welfare of the
782 clan, a sow being sacrificed to her, with a gourd of rice-beer, and leaves of the oak, or *diengsning* tree. The leaves of the oak are afterwards hung up inside the house, together with the jaw-bone of the pig. Sacrifices are offered to a forest demon, *U Bangjang* (a god who brings illness), by the roadside; also to *Ka Miang Bylli U Majgnaw*, the god of cultivation, at seed time, on the path to the forest clearing where the seed is sown. Models of paddy store-houses, baskets and agricultural implements are made, sand being used to indicate the grain. These are placed by the roadside, the skulls of the sacrificial animals and the feathers of fowls being hung up on bamboos about the place
793 where the sacrifice has been performed. There are no priests or
796 *Iyngdoh*, the fathers of the hamlet performing the various cere-
monies.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

monies. The Lyngams possess no head-hunting customs, as far as it has been possible to ascertain. These people are still wild and uncivilized. Although they do not, as a rule, give trouble, from an administrative point of view, a very serious dacoity, accompanied by murder, was committed by certain Lyngams at an Assamese village on the outskirts of the Lyngam country a few years ago. The victims were two Merwari merchants and their servant, as well as another man. These people were brutally murdered by the Lyngams, and robbed of their property. The offenders were, however, successfully traced and arrested by Inspector Raj Mohan Das, and several of them suffered capital punishment, the remainder being transported for life.

SECTION VII.

LANGUAGE.

197 BEFORE commencing to describe the more salient features of the Khasi language, its grammar, and syntax, it seems to be of importance to show how intimately connected Khasi is with some of the languages of Further India. In the middle of the last century Logan pointed out affinity between Khasi and these languages, but it has been left to Professor Kuhn to prove this connection to demonstration. The examples of comparative vocabularies which follow are taken from Kuhn's "*Beiträge zur Sprachkunde Hinterindiens*," Sir George Scott's "Upper Burma Gazetteer," and Sir George Campbell's lists. It will be seen from the collections of words that follow how Khasi possesses many words in common with Mon or Talaing, Khmêr, Suk, Stieng, Bahnar, Annam, Khamen-Boram, Xong, Samre, Khmu, Lemet, Palaung, and Wa. There is some correspondence, although perhaps to a lesser degree, between Khasi and the Ho-Munda languages and those of Malacca and the Nancowry language of the Nicobar Islands.

192 197 Let us now examine the table of numerals. The Khasi word for 1 is *wei*, but in the Amwi dialect of Khasi it is *wi*. In Khmu the word is *mai*, also in Suk; in Mon *mwoi* and in Xong *mui*. The word for 2 is identical in Khasi and Lemet, viz. *ar*. The word for 3, viz. *lai*, is identical in Khasi and Wa; also compare Lemet *lahi*. Khasi *ruar* and Lalaubang *thar* for 4 are, however, deviating forms. In the case of 5, if we cut out the prefix *m* in the Mon word *m'sun*, we have fairly close agreement with the Khasi *sun*. In the numeral 6, if we cut out the prefix *kin* of the Khasi (*kin*)*riw*, and the initial *t* of Mon and Suk *t'rou*, *trou*, we have close agreement. In the Khasi words for 7 and 8 the syllable *kin* is but a prefix. This is also probably the case in the Khasi word (*khyn*)*dai* for 9, and the *shi* in the Khasi word *shipher*, 10, merely means one.

It will be seen that there is considerable similarity in the numerals of the different languages up to six, the correspondence being most strongly marked in the numerals 1, 2, 5, and 6. If we remember that primitive people seldom can count higher than the number of digits of one hand, the dissimilarity in the numerals, as the end of the decade is approached, is probably explained. As the different people speaking these languages gradually advanced in civilization they learned to count further; but by this time they had become in some cases like those of the Khasis, the Palaungs, and Mons, widely separated from one another. As they advanced in civilization, and found the necessity of an improved notation, they manufactured numerals which differed from one another, although they retained the first few numerals they had made use of in their days of savagery. Let us now study some extracts from Kuhn's interesting comparative vocabulary.* We find many instances of agreement. I give some examples:—

Houses.—Palaung, *pleng*; Khmér, *pleng* (rain); Xong, *pleng*; Khasi, *hoong*. Myunar (Jirang) *phaalleng* seems to be very near Khmér *pâlleng*, and Palaung, and Xong *pleng*.

Day (Sun).—Khmér, *thopay*; Mon, *tuyei*; Annam, *ngay*; Lemet, *ngay pei*; Palaung, *aengei*; Khasi, *ongi*; Lakadong, *angei*; Kol, *aingi*.

Year.—Mon, *nuin*; Annam, *nam*; Stieng, *ni'nam*; Bahnar, *anam*; Khasi, *nam*.

Lightning.—Mon, *Tli*; Khasi, *lelli*.

Stone, Rock.—Mon, *tnal*, *t'naw*; Stieng, *ta'nalu*; Bahn, *tnao*, *tnoa*; Khmér, *thnoa*; Xong, *tnoa*; Palaung, *naw*; Ba, *naow*; Khasi, *naw*; Wa, *hei-nao*, *hei-nan*. Also compare Myunar (Jirang) *anaw*.

Water.—Palaung, *ea*; Khasi, *um*; Lakadong, *ea*; Anwi, *ana*; Myunar (Jirang), *ion*; Rumai, *ue*. Probably the Stieng *um*, to bathe, can be connected with the Khasi word for water.

Sea, pond, or tank.—Khmér, *ping*; Khasi, *pong*.

Rice.—Mon, *aru*, paddy, seems to be in connection with Khmér, *srur* (spoken *sruu* or *sroo*).* Xong *ruke* is in Palaung *ruhen*, *ashen*, or *talon*. These words remind us of the Khasi

* Kuhn's "Beiträge zur Sprachenkunde Hinterindiens."

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

khaw, which seems to be borrowed from the Shan *khaw* (*hkao k-aw*).

Dog.—The common word for this animal will be found to be nearly the same in sound in many of these languages, e.g. Suk, *cho*; Stieng, *sou*; Bahnar, *ko*, *cho*; Annam, *cho*; Xong, *tcho*; Mi, *khau*; Lemet, *so*; Palaung, *tsao*, *ksao*; Khasi, *ksew*. The Mon *khlaiw* is the same as the Khasi *ksew*, if l is changed into s. The Lakadong and Synteng dialects of Khasi have *kseu*, and Mynnar (Jirang) *ksow*.

Rat, mouse.—Mon, *kni*, *gni*; Stieng, *ko'nei*; Bahnar, *kone*; Khasi, *khnai*.

Swine.—Bahnar *niang* is evidently Khasi *'niang*, the abbreviated form of *sniang*.

Tiger.—Mon, *kla*; Stieng, *klah*; Bahnar, *kla*; Khmêr, *khlā*; and Khasi, *khlā* are evidently the same. With this compare the Kol *kula*, *kulā*, *kālā*.

Bird.—Suc, *kiem*; Mon, *g'cem*, *ka-tsim*; Hüei, *chiem*; Stieng, *chum*; Bahnar, Annam, *chim*; Xong, *chiem*; Palaung and Wa, *kaim*, and Khasi *sim* are clearly the same. Also compare Mynnar (Jirang), *ksem* which is very near to Mon, *g'cem*.

Fowl.—Hüei, *kat*, *yar*; Suk, *yer*; Bahnar, *ir*; Stieng, *iêr*; Khmu, *yer*; Lemet, *er*; Palaung, *her*, and Khasi, *siar*, abbreviated into *'iar*, are probably the same.

Fish.—The word *ka* or *kha* runs through the following languages:—Mon, Stieng, Bahnar, Annam, Khmu, Lemet, Palaung, Wa; and if we cut off the first syllable of the Khasi word for fish, *dokkha*, we find *'kha*, which is the same word as in the languages above mentioned, with an aspirate added. The Khasi *dok* merely means flesh, and the word *dokkha* is very frequently abbreviated, cf. *'kha mew*, *'kha iong*.

Crab.—Mon, *kh'tām*; Khmêr, *ktām*; Khasi, *thām*. If we add the gender sign to the Khasi word, it becomes *ka thām*, and we have exact correspondence.

Woman.—Mon, *brou* or *brao*. Is this the same as the Khasi (*ka*) *brie*?

Child.—Sa, *kâu*; Suk, *kou*; Mon, *kon*; Hüei, *kuon*; Annam, *kon*; Khmêr, *kun*; Khasi, *khun*. Compare Nancowry, *kon*.

Eye.—The word *mât*, *mat*, *māt*, runs through several of these languages, e.g. Mon, *mat*; Huei, *mat*; Stieng, *mat*; Bahnar,

l: Gurdon E-4, 5 (no date) 1907 AR? Khasi AR?

mat; Annam, *mat*; Khasi, *khmát* (dialectic *mát*). In Nancowry compare *ámat*, eye, and *ámat*, eyebrow, and (*e*) *mat* (*kea*) *mat* (*drug*), *mat*, of the Nicobar dialects, also Semang *mat*, *mat*, *med*. Kuhn remarks that the word *mat* is common for "*sight*," and "eye" all over the Malay Archipelago. It should be remarked that in the Amwi and Lakadong dialects of Khasi the word is *mát*. 197

Nose.—If we cut off the aspirate *kh* from the Khasi *khmat*, which thus becomes *mat*, we find some correspondence between Mon, *mah* (*mu*); Stieng (*kro*), *mih*; Bahnar, *mah*. Here also compare Ho *mae*, *mate*; Mundari, *mae*; Uraon, *mep*. In the Amwi and Lakadong dialects of Khasi the word is *mar-long*.

Hand.—Xong, *ti*; Mon, *toi*; Annam, *tay*, Khmer, *te* (from *ang te*, finger); Palaung, *tee*, *toi*, and Khasi, *khti* (with prefix *k*) closely correspond. The forms *te* and *toi* of Amwi, and Lakadong, respectively, still more closely correspond with the Mon-Khmer languages than with Khasi. Here compare Nancowry *toi* and *ti*, or *ti* of the Kol languages.

Blood.—Palaung *kwem*, and Wa *wam* closely correspond with Khasi *ambim*; here compare Khmér *jhém*.

Horn.—Mon, *grang*, the horn of an animal, may be compared with the Khasi *rang*.

Far.—Distant. Bahnar, *kangai*; Annam, *xai*; Khmér, *chkangay*; Lemet, *angay*; Sue *chagai* may be compared with the Khasi *jing-ngai*. Amwi *chajagai* seems to be a closer form to the above than Khasi *jing-ngai*. But compare Myunar (Jirang), *chagi*, which is clearly very close to Sue *chagai*, and Khmer *chkangay*.

To weep, to cry.—Mon, *pém*; Khmer, *pem*; Khmu Lemet and Palaung, *pem*, are clearly the same as Khasi *ibm*, with which also may be compared Ho *pém*.

It is interesting to note that the Amwi and Lakadong dialects of Khasi, which are spoken by the people who dwell on the southern slopes of the Jaintia Hills, seem more closely to correspond with the Mon-Khmer forms than even with Khasi. The Myunar or Jirang dialect of Khasi, spoken on the extreme north of the hills, also appears to possess some words which are very similar indeed to some of the Mon-Khmér forms given by 197

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

Professor Kuhn. Unfortunately, I had time to collect but a few words of this interesting dialect, as I arrived in the portion of the country inhabited by these people only a short time before submitting this monograph to Government. The Mynnar dialect appears to be akin to the Syntong, Lakadong, and Amwi forms of speech. The Mynnar observe also the Syntong ceremony of "Bok-ding-dikon," or driving away the demon of cholera, so that although now inhabiting a part of the country a considerable distance away from that of the Syntengs, it is not unlikely that they were originally connected with the latter more closely.

Professor Kuhn comes to the conclusion that there is a distinct connection between Khasi, Mon or Talaing, Khmer, and the other languages of Indo-China that have been mentioned, which is to be seen not only from similarities in some of the numerals, but from the surviving condemnation of many other words of these languages. He goes on to add that more important than these contacts of the monosyllabic languages of Indo-China with monosyllabic Khasi is their affinity with the Kol, and Nonosyllabic-syllabic languages and with that of the aboriginal inhabitants of Malacca, i.e. the languages of the so-called Orang-Binatang, or some of the tribes, Sakai, Semang, Orang-Benua, and others; and that although it is not, perhaps, permissible to derive at once from this connection the relation of the Khasi Mon-Khmer monosyllabic group with these poly-syllabic languages, it seems to be certain that a common substratum lies below a great portion of the Indo-Chinese languages as well as those of the Kol and Mon-Munda group. More important than connections between words is, as Dr. Grierson points out in his introduction to the Mon-Khmer family, the order of the words in the sentence. In both Khasi and Mon
193 that order is subject, verb, object. Taking this fact in conjunc-
197 tion with the similarities of the Khasi and Mon vocabularies, we may conclude that it is proof positive of the connection between Khasi and Mon, or Talaing. In Munda, however, the order is subject, object, verb. This is a very important difference, for, as Dr. Grierson points out, "the order of words in a sentence follows the order of thought of the speaker; it follows therefore that the Munda think in an order of ideas different

Ii Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

from those of the Khasis and the Mons. Dr. Grierson comes to the same conclusion with respect to these languages as Professor Kuhn, which is as follows:—"Owing to the existence of these differences we should not be justified in assuming a common origin for the Mon-Khasis langs., on the one hand, and for the Munda, Nancowry, and Malacca languages on the other. We may, however, safely assume that there is at the bottom of all these tongues a common substratum, over which there have settled layers of the speeches of other peoples, differing in different localities. Nevertheless, this substratum was so firmly established as to prevent its being entirely hidden by them, and frequent undeniable traces of it are still discernible in languages spoken in widely distant tracts of Farther and Further India. Of what language this original substratum consisted we are not yet in a position to say. Whatever it was, it covered a wide area, larger than the area covered by many families of languages in India at the present day. Languages with this common substratum are now spoken, not only in the modern Provinces of Assam, in Burma, Siam, Cambodia, and Annam, but also over the whole of Central India, as far west as the Berars." Grierson, having agreed regarding the existence of this common substratum, does not finally determine whether the ancient substratum was the parent of the present Munda languages, or of the Mon-Khasi language. He says, "It cannot have been the parent of both, but it is possible that it was the parent of neither." We are thus still in a state of uncertainty as to what was the origin of these languages.

The brief description which follows of some of the more prominent characteristics of the Khasi language is based chiefly on Sir Charles Lyall's skeleton Grammar contained in Vol. II of Dr. Grierson's "Linguistic Survey of India." It does not pretend to be an exhaustive treatise on the language; for this students are referred to the excellent grammar compiled by the Rev. H. Roberts.

The Article.—There are four articles in Khasi; three in the singular, *u* (masculine), *ka* (feminine), and *i* (diminutive of both genders); and one in the plural for both genders, *ki*.

All Khasi nouns take a pronominal prefix to denote the gender, i.e. the third personal pronoun, *u* (masculine), *ka* (feminine),

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

193 *i* (diminutive). The great majority of inanimate nouns are feminine, and all abstract nouns. The sun (day), *ka sngi*, is feminine; the moon (month), *u Blei*, is masculine. Sometimes the word varies in meaning according to the gender, e.g. *u ngay*, a law; *ka ngay*, honey.

Gender.—Names of mountains, stones, plants, fruits, stars, and the moon, are masculine, e.g.:—

U Lylleng, the Lylleng rock.
U maskha, quartz.
U phew, potato.
U sok sniatim, orange.
U Iar shei, the morning star.
U Iar Bnlaj, star.
U Blei, the moon.

Names of rivers, lakes, books, places, the sun, and all abstract nouns are feminine, e.g.:—

Ka wah, river.
Ka umi, lake.
Ka Lylleng, book.
Ka Shillong, Shillong.
Ka sngi, sun.
Ka jingmang, advice.

The article *i* is used either as a diminutive, as *i Shnaiborg*, a baby, or for denoting relationship, as *i mei*, mother.

Number.—*U*, *ka*, and *i* stand for the singular number, e.g. *u Bilo* (a tiger), *ka Shah* (a Khasi basket), *i Shna* (a child). *Ki* is the sign of the plural, as *ki nam*, the sunn. *Ki* is used in few instances in most horrifically, as *ki Siem*, the kings, *ki Sibor*, the father-in-law.

Cases are eight in number, and are denoted by prefixes. The declension of the noun *ban* (bill) is given below by way of example:—

	Singular.	Plural.
Nominative	*u ban*	*ki ban.*
Accusative	*ym u ban*	*ym ki ban.*
Instrumental	*dia u ban*	*dia ki ban.*
Dative	*ym, ban, ym ulu u ban*	*ym, ban, ym ulu ki ban.*
Ablative	*ym u ban*	*ym ki ban.*
Genitive	*jong u ban*	*jong ki ban.*
Locative	*ban u ban*	*ban ki ban.*
Vocative	*ban ban*	*ban phi ki ban.*

I: Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

The sign of the genitive case, *jong*, is sometimes omitted for the sake of brevity, *e.g.* *u kwor ugo* (my dog) for *u kwor jong ugo*. The preposition *ka* gives also the force of the possessive case, *e.g.* *ka ka jong ka jong* (their own). There are some nouns which change their form, or rather are abbreviated when used in the vocative case, *e.g.* *ka mei*, not *ka kmei* = Oh mother; *ka pa*, not *ka kpa* = Oh father. These, however, are all of them nouns showing relationships. 195

Pronouns.—Personal pronouns are *ngu* (I), *ngi* (we), *ma* (thou, masculine), *pha* (thou, feminine), *phi*, you (masculine or feminine), *u* (he, it), *ka* (she, it), *i* (diminutive form of *u* or *ka*), and *ki* (they).

The emphatic form of the personal pronoun is formed by prefixing *ma*, *e.g.* *ma-ngu*, *ma-u*, after a verb, but not after a preposition, *e.g.* *ki-ma-ngu* = it is I. But *ai ia ma ngu* is an incorrect form.

The Reflexive Pronoun is formed by the word *kade* (self) being affixed to the personal pronoun, *as u-kah ma-ia kade* = he has hurt himself hard, or by the addition of the word *ki* (self) to the personal pronoun, *as phi ki phi ong* (you yourself).

The Relative Pronoun is formed by the suffix *ka*, added to any of the personal pronouns, *as kaba*, who, *kiba* (who, which).

The Demonstrative Pronoun is formed by the addition of the particles denoting the position of things with reference to the speaker, *e.g.* (1) near = this, *ne* (*u-ne*, *kane*, *i-ne*, *ki-ne*); (2) in sight, but further off = that, *to* (*u-to*, &c.); (3) further away, but still visible = that *tai* (*u-tai*, &c.); (4) out of sight or only contemplated in the mind = that, *ta* (*u-ta*, &c.); (5) above = that, *tai* (*u-tai*, &c.); (6) below = this, *thi* (*ka-thi*, &c.); *kitai-tai*, *kaiai-ta*, *kathi-thie* point to an object at a great distance but within sight.

The Interrogative Pronoun is the article followed by *no* or *ai* (*e.g.* *u-no*, *kano*, who), *u-ai*, *ka-ai* (who, which). *Ki* is often used without the "article," and *no* (which is restricted to persons) when *declined*, regularly drops the "article," *e.g.* *jong-no* whose? *no-no*, whom? *ska-no*, to whom? What? *ondar*, *ia-ainal*, and also *kaai*.

Adjectives are formed by prefixing *ka* to the root, thus *kha* goodness; *ka-kha*, good; *ensin*, badness; *ka-ensin*, bad. When

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

193 *ka* is dropped, the word is no longer an adjective but a verb, and is some cases a noun, e.g. *ulu lêwar* (adj.) = big, great; *u lêwar* = he becomes great. An adjective may be formed without any of the prefixes *ka*, *ut*, &c., e.g. *ka mon-tuk* = a thieving cat.

An adjective follows the noun it qualifies, and agrees with the noun it qualifies in gender and number.

Comparison.—The comparative is formed by adding *lêwar* before an adjective, followed by *ban* or *ym* (than), or simply *ym*, and the superlative by adding such adverbs of intensity as *ban*, *ut*, *ut lêwar*, *ban ut*, *shikhdi-i*, which are followed generally by *ym* or *ban ym*.

Numerals.—In Khasi the cardinal number always precedes the noun (e.g. *ka ain*, three times). The following are the first ten numerals.

[902]

1. *Ha-i.*	6. *Hynrai.*
2. *Ar.*	7. *Hynnem.*
3. *Ain.*	8. *Thew.*
4. *Sha.*	9. *Khyndai.*
5. *Sha.*	10. *Shiphew.*

The word *lêad* is prefixed for forming the numerals from 11 to 19, e.g. *lêad-ym*, *lêad-ar*, eleven, twelve, &c.

The verbal root (which never varies) may be simple or compound. The compound roots are (1) causal, formed by prefixing *pyn* to the simple root: as *ioy*, die; *pynioy*, kill. (2) Frequentative, formed by prefixing *ion*; as *iom*, weep; *ion iom*, weep continually. (3) *Intransitive*, by prefixing *mon*; as *ainud*, be wise; *monainud*, grow wise. (4) *Reciprocal*, by prefixing *ia*; as *ia-ïl*, love; *ia-ïl*, love one another. (5) *Intensive*, by prefixing the particle *lyn*, *lyn*, *syn*, *ryn*. Any noun or adjective may be treated as a verbal root by means of a prefix of these five classes. Thus *lajin*, a quarrel (Hindustani loan word, *pajin*); *ia-lajin*, to quarrel with one another; *lynin*, share; *pyn-lynin* (causal root), to divide between several persons. It should be mentioned with reference to the causal class or frequentative verbs, that they sometimes take the prefixes or particles as follows: prefixes to call them, *dem*, *day*, *mop*, *shuit*, *ioy* in place of *ion*; e.g. *dem-iom*, to come after; *day-ïl*, to practise; *mop-ïud*, to go on searching; *shuit-pang*, to be always ill; *ioy-iom*, to be in the habit of dropping. There are two

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

verbs for "to be," *long*, implying existence absolutely, and *don*, implying limited existence, and also meaning "to have." There is only one form of conjugation for all verbs. Tense and mood are indicated by prefixes, number and person by the subject. When the subject is a noun the pronoun is inserted before the verb. The following is the conjugation of the verb "to be" in the present, past, and future tenses :—

Present.		Past.		Future.	
Singular.	Plural.	Singular.	Plural.	Singular.	Plural.
1	2	3	4	5	6
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

The above simple tenses are made definite or emphatic by various means. *Lai*, sign of the past, when added to *lah*, sign of the potential, has the sense of the pluperfect, e.g. *nga la lah long*, I had been. *Ïa* abbreviated into *'a* emphasises the future, the particle *ne* also indicates the future; *da* is the usual sign of the subjunctive mood, *lada*, *la*, *lymda*, *tad*, *pada*, *ban*, *de* are other signs of this mood. The sign of the infinitive is *ka'*. The imperative is either (1) the simple root, or (2) the root compounded with some word such as *to*.

Participles.—The present participle is formed by prefixing *ka* to the root, e.g. *ka long*, being. The imperfect participle is formed by prefixing such words as *ka ne*, *ka da*, *de lada*, &c. The perfect participle is formed by putting such particles as *ka la*, *lada la*, *de lada la* before the verb. Verbal nouns of agency are formed by prefixing *nong* to the root, e.g. *u nong lada* (the worth-er). The *Passive Voice* is formed by using the verb impersonally, and putting the subject into the *Accusative* case with *da*.

1:Gordon E-4, 5 (no date) 1907 AR7 Khasi AR7

193 *Potentiality* is indicated by the verb *lah*, necessity by the verb *dei*; *dang* and *da* show the indefinite present.

The negative is indicated by the particles *yn*, contracted into *'n*, *shym*, and *put*. *Yn* is put before the verb, e.g. *'yn don briw* = there is no one; with a pronoun it is contracted, e.g. *u'n wan*, he does not come. It follows the sign of the future, e.g. *phi'n y'n wan*, you will not come. *Shym* and *put* are negative particles, and are used with *negative* verbs in the past tense, e.g. *u'n shymle wan*, he did not come.

The use of the word "jing."—One of the most striking features of the language is the use of the word *jing*, which is employed to create a verbal noun out of a verb; for instance, take the verb *kam*, to eat; if we prefix *jing* we have *jingkam*, food. *Ïlat*, to hold; *jing-ïlat*, a handle. The use of the word *jing* has already been noticed under the heading "verbs." As an example of another common prefix, it may again be mentioned here. Thus, *sang-ni-jingkam* means a table servant, literally, one who gives food. Again, *sang-ïlat*, a holder, literally, one who holds.

Syntax.—The order of words in the sentence is usually (1) subject, (2) verb, and (3) object, in fact, the same as in English, and in this respect it differs entirely from the order in the languages derived from Sanskrit, and that of the languages of the Tibeto-Burman group, so far as I have been able to ascertain. For instance, in the Kachari or Bro language the order in the sentence is (1) subject, (2) object, (3) verb. In Khasi when emphasis is needed, however, the object occasionally precedes the verb, e.g. *ïa u sah u ïa shi*, he has sold the fruit, literally, the fruit he has sold. As stated before, adjectives follow the noun they qualify, e.g. *u lum sngi-mung*, a high mountain, literally, the hill that is high. Interrogative adverbs may either precede or follow the verb, e.g. *wei phi wan*, or *phi wan wei*, where do you come from?

No account of the Khasi language would be complete without some reference to the adverbs which are so very numerous in Khasi. U Nimar Singh, in his admirable little book of "Hints on the Study of the Khasi Language," writes, "Adverbs are so numerous in the Khasi language that I shall not attempt to enumerate them all in this small book. Many of the adverbs

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

indeed, belong to the untranslatables of the language. We are never in want of a specific term to express the appropriate degree of any quality." To learn how to use the right adverb at the right time is one of the niceties of the language. There is a peculiarity about some of the adverbs of place which should be mentioned: e.g. *Hangto*, there (within sight); *hangne*, here; *hangto*, there (out of sight); *hangtei*, there (at some distance); *hangtei*, there (upwards); *hangthi*, there (downwards); also the interrogative adverbs *hangno*, *nangno*, whence, contain the inherent root *ngo*, and it seems possible that this *ngo* is the first personal pronoun I. If this is so, *hangto* would mean literally "to me there," *hangthi* "to me down there," and similarly *nangno*, *nangne* would mean "from where to me there" and "from there to me here." 193

Adverbs generally follow the words they modify, as *u'n leit nyuiu-ehe* will go now, but there are exceptions to the above rule, such as interrogative adverbs. The following come before those they modify: *hang ala*, *la dang* (as soon as, when); *khem*, *ehait* (used to, ever); *pat ne pat* (yet); and *ekyn* (not); but *ehah* (more) goes last. Adverbs of past time are formed by prefixing *ngo*, e.g. *ngnikyoo*, a short time ago. Adverbs of future time are formed by prefixing *la*. The particles *nan*, *nan la*, and *lada* denote repetition.

The Khasis are exceedingly fond of using double words* which add much to the finish and polish of a sentence. Old people especially have a predilection this way. It is one of the great difficulties of the language to learn how to use such double words correctly. The following are some examples:— [195] 193 192

Nouns.

ka jain ka sep	cloth.
ka lot ka ala	paper.
ka lyoti ka synghing	road.
ka ling ka sem	house.
o ladu, o phalu	lady.
o tymen o ma	elder.
ka sub, ka wait	arms (lit. shield and sword).
o ladon ka ess	a well to do person.
ka ejuli ka phew	wealth.
o kha o mat	a relation on the father's side.

Verbs.

pyneih pynsain	to comfort.
ia shah ia dah	to scoffs.

* Khasi little Spanish.

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

193
192

Verbs.

kyrugom-kyrsit	to threaten.
shepting-shepmiej	to be afraid.
shiksh-shiksh	to be familiar.
kyrpad-kyrpen	to beg.
ia hum-ia hang	to assemble.

Adjectives.

hanjw-hanseh	bad.
hanat-hating	active.
dunbor-dunor	powerful.
don hurum-don [illegible]	noble.
hahhrow-hatri	pertaining to a noble family.
hahih-hanh	poor, needy.
hahsh-hanh	righteous.
hariwhha-riwmint	wealthy.

Adverbs.

hur-hur	delicately.
hum-hum	brilliantly (red).
prum-prum, prum-prum	prominently.
ryuhiow-ryuhiow	shrinkingly.
nuw-nuw, nuw-nuw	shakily.
iw-iw, iw-iw	weakly.
parum-parsh	many.
sep-sep, sep-sep	having no taste.

The Mikirs appear to have borrowed a small portion of their vocabulary from the Khasis. The following are quoted as examples of possible common roots:—

	Mikir.	Khasi.
belly	*pik*	*kpah.*
strike (v.)	*chik*	*shah.*
father	*po*	*kpa.*
come (v.)	*ring*	*ring.*
rice beer	*kor*	*kiar.*
maternal uncle	*mi-kor*	*kai.*

197 The Lyngngam dialect differs so much from the standard Khasi that some remarks regarding the former will not be out of place. Dr. Grierson, on pages 17 to 19 of his Volume II. of the "Linguistic Survey of India," has indicated some of these differences, which may be recapitulated here as follows. Some of the commonest verbs vary considerably from those used in
199 the standard dialect. There are also many minor differences of pronunciation. A man is *u kwa* not *u kwiar*, a son is *u u khaw*,
193 not *u khaw*. Standard *ny* is often represented by *nj*. Thus
194 *dinj* for *dinny*, see. A final *k* often appears as *h*, and an initial *k* as *p*. Thus, *kaah* (Standard) all becomes in Lyngngam *paah*

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

Standard *ei* becomes *ee*. Thus *weim-wee*, one; *dei-dee*, be necessary. The articles are frequently omitted. The pronoun *u* is used for the plural as well as the singular, instead of the Standard plural *ki*. The diminutive *i* is used with inanimate nouns. This is also sometimes the case in the Standard form. 199 193 194

Nouns.—The prefix of the Accusative-dative is *ee* or *ee*, often contracted to *i* instead of *ie* (Standard). The prefix of the Dative is *hanam*, *hum*, or *from*. The Standard Dative-locative prefix *ha* is also used, and may be spelt *he* or *hy*. *Ta* or *te* are also found. For the genitive, besides the Standard *jong*, are found *ha*, *ee-ha*, *ee*, and *ee-nee*. *Ee-nee* and *ee* also mean "from." 193

The plural sometimes takes the suffix *ee*.

Adjectives.—The usual word for male is *hoong*, and for "female" *hoothee*, in place of the Standard *shyoong* and *hynthei* respectively. The following are examples of comparisons:—*Ee-nyrriang*, good; *Mei-nyrriang*, better; *U ee-nyrriang*, best. The Standard form is also used for the superlative.

Pronouns.—The Personal Pronouns are:—

	Singular	Plural
1st Person	*ee*	*hinee*, *ieee*.
2nd Person	*mi*, *mee*	*phinee*.
3rd Person	*u*, *ju*, *u-jo*	*kee*.

The Nominative of the pronoun of the second person singular is given once as *ha-mi*, and once as *ee-mi*. The *ee* or *he* is the Standard emphatic prefix *ee*.

Demonstrative Pronouns appear to be *ha*, *tei* that, and *ooi*, or *uih*, this. *Ee* is used as a definite article in the phrase *ee jeewee*, the earthquake.

The Relative Pronoun is *u-dah*, who.

Interrogative Pronouns are *mee*, *u-ieee*, who? and *mee*, what?

Verbs.—The pronoun which is the subject of a verb may either precede or follow it. Thus *ee sip*, I strike; *sip hinee*, we strike. The words meaning to be are *ee*, *ee*, and *mee* in addition to the Standard *long*. Like the Standard *dee*, *ee*, corresponding to Syntong *ee*, also means to have. As in the

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

193 Standard, the Present Tense is formed by using the bare root.

The Past Tense is formed in one of five ways, viz. :—

1. By suffixing *ïai*, as in *ong-ïai*, said.
2. By suffixing *lah-ïai*, as in *dik-lah-ïai*, went.
3. By prefixing *ïai*, and suffixing *ïai*, as in *ïai-ong-ïai*, said.
4. By prefixing *lah*, as in *lah-ïpïai*, asked.
5. By prefixing *pa* (pan), *pan*, as in *pa-ong*, gave; *pan-ïkeit*, shook; *pa-pait*, broke; *pa-pai*, fell.

The Future is formed in a very peculiar way. The Standard *pa* is inserted into the middle of the root, immediately after the first consonant. Thus *ïap*, strike; *ïpaïp*, will strike. If the root is a compound, it is inserted between the two numbers, as in *pan-pa-ong*, will fill. Here observe that the Standard causative particle *pan* becomes *pan* in Lyngam. The Infinitive has the same form as the Future.

Dr. Stevenson points out the following most noteworthy fact with reference to the formation of the Lyngam Future and Infinitive, i.e. that similar infixes occur in Malay, in the Nancowry dialect of Nicobar, and the Malacca aboriginal languages.

The particle of the Imperative is *uei*, as in *uei-ïai*, give; *uei-dem*, bring. The usual negative particle is *ji*, which is suffixed, e.g. *ong-ji* is not.

NUMERALS.

§ 82. 192.

LYNGAM	DEVIANCE (KHASI).
1. [illegible]	Ïïei, etc.
2. [illegible]	Ïï.
3. [illegible]	Ïïei.
4. [illegible]	Ïïïïei.
5. [illegible]	[illegible].
6. [illegible]	[illegible].
7. [illegible]	[illegible].
8. [illegible]	[illegible].
9. [illegible]	[illegible].
10. [illegible]	[illegible].

The peculiarity about the Lyngam numerals is the suffix *ei*, and the numeral "five" *de*. None of the other dialects of Khasi possess this peculiarity. Dr. Stevenson's Volume may be

192.

1: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

referred to for a Lyngam Vocabulary. I make the following additions :— 12

English	Lyngam	Khasi (Standard)

APPENDIX C.

DIAGRAM OF EGG BREAKING BOARD.

717

POSITION OF EGG BREAKER

I: Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

P221

APPENDIX C.

DIVINATION BY EGG-BREAKING.

THE *diang shat pylleng*, or egg-breaking board, is shaped as indicated in the diagram. Having placed a little heap of red earth on the board at point *p*, the egg-breaker sits facing the board in the position shown in the diagram. He first of all makes a little heap of rice in the middle of the board sufficient to support the egg. He places the egg there. He then takes it up and smears it with red earth, muttering incantations the while. Having finished the invocation to the spirits, the egg-breaker sweeps the grains of rice off the board, stands up, and dashes the egg on the board with considerable force. The large portion of the egg-shell is made to fall in the middle of the board, as at X in the diagram. This portion of the shell is called *ka liang*, or the boat. The small bits of egg-shell which fall around the boat are either good or evil prognostics, according to the following rules:—

1. The bits of shell which fall on the right of the boat are called *ki jingkar*, and those on the left *ki jingkhew*. Supposing fragments of shell fall as at *b*, *c*, *d*, *e*, with their insides downwards, this is a good sign, but if one of the fragments lies with its outside downwards, this is a bad omen, and signifies *ka seng lang kha*, or sin on the father's or the children's part. It may also signify *ka daw lum*, or "came from the hill," i.e. that the illness or other affliction has been caused by a god of some hill.

2. If the fragments of shell lie on the left side of the boat as at *g*, *h*, *i*, *j* in the diagram, they are named *ki jingkhew*. If they lie with their insides downwards, they indicate a favourable sign. If *g* lies with its outside downwards, this is an evil omen. If *g* and *h* lie with their insides downwards, this is favourable,

1:Gurdon E-4, 5 (no date) 1907 AR7 Khasi AR7

[167] even if *i* lies with its outside downwards. If, however, *j* lies with its outside downwards, this is not a good sign.

3. If there are a number of pieces of egg-shell lying in a line, as at *k*, this is an evil prognostic, the line of shell fragments indicating the road to the funeral pyre. Such a line of shell fragments is called *ki'leng rah thang*. This sign is a harbinger of death.

4. If all the fragments of shell on both sides of the board, excepting the boat, lie with their insides downwards, the question asked by the egg-breaker is not answered. If *a* or *l* fall with their outsides downwards, this is a bad sign.

5. If the portion of a shell at *f* falls with the outside downwards, this indicates that some god needs appeasing by sacrifice.

6. If there are a number of small fragments lying around the boat, as in the diagram, these mean that there are many reasons for the illness, which cannot be ascertained.

7. If the portion of shell marked *s* is detached from the boat, this indicates that the goddess is very angry.

8. If four fragments lie around the boat so as to form a square, as *c, e, h, j*, these mean that the patient is at the point of death. These are called *ki leng sher thang*.

9. If there are no fragments, as at *d, e, f, g, h, i*, it is a puzzle. *ka leng kyntip*.

[175] *Note.*—The above information was obtained from U Sarup Singh, of Mairong; U Thum, of Laitlyngkot, and U Bud, of Jowai. Different egg-breakers have somewhat different methods of reading the signs, but the main points are usually the same.

[501] The Religious Life of the Khasi

[502] By P. F. Stegmiller, Apostolic Missionary, S.D.S., of Assam (India).

I. Religion in General

1. Gods, Spirits, Souls.
2. Methods of Warding Off Evil Spirits.
3. Taboos (sang).
4. Egg Throwing (shat-pylleng).
5. The Sacrifice of the Rooster (jingkmia sylar).
6. Discovering the Spirits that Need Appeasing (kheinkeuid).
7. Prayer of Thanks after Receiving Good Health.

II. Religion in Various Phases of Life.

1. Giving a Name (tap lubri tap kyrteng).
2. Sacrifices during the Illness of a Member of the Family.
3. Sacrifices and Ceremonies at Death.
4. Cremation (ka jingthang).
5. Burial of the Bones.
   a) First Burial (maw shying).
   b) Second Burial (maw phew).
   c) Third Burial (maw bah).

I. Religion in General

1. Gods, Spirits, Souls.

[73] [77] An explanation about the origin of their religion is not to be expected from the Khasi themselves. Since they do not have a system of writing, nor idols or temples, one must turn entirely to their oral traditions.

773 782 Several Khasis claim that the devil prescribed to their ancestors the method of sacrificing. On the other hand others maintain that in times past a man of rare size and strength came to their country. This man accomplished wonderful things, and commanded their ancestors to sacrifice and at the same time prescribed for them the method of sacrificing. Today the place [104] of his former dwelling on a mountain near Shillong is still pointed out. Since something divine was suspected in that man, he was called u 'lei shillong (the god Shillong).

776 The Khasi believe in a highest being, whom they call u blei nongthaw (1) (the creator god).

[194] 1. Pronounciation of Khasi (method of writing): ei is pronounced as two syllables, e - i, w is pronounced like u, aw is therefore like a - u, sh is pronounced like sch = phonetic š.

Just as the ideas about this person are very hazy, so are the concepts of eternity and the soul.

775 The Khasi are not in agreement among themselves about the conception of what happens to the soul after death. Several say that after death the soul goes up in the air and becomes air and therefore exists no longer. But most of them believe that the soul exists after death and can be happy or unhappy. But this does not depend on personal guilt or sin but only on the conscientious completion of the burial ceremonies.

[631] 776 The country in which the Khasi live is divided into several districts, which were formerly ruled by several kings before the English came. [408] According to the Khasi each district

2:Stegmiller-J N-4,5(no date)1921 A87 Khasi A87

776 has its own tutelary god on whom they confer the name of the district.

Villages have their own tutelary gods, families have their tutelary gods, even individual people na.. their guardian gods, to whom they occasionally bring a sacrifice.

The Khasi and Synteng also honor gods who are not thought of as tutelary gods but as dispensers of purely material favors, as, for example, u 'lei longspah (god of wealth) and u'lei umtong (the god of water which is used for cooking and drinking). (2)

2. Cf. (below, p. 410) the summarized table of some of the good and evil gods who are honored by the Khasi and the Synteng.

But in general the Khasi believe that the gods or spirits are evil spirits, whom they then designate with the name ksuid (devil).

782 They believe that their country is full of such ksuid. The chief task of the Khasi is to pacify them. They try by all means to put them in a good mood, and to appease them by sacrifice. It is fear which incites them to their religious activities, not respect or actual reverence. For the Khasi are convinced that it was formerly better. They relate that in the beginning [773] heaven and earth were near together, that people could consort directly with u blei nongthaw the creator god, and that there was still no sin at that time. Now, however, man is sinful and no one offering a sacrifice forgets to pronounce the formula: nga briu nga la pop (I, man, have sinned). Thus the concept sin is one of the bases of the Khasi religion. The other basis is sacrifice. There is no doubt that sin and sacrifice make up the basic thoughts of the religious views

782 of the Khasi.

Just as the Khasi are unable to explain how man fell into sin, so they also cannot explain why the rooster appears as mediator between god and man. The Khasi tradition relates of the rooster: u khun ka blei uba kit ryndang ba shah ryndang na ka kynta jong nga u briu, i.e. he who, as son of the goddess, gives his life for man, thus expiating sin through sacrifice and reconciling god.

769 775 The Khasi believe in another world and their attention is directed towards the comfort of the spirits of the dead. One of the main tasks is to give them nourishment (ai ban), which must be done, since the welfare of the living depends on the welfare of the dead. For example, if one can no longer get the corpse of the deceased because it is in a foreign country or has been consumed by wild animals, one takes his clothes at the very least and carries out the burial ceremonies with these. For only such spirits, whose burial ceremonies were performed according to usage and custom, can participate in chewing betel nuts in the garden (in the house) of god, whereas the others must wander around on earth [109] or must continue living in insects, birds, and other animals. They do not believe in hell (in the Christian sense). The greatest felicity [27K] for a Khasi is "to chew betel nuts perpetually." Therefore they conceive of heaven as the dwelling (garden or house) of god, in which only betel nuts are chewed: uba ban kwai ha iing u blei (he who chews betel nuts in the house of god).

[776] This cult of spirits, which relates to deceased relatives, is mixed with the ancestor cult. Thus the first great-grandmother of each sib (jaid) becomes a goddess (ka jaubei) and the first great-grandfather of the sib a god (u thaulang).

776 Finally other earthly things are deified,
777 and the cult of spirits increases in objects.
778 If there is an unusually formed mountain anywhere, sacrifices are brought to it, since a kwid lives there. And the spirit who inhabits the mountain is soon combined with the mountain itself, and then the mountain is worshipped and sacrifices are brought to it. The same thing happens with rivers. How easily a river god can be insulted and made angry by fishing or by crossing over to the other bank! Therefore the first thing to do is to bring the river god a sacrifice. The Khasi never make a picture, neither of stone nor of wood, which is supposed to represent their gods, but nevertheless they revere many powers of nature and phenomena of nature, and it is difficult to differentiate the extent to which the mountain or river is worshipped and the extent to which sacrifice is made to the spirit of the mountain or the river.

In everything that one calls bad luck or misfortune the Khasi see the work of evil spirits: in the bad harvest, in flood, in sickness. The spirits live in the primeval forest, in the steep inaccessible cliffs, in the rushing river, in the green tree. They come through the air in all weather. They give the tiger strength, the snake poison, the thicket fever, and they lurk in cholera for their victim.

782 These are the reasons for the many sacrifices and sacrificial customs of the Khasi all of which are only to bring about the reconciliation of the angered spirits. Prayers also occur during individual sacrificial scenes which one can conceive of as prayers of thanks or of praise, but these are exceptions.

The sacrifices are performed either by sacrificial priests (lyngdoh) or by old men who have experience. First one seeks out the spirit who

782 must be appeased by throwing eggs. If the desired
[781] effect does not occur after the sacrifice has been offered, further information is sought by observing intestines (sacrifice of rooster), and the sacrifice is offered again. At least that is what is done for sickness. The other sacrifices will be described in more detail later.

771 The religion of the Khasi is one that arises
114 from fear of misfortune and harm, and is active in the worship of (evil) spirits through sacrifice. This definition of mine corresponds essentially with the definitions of Bivar, (3) who

[113] 3. Bivar, Administration Report on the Khasi and Jaintia Hills District of 1876.

says: "The Khasi religion may be briefly defined as a form to cure illnesses and to ward off misfortune, by finding out [210] the name of the devil who is the original cause of the evil and to appease him by sacrifices which are necessary," and Gurdon (4) "calls the Khasi religion a cult

[113] 4. Gurdon, The Khasi (London, 1907) p. 105.

of spirits, i.e., actually rather a reconciliation of spirits, good as well as bad, by sacrifices, which are offered occasionally, especially in times of distress."

Table of Summary

776 of several gods (good and evil) who are revered by the Khasi and the Synteng.

1. Good Gods:

u blei nongthaw, the creator god,
u 'lei longspah, the (good) god of wealth,

776 u 'lei umtong, the god of water that is used for cooking and drinking,
u 'lei shillong, the god who commanded sacrifice,
u sim shillong nongjah, the highest god of the Synteng,
ka maidolong, the highest goddess of the Synteng,
u sim synriang, the son of the above who was born in a wonderful, supernatural way,
ka ram-ew, the goddess of earth,
ka puron, one of the first feminine deities of the Khasi, who is supposed to represent the first maternal ancestor,
u phan suid iap, one of the ancestor spirits who is invoked for blessing of the living and the dead,
u phan long siem, the household god of a king,
ka longkha, the goddess of marriage,
ka 'leikhuri, the household goddess of a certain sib of the Khasi,
u 'suid sia, the spirit of the first maternal great-uncle of a sib,
ka blei long-s'iem, the goddess who makes kings kings,
ka s'iem-synshar, the goddess who rules the world,
u biskurom, the god who teaches the playing of flutes and of other musical instruments,
ka blei-jew-lei-hat, the goddess of the market places,
u 'lei pyrthat, the god of thunder,
ka 'lei aitan, the goddess of the river,
ka 'lei iing, the household goddess,
ka ksaw ka jirngam, the goddess who brings luck, especially in the hunt,
u rynkew shnong, the tutelary god of a village,
u basa shnong, the tutelary god of a village,
u phan u kyrpad, the tutelary god of a village,
ka longkur, the tutelary goddess of a sib,

77 ka 'lei-sad 'lei-sunom, the tutelary goddess of a royal family,
ka 'leikhyrdop 'leikharai, the goddess who guards the entrance to the village in time of war,
ka 'lei-muluk, the goddess who guards the state or village,
ka sad, the goddess who guards the royal families,
ka ram-shandi, the goddess who inspires the people in time of war.

[41] 2. Evil Gods

u siem thylliew, the god of smallpox,
ka duba, the fever demoness in and around Theriagat,
ka rih, the demoness of malaria fever,
ka khlam, the demoness of cholera,
ka tyrut, the demoness who causes violent death,
u mahet, a devil to whom one offers sacrifices only inside a house,
ka byrdaw, the demoness who causes attacks of cramps,
u kyrtep, the devil who causes blindness,
u lasandoh, the devil who causes swelling of the joints and hoarseness,
u jingbih-u lasam, the devil who causes sickness of the mouth and of the teeth,
ka tihar, the demoness who causes severe colic,
ka shwar, the demoness who causes convulsive cramps,
ka shuar, the demoness of wealth,
u thynrai, the devil who always makes illnesses worse,
ka shur, the demoness of wealth (only among the Khasi),
ka taro, the demoness of wealth (only among the Synteng),
u 'suid-um, the devil of water who attacks the women and causes sterility and miscarriage,

776 u tynjang, the lame devil who lives in the thicket and tickles people to death,
ka ron, the worst of all the demonesses (only among the Synteng),
u 'suid-las-iap, the executor of the commands of god, who has to fetch the souls into the other world,
u thlen, the devil of wealth and comfort who can only be worshipped by human sacrifice,
ka smar, a demoness who brings violent death,
ka syrti, the demoness who scratches and cuts, saws, and files (by pain in the intestines),
ka jumai, the demoness of earthquakes,
ka niangriang, the demoness who causes children's illnesses (especially in the navel),
u 'suid briew or u 'suid ngon, the devil who attacks people in the early morning and causes stitches in the side or hoarseness,
u 'suid-synta-saran, the devil who makes headaches,
u synkai bamon, an evil spirit,
ka ramshandi, a demoness.

3. Revered Powers of Nature:

778 The Punatit River, to whom the kings of Mongstein, Dangrin, and Nobosohpoh offer sacrifices.
the Khai-sara River among the Lar,
the Kopili River among the Synteng,
the Myntang River among the Synteng,
the Shillong Peak (mountain near Shillong),
the Rableng Mountain near Shillong, [112]
the Kyllong Cliffs,
the Symper Mountain,
the mountain Pyddieng blei lyngdoh near Shangpung (Jaintia).

779 754 2. Methods of Warding Off Evil Spirits

The Khasi do not practise magic in the

758 strictest sense of the word. It is rather an
759 instinctive activity, which is influenced by superstition to which they have succumbed. In their opinion all misfortune and bad luck are caused by evil spirits. The chief purpose of
(760) their sacrifices is to propitiate them (khein ban khai). But they well know that it is possible to cause others harm with the help of the kouid. Their magic consists of this and in warding off harm. The magic is not accomplished by special magicians who make a profession of it; but whoever believes he is able to harm others with the help of the devil tries it. In the same way, those who have to ward off harm of any kind hope to be able to accomplish this with the help of the devil.

753 If anyone has a throat ailment, whether it
754 is a tumor or only hoarseness, they believe that
756 it occurs through the influence of the devil u lasamboh. Therefore a rooster or a pig is sacrificed in the courtyard of the person concerned. The blood of the sacrificed animal is given to the sick person to drink so that he may recover.

They do similar things when a person has a toothache or is sick with some kind of mouth ailment. This sickness is ascribed to the devil u jingbih.

757 If a child is born blind they believe that
758 adultery on the part of the father is the cause. This adultery is punished in the child by the devil u kyrdep.

The demoness ka byrdaw causes attacks of cramps, and convulsive cramps are the work of the feared demoness ka shwar.

Existent ailments are made definitely worse by the devil u thyrnrei.

Whoever goes into the forest and hears the call: kăw-hoit, kăw-hoit, should hurry away because the devil u 'suid-tynjang lives there and

7% is calling. He is, however, lame; but whoever
[756] answers the call or screams is lost, since he will be seized by the 'suid tynjang and tickled to death.

[763] If one wishes to protect oneself from a violent death, one must propitiate the demoness ka tyrut by sacrifice, because she is the original cause of this method of dying. The Khasi have a great respect for violent death as it increases the difficulties of the prescribed ceremonies of burial, even making them impossible, which would in turn deny the spirit of the departed one peace in eternity.

[775] They also live in fear of the devil u 'suid-lam-iap (the messenger of god, i.e., the executor of his commands). He leads the souls of people away into another kingdom. He is supposed to be horrible; of gigantic size, he walks around with long trailing hair seeking his victim. His teeth are as large as a ka wait (a hatchet or an axe).

[842] [413] The women are especially afraid of a devil whom they call u 'suid-um (the water devil). He has the power of attacking women and causing sterility in them, and if they are pregnant causing a miscarriage.

7% The demoness ka khlam brings cholera and the
753 demoness ka tihar brings severe colic.

They believe that they get malaria through the influence of the demoness ka rih, while in the region of Theriaghat the fever is ascribed to the demoness ka duba.

Smallpox, which is otherwise feared everywhere, is considered by the Khasi to be evidence of the favor of the god u siem niang thylliew. If there is someone in one of the huts sick with smallpox, the sick person is not only not avoided, but even healthy children are brought there, so that they may receive the "kiss of the god," i.e., that they may also get smallpox.

000 that they may also get smallpox.

776 Every Khasi is desirous of wealth. There-
556 fore they sacrifice to the demoness of wealth, ka shur, whom they fear just as much as the Synteng fear the demoness ka taro, who likewise only allows the desired wealth to come to those who revere her.

776 But all evil taken together can be caused
782 by the demoness ka ron. She is the worst of all devils in the opinion of the Synteng. The Khasi sacrifice only to her and the devil u mahet inside the hut, and not as is otherwise customary out of doors (in the courtyard of the hut).

But the Khasi have the greatest fear of the
[?25] devil u thlen. He can be kept in the house by people in the form of a snake. Since he is only propitiated by human blood, it is necessary to find human sacrifices (ka 'langthoklieh). One cuts off the toenails and fingernails of the victims and these are brought with the blood of the murdered one during the night in a closed house as a sacrifice to the devil with prayers and exhortations. To get these human sacrifices, the thlen possessor must look for them with cunning or violence. Usually hired murderers are sent out, to whom one previously hands a quite special liquor 'iad-tang-snem (literally: lasts for a year). The Khasi believe that anyone who drinks this liquor is so influenced (enchanted) that he will really carry out the planned murder. When these murderers (nong-shoh-noh) are on their way or waiting in ambush to catch their victim for the thlen, they may not use any iron, because the thlen near the cave of Pomdalai near Cherrapunji was killed by a brave man named u suidnoh, when the thlen appeared there in the form of an enormous snake in order to swallow up people and animals. The victim is struck down with a stick which usually has a silver knob.

776 Then the wings of his nose are cut with a shear,
782 or pincer of silver and the blood is drained off. In the same way the nails on the hands and feet are cut off with silver shears. Finally the dead body is thrown into an abyss. (5)

[113] 5. For further details about "Human Sacrifice Among the Khasi", see Dr. P. C. Becker, Salvatorianische Mitteilungen [Salvatorian Communications], 1909, No. 5, pp. 75 ff.

754 [114] Since on the one hand many Khasi are busy
782 trying to kill others with the help of the devil or to make them sick (ai-ksuid), and on the other hand the evil spirits also harm men without being called upon, an enormous fear is thus the fruit of this superstition. From this fear comes the desire to make oneself free from the influence of evil spirits (lait-ksuid) or to modify this influence by sacrifices (khad) or at least to propitiate the devil completely (khein-ban khai).

796 Therefore the Synteng annually hold a large feast for driving away cholera (ka behdiengkhlam).
[722] The offered sacrifices have the purpose or propitiating the feared demoness ka khlam but at the same time they also have the purpose of making the participants in the sacrifice safe against cholera (to enchant them). Gurdon (6)

6. Gurdon, The Khasis.

describes this feast as follows: "In the month of June when the river is full of water, on a certain day the men go in the morning in front of the huts and strike the roofs of the huts with sticks. At the same time they call on the demoness ka khlam continuously and challenge her to leave

796 the house concerned. Then they go slowly down to the river. Large poles, which were set out the day before, are now placed on the river. The people jump onto the poles and try to break them. If this happens a general great shout of joy sounds forth. If all the poles are broken, they fetch a particularly strong pole, actually a beam, and place it over the river. The people now divide up into two halves, and a battle begins for the possession of this beam. But the fight is a friendly one and even though there are many blows and even wounds, the people do not engage in a serious fight, even though they battle and struggle for the possession of the beam so hard that many lose all their clothes. The side which has the luck of winning possession of the beam will be healthy (free of cholera) and well for the coming year according to the belief of the people.

797 The use of charcoal also borders on magic. Thus P.V. Kartte, Apostolic Missionary, S.D.S. writes: (7) If a mother has a long journey to

[113] 7. Kartte, Die Religion der heidnischen Khasi [The Religion of the Heathen Khasi], Apostelkalender, 1895. [Apostle Calendar]

make, she makes a black mark with charcoal on the forehead of her child to protect it from any harm. Then she takes a longish piece of wood, splits it at one end into four parts, and puts the piece of charcoal in between. The mother carries this in her hand on the journey.

821 The same missionary also reports the doings of the Khasi during an eclipse of the moon: "If there is an eclipse of the moon, the Khasi believe that a frog is with the moon and is eating it up. The Khasi like the moon very much, and in order to prevent the frog from eating up the

821 moon they try to frighten the frog with noise and to drive him away. A few days ago we experienced a sample of it. In all the villages the Khasi beat drums and screamed at the same time. It was a purely hellish spectacle." (8)

8. Loc. cit., p. 62.

[415] The Khasi also have no explanation for thunderstorms. They believe, therefore, that the ksuid (devils) cause them. Especially disturbing to them is thunder, which can be extremely violent in a tropical storm. When lightning strikes [712] anywhere, they sacrifice to the ksuid u pyrthat a fat pig, the blood of which is smeared on the altar in order to propitiate him and to prevent the lightning from striking again.

722 When the Khasi sacrifice to protect themselves from harm or to heal themselves from illnesses, they murmur formulas or prayers during the sacrifice. They implore the invisible powers at the same time and thus support the offered sacrifice. They call this murmuring tim-knia (swearing-sacrificing). It is also reported thus of the sacrifices in Nongkrem: (9) "Each person places

[113] 9. P. Dr. C. Becker, Die Nongkrem-Puja in den Khasibergen (Assam) [The Nongkrem Puja in the Khasi Mountains (Assam)], Anthropos, IV (1909), p. 898.

the little bottle of liquor on the little pile of mud in front of him. This represents the altar. Then they take pepper leaves and oak leaves and place them in front of the altar in a certain way next to and on top of each other; pieces of betel nut are placed on top and the whole is sprinkled with rice, kpu meal and rynsi meal, while short prayers are murmured."

000 while short prayers are murmured." To ward off
789 the influence of evil spirits, the Khasi use all kinds of magic means. They prepare a kind of lattice work from split igrâ (thin bamboo), which they fasten side by side evenly with a binding object (u thri), with the inside towards the front, and they hang it up on forked branches in the forest. The number of these little sticks is always uneven, 13 or 15 more or less. In the middle of the little sticks a colorful line (blue or red) is drawn (Fig. 1). Such lattice work or bamboo flags are often placed several together in some place in the forest. [Figs. 1, 2, 3, 4, 5, spirit sticks and spirit lattices.]

In addition to these lattice works or flags they also make spirit sticks or spirit posts which they also place in the thickets and which have the same purpose of driving off the spirits or of making them harmless. [416] Such sticks are cut from wood and are either quite simple square sticks with a crooked, added point (Fig. 5) or they are simple square sticks with a triple point (Fig. 2) all cut from one piece. These sticks are not painted. In addition to these simple spirit sticks the Khasi also make beautiful painted sticks. Fig. 3 shows a square stick which has a triple square decoration in blue and red. Its point is not notched, but cut slanted or crooked. Fig. 4 shows another kind. It is a six-sided wooden stick which has a hat or head (of one piece with the stick), the point of which is notched or set off. This spirit stick has circular decorations of red and blue interrupted by straight, horizontal lines. Such sticks also occur in an eight-sided form.

One often finds several of such spirit sticks or flags placed beside each other in a little place in the woods or thickets. [Illustration: Magic lattices against the forest devil].

789

[416]

Magic lattices against the forest devil.

782 The Khasi also erect little platforms with little houses from long bamboo sticks in which food is served to the spirits of the woods and fields (to serve [siang-] actually means spread out, as one spreads out a carpet or as one spreads out leaves for serving rice on).

[789] But not only through making sacrifices do the Khasi try to propitiate the devils and thereby make them harmless. They even try it with violence. Thus, as mentioned above, they drive the cholera demoness out of the house with sticks. Also during a cremation they shoot three arrows to ward off evil spirits.

There are many ways of warding off evil spirits; or, for acquiring their help words, wishes, or curses are used, as, for example, during a match of arrow shooting, the watchers who stand by the target try to keep the arrows of the opponents from hitting the target by calling on some god (ksuid) and the more they shriek, the sooner they believe they will attain their purpose. They wish to influence the arrows of the opponents.

3. Taboos (sang)

784 The sang or taboos of the Khasi also belong
782 to superstition. Sang means the same as "sacrilegiously or most strictly forbidden." This sang can be traced back to totemistic views. Sang can be something for a single person, for a house (iing) or a family, for a sib and a whole race
[587 (jaid). If a man or a woman whose spouse has
428] died remarries, the sang is transferred to the relatives of the deceased man or woman. This "inheritance" of the sang is different according to the sib. By accepting the sang the inheritors must pay 11 of a [417] kaŵ or 7 1/2 of a kaŵ or 5 1/2 of a kaŵ. By kaŵ the number 1280 is actually understood. But it means, however, that

784 the heir must pay 11 or 7 1/2 or 5 1/2 percent
782 of their wealth, in order to be able to pay for the great festivities at the cremation and the later disposal of the ashes. First of all various sacrificial gifts are bought with the money. When one has all the sacrificial gifts together, one erects three hewn stones in the manner of mau-bynna (urn stones) on any road. These stones are called "adulterer stones" /Ehebrechersteine/ (mau-klim). Then one catches a pig and curses it in the following way: (10)

[113]

10. This and the following Khasi texts are taken from the kitab jingphawar by U. Rabon Singh (Shillong, 1902); I am indebted to the very worthy P.C. Bonheim, Apostolic Missionary, S.D.S. of Cherrapunji, who was most willing to place his many years of experience at my disposal for the translation into German.

Hei sngewkyndiang ho kane nga iathuhkhana ba me ba la ioh ka sang na ka tnga ka jong me yn leh kumno kynrad wei la pom ka bneng ka khyndew, ka tyrut ka smer sngew la khuid ka sang ka ma, ka klim ka ngat yn long sa ka rong sa ka taw, sa ka sngewbha ka sngewmiat mo! Hei une sa u dykhot u lamjew ka iad bang ka iad thiang mo!

So listen carefully to this that I am saying, thou who hast inherited the sang from thy wife; What else should we do, lord; after heaven and earth, the Tyrut and the Smer (demonesses) slay him, we are freed; the sang is made holy, the feared sang, adultery and other sins. Then it can be that the bones are transferred and peace and joy will come to us, mo! (is it

2:Stegmiller-21 M-4,5(no date)1921 AR7 Khasi AR7

784 not so!) See here the piece u dykhot (11) and
782

11. A piece of sacrificial meat.

the sour things u lamjew (12) (a strong and

12. Herbs, roots.

sweet liquor) no! (is it not so!)

[574] All relatives and acquaintances, friends and neighbors are invited to this sacrificial feast.[1] There is a big festive meal, chiefly of meat and bacon. But before the eating begins, the reng (horn) and ngap (fork) which were laid on the "adulterer stone" before the cursing of the pig are removed. At this sacrifice all the money collected before (11 or 7 1/2 or 5 1/2 of a kaw) must be completely used up, as it is forbidden to preserve any of it in house so that it will not get mixed up with the daily wage or one's earnings.

[587] The remarriage must naturally occur in another sib (jaid) if the sang is to be inherited; because otherwise the sang would remain in the family.

784 Most of the sang that occur, different according to the families or the sibs, are the following: (13)

13. Gurdon, The Khasis, p. 5.

[418] 1. Building a house with stone walls on all four sides.
2. The use of iron nails in building a house.
3. The use of more than one kind of wood in building a hearth.
4. The use of resinous wood in building a house.
5. Felling wood in a holy forest (except

1 [cf. cat. 116, pp. 19-21 -- Analyst]

784

for a cremation). See table I, picture 2, "The heathen Khasi village Raliang with a "holy wood" (law kyntang) in the background."

6. Giving or taking anything at all with the left hand.
7. Stepping over the corpse of another person.
8. Killing an animal or bird without having previously strewn rice on its head.
9. Using the milk of the cow or the goat.
10. Completing all kinds of started sewing or basket weaving for pregnant women.
11. Pregnant women are not allowed to accompany any funeral procession.
12. The husband of a pregnant woman is forbidden to roof the house (straw roof) or to make a handle for a hatchet or an axe (ka wait - ka da).
13. Speaking with anyone at all as long as the threshing of the rice lasts, unless it is with the co-workers of the man or of the woman.
14. Variously the use of pork, dried fish, melons, lemons, etc. is forbidden.

784 Violating the sang is punished by the
68?deity. Thus several Khasi explained after the
342great earthquake of June 12, 1897: "Because you built your houses of stone and fastened the planks with nails, it has so happened that everything has tumbled down, because god does not wish stone and despises nails. Formerly we too built only with wood and bamboo and used bast for making things fast and for binding, but today people have become proud and have built with stone. That is why this has happened; god

784
682 hates stone; he does not wish any lime." (14)
342

14. P.A. Münzloher, S.D.S. Die apostolische Präfektur Assam [The Apostolic Prefecture of Assam] (Rome, 1899), p. 83.

4. Egg Throwing (shat-pylleng)

787 The most common of all the oracles of the
782 Khasi is egg throwing (shat-pylleng). A great deal has already been written about it. (15)

[113] 15. P. Dr. C. Becker, Das Eierwerfen der Khasi [Egg Throwing Among the Khasi] Anthropos XII-XIII (1917-1918), pp. 494-496.

I will only add here the prayer of the sacrificer u nongshat-pylleng. It is not an actual prayer, at least the nongshat-pylleng is not bound to any formula. The sacrificer speaks approximately thus:

Ko lengsam khun ka blei, ko banang ko batip ko ba lah ko baiai, nga pynthiah nga pyndem halor ka diengshat ka diengkhein, ka duwan ka dupat, a kynrad ngan kylli ngan	O thou egg of the oracle, thou daughter of the goddess, thou whom thou knowest and art aware of (art able to) thou remainest thou (stayest); I put thee down here on the board (16)

16. Cf. Table II, Picture 1. [419]

togkit katne ba long shitom ka lanot ka shoh ka ther ka shit ka syang ka pisa ka lynga ia ka met u	on the oracular wood, on the altar, o mistress, I question and ponder (would like to question,

787 Donsing hato nangno ka
782 daw ba long katne don
hi na kpoh la iing mo?
Kaba wan thaw katne?

wish to question), for great are the troubles and the afflictions, the oppressions and the cares, the heat and the fire (of the fever), the disquietude and the depression of N.N. What is the reason that he is so badly off? Does the cause lie in the family itself perhaps (na khpoh, i.e., in the stomach, in the insides)? Has that perhaps done all this?

Lada don ka jot
ka rem ka bijar ka
buhkhoh ha ka blei
ka Iawbei, ha u phan u
kyrpad ngan sa jied
ngan sa pynshai ia ka
khmat ka long jot ka
long rem ka bijar ka
buhkhoh, don?

If perhaps a sin, a guilt, a vexation, or any annoyance exists for the goddess Jaubei or Phan u kyrpad, so will I ponder and illuminate the eye (of understanding) the corruption and the guilt, the annoyance and the vexation, which, may it be?

Jem ka mon bin
kynrong ka diang joit
buh ka jingkem arsnep
slait, da weng ka lar
ka sap ka buhsang ka
tharai ong em me ym don
na kpoh la iing ka ban

My will is soft as jelly and very tiny. Cross the left over the right quickly! Line up the two egg shells (slait, i.e., without any room in

787 wan thaw kum kata, khat
782 ei na wei du kaba wan
shoh ther katne.

between), take away the white (egg white), the sacrilegious thing, (not permitted thing) and the uncertain thing! Say: no! thou! It does not come from the family that which has caused all this. Therefore it comes from outside (from somewhere else), that which strikes him and rattles down so on him.

Lar ha ka dong ngang, kiew ha ka dong roit, noh ka diang khyllon ka diang da buh lengsam shiliang kadiang!

May the white come to the outermost corner and may it climb into the corner, down with the left! May the left close together (may the left sink powerlessly together). Place the oracle over to the left, to the half!

Mynno nga bynthiew mynno nga kyrkhah mynno nga sin mynno nga rngop nga pynsum dewlieh dewtem dewsni dewsnah dewraij dewkynton ba ngan iit ia ka liem ia ka dem ka pyllup ka lyndang, mo.

When have I then spit out? When have I cleared my throat of the thick phlegm? When have I [420] given a nickname? When have I washed and bathed the white earth (clay, loam), white loam, yellow loam, sticky loam, heaped up loam? So that I may

787
782

	recognize that which lies towards the top and towards the bottom, that which lies on the back and on the stomach, is it not so?
Mynno nga rah mynno nga rong kum ka khlieng ka tyngab, ka ims ka doh.	When have I carried anything away, When have I dragged something off, such as the hawk or the raven or any kind of bird or meat?
Hu mo 'lengsam!	Hurrah! is it not so, thou egg of the oracle!

5. The Sacrifice of the Rooster (jingknia syiar)

Just as by egg throwing so by the sacrifice of the rooster the Khasi wish to find out the reasons that are causing illness or some other misfortune. This sacrifice of a rooster is almost as common as throwing eggs. It is especially performed when a serious case must be settled. Since the rooster is more expensive than an egg, they expect to get the desired results more readily through the sacrifice of the rooster. In general the rite is the same as described in the Nongkrem-Puja in the Khasi mountains. (17) An example of the "invocations"

17.P. Dr. C. Becker, Anthropos, IV (1909), p. 899.

follows here, which the sacrificer pronounces with the following words:

787
782 Te ko rangiarkhad, ko khun ka blei, ko rangkynjih ko rangkyn jai, ko rangkynih ko rangphawar ko ba ioh ka hukum ka kular na myndang long ka pyrthei, shai ka pyrthei na khmat ka blei ktien ka blei, te ha sngew nga kylli nga tohkit ha shat ha ka khan, nangno ka daw ba wan shoh wan ther katne ia ka met u Donsing?

And now, thou sacrificial rooster, thou son of the goddess, thou hopper and jumper, thou crower, thou wise-speaker (who understands how to speak in figures of speech), thou who hast received the law and the promise from the beginning of the world, Bright is the world from the face of the goddess, from the word of the goddess! So listen now, I ask, I ponder, I cast oracles, I question oracles: whence is the reason (what is the reason), that strikes N. N. and rattles down so on his body?

Ong phi ka blei manga, ka shoh te manga ka ther te manga ka sympat ka kawiat te manga, te nga shang darum-darum daneng-daneng nga kylli nangno ka long-jot ka long-rem, nangno ka bijar ka buhkhoh phi ka blei!

Say, o goddess: It is I who strikes him, it is I who rattles down on him, and I who scourges /421/ and lashes him. And I go back and forth and up and down and ask, whence comes then the destruction, the incrimination, whence then the vexation and annoyance, o thou goddess!

787
782 Ong phi ka blei,
ko khun ka lamler
mynkato me ka sngi
me iapan ia ka dur ka
long briew ka long iing
na khmat nga ka blei
ka laubei nga ong!

So say, o goddess,
thou daughter of lies,
at that time, is it
not so, (18) on that

18. The following words are, as it were, as if the sacrificial rooster were putting them in the mouth of the goddess and were contradicting the oracle.

Khie kynmaw
sieh ka jutang na kata
ka lynti, ynda me ieng
ka nguh ka dem u ak-
hot u lamjew u kpu u
rynsi ia ka jong ka
longspah kat ia katei
ka dur ka long briew
ba me la sieh ka jutang
mynkato ka sngi.

day thou hast demanded the picture of the man, the value of the family before my face, before me, the goddess, before me the Jaubei, so I say!

Stand up and recall! Draw forth the promise from that way! And when thou standest there and bowest down and showest reverence, then the thanks and the reverence, then the piece and the sour thing, then the bread and the cake, to thine own well-being and wealth, as to that picture of the coming into existence of man which thou hast produced through the

787
782 Mem don ka iathuhkhana ha khmat nga ka blei me tep me lynde pynban, nangta jot nga ka blei ka laubei!

promise on that day.

Hast t.ou no tale of this before my, the goddess! before my face! Thou buryest, thou concealest it rather, and therefore the disaster, say I, the goddess, the Jaubei!

Im u syiar u shan ye nangta im ka sang ka ma te nangta, im ka tyrut ka smer te nangta, ioh ka shitom ka lanot u bynriew te na kata ku lynti.

Long live the rooster, the support, and further, long live the taboo and the threat, and again long live the Tyrut and the Smer and then: man experiences suffering and sorrow, on every way thither (from birth).

Te ko blei trai kynrad wei nga la lap ia kata ka knia ka lynti ka long-jot ka long-rem ka jong phi te mynta ngan da ieng ka kynmaw ka kyndit namar kata ka lynti kat haba shong ka nguh ka dem u kpu u rynsi u klonh u ksaw, la suk la jemnud phi ka olei ka lawbei na kata ka lynti.

Thou, however, o god and master, since I have now come along thy ground, the way of destruction, of guilt, so I raise myself up. The memory, the perplexity because of that way, wherever I may dwell, shall be the thanks, the reverence [420], the bread and the cake, the gourd and the gourd bottle; peaceful and well-intentioned art thou, o goddess Jaubei, on that path.

787
782

Yn sa ioh ka khiah ka nang, ieng rangbah u bynriew joit suk me u blei lyngngai weng ka thoah ka tar ka kjab ka star.

We receive the sublime and the possible. Quickly rise up, man! Well satisfied be thou, o god! Take away the faults, the stains, the band and the sling.

Ong ym pat shong ka dur da kumta khadei dang kumwei du, kiew da ka thoh da ka tar da ka brain da ka briah da ka kjab da ka star, katta mo blei tray kynrad, kuri-ei nga pynsum nga pynsleh nga pyntang nga pynpung ha ka umthwei umlyngiam, ban kiew ka syrti ka jumai ban um ka ryndang ha khmat ka duwan ka dupat ban nang ka korbar ka sorbar mo?

Say: the picture does not yet appear thus, rather different, is it not so! Raise thyself from the great stains and from the great faults and from all the little stains and spots, from sling and band and then, is it not so, o god and master, it is in vain! I wash and bathe and make pipes of water and scooped-out wells in the eddy and in the depths, so that ka syrtieh (19)

[776] 19. Ka syrtieh is a demoness, who cuts and scratches and files and saws, i.e., through inner pains.

and ka Jumai (20) may

[776] 20. Ka jumai is the demoness of earthquakes.

arise, so that the throat may dissolve (bleed to death) before the visage of the

787
782

Snam syiar, hei nga dkhat sohpet shynnai ban nang ka korbar ka sorbar, kane de ka deng de ka kup ka ryndia ka muka ka iarong ka muna ho, jei dong tam dong lait ban lait ka jot ka rem mo?

altar, so that the counsel be good, is it not so?

Thou blood of the rooster, hurrah! Look, I tear out its navel, the intestines, so that the counsel be good. This here is the jewelry, this the garment, this the silk, this the purse and the net, is it not so? Look, here is the tube for gathering, here the tube for escaping from destruction and guilt is it not so?

776
782

6. Discovering the Spirits that Need Appeasing (kheinksuid).

Khein ksuid means the seeking for or the discovering of the insult to the goddess which sells (die) man through suffering to the pain-causer (ksuid). The demon cannot harm man if the goddess does not stand for it and allow it. The guilt of man plays no part in this (in and of itself). The Khasi say that in their religion there is only one goddess, the "Giver of Orders" (ka nonghukum). She commands that a phan u kyrpad [423] should be, that a suid-nia of Jaubei should be (suid-nia is the spirit of the first maternal uncle of the sib, in this case he is supposed to be the "intercessor" with the Jaubei). Or she herself choses a means, that is supposed to be "god." for example, as she herself becomes the goddess of wealth or the goddess of the curse. This goddess gives the command for the sacrifices: That the piece (u dykhot) and the

776
782 sour thing (u lamjew) be sacrificed! If this goddess is insulted by any kind of error, then she must be propitiated again, and this is done by the sacrifice of a goat, of a pig, or through the sacrifice of the gourd and the gourd bottle, or (for the very poor) through the sacrifice of water which one shakes out on a brass plate (ka pliang) or on a woven plate (ka pdung). It is she also who commands that one drive away the demon or the demoness, especially the demon who helps day and night (uba rap synnia rap sngi), by a sacrifice of money, a hundred or a ten, which must be brought to him.

Everything is at her command: thus the sacrifice of food which is brought the spirits (ai bam ia ki suidiap), the sacrifice of thanks which is brought the Thaulang (kaba nguh thawlang), the auguries (kaba tap ryngiew tap rywiang) or the naming of children (tap lubri tap hyrteng). For example, if a mountain devil or a river devil is supposed to be driven away, she gives the command to ask the oracle of the house first and not to make a noise. Then, however, one should take a freely chosen sacrifice, such as doves, chickens, pigs, or goats and strew them with rice and then let them run off free. Anyone who catches them may keep them.

[784] In this religion there is also something very painful and extremely difficult, namely finding out the guilt of one long since dead in order to atone for it again through sacrifice. For sometimes nothing can be found that is the reason or cause of sickness or trouble and therefore it must be the error of an ancestor that is not yet expiated. But this kind of investigation of devils is very difficult, since one cannot easily discover the connection. An experienced and worthy sacrifice who-

776 782 understands how to interpret the signs of the goddess must take this case in hand.

782 If the goddess Jaubei was insulted by an offense, a goat must be sacrificed to her. This goat must be beautiful, it must be white, it must be full-grown, but still virginal. The sacrifice is brought into the front courtyard. On the altar, which is usually prepared of loam or earth, (21) the sacrificial gifts are

21. By "altar" (ka duwan) the Khasi means everything on which he offers his sacrifices, whether it be a stone, or a banana leaf, a heap of loam, or an altar made of earth.

now spread out: bread(kpu), cake (rynsi), gourds (u klong), young oak shoots (u sning ka laliar), uncooked rice (u khaw) and fermented rice water (ka sapoh). Now the goat's head is cut off with one blow. The dead animal is cut up and the separate pieces needed for the sacrifice are placed in readiness. There are various ways of sacrificing. Some take five such pieces, others seven, and again others take nine pieces. But what is taken for the sacrifice, must [424] come from the inside of the animal (napoh krem ka kypoh, i.e., from the stomach cavity). Those who use five pieces take something from the liver, something from the heart, something from the lung, something from the kidneys, and something from the loin (of meat, the part that runs along the spinal marrow).

Those who use seven parts for the sacrifice take the above mentioned parts and in addition some of the spleen and some of the small intestine.

782 But those who use nine parts take in addition to those parts mentioned above two parts of the large intestine and of the small intestine and two parts of the appendix.

It is very hard to describe the sacrificial customs of the Khasi, i.e., to describe them quite exactly, as it is made differently in many cases. And even in the same case, for example for the same sickness or the same trouble, the sacrifices are made differently. One can readily see that in the fact that some use five parts of the sacrificed animal, some even seven parts and others again nine parts. Similar differences occur all along the line. For all cases the "piece" (dykhot) and the "sour thing" (lamjew), as well as "liquor" (iad) are sacrificed.

The method of the sacrifice depends on the relatives, that is on what the custom of the sib is. The youngest daughter is the [428] heiress of the wealth, but she is also the one who is responsible for the sacrificial rites of the sib. It is her duty to preserve the sacrificial rite which was always customary in the family (ha iing). The sacrificer (u synniang) conducts himself according to her instructions. Often many sacrificers are needed, for example at a time of plague or general trouble. Since there are now not too many sacrificers who understand the matter well, many desired sacrifices are omitted. Because of that, the Khasi believe that the rooster (u siar u shan) lives again, because of that the u longduh u longsam (evil spirit) lives again, because of that the Tyrut and the Smer live again, i.e., the evil demonic influences of these spirits become influential again through the neglect of the sacrifices.

782 Often the head of a sib (u knie u kypa) delays the sacrifice for a decade, often for a lifetime. From this comes the difficulty for the descendants of being able to sacrifice according to the ways of the sib, since the memory of their own sacrificial rites becomes lost by the years long pauses in the sacrifices. It is difficult to revive (kynroi) the method of sacrificing. Or the old people die off (or become Christians) and so the young people no longer learn which formulas they have, which invocations were customary, which parts (of the slain animal) they should [769] take. The relationship with the ancestors becomes lost and as a rule they can no longer remember everything.

When matters have progressed this far, then the Jaubei sees to it that sacrificing is not neglected by permitting the members of her sib to be plagued by the devils. Especially, she permits the devils of the mountains, the rivers, the water, and the air to make their harmful influences effective. Since illnesses always keep occurring and deaths [425] happen, etc., sacrificing never does quite die out and the religion of the Khasi which reverences spirits in the most varied ways remains in existence.

7. Prayer of Thanks after Receiving Good Health. (22)

22. Cf. also the prayer of thanks and entreaty at the end of the Nongkrem-Puja, Dr. Becker, Anthropos, IV (1909), p. 902.

Sacrifices are certainly offered chiefly in times of trouble. But the Khasi do not

782 forget a good deed received. If someone receives his health again by sacrifice, he brings a sacrifice of thanks and says:

To sngew ko blei ko laubei te wei nga la shem ia ka nia ka lynti ka long jot ka long rem jong phi, te kynrad hajar nguh te sngewsynei ho, ba la kum bieit kum lyndet nga u khun u ksiew!

Hear then! o god! o Jaubei! After I have recognized thy reasons and ways, from whence thy destruction and thy blame have come (which you have found in me), thus, o my lord, I thank thee a thousandfold, and hearken unto me graciously, since I unwittingly, since I opposed thee, I thy child and grandson!

To ai ka khiah ka nang, ngan sa kynmaw ngan sa kyndit namar kata ka nia kat haba shong ka nguh ka dem u dykhot u lamjew u kpu u rynsi u klong u ksaw law ka shoh ka ther ka pisa ka lynga, hei wat die rem ngiat shuh ho kum kynnin kum hunne, ap ia ka nia ka lynti pyllun katta mo!

Health and wealth, it will always hover before my eyes (thy command), these causes (of the sickness), wherever I live and settle (sit down), wherever the piece inclines itself and the sour thing and the bread and the cake, the gourd and the gourd bottle, loosen (take away) the blows and the rattling down, the difficulties and the oppression! O do not sell so dear any more as yesterday and early

782

today, but await with patience the cause and the way! So much, is it not so! --

II. Religion in Various Aspects of Life.

553 1. Giving a Name (tap lubri tap kyrteng).
844 By tap lubri tap kyrteng one means the
782 ceremony of the giving of a name to a child. In the section on sang I have already indicated the various taboos of a pregnant mother in regard to her husband.

At the birth of a child now, so the Khasi say, there are not as many ceremonies as at the death of a relative. For birth is anyhow in and of itself a feast of joy, since one is more joyful when a person enters life than when he departs from life.

[426] When a child is born, sacrifices are made on the next day (if it was born in the evening or in the night, on the following morning) and the ceremony of giving the name is performed. The sacrificer must be a relative of the child's. Among the Synteng, aunts of the child are called on by preference as executors of the sacrifice. The umbilical chord is cut off with a sharp-edged piece of bamboo and the child is bathed in warm water. The afterbirth (ka shynnai) is carefully kept in an earthern pot in the house (nongpei). Instruments are then placed at the child's side as symbols of later occupations, near a girl a knife (i wait) and a woven bamboo carrier (i star); but near a boy a bow (ka tyntieh) and three arrows (ki 'nam). The sacrificer fetches a little plate, on which he sprinkles rice meal and fills a gourd bottle (u klong) with rice brandy, which he previously mixes with water. He

553
844
782

arranges all this on a bamboo swing (u prah) and then begins the sacrifice with the following words:

Te ha sngew ko blei trai kynrad ko thaw-bynriew ko buhbynriew te ba long ka jer ba long ka thoh ban neh ka nam ban neh ka kyrteng ban long u lubri ban long ka kyrteng wei la suk la sngewbha phi ka blei ban khot da kata ka kyrteng to kein ba un long tymmen un long san un sain la ka kur la ka jaid un bad la ka khein ka bishar ha kpoh la iing mo.

Te sngew sa ka jong me u thawlang babha bamiat te wei ym don ka sang ka kyndiah te la long kynthei la long shynrang te a un long rangbah man rangbah yn sah ka nam yn sah ka kyrteng mo!

And so hear, o god and lord, o creator and maker of men! for now the name-giving and the noting-down shall occur, so that the fame may last and the name be kept, after it has pleased thee, o goddess, to name with this name. Now may it (the child) live to an old age and become great and strong in his descendants and races, and may he keep and observe the commands and justice of his family.

And so hear thou also, o thou good and beautiful Thaulang, since now for once no taboo and no difficultty exist and little woman and little man are (and a child was born), so may he become big and become a strong man and may the fame remain and the name remain preserved. Is it no so!

Meanwhile the sacrificer slowly sprinkles the brandy on the rice meal so that a dough is made. Now one seeks for the name of the child.

553
844 While he pronounces several names, he very slow-
782 ly pours the rice liquor out on the ground. The name, then, that coincides with the drop that takes the longest to free itself from the neck of the gourd bottle, is given the child. When the name is found by this method, the sacrificer makes a mark on each foot of the child with the dough mentioned above, thus giving him the name.

553 [427] But if somebody comes into the hut
844 by chance while the liquor is being poured out and says something, then a name formed from these words is given the child. Then the parents and relatives of the child must eat three times from this dough. When this is all over, the father takes the placenta, sprinkles rice meal on it and swings it three times over the head of the child. Thereupon he leaves the house and fastens the jar including the contents to a tree near the hut. Today this ceremony is seldom done exactly. Usually the father only goes in the yard and buries the placenta somewhere.

553 When the father returns, his feet are sprinkled with water ban khuid ban jhiah krat i khunlung, i.e. so that the child may stay healthy. A rice cake (u purew) which was prepared earlier is now eaten by everybody. Thereupon all the relatives sit down, the relatives of the wife on the left and the relatives of the husband on the right. A piece of the rice cake (purew) is dipped in water and the toes of all the guests are wiped with it. After the end of these ceremonies the utensils which were placed at the side of the child, the bow, the three arrows, the knife and the carrying straps, are taken away and carefully fastened to the inside of the roof of the hut.

553 Here are several examples of heathen Khasi names:

u Kisorai	ka Nobitri
u Rasmoni	ka Derisi
u Jaweng	ka Nimai
u Syer	ka Elimai
u Sniang	ka Korimai

The names with the article u are for the masculine sex, those with the article ka for the feminine sex.

The customs of the name giving are not the same everywhere. It is reported (23) that on

23. Gurdon, The Khasis, pp. 124-127.

such occasions a banana leaf with a pounded yellow root and five dried fish should be placed in readiness. An older man, who understands name giving (kaba jer khun), places a banana leaf on the ground and sprinkles it with water. He takes the gourd bottle in his hand and calls on god as a witness. The people gathered there then mention a lot of names, which the one offering the sacrifice must repeat. While he is saying the names, he pours rice brandy out of the gourd bottle onto the ground. The name that is said with the last drop from the gourd bottle is the name of the child.

"Or one lets two little bamboo sticks (igrâ) fall to the ground. If these remain in the formation of a cross, the name that has been spoken meanwhile is the one kept. Otherwise this is done until the desired position of the sticks occurs. But this way takes a lot of time and trouble, since it is sometimes a long time before the little bamboo sticks lie in a crossed position. Mr. Jenkins reports

553 that a Khasi told him, [428] that all kinds of nuisance and deceptions occur with this method of name giving since one likes to save time and trouble."

"The dried fish are held by each end and cut into two pieces. Finally one wipes the yellow root that has been mixed with water on the right foot of the father, the mother, and the child."

844 Among the Synteng the following items are
782 offered in sacrifice immediately after the
553 birth of a child: some rice meal, eggs, roots and leaves. After the child is a month old (one often waits two months) the ceremony of the name giving is performed. This is done, if not by the sister of the mother, then by the oldest man of the sib. Sacrifices are brought again at this celebration, specifically two hens and a goat.

844 The parents of a newborn child are not allowed to cross a river, nor may they wash their clothes as long as the umbilical cord is not healed, since otherwise the mountain or river devil would harm the child.

845 Twins are considered a punishment, which has been incurred by somebody in the sib for violating a taboo. If the twins are of different sex, their bones may not later be placed in the common family grave.

782
755

2. Sacrifices during the Illness of a Member of the Family.

[753] Usually sacrifices are made only for internal illnesses. Because the Khasi cannot explain the origin of these illnesses, they are of the opinion that a devil has caused them. He must be angry with the person concerned

755 and must now be propitiated by a sacrifice.
782 For outside illness, for example, wounds which they have incurred by falling or hitting something, they do not make a sacrifice because the cause of the illness is known to them.

For internal sickness the sacrifice is usually made in the court area if unfavorable weather does not prevent it. What should be sacrificed is determined only by the sacrificial priest (lyngdoh). If the illness is not important, an egg is sacrificed. (24) The

24. See above, egg throwing.

sacrificing priest takes a rather large dish (ka pliang kynthei) on which he places a lattice of little bamboo sticks. Now he takes an egg, caresses it, calls it goddess (ka blei), strews it with rice and smears it with red mud. Then he throws it with all his might onto the bamboo lattice. The inside of the egg runs through the lattice into the dish. He does this with one egg after another. This egg sacrifice is performed every morning and every evening until the sick person is well again. Many make the sacrifice early before sunrise and in the evening after sunset.

If the illness is of a more serious kind, chickens are sacrificed. This is done in the following way. The sacrificial priest strews rice on the chicken's head, then places the neck of the animal on the left index finger and holds the head of the animal down with his left thumb. Then he cuts open the chicken's throat with a knife. (25) The sacrificer

25. Cf. Table II, Picture 2: Sacrifice of a Chicken among the Khasi.

782 now draws the bronchia out through the opening
755 he had made [429] and according to their position he judges whether the sick person will get well or not. (26)

26. Cf. Sacrifice of the rooster, ka jingkhia syiar.

If the illness is still worse and death is feared, then the cleverest and most experienced sacrificial priests are called. Goats and pigs, and if the sick man belongs to the well-to-do, also cows are sacrificed by these. (27) All the relatives participate in the

27. Cf. above, Khein Ksuid

sacrificial meal with the priest.

If the illness is leading towards certain death, sacrifices are made until there is no longer any sign of life. Thus the father of a sick boy in Umpling, who himself was a sacrificial priest, sacrificed the most beautiful chickens all day long until the boy died in the evening from vomiting of blood.

Among the Synteng only rice, eggs, hens, pigs, and deer, but no cows, are sacrificed. Certainly many sibs are allowed to eat the meat of cows, but they are exceptions. Of the sacrificed animals the gods (or devils) receive only some blood, some of the heart and the intestines; the rest is eaten by those present.

3. Sacrifices and Ceremonies for a Death.

763
782 Without interruption -- until death occurs -- sacrifices are offered for a dying

763 [782] person. Whether death has occurred is determined by calling his name. If no further sign of life is observed, howling and wailing begin to announce the mourning. Tears are extremely rare.

764 The dead person is bathed and washed (pynsum-pynsleh), wrapped in his clothes and reverently placed on a bamboo mat. One is particularly careful with the limbs; for the hands and feet are stretched out completely (phyneit ki kjat ki kti) and placed straight (pynthiah beit). To indicate mourning one does not wind the dead man's turban from right to left as usual but the other way around. In the territory of Lamin one puts betel nuts, which are wrapped in pepper leaves, between the turban and the forehead. These betel nuts are placed in a row so that they look like a crown or wreath. Every morning and every evening, as long as the body is in the house, one places cooked rice and dried fish by the head of the dead man. One calls this giving ai ka ja miet ja step (morning and evening meal).

764 782 How long the dead man stays in the hut varies with each sib. Many are cremated on the day after death, whereas others several days later, but always the body stays an uneven number of days in the hut. A betel nut with a pepper leaf and lime is placed with the food as well as a bamboo beaker with water. Finally one puts the "stomach egg" (ka leng kpoh) on the stomach of the dead man (in the area of the stomach). This is the start of the actual sacrifice.

The sacrificer takes a chicken, strews rice on its head, holds it ready for killing, and says while doing this:

782
764 [430] To sngew mo ba long u krad lynti u krad syngkieng, te ba poi hi ka sngi ka ia te wei ngam lap ia ka khein ka bishar te la pom ka tyrut ka smer la pom ka bneng ka khyndew, te kynrad sngew ho, ba men leit da ba suk da ba beit ha kpoh la ka kmie ka kiaw u nie u ma suidnia ka laubei mo?

Hear, o thou road scraper, thou path scratcher, since the day and hour have come and I can no longer get along, am with sacrifice and justice, so have the Tyrut and the Smer struck me and heaven and earth have struck me and so my lord, stop then, that thou goest in peace, right and righteousness of the stomach (in the family) in peace and harmony with the uncle and the cousins. Judge thyself, o goddess Jaubei, is it no so?

Now even though otherwise only good chickens may be used for sacrifices, in this case it does not make any difference whether the rooster (u iar krad lynti) is a fine example or not. The next best is simply taken.

If the dead man is cremated "poorly," i.e. if the relatives are not in a position to pay greater costs, only this rooster and a handful of rice is sacrificed.

If the dead man is cremated "richly," i.e. if the relatives are in a position to pay for the usual ceremonies along with numerous sacrifices, a pig is sacrificed and each of the masculine relatives must give a handful of rice which is also sacrificed immediately.

Various sacrifices are offered, according to whether the dead man is to be cremated on a base built of stone as is the case of the very

764
782 rich, or in a kind of coffin (shyngoid). In the first case a steer (ox) is sacrificed, in the other case a pig (u 'niang shyngoid). The horns of the steer (u masi pyllait) are painted gold or silver. Today one does this only with gold or silver paper. Then the animal is let loose after it has been strewn with rice and sprinkled with water ('iad-um). Anybody who captures it can keep it or kill it. As soon as the animal is let loose, one calls it masi-tamrong. If one wants to set up on the cremation area bamboo poles with white cloth pieces on them as if they were flags, which is only done for the very well-to-do, a rooster (u 'iar kait) is sacrificed.

[461] Since no work may be done on the day of cremation, all the preparations must be completed, such as fetching wood from the forest ('law kyndang), erecting the funeral pyre, arranging for the necessary sacrificial animals and other sacrificial gifts, etc.

4. The Cremation (ka jingthang).

The Khasi burn their dead. At the crematory ceremony one can distinguish various classes or kinds, either according to the wood [431] which is used or according to the catafalque (scaffolding for the body or structure above the dead person) which is erected.

The methods of cremation according to the differences in the wood are:

1. The cremation, for which only uncut wood is used, that is, wood as it is found without any kind of preparation. This type of cremation is made only by the very poor (uba duk eh) who have no more relatives. There is no sacrifice made at this cremation

764 (khlem dykhot).
782 2. Cremation in which the wood used is cut with a knife (da wait). Here a handful of rice is taken from the relatives (ka pynkham ka pynsoh) and a sacrifice offered, "the piece and the sour thing."

3. Cremation in which the wood used is cut clean as boards (ka lyntang). In this class the drum (ka ksing) and the kettledrum (ka dah) are beaten, guns (ka suloi) and the pipe (ka man, i.e., a cannon) are fired, sacrifices are offered, "the piece and the sour thing (u kykhot u lamjew)," an ox (u masi) and a pig (u sniang) are sacrificed. Usually the sword dance (shad wait) is also performed.

764 The method of cremation according to the differences in structure are:

1. Thang syrkhait is that type of cremation in which no kind of catafalque (structure) is used. In this case the dead person is placed on a kind of bamboo lattice work.

2. Thang lyngkhason is that form of cremation for which a catafalque is erected. The dead person is put in a kind of coffin made of young slender trees, bamboo, and boards. This coffin is covered with red cloth with decorations of silver edgings. Over the body, which one does not see, a structure is erected of flowering bushes and figures. One likes to make a peacock of wood to which paper is attached. (28) The whole thing is

28. This ceremony might have originated

764

in the valley and been brought in from there.

[436]

richly decorated with paper flowers. The structure is over the head of the deceased. Shell money (sbai) is distributed to the people at this cremation.

3. Thang shan is that method of cremation, in which the expense goes still further. In addition to the above mentioned structure over the body, a baldachin of four high bamboo poles is also erected over the funeral pyre, which is kept up after the cremation. The baldachin is decorated with colored cloth or paper. Only the very eminent people and the group mother (Stammutter) are cremated in this fashion.

The wood for the cremations is always taken from a holy forest ('law kyndang). But dry wood is also always brought along from the hut, since the green wood fetched from the 'law kyndang would not burn immediately. The fire is also not lighted at the place of cremation, but one takes a firebrand from the hut.

[432] Not until all the relatives have arrived and all the preparations for the cremation are completed -- for no work may be done on the day of cremation -- is the dead man brought to the place of cremation. He is placed, fully clothed, on a bamboo bier (ka krong). At the four ends of the bier, often also at the middle of the long sides, so that there are six of them, bamboo sticks are raised upright and a white cloth is fastened around the whole or crosswise -- depending on whether the body is that of a man or a woman. Weapons,

764 a shield, bow, arrow, and knife (wait) are placed beside the man and ornaments beside a woman. All this, however, is not burned, but is taken away before the fire is lighted, with the exception of the woolen or silk cloth that is attached to the upper ends of the bamboo poles. If the corpse has received money and food, a sacrifice is offered, usually a goat. Poorer people pour a little brandy on the ground.

Now the funeral procession moves towards the place of cremation. This place is designated in each village and is usually located on the slopes near oak forests.(29) As pre-

29. Cf. Table II, Picture 3: Place of Cremation of the Khasi with a stone substructure.

viously during the night, when the dead man lay in the hut, guns are also shot off now, and if the people have wealth, paper bombs are set off. On the way copper coins are distributed to poor people. The tom-tom resounds, the eternal, monotonous beat on the large drum and the melancholy piping of the flutes (sharati). With great wailing from the mourners, in which the women relatives of the dead person excel, they finally reach the place of cremation, which is not sought out until late in the afternoon.

764 First a goat (u'lang mawkjat) is sacrificed
782 here. Then the body is lifted up on the catafalque, which has already been prepared, with his head towards the west and his feet towards the east. A rooster is now sacrificed, which they call 'iar syngkhong. If the deceases is well-to-do, a he-goat is also slaughtered,

764 which is called u 'lang sait ksuid or "the
782 he-goat which washes off the devil." The meaning of this is: the he-goat is similar to the "scapegoat" which takes the sins of the deceased upon himself.

Among the poor (that is among those who only use uncut wood as well as those who use wood cut with the ka wait) there is no funeral.

Now the closest relatives start the fire and after these the children of the deceased, if there are any present, apply fire. The cloth on the upper end of the bamboo poles flame brightly and is burned up in no time. The few clothes of the deceased are also soon in flames and then the actual burning of the body begins.

If the pile of wood catches fire, a rooster u 'iar padat is sacrificed immediately. This rooster is swung three times over the funeral pyre just as one swings incense and its blood is smeared three times on the pyre. Then the "stomach egg" (leng kpoh) is broken at the head end of the funeral pyre. Then three ar-
[823] rows ('nam tympem) [433] are thrown by hand as far as one can in three directions. One to the east, one to the south, and the third to
[775] the north. But never to the west. Because according to the belief of the Khasi the west leads to the unending, thither go the souls of the dead, there lies eternity. (30)

[626] 30. When the Khasi would like to have somebody go far away and they curse him, they speak as follows: to leit sha ban sep ka sngi shaba mih u bnai, i.e., go away where the sun sets and the moon rises!

(Go away where the pepper grows.)

ooo (Go away where the pepper grows.)

764 Meanwhile others are completely occupied with the burning of the body. Soon the intestines pour out into the fire, whereupon they begin to sizzle. A horrible smell comes from the crackling intestines. The steam that is developing in the skull from the fire causes a violent explosion in the skull which sounds like a gunshot. After the pile of wood has burned down and the yellowish green smoke has gone, you still see in the bluish fire the outlines of the black, steaming and cooking corpse. Now the men, who are already quite drunk from rice brandy, poke around in the fire with bamboo sticks and pour liquor and oil on it, which causes the flames to blaze up again. I saw in Lamin at a cremation that the heart was left as the last thing, which was then burned by itself with great sadness on the [273] part of the cremators. The objectionable scene of cremation could not occur without an [782] excess taking of alchohol. As a conclusion a goat is sacrificed (u 'lang dholia) on the spot and the relatives take their departure as they place betel nuts on the burned up funeral pyre with these words: khublei khie leit bam kwai ha iing u blei (god guard thee, go and eat betel nuts in the house of god!

In some places it is customary before the cremation for a man to get drunk with liquor. He then represents the devil and performs all sorts of tricks.

764 When the corpse is burned, one then col-
782 lects the remains of the bones which did not quite get burned up. (31) These are washed

31. Cf. Table III, Picture 1: Collecting the Remains and the Bones

that are not burned up and the Ashes (among the Khasi).

and wrapped in a small piece of cloth and then put in an urn (jar). While a woman is doing this, a man strews rice on the ground and entreats the spirit of the deceased not to disturb his relatives who have remained behind in the world, since everything was done correctly at the cremation. When this entreaty is finished, the urn with the remains of the bones is placed under the tombstone (maw shying). The remains of poor people are also put under this stone but not in an urn. The sacrificial rice (ka japha) is also placed by the urn as food for the deceased (cf. the next section).

M5
782 Early the next day they count up together the expenditures they have had. Speeches are made by the u kni u kpa (the maternal uncle) to the assembled children and grandchildren. This u kni u kpa [434] has been the priest and judge of the sib up until now. Now all business stops for three days. But on the third day they gamble (draw lots - bud pylleng) with two eggs to see who will be the leader of the sib of the deceased in the future, so that one will know to whom one should turn when sacrifices must be offered or quarrels are to be smoothed out. Thereby the present u kni u kpa speaks in relation to the deceased:

Hei ap ia ka nia ka jutang ynda ia lum ia kynshew ia u kur u para u khun ka meinah ka meisan yn sa tai ia ka khein ka bi shar yn sa long ka

So hearken unto the words of the promises! After the relatives and brothers and sisters of the mothers-in-law and aunts are gathered, we will sift

765 ai ban ka ai sa ia me
772 ka kynrong ka hyntaw ka pynkhiah ka pynnang, dih sa ka kiad sa ka un mei

our words and our sacrifices and out judgments and then will be: to care for thee and to nourish thee and to carry over thy bones and to care for thee in sickness and to make thee healthy. So we wish to drink the liquor and the water, is it no so! (32)

[279] 32. The water is a fermented rice water, that is variously called rice beer. The last sentence has the sense of an affirmation and of an oath.

Hei angew ryngkat ma phi ka blei ka laubei ka nonglum nongkynshew shi khrum ka nar mei

So hear then, o goddess, thou Jaubei, thou who has gathered us here, one and all (33) the whole sib

33. Shi khrum - actually the hollow place, the place under the house.

and stone and iron, is it not so!

764 As there are various customs for sacri-
772 fices, so are the ceremonies for cremation various. It is reported (34) that on the day of

34. Gurdon, The Khasi, p. 133.

cremation pigs are slaughtered by the relatives of the deceased. Those, who cannot afford to

764
782 sacrifice pigs, bring liquor, some of which they pour out on the funeral pyre. The coffin is raised onto a bamboo bier, and some money is placed next to the body so that the spirit of the deceased can buy food on the journey. Cotton or (in the case of rich people) silk cloths are wound around the coffin, crosswise if the deceased is a man, in the form of a square if the deceased is a woman. Before the bier is [783] raised up, one throws a handful of rice and pours a little water from a jug in front of the door and sacrifices a goat. These are purification ceremonies. The funeral procession is now arranged and slowly wends its way accompanied by a great deal of music. For rich people guns are shot off in between times. Copper coins are also strewn along the way. As the funeral pyre is approached, the corpse is placed on display and the peices of meat of the sacrificed animals which lay beside the body are thrown away. Then one arranges three loaves of baked bread, an egg, the lower jawbones of the animals which were sacrificed, the left [435] foot of the rooster (u 'iar krad lynti), a jug of water, food in a dish, and three arrows. A goat is now sacrificed. The body of the deceased is placed in the coffin, if one is used, and then lifted up on the pile of wood, with the head towards the west and the feet towards the east. Pieces of wood are now placed around the corpse, and the egg ("stomach egg") is broken, not as is often supposed over the stomach of the deceased but rather it is thrown on the pile of wood in the direction of the feet. The fire is now lighted by the kur or member of the clan and then by the children, if there are any. Another rooster (u 'iar padat) is sacrificed, the blood

764 of which is smeared three times on the pile
782 of wood. After the clothes are removed, the bier is broken into pieces. The edibles and the jawbones are now placed by the head of the deceased. After the sacrifice of the rooster the three arrows are shot off from a bow, one towards the north, another towards the south, and one towards the east. One calls these arrows the 'nam tympem. It should perhaps be mentioned that the number of arrows, which are shot off during the cremation, corresponds with the number of arrows which are used during the name giving. As soon as the fire is burning, another goat is sacrificed (lang dholia). In some cases all the clothes are burned with the body; in other cases the clothes are only held over the fire and then put aside for further use (which is the case only among the poor). Before the relatives and friends leave the place of cremation, they place betel nuts on the pile of wood and say farewell to the deceased with these words: "Khublei, go and eat betel nuts in the house of god" (according to Gurdon).

5. Burial of the Bones

764 There is a threefold burial of the bones, i.e., of the remains of the bones not burned up and of the ashes. But these burials are not varied for the wealthy, the well-to-do, or the poor, as in the case of cremation, but all the bones of the dead are buried three times in different places. The burial rite for the first or second burial is essentially the same. The rite of the third is considerably more ceremonial.

The first burial occurs immediately after the cremation near the place of cremation in

764 the maw shying, the place of temporary keeping.

The second burial occurs later, when the bones are transferred from the maw shying into the maw phew. Maw phew are places for keeping the ashes of members of a narrower family circle. The bones of the male relatives are kept here as well as the bones of the female relatives, but separately from each other.

The third burial finally occurs in a very ceremonial way, when the bones from the various maw phew are transferred into the common grave of the whole sib maw bah.

[436] A Schematic Representation of the Transfer of the Bones of a Sib:

1. Burial:	Cremation: maw shying	Cremation: maw shying	Cremation: maw shying
	Cremation: maw shying	Cremation: maw shying	
(Bones of a single dead person, male or female)			(single grave)
2. Burial:	maw phew	maw phew	
(Bones of men and women separated)			Family grave)
3. Burial:	maw bah		
(Bones of the men and women separated)			(Sib grave)

a) First Burial (maw shying)

As soon as the cremation is over, the participants form a procession and bring the ashes or bones to the maw shying. One man hurries ahead, strewing leaves (ding shit=hot wood) alternately with grains of rice on the
764 road. Then the woman follows who carries the
292 bones. She is festively dressed and has a kind of scarf around her shoulders such as the Catholic priests wear for carrying the monstrance. In a village south of Lamin I saw

764
[292] on such an occasion a scarf which was decorated with gold edges and gold fringes. Whereas the relatives following next may walk and speak as they choose, the woman dressed in the scarf, who is carrying the bones wrapped in white cloth with respect against her breast, is required to be silent, not to vary to the right or to the left, but to walk in a straight line to the maw shing [sic] as far as this is possible.

764
782 Having arrived at the place, a rooster is first sacrificed, which one calls the "guide to heaven" (u 'iar krad lynti), because he is supposed to accompany the spirit of the deceased into the other world. Afterwards three loaves of rice bread, an egg and brandy are sacrificed by the sacrificial priest (nongknia), so that the ashes may rest well here. The bones are placed in an earthern pot after they are well washed, and the jar is bound with a white linen cloth. The three loaves of bread along with the egg and the left foot of the previously sacrificed rooster are placed beside the jar in the prepared grave (if one can call the hole that) and the grave is closed with a stone. Betel nuts, pepper leaves, and lime are placed on top.

b) Second Burial (maw phew)

After a while the bones in the separate maw shying are collected, but the bones of the men and the bones of the women are kept and carried separately. In a manner similar to the above the transfer into the maw phew occurs. There the bones are laid separated in the prepared places, and the usual sacrifices of the rooster, the kpu, and the liquor are offered.

c) Third Burial (maw bah)

764 The ceremonial transfer of the bones from the various maw phew into the common sib grave maw bah is probably the most important of all the ceremonies [437] which the Khasi have. For not merely the precise and orderly fulfillment of every prescribed ceremony and custom, even the smallest, is necessary here, but also an emotional or spiritual preparation is needed, which neither occurs nor is demanded among the Khasi for anything else. This emotional or spiritual preparation consists in the requirement that all members of a whole sib must live in peace with each other, since otherwise the ceremonial transfer of the bones may not take place.

[787] If all quarrels and discords are smoothed out, this is determined with the greatest exactitude, and a sacrificer who is taken from the sib inquires by egg throwing and the sacrifice of a chicken, which day would be suitable for the ceremonial act. If the day is determined in this way, all the relatives of the dead meet together in the house of the group mother [Stammutter] (iing seng): the children, the brothers and sisters, the nephews and nieces (shi kur shi para ryngkat u khun ka meinah meisan baroh), the great uncles and the little uncles (u nie-bah u nierit). Standing, they call upon the goddess who has created the members of the whole sib and say:

764 782

Kumno? hukum phi ka blei thaw bynriew buh bynriew ba ngan ieng ka lum ka kyn shew ka thep ka tian ia u suidiap u nongiap u lor u kap	How dost thou, o goddess, wish that I stand (before thee, before thy face) to gather the hard earned, the stored up, the spirits of the dead,

764
782 baroh na tynrai ka iingseng iingkhad-duh? — the chiefs of the family and the old family chiefs of the deceased from the tribal house?

If the goddess now sanctions it, then they gather the sacrificial gifts and the sacrificial money (which is often thousands of rupees) to use them for the festivities.

Two women then go to the various maw phew and reverently fetch the bones that were placed there. One woman carries the bones of the male dead, the other the female ones, and both bring them to the house of the group mother, where they are ceremoniously placed and decorated with flowers and beautiful cloths. Now the spirits of the dead receive nourishment (ai bam), in that a pig, a rooster and a steer are sacrificed. The best pieces of these animals are kept in a basket in the house for a later division among the participants. The rest is sacrificed.

764
535 Then there is dancing. (35) This cere -

35. Cf. Table III, Picture 2: Ceremonial Dance in Honor of the Deceased.

monial dance in honor of the deceased lasts either three or five or nine days, whatever seems best (and how long the collected money lasts). A place in front of the house is festively arranged and used as the place for dancing (lympung). Music is played and liquor distributed.

764
769 On the day on which they intend to transfer the bones, the drums (ka ksing) and the kettledrums (ka nakra) are beaten, [438] the flutes (ka sharati) are blown, guns (suloi) and cannons (ka man) are shot off. An ancestral

764 769 doll is made of bamboo and this is supposed to represent either the great grandmother (the Jaubei of the sib) or the great great uncle (suidnia). They walk to the mawniam mawrukom (the ceremonial stones, ancestral stones) (36)

36. Gurdon, The Khasis, p. 141, gives another description of these customs. He says: In Cherrapunji two dolls are made, called ka puron and u tyngshop. The former is supposed to represent the Jaubei, the latter the suidnia. The dancers hold these dolls in their hands.

[211] with this ancestral doll (u tyngshop). While some dance, others set up "resting stones" or "foot stones" or "road stones" (maw kjat or maw lynti) on the way to the maw bah for the spirits of the dead, where they can rest on the way to the common grave. These stones are about a meter high and stand three in a row at each place. In front of them a flat stone like a platter is placed on four small stones which form a base or feet (maw kjat, i.e., stone foot). (37)

37. Cf. Table III, Picture 3: "Foot stone or road stone" among the Khasi.

On the day on which the dance ends they arrange ka pyngrei, i.e., a marriage feast of the spirits of the deceased, who died in their youth (grown but unmarried or childless). For this they choose two poor old people a man and a woman, of small size whom they pay for this.

764 769 The man is the groom of the dead young girl, the old woman the bride of the dead youth. They have the two scramble for the spirits' rice (ki pyniaknieh bam ka ja snaiap) and have them jump over the rice mortar (thlong) and the rice pestle. Then arrows are thrown as far as possible, which the two people are supposed to seize. This game of catching means the driving out of demons who surround the maw bah and wish to prevent the approach to the stones. Then one strews seed rice (u kaw rawai) on the road from the house to the end of the village. The two little people must now run with sticks (da ki diengduh) and thresh or beat the rice. This happens three times, one after another.

764 When it has become bright day, a handful of rice is taken from each of the relatives, as well as the contribution for defraying the [782] costs of the whole festivities. Then they fetch an "altar he-goat" (u' lang duwan), in order to cut off its head on the village altar (ha ka duwan ka shnong ka mulak). Now they make merry with drums and flags (ka ksing ka lama). The children and grandchildren sit down together and greet each other solemnly, [535] especially the "cousin" (u kha pka). Then a shield dance (mastieh) (38) is held. They

38. Cf. Table IV, Picture 1: Khasi men, ready for the shield dance.

perform three rounds. Then a he-goat is slaughtered, and all dancers with the shields bow three times before the "cousin" (u kha pka). Each of the sons of the group house (Stammhaus) does the same thing.

Now everybody rises, and someone sacrifices the scapegoat u' lang sait ksuid. A

764 A
[335] weapon dance is performed in which the sons follow one behind the other (according to age) (39) (shad wait, i.e. weapon dance).

39. Cf. Table IV, Picture 2: Weapon dance of the Khasi at the third burial.

764
782 [439] When the weapon dance has ended, they go in a procession (as above for the maw shying) to the maw kjat or maw lynti. Having arrived there, each of the sons slaughters a he-goat by separating the head of the animal from the body with one blow. The usual sacrifice takes place. But usually there are not a lot of he-goats slaughtered (since there is not enough money) but only one, which is then called u' lang maw lynti. The retinue or escort of the sons ends here (hangne la kut ka jingleit on lynti ki khun kha).

The others continue on to the maw bah. Having arrived there, they open the door (the closure of the container for the bones). A man, who is paid for it, crows three times to represent the spirit rooster iar iap. This occurs in front of the stone. Then all the spirits who are in the cave room are awakened (kyrsiew) by someone saying:

to khie to khie la wan u khun la wan u ksiew!	Stand up! Stand up! The children have come, the grandchildren have come!

Then they place the bones of the deceased inside, separated according to sex. In addition there are the sacrificial gifts: the bread and the cake, which they spread out (siang). Also morning and evening rice (i.e. cooked rice ready for eating) they place (theh —

764
782

pour out) on the stone, also betel nuts and pepper leaves and ka reng ka ngab (the jawbones of the [sacrificed] animals). The contribution (u khrong u khwang) is also added. Then the stone is closed.

Then they strike three times with a stick (sympat da ki dieng) on the stone, which they call tan ding (taken from fire), saying:

Hei nga tan ding nga tan theh ioh don uba mang uba thew u tynjuh u pan tien wat	See, I come towards the fire, see, I pour out the sacrificial gift, (40) so

40.- i.e., I perform the ceremonies faithfully.

leit khih wat leit win ap la ka khein ka bishar pyllun ho mei, ho iaw, ho nie, ho ma shi khrum ka maw ka nar!	that someone does not perhaps come and infringe and seek to demand a sacrifice. Do not disturb thyself! Be calm! and await patiently thy time of sacrifice. Is it not so, little mother, is it not so, mother-in-law, is it not so great uncle, is it not so, cousin, is it not so, all ye cousins who are under the stone!

On the next morning they figure out what everything has cost and what has been used. Then they take sacrificial liquor and say ('suit' means actually: they take it, present it, and hold it up ceremoniously):

Hei ko nie ko ma ko mei ko iaw ka suidiap	See, o uncle, see, o cousin, see, o little

764
782

ko nongiap shi khrum /407 ka maw sngew ho la lut la sep katta to nang kyrsoi to nang kyrsih la iaid ka iew ka duwar ka kitnong ka bylla ka khaii ka pateng!

mother, see o grandmother of the deceased, o all ye dead, who are under this stone, listen! Thus and thus much we have used and given out, bless and increase it. May all our doings, all our household, all our daily wage, all our business make us happy!

Then they divide the remains of the sacrificial gifts (also the pieces of meat which were kept in the basket) and bow down and mourn all the deceased cousins and aunts. And when the sacrificial remains have been divided, they give everybody four to five rupees (five marks, sixty pfennigs to seven marks according to the peace evaluation) in addition and say:

Shim kein khun to leit long bynriew to leit man byn riew to roi to pa to long spah to man spah wei kumba nga la kha la long shisha bam don ka sang bamdon ka ma a yn sah ka nam yn sah ka rong yn sah ka ummat yn sah ka umpung mo.

So, take, my son, grow and be strong, be happy and successful; may thy wealth increase, as I conceived thee without shame and wrong; may thy reputation and thy honor endure, and also the tears and the wells (41) should endure, is it not so.

41. i.e., the descendants who will mourn thee.

Thus they do it to all the children one after the other. After three days they destroy

764
782

the doll, whether it was (i.e. was supposed to represent) a male or a female one.

In conclusion they sacrifice a pig as a food sacrifice which they call the "doll pig" (u niang ai bam tyngshop).

After the passage of a month they sacrifice a pig again as a food sacrifice, which they call the "month pig" (u niang ai bam lait bnai).

And finally after a year they sacrifice still another pig as a food sacrifice which they call the "year pig" (u niang ai bam lait snem). (42)

42. Cf. Table I, Picture 1: Third burial place of the Khasi.

Gurdon (43) also describes this ceremony

43. Gurdon, The Khasis, p. 142.

differently, saying: "After they have arrived at the grave, the bones are washed three times in a basin (this is a custom from Cherrapunji). In Maushai the bones are exposed to the heat of a fire which has been lighted on a little platform. Then the stone door of the cinerarium is opened. The bones of the women are placed inside with the urn next to the wall which is farthest away from the door. But the bones of the men are placed next to the door. Many sibs place the bones of the men on the right side and the bones of the women on the left side. Then sacrifices of food and drink are offered the ancestors on a stone in front of the grave. The men perform a ceremonial dance with sword /440a Table I, 1. Third Burial Place. 2. the village Raliang/ 1

Foot Stone and Road Stone.] [440d Table IV, 1. Ready for the Shield Dance. Weapon Dance.] [441] and shield (three times), and the door of the grave is closed. Afterwards a flag is planted on the grave.

All the people go away, with the exception of three men. One of these sacrifices a rooster (iar tanding) in front of the grave, the second one sits behind the sacrificer and holds three firebrands in his hands, which he moves back and forth. This man crows three times like a rooster. The (third) man behind the grave listens most carefully to every noise that is noticed meanwhile in the grave. The belief actually exists, that if the ceremonies have not been performed properly, the grave will now tremble and move. When the three watchers are satisfied and convinced that there was no motion in the grave, they go home and report it to the relatives. This ceremony is called tan ding or the test by fire.

On the next morning, the woman who is the householder of the house of the group [Stammhaus] divides the hind quarters of the sacrificial animals among all the participants of the sacrifices. The relatives are not allowed to go to work before three days have passed. The third day is called ka sngi lait.

The whole ceremony has symbolical meaning. The massive stone grave is supposed to represent a safe place for the spirits. If, however, the departed spirits are not satisfied with the whole ceremony, they will disturb their relatives in this world."

Aus dem religiösen Leben der Khasi.

    c) Drittes Begräbnis (*nsaw bah*).

I. Die Religion im allgemeinen.

1. Götter, Geister, Seelen.

Von den Khasi selbst ist keine Erklärung über die Entstehung ihrer Religion zu erwarten. Da sie keine Schriftzeichen, keine Götzenbilder, keine Tempel haben, ist man ganz auf die mündliche Überlieferung angewiesen.

Einige Khasi behaupten, es wäre ihren Ahnen die Art und Weise zu opfern vom Teufel vorgeschrieben worden. Andere dagegen meinen, es sei in früheren Zeiten ein Mann in ihr Land gekommen von seltener Größe und Stärke. Dieser habe wunderbare Dinge vollbracht und ihren Ahnen befohlen, zu opfern und ihnen zugleich die Art und Weise des Opferns vorgeschrieben. Heute noch zeigt man den ehemaligen Platz seines Wohnsitzes auf einem Berge in der Nähe von Shillong. Da man in jenem Manne etwas Göttliches vermutete, wurde er *u 'lei shillong* (der Gott Shillong) genannt.

Die Khasi glauben an ein höchstes Wesen, das sie *u blei nongthaw*[1] (Gott den Schöpfer) nennen. Wie die Anschauungen über diesen sehr verschwommen sind, so sind es auch die Begriffe über Ewigkeit und Seele.

Über die Ansicht, was mit der Seele nach dem Tode geschieht, sind die Khasi unter sich nicht einig. Einige sagen, die Seele gehe nach dem Tode in die Luft und werde selbst zur Luft, bestehe also nicht mehr weiter. Die meisten aber glauben, daß die Seele nach dem Tode weiter bestehe und glücklich oder unglücklich sein könne. Doch hänge dies nicht von einer persönlichen Schuld oder Sünde, sondern nur vom gewissenhaften Vollzug der Bestattungszeremonien ab.

Das Land, das die Khasi bewohnen, ist in mehrere Bezirke eingeteilt, welche früher, bevor die Engländer kamen, von eigenen Königen regiert

[1] Zur Aussprache des Khasi (Schreibweise): *ai* wird gedehnt ausgesprochen, *o-i*, *u* wird wie *o* ausgesprochen, *ow* ist also gleich *o-u*, *ah* wird wie *ach* ausgesprochen — phonetisch *ā*.

wurden. Jeder Bezirk hat nach der Anschauung der Khasi einen eigenen Schutzgott, welchem sie den Namen des Bezirkes beilegen.

Dörfer haben ihre Schutzgötter, Familien haben ihre Schutzgötter, ja sogar einzelne Menschen haben ihre Schutzgötter, denen gelegentlich Opfer dargebracht werden.

Auch verehren die Khasi und Syntengs Gottheiten, die nicht als Schutzgötter, sondern als Spender von rein materiellen Wohlfahrten gedacht sind, wie z. B. *a 'ñi Jengpnah* (der Gott des Reichtums) und *a 'ñi umtong* (der Gott des Wassers, das zum Kochen und Trinken gebraucht wird)[1].

Im allgemeinen aber haben die Khasi den Begriff, daß die Gottheiten oder Geister böse Geister seien, die sie dann mit dem Namen *Arwah* (Teufel) bezeichnen.

Sie glauben, daß ihr Land voll von solchen *Arwah* sei. Diese zu beruhigen, ist die Hauptaufgabe der Khasi. Sie versuchen mit allen Mitteln die unbekannten Mächte und Geister zu versöhnen, gutzustimmen und durch Opfer zu beschwichtigen. Es ist Furcht, die sie zu ihren religiösen Handlungen antreibt, nicht Ehrfurcht oder eigentliche Verehrung. Denn die Khasi haben die Überzeugung: [illegible] Anfange Himmel und Erde nahe beisammen waren; daß die Menschen unmittelbar mit *a bier sengthaw* (Gott dem Schöpfer) verkehren konnten; daß es damals noch keine Sünde gab. Nun aber sei der Mensch in Sünden, und kein Opferer vergibt, den Spruch hersagend: *ngo bria ngo la pap* (ich Mensch habe gesündigt). So ist der Begriff Sünde einer der Fundamente der Khasireligion. Das andere Fundament aber ist das Opfer. Es ist kein Zweifel, daß Sünde und Opfer die Grundgedanken der religiösen Anschauungen der Khasi ausmachen.

So wenig sich aber die Khasi erklären können, wie der Mensch in die Sünde fiel, ebensowenig haben sie eine Erklärung dafür, daß der Hobo als Mittler zwischen Gott und dem Menschen erscheint. Vom Hobo sagt die Khasiüberlieferung: *a khun ka bäi ube bit ryndong ka shuh ryndong na ka kynia jong ngo a bria*, d. h. der als Sohn der Göttin sein Leben für den Menschen hingibt, also durch Opfer die Sünde wieder gutmachte und Gott versöhnte.

Die Khasi glauben an eine andere Welt und ihr Augenmerk richtet sich da auf das Wohlbefinden der Geister der Verstorbenen. Diesen Nahrung zu geben *(ai kam)*, ist eine der Hauptaufgaben, die erfüllt werden müssen, denn vom Wohle der Verstorbenen hängt das Wohl der Lebenden ab. Wenn man z. B. den Leichnam eines Verstorbenen nicht mehr haben kann; da er in der Fremde liegt oder von wilden Tieren verzehrt wurde, so nimmt man wenigstens seine Kleider und vollzieht mit denen die Bestattungszeremonien. Denn nur solche Geister, denen Bestattungszeremonien nach Herkommen und Gebrauch gemacht worden, können ins Brüllhausen im Garten (im Himmel) Gottes hineinkommen, während die anderen auf der Erde umherirren

[1] Vergleiche meine S. 410 die Übersetzung einiger guter und böser Gottheiten, die von den Khasi und Syntengs verehrt werden.

oder in Insekten, Vögel und anderen Tieren wiederfinden können. An eine Hölle (im christlichen Sinne) glauben sie nicht. Die größte Seligkeit für einen Khasi ist „ewig Beisichselbstsein". Daher stellen sie sich den Himmel als Wohnung (Garten oder Haus) Gottes vor, in der nur Beisichselbst gekannt wird: *ohn hum hmi ha ing a ñiñ* (der Beisichselbst lebt im Hause Gottes).

Dieser Gedankenkreis, der sich auf die verschiedenen Verwandten bezieht, verbindet sich mit dem Kulte der Ahnen. So wird die erste Urgroßmutter einer jeden Sippe (*jaid*) zur Göttin (*ka jaidon*) und der erste Urgroßvater der Sippe zum Gott (*U dkaulang*).

Schließlich werden auch andere indirekte Dinge vergöttlicht, und der Gedankenkreis erweitert zu Objekten so, ist ignoriert ein aufhaltend gebrauchter Berg, so werden ihm Opfer dargebracht, da dort ein *daiid* wohnt. Und der Geist, der den Berg bewohnt, wird bald mit dem Berge selbst verwirrt, und nun wird der Berg angebetet, und ihm werden die Opfer dargebracht. Mit den Flüssen geht es ähnlich. Wie leicht kann ein Flußgott beleidigt und erzürnt werden durch Fischen oder durch Eindringen von anderen Dingen! Das Naturbedürfnis ist also, diesem Flußgott ein Opfer darzubringen. Die Khasi machen sich niemals ein Bild, ist es aus Stein oder Holz, das ihre Gottheiten darstellen soll, aber trotzdem verehren sie manche Naturkräfte und Naturerscheinungen, und so ist [illegible] wie weit der Berg oder Fluß angebetet wird, und wie weit nur dem Geiste des Berges oder des Flusses gespielt wird.

In allem, was man Unglück oder Mißgeschick nennt, sehen die Khasi die Arbeit der bösen Geister: in der Mißernte, im Hochwasser, in der Krankheit. Die Geister wohnen im Urwald, in den steilen, unzugänglichen Felsen, im rauschenden Fluß, im grünen Baum. Sie kommen durch die Luft im Wind und Wetter. Sie geben dem Tiger die Kraft, der Schlange das Gift, sie verleihen dem Dickicht das Fieber und lauern in der Cholera auf ihre Opfer.

Daher die vielen Opfer und Opfergebräuche der Khasi, eben nur, um die Verehrung der mächtigen Geister herbeizuführen. Es kommen zwar bei den einzelnen Opferzeremonien auch Gebete vor, die man als Dank- oder Lobgebete auffassen kann, doch sind das nur Ausnahmen.

Die Opfer werden entweder von Opferpriestern (*lyngdoh*) oder von alten Männern, die Erfahrung haben, dargebracht. Erst wird durch Einwerfen nach dem Geiste gefragt, der versöhnt werden soll. Kommt nach dem dargebrachten Opfer der gewünschte Effekt nicht zustande, so wird durch Eingeweidebeschau (*Pilsomsyiar*) weitere Aufklärung gesucht und das Opfer von neuem dargebracht. So verzögern sich oft bei Krankheiten. Die anderen Opfer werden später näher beschrieben werden.

Die Religion der Khasi ist eine aus Furcht vor Unglück und Schaden entspringende, durch Opfer sich betätigende Verehrung der (bösen) Geister. Diese meine Definition deckt sich im wesentlichen mit der Definition von Bivar[1], welcher sagt: „Die Khasireligion mag kurz definiert werden als eine Furcht, Kreaturen zu besitzen und Unglück abzuwehren, durch Herauffinden

[1] Bivar, Administrative Report on the Khasi and Jaintia Hills District of 1906.

den Namens des Teufels, der der Urheber des Übels ist, und durch die Opfer, die nötig sind, ihn zu versöhnen" und Oldham[1] „nennt die Khasireligion einen Geisterkult, d. h. eigentlich mehr eine Versöhnung der Geister, sowohl guter wie böser durch Opfer, welche gelegentlich dargebracht werden, besonders in Zeiten der Trübsale".

Übersichtstafel

einiger Gottheiten (guter und böser), die von den Khasi und den Syntengs verehrt werden.

I. Reine Gottheiten:

a *Bôri nongthaw* Gott der Schöpfer,
a *'Iei longpyuh* der (gute) Gott des Reichtums,
a *'Iei umtong* der Gott des Wassers, das zum Kochen und Trinken gebraucht wird,
a *'Iei shillong* der Gott, der das Opfern befohlen hat,
a *sim shillong ramjuk* der höchste Gott der Syntengs,
fa *maidsiong* die höchste Göttin der Syntengs,
a *sim synriang* der Sohn der obigen, der auf wunderbare, außerordentliche Weise geboren wurde,
fa *rum-ew* die Göttin der Erde,
fa *parem* eine der ersten weiblichen Gottheiten der Khasi, die die erste mütterliche Ahne vorstellen soll,
a *pham raid iap* einer der Urahnengeister, wird angerufen um Segen für die Lebendigen und die Toten,
a *pham long sion* der Hausgott eines Königs,
fa *longkha* die Göttin der Hochzeiten,
fa *'ieikkuri* die Hausgöttin einer gewissen Sippe der Khasi,
a *'raid nia* der Geist des ersten mütterlichen Großvaters einer Sippe,
fa *blei long-i'ew* die Göttin, welche die Könige zu Königen macht,
fa *i'ew-synohar* die Göttin, welche die Welt regiert,
a *kiskarem* der Gott, der Flöten und andere Musikinstrumente spielen lehrte,
fa *blei-pra-lei-kai* die Göttin der Magie,
a *'Iei pyrthai* der Gott des Donners,
fa *'Iei nilam* die Göttin des Sturmes,
fa *'Iei ding* die Hausgöttin,
fa *kyner ka jingpaw* die Göttin, welche Glück bringt, besonders auf Jagden,
a *synlaw ainong* der Schutzgott eines Dorfes,
a *kma ainong* der Schutzgott eines Dorfes,
a *pham a kynpad* der Schutzgott eines Dorfes,
fa *longkur* die Schutzgöttin einer Sippe,
fa *'iei-ssid 'iei-sawaw* die Schutzgöttin einer Königsfamilie,
fa *'ieikhynriap 'ieikhawai* die Göttin, welche den Dorfeingang bei Kriegszeiten bewacht,
fa *'iei-maiiak* die Göttin, welche den Staat oder das Dorf bewacht,
fa *ssid* die Göttin, welche die Königsfamilien bewacht,
fa *rum-shandi* die Göttin, welche die Leute bei Kriegszeiten inspiriert.

---

[1] Oldham, „The Khasis". London 1907, S. 108.

2. Böse Gottheiten:

a siem niang thyllew der Gott der Blattern,
ka dabu die Fieberdämonin in und um Theriagat,
ka rik die Dämonin des Malariafiebers,
ka khlum die Dämonin der Cholera,
ka tyrut die Dämonin, welche gewaltsamen Tod verursacht,
a maket ein Teufel, dem nur innerhalb des Hauses geopfert wird,
ka hyrdow die Dämonin, welche krampfhafte Anfälle verursacht,
a hyrtep der Teufel, der Blindheit verursacht,
a lasumdok der Teufel, der Schwellung des Gesichts und Heiserkeit verursacht,
a jinghik-a lasum der Teufel, welcher Mund- und Zahnkrankheiten verursacht,
ka tikar die Dämonin, welche schwere Kolik verursacht,
ka skmar die Dämonin, welche zuckende Krämpfe verursacht,
ka skaar die Dämonin des Reichtums,
a skparai der Teufel, welcher die Krankheiten stets verschlimmert,
ka skar die Dämonin des Reichtums (nur bei den Khasi),
ka taro die Dämonin des Reichtums (nur bei den Synteng),
a 'said-um der Teufel des Wassers, der die Weiber anpackt und Unfruchtbarkeit und Abortus verursacht,
a tynjong der *taime* Teufel, der *im Dickicht* wohnt und die *Menschen* zu Tode hetzt,
ka ron die schlechteste aller Dämoninnen (nur bei den Synteng),
a 'said-lum-tap der Vollstrecker der Befehle Gottes, der die Seelen in die andere Welt abzuholen hat,
a thim der Teufel des Reichtums und Wohlstandes, der nur durch Menschenopfer verehrt werden kann,
ka smar eine Dämonin, die gewaltsamen Tod bringt,
ka syrti die Dämonin, die kratzt und schneidet, die sägt und feilt (durch Schmerzen in den Eingeweiden),
ka jumai die Dämonin des Erdbebens,
ka niangriang die Dämonin, welche Kinderkrankheiten (besonders am Nabel) verursacht,
a 'said-briew oder *a 'said ngam* der Teufel, der die Menschen am frühen Morgen angreift und Seitenstechen oder Heiserkeit verursacht,
a 'said-kynta-maraw der Teufel, der Kopfweh macht,
a synkai hamar ein böser Geist,
ka ramskandi eine Dämonin.

3. Verehrte Naturkräfte:

Der *Piamtiil*-Fluß, welchem die Könige von Nongstoin, Dangrin und Nobosohpoh opfern,
der *Khai-mara*-Fluß bei den Wir,
der *Kiprill*-Fluß bei den Synteng,
der *Myntang*-Fluß bei den Synteng,
der *Shillong-peak* (Berg bei Shillong),
der *Riabong* Berg bei Shillong,

2: Stegmiller AR7 Khasi

der *Kyllong*-Felsen,
der *Symper*-Berg,
der Berg *Pyddieng blei lyngdoh* nahe bei Shangpung (Jaintia).

2. Mittel zur Abwehr der bösen Geister.

Die Khasi betreiben die Zauberei nicht im strengsten Sinne des Wortes. Es ist mehr ein instinktives Handeln, das beeinflußt wird durch den Aberglauben, dem sie verfallen sind. Nach ihrer Meinung entsteht ja alles Ungemach und Unglück nur durch die bösen Geister. Diese zu versöhnen *(khein bun khai)*, ist die Hauptaufgabe ihrer Opfer. Doch wissen sie gut, daß es möglich ist, mit Hilfe des *ksuid* anderen Schaden zuzufügen. Darin also und im Abwehren des Schadens besteht ihr Zaubern. Das Zaubern geschieht nicht durch eigene Zauberer, die ein Geschäft daraus machen würden, sondern, wer immer glaubt, mit Hilfe des Teufels anderen schaden zu können, der probiert es; ebenso wie auch diejenigen, die einen Schaden irgendwelcher Art zu verhindern haben, hoffen, dies mit Hilfe des Teufels tun zu können.

Hat irgend jemand eine Halskrankheit, sei es eine Geschwulst oder auch nur eine Heiserkeit, so glauben sie, dies komme durch den Einfluß des Teufels *u lasamdoh*. Daher wird im Hofe des betreffenden Kranken ein Hahn oder ein Schwein geopfert. Das Blut des Opfertieres wird dem Kranken zum Trinken eingegeben, damit er genese.

Ähnlich machen sie es, wenn eine Person an Zahnweh oder an einem sonstigen Mundleiden erkrankt ist. Diese Leiden schreiben sie dem Teufel *u jingbih* zu.

Wird ein Kind blind geboren, so ist nach ihrer Ansicht ein Ehebruch des Vaters schuld. Dieser Ehebruch wird am Kinde durch den Teufel *u kyrdep* bestraft.

Krampfhafte Anfälle verursacht die Dämonin *ka byrdaw*, und zuckende Krämpfe sind das Werk der gefürchteten Dämonin *ka shwar*.

Bereits bestehende Krankheiten werden durch den Teufel *u thynrei* bedeutend verschlimmert.

Wer immer im Walde geht und den Ruf: *kâw-hoit, kâw-hoit* vernimmt, der eile davon, denn der Teufel *u 'suid-tynjang* wohnt dort und ruft. Zwar ist er lahm, doch wer auf den Anruf antwortet oder einen Schrei ausstößt, der ist verloren, indem er vom *'suid tynjang* gefaßt und zu Tode gekitzelt wird.

Will man sich vor einem gewaltsamen Tode schützen, so muß man die Dämonin *ka tyrut* durch Opfer besänftigen, denn sie ist die Urheberin dieser Todesart. Die Khasi haben einen großen Respekt vor dem gewaltsamen Tode, da er die vorgeschriebenen Zeremonien beim Leichenbegängnis erschwert, wenn nicht unmöglich macht, was dem Geiste des Dahingeschiedenen in der Ewigkeit keine Ruhe gönnen würde.

Auch leben sie in Angst vor dem Teufel *u 'suid-lam-iap* (dem Boten Gottes, d. h. dem Vollstrecker seiner Befehle). Er hat die Menschenseelen hinwegzuführen ins andere Reich. Schauerlich soll er sein: von gigantischer Größe, mit langen, aufgelösten Haaren geht er umher, seine Opfer zu suchen. Seine Zähne sind so groß wie ein *ka wait* (ein Beil oder eine Axt).

2: Stegmiller AR7 Khasi

Besonders die Frauen werden durch einen Teufel beunruhigt, den sie *u 'suid-um* nennen (den Wasserteufel). Dieser hat die Macht, die Frauen anzupacken und bei ihnen Unfruchtbarkeit und, wenn sie schwanger sind, den Abortus zu verursachen.

Cholera bringt die Dämonin *ka khlam* und schwere Kolik die Dämonin *ka lihar*.

Malariafieber glaubt man durch den Einfluß der Dämonin *ka rih* zu erhalten, während man in der Gegend von Theriaghat das Fieber der Dämonin *ka daba* zuschreibt.

Die sonst überall gefürchteten Blattern sind den Khasi eine Gunstbezeugung des Gottes *u siem niang thylliew*. Ist in einer Hütte jemand an Blattern erkrankt, so wird die kranke Person nicht bloß nicht gemieden, sondern man bringt sogar noch gesunde Kinder hin, damit sie den „Kuß des Gottes" empfangen, d. h. auch die Blattern bekommen sollen.

Nach Reichtum trachtet jeder Khasi. Daher opfern sie der Dämonin des Reichtums *ka shur*, die sie ebenso fürchten wie die Synteng die Dämonin *ka taro*, die ebenfalls nur ihren Verehrern den ersehnten Reichtum zukommen läßt.

Alle Übel, aber zusammengenommen, können von der Dämonin *ka ron* verursacht werden. Sie ist die schlechteste aller Teufel nach Ansicht der Synteng. Ihr und dem Teufel *u mahet* opfern die Khasi nur in der Hütte und nicht, wie sonst gebräuchlich, auch im Freien (im Hofraum der Hütte).

Die größte Furcht aber haben die Khasi vor dem Teufel *u thlen*. Dieser kann in Gestalt einer Schlange von den Menschen im Hause gehalten werden. Da er nur durch Menschenblut versöhnt wird, ist es nötig, menschliche Opfer *(ka 'langthokhlieh)* zu finden. Diesen schneidet man die Nägel der Finger und Zehen ab, die dann mit dem Blute des Ermordeten des Nachts im verschlossenen Hause dem Teufel als Opfer unter Gebet und Anrufungen dargebracht werden. Um diese menschlichen Opfer zu bekommen, müssen die *Thlen*-Inhaber solche mit List oder Gewalt suchen. Meistens werden gedungene Mörder ausgeschickt, denen man vorher einen ganz bestimmten Schnaps *'iadtang-snem* (wörtlich: bewahrt für ein Jahr) verabreicht. Von diesem Schnaps glauben die Khasi, daß er denjenigen, der davon trinke, soweit beeinflusse (bezaubere), daß er den geplanten Mord auch wirklich ausführe. Wenn nun diese Mörder *(nong-shoh-noh)* auf ihrem Wege oder im Hinterhalte sind, um ihre Opfer für den *thlen* zu verfolgen *(beh-nong-shoh-noh)*, so dürfen sie sich keines Eisens bedienen, da durch Eise.. der *thlen* bei der Höhle von Pomdalai bei Cherrapoonjee, als er in Gestalt einer übergroßen Schlange erschien, um dort Menschen und Tiere zu verschlingen, von einem mutigen Manne namens *u saidwoh*, getötet wurde. Mit einem Stocke, der gewöhnlich einen silbernen Knauf hat, wird das Opfer niedergeschlagen. Dann werden ihm mit einer Schere oder Pinzette aus Silber die Nasenflügel geritzt und das Blut wird abgezapft. Ebenso werden die Nägel an den Händen und Füßen mit der silbernen Schere abgeschnitten. Der tote Körper wird zum Schlusse in einen Abgrund geworfen[1].

[1] Näheres über die „Menschenopfer unter den Khasi" siehe Dr. P. C. [illegible], Salvatorianische Mitteilungen, 1909, Nr. 5, S. 758.

Da nun einerseits viele Khasi darauf aus sind, andere mit Hilfe des Teufels zu töten oder krankzumachen *(ai-ksuid)*, anderseits aber die bösen Geister auch ungerufen dem Menschen schaden, so ist bei diesen Anschauungen eine übergroße Furcht die Frucht dieses Aberglaubens. Dieser Furcht entspringt der Wunsch, sich von dem Einflusse der bösen Geister freizumachen *(lait-ksuid)* oder diesen Einfluß abzuschwächen durch opfern *(khad)*, oder mindestens die Teufel gänzlich zu versöhnen *(khein-ban khai)*.

So halten die Synteng alljährlich ein großes Fest ab zur Vertreibung der Cholera *(ka behdiengkhlam)*. Die dargebrachten Opfer haben den Zweck, die gefürchtete Dämonin *ka khlam* zu versöhnen, aber auch zugleich den Zweck, die Teilnehmer am Opfer gegen den Einfluß der Cholera gefeit zu machen (zu verzaubern). Gurdon[1] beschreibt dieses Fest wie folgt: „Im Monat Juni, wenn der Strom mit Wasser gefüllt ist, gehen an einem bestimmten Tage die Männer des Morgens vor die Hütten und schlagen mit Stöcken *(dieng)* auf die Dächer der Hütten. Dabei rufen sie fortwährend die Dämonin *ka khlam* an und fordern sie auf, das (betreffende) Haus zu verlassen. Dann geht man gemeinsam zum Fluß hinunter. Große Stangen, die bereits am Tage zuvor zurechtgelegt wurden, werden nun über den Fluß gelegt. Die Leute springen auf die Stangen und versuchen diese zu zerbrechen. Geschieht dies, so ertönt ein allgemeines großes Freudengeschrei. Sind alle Stangen zerbrochen, so holt man eine besonders feste Stange, eigentlich einen Balken, und legt ihn über den Fluß. Das Volk teilt sich in zwei Hälften und nun beginnt ein Kampf um den Besitz dieses Balkens. Der Kampf ist aber ein gutmütiger, und wenn es gleich viele Püffe und sogar Wunden absetzt, so kommen die Leute doch nicht in einen ernsten Streit, trotzdem sie kämpfen und sich so bemühen um den Besitz des Balkens, daß manche dabei sämtliche Kleider verlieren. Diejenige Partei, welche das Glück hat, in den Besitz des Balkens zu kommen, ist nach dem Glauben der Leute für das folgende Jahr der Gesundheit (frei von Cholera) und der Wohlhabenheit gewiß."

An Zauberei grenzt auch der Gebrauch der Holzkohle. So schreibt P. V. Kartte, apostolischer Missionär, S. D. S.[2]: Hat eine Mutter mit ihrem Kinde einen weiten Weg zu machen, so macht sie, um es vor etwaigen Unfällen zu schützen, mit einem Stück Holzkohle dem Kinde einen schwarzen Fleck auf die Stirne. Dann nimmt sie ein längliches Stück Holz, spaltet es an dem einen Ende in vier Teile und steckt das Stück Holzkohle dazwischen. Dieses trägt die Mutter auf der Reise in der Hand.

Der gleiche Missionär berichtet auch das Tun der Khasi bei einer Mondfinsternis: „Ist eine Mondfinsternis, so meinen die Khasi, daß am Mond ein Frosch sei, welcher denselben abfrißt. Die Khasi haben den Mond sehr gern, und um zu verhindern, daß der Frosch den Mond auffresse, so suchen sie den Frosch durch Lärm furchtsam zu machen und zu verjagen. Vor einigen Tagen erlebten wir eine Probe davon. In sämtlichen Dörfern schlugen die Khasi die Trommeln und schrien dazu. Es war ein reiner Höllenspektakel[3]."

---

[1] Gurdon, „The Khasis".

[2] Kartte, „Die Religion der heidnischen Khasi". Apostelkalender 1895.

[3] A. a. O., S. 62.

2: Stegmiller AR7 Khasi

Die Khasi haben auch keine Erklärung für das Gewitter. Sie meinen daher, daß die *ksuid* (Teufel) es verursachen. Besonders macht ihnen der Donner zu schaffen, der bei einem Tropengewitter äußerst stark sein kann. Wenn nun der Blitz irgendwo einschlägt, so opfern sie dem *ksuid u pyrthat* ein fettes Schwein, dessen Blut auf den Altar geschmiert wird, um ihn zu versöhnen und weitere Blitzschläge zu verhindern.

Wenn die Khasi opfern, um sich vor Schaden zu schützen oder um Krankheiten zu heilen, so murmeln sie Formeln oder Gebete während des Opferns. Sie beschwören gleichsam die unsichtbaren Kräfte und unterstützen so die dargebrachten Opfer. Dieses Murmeln nennt man *lim-knia* (schwören-opfern). So wird auch von den Opfern in Nongkrem berichtet[1]: „Ein jeder stellt das Schnapsfläschchen auf das vor ihm befindliche Häufchen Lehm. Dies stellt gleichsam den Altar vor. Dann nimmt man die Pfeffer- und Eichenblätter und legt sie vor demselben in einer bestimmten Form neben- und aufeinander, Stücke Betelnuß werden daraufgelegt und das Ganze mit Reis, *kpu-* und *rynsi*-Mehl bestreut, indem kurze Gebetsformeln gemurmelt werden." Um den Einfluß der bösen Geister abzuwehren, gebrauchen die Khasi auch allerlei Zaubermittel. Sie verfertigen aus gespaltenem *igrá* (dünner Bambus), das sie mit der Innenseite nach vorne gleichmäßig nebeneinander durch ein Bindemittel *(u thri)* befestigen, eine Art Gitter, das sie an gabelförmigen Ästen im Walde aufhängen. Die Zahl dieser Stäbchen ist immer eine ungerade, seien es nun 13 oder 15 oder mehr oder weniger. In der Mitte der Stäbchen wird ein farbiger Strich (blau oder rot) gezogen (Fig. 1). Solche Gitter oder Bambusfahnen werden oft mehrere zugleich an irgendeinem Orte im Walde versteckt.

Geisterstäbe und Geistergitter.

Außer diesen Gittern oder Fahnen machen sie auch Geisterstäbe oder Geisterpfosten, die sie ebenfalls im Dickicht verstecken und die den gleichen Zweck der Vertreibung, resp. der Unschädlichmachung der Geister haben.

[1] P. Dr. C. Becker, „Die *Nongkrem-Puja* in den Khasibergen (Assam)", „Anthropos" IV (1909), S. 898.

Solche Stäbe werden aus Holz geschnitzt und sind entweder ganz einfache, viereckige Stäbe, mit einer krummen, angesetzten Spitze (Fig. 5) oder es sind einfache viereckige Stäbe mit einer dreifachen Spitze (Fig. 2), alles aus einem Stück geschnitzt. Diese Stäbe sind nicht bemalt. Neben diesen einfachen Geisterstäben machen die Khasi auch schöne, bemalte Stäbe. So zeigt Fig. 3 einen viereckigen Stab, der eine dreifache, eckige Bemalung in blauer und roter Farbe aufweist. Seine Spitze ist nicht eingekerbt, aber schief oder gekrümmt zugeschnitten. Fig. 4 zeigt eine andere Art. Es ist ein sechseckiger Holzstab, der einen Hut oder Kopf (aus einem Stück mit dem Stabe) hat, dessen Spitze eingekerbt oder abgesetzt ist. Dieser Geisterstab hat eine kreisartige Bemalung von roter und blauer Farbe, von geraden Querlinien durchbrochen. Solche Stäbe kommen auch in achteckiger Form vor.

Man findet solche Geisterstäbe und Geistergitter oft mehrere nebeneinander auf einem kleinen Fleck im Walde oder Dickicht zusammen aufgestellt.

Auch errichten die Khasi auf langen Bambusstangen kleine Plattformen mit Häuschen, in denen den Geistern der Wälder und Felder Nahrungsmittel aufgetischt werden (auftischen *[siang-]* heißt eigentlich ausbreiten, wie man einen Teppich ausbreitet oder wie man die Blätter ausbreitet als Unterlage zum Reisessen).

Zaubergitter gegen die Waldteufel.

Aber nicht bloß durch Opfergaben versuchen die Khasi die Teufel zu versöhnen und dadurch unschädlich zu machen. Selbst mit Gewalt versuchen sie es. So treiben sie, wie schon oben erwähnt, die Cholera-Dämonin mit Stöcken zum Haus hinaus. Auch bei der Totenverbrennung schießen sie drei Pfeile ab, um dadurch die bösen Geister abzuwehren.

Vielfach sind die Mittel zur Abwehr der bösen Geister oder zur Erlangung ihrer Hilfe nur Worte, gleichsam nur Wünsche und Verwünschungen, wie z. B. beim Pfeilwettschießen suchen die Zuschauer, die am Ziele stehen, die Pfeile der Gegner dadurch vom Treffen des Zieles abzuhalten, daß sie irgendeine Gottheit *(ksuid)* anrufen, und je mehr sie schreien, desto eher glauben sie ihren Zweck zu erreichen. Sie wollen die Pfeile der Gegner beeinflussen.

3. Die Verbote *(sang)*.

Zum Aberglauben gehören auch die *sang* oder Verbote der Khasi. *Sang* heißt soviel als „sakrilegisch oder strengstens verboten". Dieses *sang* ist auf totemistische Anschauungen zurückzuführen. *Sang* kann etwas für eine einzelne Person, für ein Haus *(iing)* oder eine Familie, für eine Sippe und ein ganzes Geschlecht *(jaid)* sein. Wenn ein Mann oder eine Frau, deren Ehegatte gestorben ist, sich wieder verheiratet, so geht das *sang* auf die Verwandten des (oder der) Verstorbenen über. Dieses „Erben" des *sang* ist je nach der Sippe verschieden. Bei der Übernahme des *sang* müssen die Erben 11 von einem

kaŵ oder 7½ von einem *kaŵ* oder 5½ von einem *kaŵ* zahlen. Unter *kaŵ* versteht man eigentlich die Zahl 1280. Der Sinn aber ist, daß die Erben 11, resp. 7½ oder 5½ Prozent ihres Vermögens zahlen müssen, um die großen Feierlichkeiten bei der Verbrennung und bei der späteren Beisetzung der Asche begleichen zu können. Für das Geld werden in erster Linie die verschiedenen Opfergaben gekauft. Wenn man alle Opfergaben zusammen hat, so errichtet man drei behauene Steine nach Art der *mau-bynna* (Urnensteine) an irgendeinem Wege. Diese Steine heißen die „Ehebrechersteine" *(mau-klim)*. Dann fängt man ein Schwein ein und verflucht es auf folgende Weise[1]:

„Hei sngewkyndiang ho kane nga iathuhkhana ba me ba la ioh ka sang na ka tnga ka jong me yn leh kumno kynrad wei la pom ka bneng ka khyndew, ka tyrut ka smer sngew la khuid ka sang ka ma, ka klim ka ngat yn long sa ka rong sa ka taw, sa ka sngewbha ka sngewmiat mo! Hei une sa u dykhot u lamjew ka iad bang ka iad thiang mo!"

„So höre aufmerksam dieses, was ich erzähle, der du das *sang* vererbt hast von deiner Gemahlin, was sollen wir anderes tun, Gebieter, nachdem ihn erschlagen der Himmel und die Erde, die *Tyrut* und die *Smer* (sind Dämoninnen), sind wir befreit; geheiligt ist das *sang*, das gefürchtete, der Ehebruch und sonstige Sünden. So kann dann sein, daß die Gebeine übertragen werden und Friede und Freude wird uns zuteil, *mo!* (nicht wahr!) Siehe hier das Stück *u dykhot*[2] und das Säuerliche *u lamjew*[3] (ein starker und ein süßer Schnaps) *mo!* (nicht wahr!)"

Zu diesem Opferfeste ladet man alle Verwandte und Bekannte, Freunde und Nachbarn ein. Man hält ein großes Festessen, wobei Fleisch und Speck die Hauptsache bilden. Bevor aber das Essen beginnt, entfernt man die vor dem Verfluchen des Schweines auf die „Ehebrechersteine" hingelegten *reng* (Horn) und *ngap* (Gabel). Bei diesem Opfer müssen alle vorher gesammelten Münzen (11 oder 7½ oder 5½ von einem *kaŵ*) vollständig aufgebraucht werden, da es verboten ist, etwas davon im Hause aufzubewahren, damit es etwa nicht vermischt würde mit dem Tageslohn oder mit dem Erwerb.

Die Wiederverheiratung muß natürlich in eine andere Sippe *(jaid)* geschehen, wenn das *sang* vererbt werden soll; denn sonst bleibt das *sang* in der Familie.

Die meistens vorkommenden *sang*, je nach den Familien oder Sippen verschieden, sind folgende[4]:

---

[1] Dieser und die folgenden Khasitexte sind dem *kitab jingphawar* von U. RABON SINGH, Shillong 1902, entnommen; bei der Wiedergabe in deutscher Sprache bin ich dem hochwürdigen P. C. BONHEIM, apostolischem Missionär, S. D. S., von Cherrapoonjee, sehr verbunden, der mir seine langjährigen Erfahrungen bereitwilligst zur Verfügung stellte.

[2] Ein Stück Opferfleisch.

[3] Kräuter, Würze.

[4] GURDON, „The Khasis", S. 5.

2: Stegmiller AR7 Khasi

1. Ein Haus bauen mit Steinmauern auf allen vier Seiten.
2. Der Gebrauch von Eisennägeln beim Hausbau.
3. Der Gebrauch von mehr als einer Holzart beim Bauen des Herdes.
4. Der Gebrauch von harzigem Holz beim Hausbau.
5. Das Holzfällen in einem heiligen Wald (mit Ausnahme für eine Leichenverbrennung). Siehe Tafel I, Bild 2, „Das heidnische Khasi-Dorf Raliang mit einem ‚heiligen Wald' *(law kyntang)* im Hintergrund".
6. Mit der linken Hand irgend etwas geben oder nehmen.
7. Über den Körper eines anderen hinwegschreiten.
8. Das Töten eines Tieres oder Vogels, ohne vorher Reis auf dessen Kopf gestreut zu haben.
9. Der Genuß von Kuh- oder Ziegenmilch.
10. Das Beendigen jeglicher angefangener Näh- oder Korbflechtarbeit für Schwangere.
11. Schwangere dürfen keinen Leichenzug begleiten.
12. Dem Manne einer schwangeren Frau ist es verboten, das Hausdach (Strohdach) zu decken oder an ein Beil oder Schwert *(ka wait -ka da)* einen Handgriff zu machen.
13. Das Sprechen mit irgend jemand, solange das Dreschen des Reises dauert, es sei denn mit den Mitarbeitern des Mannes oder der Frau.
14. Verschiedentlich ist der Genuß von Schweinefleisch, getrocknetem Fisch, Melonen, Zitronen usw. verboten.

Das Übertreten des *sang* wird von der Gottheit bestraft. So erklärten einige Khasi nach dem großen Erdbeben vom 12. Juni 1897: „Weil ihr eure Häuser von Steinen gebaut habt und die Planken mit Nägeln befestigt, so ist es geschehen, daß alles eingestürzt ist, denn Gott will nicht den Stein und verabscheut die Nägel. Wir haben in früheren Zeiten auch nur von Holz und Bambus gebaut und Bast zum Befestigen und Binden benützt, aber heute sind die Leute stolz geworden und haben von Steinen gebaut. Darum ist dies geschehen, Gott haßt den Stein, er will keinen Kalk[1]."

4. Eierwerfen *(shat-pylleng)*.

Das gewöhnliche aller Orakel der Khasi ist das Eierwerfen *(shat-pylleng)*. Ausführliches ist darüber bereits geschrieben worden[2]. Ich will hier nur mehr das Gebet des Opferers *u nongshat-pylleng* bringen. Ein eigentliches Gebet ist es nicht, wenigstens ist der *nongshat-pylleng* an keine Formel gebunden. Der Opferer spricht etwa:

„Ko lengsam khun ka blei, ko banang ko batip ko ba lak ko balai, nga pynthiah nga pyndem halor ka diengshat ka diengkhein, ka duwan ka dupat, a kynrad ngan kylli ngan

„O du Ei des Orakels, du Tochter der Göttin, du das du kennst und weißt (vermagst), du das du bestehst (bleibst), ich lege dich hier nieder, ich setze dich hier auf das Wurf-

2: Stegmiller AR7 Khasi

togkit katne ba long ka shitom ka lanot ka shoh ka ther ka shit ka syang ka pisa ka lynga ia ka met u Donsing, hato nangno ka daw ba long katne, don hi na kpoh la iing mo? Kaba wan thaw katne?

brett[1], auf das Orakelholz, auf den Altar, o Herrin, ich frage und erwäge (möchte fragen, will fragen), denn groß sind die Beschwerden und Trübsale, Bedrängnis und Kümmernis, die Hitze und das Feuer (des Fiebers), die Unruhe und die Niedergeschlagenheit des N. N. Was ist denn der Grund, daß er so schlimm daran ist? Liegt der Grund in der Familie selbst vielleicht (*na khpoh*, d. h. im Bauche, im Innersten)? Hat das vielleicht alles dieses gemacht?

Lada don ka jot ka rem ka bijar ka buhkhoh ha ka blei ka lawbei, ha u phan u kyrpad ngan sa jied ngan sa pynshai ia ka khmat ka long jot ka long rem ka bijar ka buhkhoh, don?

Wenn etwa eine Sünde, ein Verschulden, ein Ärger oder ein Verdruß bei der Göttin *Jaubei* oder beim *Phan u kyrpad* vorliegen sollte, so will ich erwägen und das Auge (des Verstandes) erhellen, das Verderbnis und die Schuld, den Verdruß und den Ärger, welcher wohl sein mag?

Jem ka mon bin kynrong ka diang joit buh ka jingkem arsnep slait, da weng ka lar ka sap ka buhsang ka tharai: ong em me ym don na kpoh la iing ka ben wan thaw kum kata, khat ei na wei du kaba wan shoh wan ther katne.

Windelweich und winzig klein ist mein Wille. Überschlage das Linke über das Rechte geschwinde! Reihe an die zwei Schalenteile (*slait*, d. i. ohne jeden Zwischenraum), nimm du weg das Klar (Eierklar), das Sakrilegische (unerlaubte) und das Ungewisse! Sage: nein! du! Es kommt nicht her aus der Familie, das alles dies verursacht hat. Also so kommt es doch von außen (anderswo) her, welches ihn schlägt und so sehr auf ihn niederprasselt.

Lar ha ka dong ngang, kiew ha ka dong roit, noh ka diang khyllon ka diang da buh lengsam shiliang kadiang!

Es komme das Klar in die äußerste Ecke und es steige hinein in die Ecke, hinunter mit dem Linken! Es klappe zusammen das Linke (kraftlos sinke zusammen das Linke). Setze das Orakel hinüber zur Linken, zur Hälfte!

Mynno nga bynthiew mynno nga kyrkhah mynno nga sin mynno nga rngop nga pynsum dewlieh dewtem

Wann habe ich denn ausgespuckt? Wann habe ich geräuspert den dicken Schleim? Wann habe ich

[1] Siehe Tafel II, Bild 1.

dewsni dewsnah dewraij dewkynton ba ngan lit ia ka liem ia ka dem ka pyllup ka lyndang, mo.

einen Spitznamen gegeben? Wann habe ich gewaschen und gebadet die weiße Erde (Tonerde, Lehm), weißen Lehm, gelben Lehm, klebrigen Lehm, aufgehäuften Lehm? Damit ich erkenne das nach oben und nach unten Liegende, das auf den Rücken Liegende, und das auf dem Bauche Liegende, nicht wahr?

Mynno nga rah mynno nga rong kum ka khlieng ka tyngab, ka ims ka doh.

Wann habe ich etwa fortgetragen, wann habe ich etwas fortgeschleppt wie etwa der Habicht oder der Rabe oder irgendein Vogel oder das Fleisch?

Hu mo 'lengsam!"

Hurra! nicht wahr, du Ei des Orakels!"

5. Das Hahnopfer *(jingknia sylar)*.

Wie durch das Eierwerfen, so wollen die Khasi auch durch das Opfer des Hahnes die Gründe erforschen, die Krankheit oder sonstiges Ungemach verursachen. Dieses Hahnopfer ist fast ebenso häufig wie das Eierwerfen. Man stellt es besonders dann an, wenn ein schwieriger Fall zu erledigen ist. Denn wie der Hahn kostbarer ist als ein Ei, so ersieht man auch aus dem Opfer des Hahnes die gewünschten Resultate besser. Im allgemeinen bleibt sich der Ritus stets gleich, so wie er beschrieben ist in der *Nongkrem-Puja* in den Khasibergen[1]. Hier folgt ein Beispiel der „Anrufungen", die der Opferer mit folgenden Wort ausspricht:

„Te ko rangiarkhad, ko khun ka blei, ko rangkynjih ko rangkyn jai, ko rangkynih ko rangphawar ko ba ioh ka hukum ka kular na myndang long ka pyrthei, shai ka pyrthei na khmat ka blei klicn ka blei, te ha sngew nga kylli nga tohkit ha shat ha ka khan, nangno ka daw ba wan shoh wan ther katne ia ka met u Donsing?

„Und nun, o du Opferhahn, du Sohn der Göttin, du Hüpfer und Springer, du Kräher, du weiser Redner (der es versteht, in Figuren zu reden), du, der du das Gesetz bekommen hast und die Verheißung von Anbeginn der Welt. Hell ist die Welt vom Angesichte der Göttin, vom Worte der Göttin! So höre nun, ich frage, ich erwäge, ich werfe Orakel, ich befrage Orakel: Woher ist der Grund (was ist der Grund), das den N. N. schlägt und so sehr auf seinen Körper herniederprasselt?

Ong phi ka blei manga, ka shoh te manga ka ther te manga ka sympat ka kawiat te manga, te nga

Sage, o Göttin: Ich bin es, die ihn schlägt, ich bin es, die auf ihn herniederprasselt, und ich, der ihn

[1] P. Dr. C. Becker, „Anthropos" IV (1909), S. 899.

shang darum-darum daneng-daneng nga kylli nangno ka long-jot ka long-rem, nangno ka bijar ka buhkhoh phi ka blei!

geißelt und streicht. Und ich gehe hin und her und auf und ab und frage, woher kommt denn das Verderben, das Verschulden, woher denn der Verdruß und Ärger, o du Göttin!

Ong phi ka blei, ko khun ka lamler mynkato mo ka sngi me iapan ia ka dar ka long briew ka long jing na khmat nga ka blei ka laubei, nga ong!

So sage doch, o Göttin, du Tochter der Lüge, damals, nicht wahr[1], an jenem Tage hast du verlangt das Bild des Menschen, den Bestand der Familie vor meinem Angesichte, vor mir der Göttin, vor mir der *Jaubei*, so sage ich!

Khie kynmaw sieh ka jutang na kata ka lynti, ynda me ieng ka nguh ka dem u dkhot u lamiew u kpu u rynsi ia ka jong ka longspah kat ia katei ka dar ka long briew ha me la sieh ka jutang mynkato ka sngi.

Stehe auf und erinnere dich! Ziehe hervor die Verheißung aus jenem Wege! Und wenn du dastehst und dich verbeugst und Ehrerbietung bezeigst, dann der Dank und die Ehrerbietung, dann das Stück und das Säuerliche, dann das Brot und der Kuchen, deinem eigenen Wohlergehen und Reichtum, so wie jenem Bilde der Menschwerdung, welches du hervorgezogen hast durch die Verheißung an jenem Tage.

Mem don ka iathuhkhana ka khmat nga ka blei me tep me lynde pynban, nangta jot nga ka blei ka laubei!

Hast du keine Erzählung davon vor mir der Göttin! vor meinem Angesichte! Du vergräbst, du verbirgst es vielmehr und daher das Verderben, sage ich, die Göttin, die *Janbei!*

Im u syiar u shan te nangta im ka sang ka ma te nangta, im ka tyrut ka smer te nangta, ioh ka shitom ka lanot u bynriew te na kata ka lynti.

Es lebe der Hahn, die Stütze, und ferner es lebe das Verbot und die Drohung, und wiederum es lebe die *Tyrut* und die *Smer* und dann: der Mensch erfährt Leiden und Trübsale, und zwar von jenem Wege her (von der Geburt).

Te ko blei trai kynrad wei nga la lap ia kata ka knia ka lynti ka long-jot ka long-rem ka jong phi te mynta ngan da ieng ka kynmaw ka kyrdit namar kata ka lynti kat haba shong ka nguh ka dem u kpu u rynsi u klong u ksaw, la suk la

Du aber, o Gott und Herr, da ich nun einmal auf deinen Grund, den Weg des Verderbens, der Schuld gekommen bin, so erhebe ich mich. Die Erinnerung, die Betroffenheit von wegen jenes Weges, wo immer ich auch wohne, soll sein der Dank, die

[1] Folgende Worte sind gleichsam, als ob der Opferhahn der Göttin dieselben in den Mund legte und das Orakel wiederspräche.

jemnud phi ka blei ka lawbei na kata ka lynti.

Yn sa ioh ka khiah ka nang, ieng rangbah u bynriew joit suk me u blei lyngngai weng ka thoh ka tar ka kjab ka star.

Ong ym pat shong ka dur da kumta khadei dang kumwei du, kiew da ka thoh da ka tar da ka brain da ka briah da ka kjab da ka star, katta mo blei tray kynrad, kuri-ei nga pynsum nga pynsieh nga pyntang nga pynpung ha ka umthwei umlyngiam, ban kiew ka syrti ka jumai ban um ka ryndang ha khmat ka duwan ka dupat ban nang ka korbar ka sorbar mo?

Snam syiar, hei nga dkhat sohpet shynnai ban nang ka korbar ka sorbar, kane de ka deng de ka kup ka ryndia ka muka ka iarong ka muna ho, hei dong tam dong lait ban lait ka jot ka rem mo?"

Ehrerbietung, das Brot und der Kuchen, der Kürbis und die Kürbisflasche; friedlich und wohlgemut bist du, o Göttin *Jaubei*, an jenem Wege.

Wir erhalten Erhabenes und Vermögendes. Rasch erhebe dich, Mensch! Vollbefriedigt sei du, o Gott! Nimm hinweg die Makel, die Flecken, das Band und die Schlinge.

Sage: So sieht das Bild noch nicht aus, vielmehr anders, nicht wahr! Erhebe dich von den großen Flecken und von den großen Makeln und von allen kleinen Flecken und Sprenkeln, von Schlinge und Band und dann, nicht wahr, o Gott und Herr, umsonst ist es! Ich wasche und bade und mache Wasserröhren und Schöpfbrunnen im Strudel und in der Untiefe, damit sich erhebe *ka syrtieh*[1] und *ka Jumai*[2], damit der Hals zerfließe (verblute) vor dem Angesichte des Altars, damit gut sei die Beratung, nicht wahr?

Du Blut des Hahnes, Hurra! Siehe da, ich zerreiße ihm den Nabel, das Gedärm, damit gut sei die Beratung. Dieses hier ist das Geschmeide, dies das Gewand, dieses die Seide, dieses der Beutel und das Netz, nicht wahr? Siehe hier das Rohr des Sammelns, hier das Rohr des Entgehens vom Verderben und der Schuld, nicht wahr?"

6. Das Ausfindigmachen der zu besänftigenden Geister *(kheinksuid)*.

Khein ksuid bedeutet das Suchen oder das Erforschen nach der Beleidigung der Göttin, welche den Menschen durch Leiden an den Peiniger *(ksuid)* verkauft *(die)*. Der Dämon kann dem Menschen nichts anhaben, wenn es die Göttin nicht duldet und erlaubt: Das Verbrechen des Menschen spielt dabei keine Rolle (an und für sich). Die Khasi sagen, in ihrer Religion gibt es nur eine Göttin, die „Befehlshaberin" *(ka nonghukum)*. Sie befiehlt, daß ein *phan u kyrpad*

[1] *Ka syrtieh* ist eine Dämonin, die schneidet und kratzt und feilt und sägt, d. h. durch innere Schmerzen.

[2] *Ka jumai* ist eine Dämonin des Erdbebens.

sein soll, daß ein *suid-nia* der *Jaubei* sein soll (*suid-nia* ist der Geist des ersten mütterlichen Onkels der Sippe, in diesem Falle soll er der „Fürsprecher" bei der *Jaubei* sein). Oder sie wählt sich selbst ein Mittel, das „Gott" sein soll, wie sie z. B. selbst zur Göttin des Reichtums oder zur Göttin des Fluches wird. Diese Göttin gibt den Befehl zum Opfer: Daß das Stück *(u dykhot)* und das Säuerliche *(u lamjew)* geopfert werde! Wird diese Göttin beleidigt durch irgendwelche Verfehlungen, dann muß sie wieder versöhnt werden, und zwar durch das Opfer einer Ziege, eines Schweines, oder durch das Opfer des Kürbis und der Kürbisflasche, oder (für die ganz Armen) durch das Opfer des Wassers, das man auf einen Messingteller *(ka pliang)* oder auf einen geflochtenen Teller *(ka pdung)* ausschüttet. Sie ist es auch, die befiehlt, daß man den Dämon oder die Dämonin vertreibt, besonders den Dämon, der Tag und Nacht hilft *(uba rap synnia rap sngi)*, indem ihm ein Geldopfer, Hunderter oder Zehner, gebracht werden muß.

Alles ist auf ihren Befehl: so das Speiseopfer, das den Geistern gebracht wird *(ai bam ia ki suidiap)*, das Dankopfer, das dem *Thaulang* gebracht wird *(kaba nguh thawlang)*, die Haruspizien *(kaba tap ryngiew tap rywiang)* oder die Namensgebung der Kinder *(tap lubri tap kyrteng)*. Wenn z. B. ein Bergteufel oder ein Flußteufel vertrieben werden soll, gibt sie Befehl, zuerst das Orakel zu Hause zu befragen und keinen Lärm zu machen. Dann aber soll man ein freigewähltes Opfer nehmen, wie Tauben, Hühner, Schweine oder Ziegen, und sie mit Reis bestreuen und dann frei laufen lassen. Jeder, der sie einfängt, kann sie behalten.

In dieser Religion gibt es auch noch etwas sehr Peinliches und äußerst Schwieriges, nämlich die Verschuldungen der bereits längst Verstorbenen zu finden, um sie durch Opfer wieder zu begleichen. Denn manchmal ist nichts zu finden, was der Grund oder die Ursache der Krankheit oder der Trübsale wäre, es muß daher ein Fehler der Ahnen noch ungesühnt sein. Diese Art aber der Teufelsforschung ist sehr schwer, da man den Zusammenhang nicht leicht herausbekommt. Es muß so einen Fall schon ein erfahrener und tüchtiger Opferer in die Hand nehmen, der die Zeichen der Göttin zu deuten versteht.

Wurde die Göttin *Jaubei* durch ein Verbrechen beleidigt, so muß ihr eine Ziege geopfert werden. Diese Ziege muß schön sein, sie muß weiß sein, sie muß ausgewachsen, aber noch jungfräulich sein. Das Opfer wird im Vorhof gebracht. Auf dem Altare, der meistens aus Lehm oder Erde bereitet wird[1], werden nun die Opfergaben ausgebreitet: Brot *(kpu)*, Kuchen *(rynsi)*, Kürbis *(u klong)*, junge Eichentriebe *(u sning ka lalar)*, ungekochter Reis *(u khaw)* und fermentiertes Reiswasser *(ka sapoh)*. Nun wird mit einem Schlage der Ziege der Kopf abgehauen. Das tote Tier wird zerlegt und die einzelnen zum Opfer nötigen Teile bereitgestellt. Da gibt es nun verschiedene Arten zu opfern. Einige nehmen fünf solcher Teile, andere sieben, und wieder andere nehmen neun Teile her. Was aber zum Opfern genommen wird, muß

[1] Unter „Altar" *(ka duwan)* versteht der Khasi alles, worauf er seine Opfer darbringt, sei es nun ein Stein, oder ein Bananenblatt, oder ein Lehmhaufen, oder ein aus Erde gemachter Altar.

aus dem Innern des Tieres stammen (*napoh krem ka kypoh*, d. h. aus der Bauchhöhle). Diejenigen, welche nur fünf Teile verwenden, nehmen: etwas von der Leber, etwas vom Herzen, etwas von der Lunge, etwas von den Nieren und etwas vom Lendenstück (vom Fleisch, das dem Rückenmark entlang läuft).

Diejenigen, welche sieben Teile zum Opfer verwenden, nehmen das Obengenannte und dazu noch etwas von der Milz und etwas vom Dünndarm.

Diejenigen, welche aber neun Teile gebrauchen, nehmen nebst dem eben Genannten auch noch zwei Teile vom Dickdarm und vom Dünndarm und zwei Teile vom Blinddarm.

Es ist sehr schwer, die Opfergebräuche der Khasi zu beschreiben, d. h. ganz genau zu beschreiben, da es in vielen Fällen verschieden gemacht wird. Und selbst in dem gleichen Fall, z. B. bei der gleichen Krankheit oder der gleichen Trübsale, wird verschieden geopfert. Man kann dies leicht schon daraus ersehen, daß einige fünf, andere sieben, andere wiederum neun Teile des geopferten Tieres verwenden. Ähnliche Unterschiede finden sich auf der ganzen Linie. Für alle Fälle wird stets das „Stück" *(dykhot)* und das „Säuerliche" *(lamjew)*, sowie „Schnaps" *(iad)* geopfert.

Die Art und Weise des Opferns hängt von den Verwandten ab, d. h. wie es eben in einer Sippe Brauch ist. Die jüngste Tochter ist die Erbin des Vermögens, sie ist aber auch diejenige, welche für den Opferritus der Sippe verantwortlich ist. An ihr liegt es, den Opferritus zu bewahren, der stets in der Familie *(ha iing)* gebräuchlich war. Nach ihren Angaben richtet sich der Opferer *(u synniang)*. Manchmal nun werden viele Opferer verlangt, z. B. zur Zeit der Seuche oder allgemeiner Trübsale. Da es nun nicht allzu viele Opferer gibt, die die Sache gut verstehen, so fallen viele gewünschte Opfer aus. Dadurch nun, so glauben die Khasi, lebt der Hahn *(u siar u shan)* wieder auf, dadurch lebt der *u longduh u longsam* (böser Geist) wieder auf, dadurch lebt die *Tyrut* und die *Smer* wieder auf, d. h. die üblen dämonischen Einflüsse dieser Geister kommen durch das Vernachlässigen der Opfer wieder zu Einfluß.

Manchmal verzögert auch das Oberhaupt einer Sippe *(u knie u kypa)* jahrzehntelang, oft ein Lebensalter lang die Opfer. Dadurch entsteht dann für die Nachkommen die Schwierigkeit, der Sippe gemäß opfern zu können, da durch die jahrelange Pause im Opfern die Erinnerung an ihren eigenen Opferritus verloren gehen. Diese Opferweise wieder aufzufrischen *(kynroi)*, ist schwierig. Oder es sterben die Alten weg (oder werden Christen), und so lernen die Jungen nicht mehr, welche Formeln sie haben, welche Anrufungen gebräuchlich waren, welche Teile (des getöteten Tieres) sie nehmen sollen. Der Zusammenhang mit den Ahnen geht verloren, und in der Regel können sie sich nicht mehr an alles erinnern.

Wenn es aber so weit gekommen ist, dann sorgt die *Jaubei* wieder dafür, daß das Opfern nicht unterlassen werde, indem sie duldet, daß die Angehörigen ihrer Sippe von den Teufeln geplagt werden. Besonders erlaubt sie den Berg-, Fluß-, Wasser- und Luftteufeln, ihre unheilvollen Einflüsse geltend zu machen. Da nun Krankheiten stets wieder vorkommen, Todesfälle

2: Stegmiller AR7 Khasi

eintreten usw., so stirbt das Opfern eigentlich nie ganz aus, und die Religion der Khasi, die Geister in den verschiedensten Arten zu verehren, bleibt bestehen.

7. Dankgebet nach erhaltener Gesundheit[1].

Gewiß wird hauptsächlich in Zeiten der Trübsale geopfert. Aber die Khasi vergessen auch der erhaltenen Wohltaten nicht. Hat jemand durch ein Opfer seine Gesundheit wieder erlangt, so bringt er ein Dankopfer dar und spricht:

„To sngew ko blei ko laubei te wei nga la shem ia ka nia ka lynti ka long jot ka long rem jong phi, te kynrad hajar nguh te sngewsynei ho, ba la kum bieit kum lyndet nga u khun u ksiew!

To ai ka khiah ka nang, ngan sa kynmaw ngan sa kyndit namar kata ka nia kat haba shong ka nguh ka dem u dykhot u lamjew u kpu u rynsi u klong u ksaw law ka shoh ka ther ka pisa ka lynga, hei wat die rem ngiat shuh ho kum hynnin kum hynne, ap ia ka nia ka lynti pyllun katta mo!"

„Höre denn! o Gott! o *Laubei!* Nachdem ich deine Gründe und Wege erkannt habe, woher dein Verderben und Verschulden gekommen ist (das du in mir gefunden hast), so, o mein Herr, danke ich dir tausendmal, und erhöre mich gnädig, da ich unwissend, da ich wider dich gehandelt habe, ich dein Kind und Enkel!

Gesundheit und Vermögen, es wird mir immer vor Augen schweben (dein Gebot), diese Gründe (der Krankheit), wo immer ich wohne und mich niederlasse (mich hinsetze), wo immer sich hinneigt das Stück und das Säuerliche und das Brot und der Kuchen, der Kürbis und die Kürbisflasche, löse auf (nimm hinweg) die Schläge und das Herniedergeprassel, die Bedrängnis und die Bedrückung! O verkaufe nicht mehr so teuer wie gestern und heute früh, sondern warte geduldig den Grund und den Weg! So viel, nicht wahr!—"

II. Die Religion in verschiedenen Lebensphasen.

1. Die Namengebung *(tap lubri tap kyrteng)*.

Unter *tap lubri tap kyrteng* versteht man die Zeremonie der Namengebung eines Kindes. Beim Abschnitt *sang* habe ich bereits auf die verschiedenen Verbote einer schwangeren Mutter, resp. ihres Mannes hingewiesen.

Bei der Geburt eines Kindes nun, so sagen die Khasi, macht man nicht so viele Zeremonien wie beim Tode eines Verwandten. Denn die Geburt ist ja schon an und für sich ein Freudenfest, da man doch mehr Freude hat, wenn ein Mensch ins Leben eintritt, als wenn er aus dem Leben scheidet.

[1] Vgl. auch das Dank- und Bittgebet am Ende des *Nongkrem-Puja*. Dr. Becker, „Anthropos" IV (1909), S. 902.

Ist ein Kind geboren, so wird am nächsten Tage (wenn es am Abend oder in der Nacht geboren wurde, am darauffolgenden Morgen) geopfert und die Zeremonie der Namengebung vollzogen. Der Opferer muß ein Verwandter des Kindes sein. Bei den Synteng werden gerne Tanten des Kindes als Vollzieher des Opfers gerufen. Die Nabelschnur wird mit einem scharfkantigen Bambus abgeschnitten und das Kind im warmen Wasser gebadet. Die Nachgeburt *(ka shynnai)* wird in einem irdenen Topf sorgfältig im Hause *(nongpet)* aufbewahrt. Dem Kinde werden dann als Symbole der späteren Beschäftigung Instrumente an die Seite gelegt, und zwar einem Mädchen ein Messer *(i wait)* und ein geflochtener Bambusträger *(i star)*; einem Knaben aber ein Bogen *(ka rynlieh)* und drei Pfeile *(ki 'nam)*. Der Opferer holt sich einen kleinen Teller, auf den er Reismehl schüttet, und füllt eine Kürbisflasche *(u klong)* mit Reisbranntwein, den er vorerst mit Wasser vermischt. Alles dieses stellt er auf einer Bambusschwinge *(u prah)* zurecht und beginnt dann das Opfer mit folgenden Worten:

„Te ha sngew ko blei trai kynrad ko thaw-bynriew ko bakbynriew te ba long na jer ba long na thok ban neh ka nam ban neh ka kyrteng ban long u lubri ban long ka kyrteng wei la suk la sngewbha phi ka blei ban khot da kata ha kyrteng to kein ba un long tymmen un long san un sain la ha kur la ha jaid un bad la ha khein ka bishar ha kpoh la iing mo.

Te sngew sa ka jong me u thawlang babha bamiat te wei ym don ka sang ka kyndiah te la long kynthei la long shynrang te a un long rangbah man rangbah yn sah ka nam yn sah ka kyrteng mo!"

„Und so höre, o Gott und Herr, o Erschaffer und Hersteller der Menschen: denn jetzt sind geschehen die Namengebung und die Aufzeichnung, damit bestehe der Ruf und erhalten bleibe der Name, nachdem es dir, o Göttin, gefallen hat, zu nennen mit diesem Namen. Nun so lebe es (das Kind) bis ins hohe Alter und werde groß und stark in seinen Nachkommen und Geschlechtern, und es halte und beobachte die Gebote und Gerichte seiner Familie.

Und so höre auch du, o du guter und schöner *Thawlang*, nachdem nun einmal kein Verbot und kein Hindernis besteht und Weiblein und Männlein ist (und ein Kind geboren wurde), so werde es groß und werde zum starken Manne und bleibe bestehen der Ruf und bleibe erhalten der Name. Nicht wahr!"

Unterdessen schüttet der Opferer langsam den Branntwein unter das Reismehl, so daß ein Teig entsteht. Nun forscht man nach dem Namen des Kindes. Während er verschiedene Namen ausspricht, gießt er sehr langsam Reisschnaps auf den Boden aus. Der Name nun, der mit demjenigen Tropfen, der am längsten braucht, um sich vom Halse der Kürbisflasche zu lösen, zusammenfällt, wird dem Kinde gegeben. Ist der Name auf diese Weise gefunden, so macht der Opferer mit dem oben genannten Teige dem Kinde einen Strich auf jeden Fuß, wobei er ihm den Namen gibt.

Kommt aber während des Ausgrabens des Schweines zufällig jemand in die Hütte und spricht etwas, so wird aus diesen Worten ein Name gebildet, der dem Kinde bleibt. Sodann nehmen die Eltern und Verwandten des Kindes dreimal von diesem Teig essen. Bei dem alles vorüber, so nimmt der Vater den Mutterkuchen (placenta), überschüttet ihn mit Reiswein und schwingt ihn dreimal über dem Haupte des Kindes. Hierauf verläßt er das Haus und befestigt den Topf samt Inhalt an einem Balken in der Nähe der Hütte. Diese Zeremonie wird heutzutage selten genau genommen. Gewöhnlich geht der Vater nur in den Hof und vergräbt die Nachgeburt irgendwo.

Bei der Rückkehr des Vaters werden ihm die Füße mit Wasser begossen: *ace khnid ban khiah krut i khanlong*, d. h. damit gesund bleibe das Kind. Ein schon vorher bereiteter Reiskuchen (*la pawne*) wird nun gemeinsam von allen gegessen. Daraufhin setzen sich alle Verwandten, und zwar die Verwandten der Frau zur Linken und die Verwandten des Mannes zur Rechten. Ein Stück des Reiskuchens (*pawne*) wird in Wasser eingeweicht und allen Gästen damit die Zehen abgewischt. Nach Beendigung dieser Zeremonien werden die an die Seite des Kindes hingelegten Utensilien, der Bogen, die drei Pfeile, das Messer und die Trophäen, weggenommen und sorgfältig an der Innenseite des Hüttendaches befestigt.

Hier einige Beispiele von [illegible]:

a Kiawai	*ka Nidibri*
a Rasmoni	*ka Dertai*
a Jawang	*ka Nimai*
a Syer	*ka Elimai*
a Seiang	*ka Kirimai*

Die Namen mit dem Artikel *a* sind für das männliche, die mit dem Artikel *ka* sind für das weibliche Geschlecht.

Die Gebräuche der Namengebung sind nicht überall die gleichen. Es wird berichtet[1], daß bei solchen Gelegenheiten auch ein Bananenblatt mit gestoßener Gelbwurz und fünf getrockneten Fischen beteiligestellt werden. Ein älterer Mann, der die Namengebung (*kaba jer khun*) vorsteht, legt ein Bananenblatt auf den Boden und besprengt es mit Wasser. Er nimmt die Kürbisflasche in die Hand und ruft eine Gottheit zum Zeugnis an. Die Versammelten nennen ihm dann eine Menge Namen, die der Opternde zu wiederholen hat. Während er die Namen ausspricht, gießt er von der Kürbisflasche Reisbranntwein auf den Boden. Der Name nun, der mit dem letzten Tropfen aus der Kürbisflasche zusammenfällt, ist der Name des Kindes.

„Oder man läßt zwei Bambusstäbchen (*igrd*) zu Boden fallen. Wenn diese so liegen bleiben, daß sie ein Kreuz bilden, dann wird der unterdessen ausgesprochene Name beibehalten. Sonst wird so lange fortgemacht, bis eben die gewünschte Lage der Stäbchen eintritt. Diese Art aber braucht viel Zeit und Mühe, da es manchmal lange dauert, bis die Bambusstäbchen gekreuzt zu liegen kommen. Mr. Jowens berichtet, daß ihm von einem Khasi gesagt

[1] Gurdon, „The Khasis", S. 126—127.

wurde, daß bei dieser Art der Namengebung mancherlei Unfug und Betrug vorkomme, da man Zeit und Mühe sparen wolle."

„Die getrockneten Fische werden an den beiden Enden gehalten und so in zwei Teile zerrissen. Endlich streicht man die mit Wasser vermischte Gelbwurz an den rechten Fuß des Vaters, der Mutter und des Kindes."

Bei den Synteng wird gleich nach der Geburt eines Kindes geopfert, und zwar: etwas Reismehl, Eier, Gewürz und Blätter. Nachdem das Kind einen Monat alt geworden ist (manchmal wartet man zwei Monate), wird erst die Zeremonie der Namengebung vollzogen. Dieses geschieht, wenn nicht durch eine Schwester der Mutter, so doch durch den ältesten Mann der Sippe. Bei dieser Feier werden dann abermals Opfer gebracht, und zwar zwei Hühner und eine Ziege.

Die Eltern eines neugeborenen Kindes dürfen über keinen Fluß gehen und ihre Kleider nicht waschen, solange die Nabelschnur nicht verheilt ist, da sonst der Berg- oder Flußteufel dem Kinde schaden würde.

Zwillinge gelten für eine Strafe, die jemand aus der Sippe durch irgendeine Übertretung des *sang* verschuldet hat. Sind die Zwillinge verschiedenen Geschlechts, so dürfen später ihre Gebeine nicht im gemeinsamen Familiengrab beigesetzt werden.

2. Opfer bei der Erkrankung eines Familienmitgliedes.

Meistens wird nur bei innerlichen Krankheiten geopfert. Weil sich die Khasi die Entstehung dieser Krankheiten nicht erklären können, sind sie der Ansicht, ein Teufel habe sie verursacht. Er sei über die betreffende Person erzürnt und müsse nun durch Opfer versöhnt werden. Bei äußeren Krankheiten, wie z. B. bei Verwundungen, die sie sich durch Fallen oder Stoßen zugezogen haben, opfern sie nicht, weil ihnen da die Ursache der Krankheit bekannt ist.

Bei (inneren) Krankheiten wird meistens im Hofraum geopfert, wenn nicht ungünstige Witterung sie daran verhindert. Was geopfert werden soll, bestimmt nur der Opferpriester *(lyngdoh)*. Ist die Krankheit nicht bedeutend, so werden Eier geopfert[1]. Der Opferpriester nimmt eine ziemlich große Schüssel *(ka pilang kynthei)*, auf welche er Gitter von Bambusstäbchen legt. Nun nimmt er ein Ei, liebkost es, nennt es Göttin *(ka blei)*, besprengt es mit Reis und bestreicht es mit rotem Lehm. Dann wirft er es mit Gewalt auf das Bambusgitter. Das Innere des Eies rinnt durch das Gitter in die Schüssel. Ein Ei nach dem anderen kommt an die Reihe. Dieses Eiopfer wird jeden Morgen und jeden Abend vorgenommen, und zwar so lange, bis der Kranke gesund wird. Manche opfern früh vor Sonnenaufgang und abends nach Sonnenuntergang.

Ist die Krankheit schlimmer Art, so werden Hühner geopfert. Dies geschieht, indem der Opferpriester dem Hühnchen Reis auf den Kopf streut, dann den Hals des Tieres um den linken Zeigefinger legt und den Kopf des Tieres mit dem linken Daumen niederhält. Mit einem Messer schneidet er dann dem Hühnchen den Hals auf[2]. Bei der gemachten Öffnung zieht nun

[1] Siehe oben, Eierwurfen.

[2] Siehe Tafel II, Bild 2: Hühneropfer bei den Khasi.

der Opfrer die Bronchien heraus, und je nach der Lage derselben, urteilt er, ob der Kranke wieder gesund wird oder nicht[1].

Wird die Krankheit noch schlimmer und ist der Tod zu befürchten, so werden die klügsten und erfahrensten Opferpriester gerufen. Von diesen werden dann Ziegen und Schweine, und wenn der Kranke zu den Wohlhabenden gehört, auch Kühe geopfert[2]. Sämtliche Verwandte nehmen mit dem Opferpriester am Opfermahle teil.

Führt die Krankheit zum sicheren Tode, so wird so lange geopfert, bis kein Lebenszeichen mehr vorhanden ist. So opferte der Vater eines kleinen Knaben in Umpling, der selbst Opferpriester war, den ganzen Tag über die erhabensten Hühner, bis am Abend der Knabe durch Stillwerden starb.

Bei den Syntreng werden nur Reis, Eier, Hühner, Schweine und Hirsche, aber keine Kühe geopfert. Zwar dürfen manche Sippen auch Kuhfleisch essen, doch gebührt dies zu den Ausnahmen. Von den Opfertieren erhalten die Götter (bew. Teufel) nur etwas Blut, etwas vom Herzen und die Eingeweide, das Übrige wird von den Anwesenden gegessen.

3. Opfer und Zeremonien bei einem Todesfall.

Unterbrochen — bis zum Eintritt des Todes — werden bei einem Sterbenden Opfer dargebracht. Ob der Tod eingetreten ist, wird durch Aufrufen des Namens festgestellt. Wird kein Lebenszeichen mehr beobachtet, so beginnt ein Heulen und ein Wehklagen, um die Trauer zu bekunden. Trauer sind zuerst selten.

Der Tote wird gebadet und gewaschen (*pynsaw-pynshi*), in seine Kleider gehüllt und ehrfurchtsvoll auf eine Bambusmatte gelegt. Hierbei zeigt man den Glaubensbrüdern besondere Aufmerksamkeit; denn die Hände und Füße werden vollständig ausgestreckt (*pynhdit ki ïpuí ki kdi*) und gerade hingelegt (*pynthiah ïwit*). Um die Trauer zu bezeugen, wendet man dem Toten den Turban nicht von rechts nach links, wie gewöhnlich, sondern umgekehrt. Im Gebiete von Lamin steckt man nun zwischen Turban und Stirne Bambusse, die in ein Pfefferblatt gehüllt sind. Und zwar werden diese Bambusse der Reihe nach hineingesteckt, so daß es aussieht wie ein Kranz oder eine Krone. Zu Häupten des Toten stellt man jeden Morgen und jeden Abend, so lange sich der Leichnam im Hause befindet, gekochten Reis und gebrochene Fladen. Dieses nennt man *ai ka ja mint ja ship* (Morgen- und Abendessen) geben.

Wie lange der Tote in der Hütte bleibt, ist je nach den Sippen verschieden. Manche werden schon am Tage nach dem Hinscheiden verbrannt, während andere mehrere Tage, aber stets eine ungerade Zahl von Tagen, in der Hütte liegen. Zu den Speisen wird noch eine Beimischung mit Pfefferblatt und Kalk gelegt, sowie ein Bambusbecher mit Wasser gestellt. Zum Schlusse legt man auf den Bauch des Toten (in der Gegend des Magens) den „Beutel"* (*ka ïeng ïpoh*). Dieses ist der Beginn der eigentlichen Opfer.

Der Opfrer zündet einen Hahn, streut ihm Reis auf den Kopf, hält ihn bereit zum Töten und spricht dabei:

---

* Siehe Halbmaßen, der jüngstens opfer.
* Siehe einen Beutel dazu.

„Ze engere met de tong a broad (yard) o breed uitgedeeld, ze ka gat bi ka engt ka ze ze wel tegoen lage ro ka kleine ka dinker ze ka pone ka (yard) ka ower ze pone ka breeng ka kilyindre, ze kyoned engere ka, ka more bill ze ka wall, ze ka bell ka fjerk ze ka breed ka kiaap o ner o ma neidrioc ka fasder ner?"

„Hört, o ihr Wagelustern, ihr Pfuderinnen, die nun der Tag und die Stunde gekommen ist, und ich euch mehr sowohl gekommen bin mit Cyler und Gewichi, so haben euch, ewchlagen die Cyrol und die Zinn, und haben euch ewchlagen die Hinnol und die Eulb, und ewcmeie Cotrotes, hier dem, ewl„fall die ortent in Frieden, Recht und Gewichtigkeit des Bandes die Jag Pawilin) in Frieden und Einvernehmen mit dem Chiel und dem Verbrec, Urnelo willen, o Centro dwelel, ruiep gale?"

Wenn nun nun zu den Cylinder nur gute Stücke verwendet worden dürfen, so ist es in dieserlei Falle gleich, ob der Faden ze ter *broad (yard)* ein schlechtes Exemplar ist oder nicht. Es wird einfach der nächste beste genommen.

Wird der Ton „*ner*" verlangt, d. h. sind die Angehörigen des Tolen nicht in der Lage, größere Spanne zu zahlen, so wird nur dieser Faden und eine Handvoll Bim gegeben.

Wird der Ton „*mich*" verlangt, d. h. sind die Angehörigen in der Lage, die gewöhnlichen Zeremonien unter den natürlichen Cylinder zu benutzen, so wird ein Schwein gegeben, und jeder der spezielen Verwandten und eine Handvoll Bim begeben, die ebenfalls gleich gegeben wird.

Nun werden verschiedene Cylin dargebracht, je nachdem der Ton auf einer aus Stein gemeißelten Unterlage, wie es bei den ganz Reichen der Fall ist, oder in einer Art Sarg (*Hyngend*) verlangt werden soll. In einem Falle wird ein Stier (*Chiles*), im anderen Falle ein Schwein (*a wang Hyngend*) gegeben. Dem Stier (*a mant gyland*) werden die Hörner vergoldet oder versilbert. Hierauf sucht man den ner mit Gold- bzw. Silbergegen. Dann wird der Ton, nachdem er mit Bim bestreut und mit Wasser besprengt worde (*ind-eng*), fortgeleitet. Jeder, der es erfährt, kann es letzteres sehen. Sobald der Stier fortgeleitet ist, sucht man die *mandoneng*. Mit man auf dem Verbrennungsplatz Begleitungen mit weißen Leinwandstücken, um wieder zu Fahnen, gefrischen, wer nur bei den ganz Wohlhabenden geschehen darf, so wird gilt ein Faden (*a 'ner bell*) gegeben.

Da ab Verbrennungsplatz nicht gearbeiten werden darf, müssen alle Vorbereitungen dazu, wie das Holen des Holzes aus dem Walde (*Tow dyndeng*), das Herrichten des Scheiterhaufens, das Besorgen der nötigen Cylinderes und sonstigen Cylingelnen zum bestellt werden.

4. Die Leichenverbrennung (*Ser Jingdeng*).

Die Klaat verbrennen den Totem. Bei dem Verbrennungsvorgang kann man verschiedene Klassen oder Zwei unterscheiden, sowohl nach dem Totem,

das gebraucht wird, oder nach dem Kawhéik (Leichengarten) oder Aufbau über dem Totem), der hergestellt wird.

Die Verbrennungsarten nach dem Holzunterschiede sind:

1. Die Verbrennung, wobei nur unbearbeitetes Holz, so wie es gefunden wird, ohne jegliche Zubereitung, Verwendung findet. Diese Art der Verbrennung findet nur bei den ganz Armen statt (*ishi dak ok*), und die betreffenden hergestellte nicht haben. Bei dieser Verbrennung finden keine Opfer statt (*khlaw dykkuu*).
2. Die Verbrennung, wobei das verwendete Holz mit dem Messer (*ka ward*) zubereitet wird. Hier wird eine Handvoll Reis von den Angehörigen gemessen (*ka pynkhaw ka pynwarb*), und ein Opfer dargebracht, „*ka Ditch and ka Skentiche*".
3. Die Verbrennung, wobei das gebrauchte Holz sinnreich wie Bretter verbrauscht wird (*ka lyndong*). Bei dieser Klasse wird die Trommel (*ka kang*) und die Pfeife (*ka duli*) gestimmen, werden Pfeifenrohrchen (*ka nalei*) und das Rohr (*ka man*, d. h. eine Kanone) eingeführt, werden Opfer dargebracht, „*ka Ditch and ka Skentiche (a dykkat a lawjang)*", wird ein Ochse (*a wasi*) und ein Schwein (*a wasing*) geopfert. Hierbei wird auch noch der Schwertanz (*shad wasi*) aufgeführt.*

Die Verbrennungsarten nach dem Aufbauunterschiede sind:

1. *Thang synkhuid* ist jene Verbrennungsart, bei der keinerlei Kawhéik (*kulhaw*) verwendet wird. Der Tote kommt in diesem Falle auf eine Art Bambusgitter zu liegen.
2. *Thang lynghkaw* ist jene Verbrennungsform, bei der ein Kawhéik aufgerichtet wird. Der Tote kommt in eine Art Sarg aus Latten, Bambus und Stroh. Dieser Sarg wird innerlich mit reinen Tuch, und es werden Verzierungen aus Silberfolien angebracht. Über dem Leichnam, den man nicht sieht, wird ein Aufbau von Blumenbüchen und Figuren errichtet. Ferner macht man einen Pfau aus Holz, der mit Papier verkleidet wird. Den Gesang wird mit Papierblumen künstlichst geschmückt. Der Aufbau ist über dem Haupte des Verstorbenen. Bei dieser Verbrennung wird Pfeifengeld (*ishei*) an die Leute verteilt.
3. *Thang shem* ist jene Verbrennungsart, wobei der Aufwand noch weitergeht. Außer dem oben genannten Aufbau über dem Leichnam wird hier noch über dem Schulterhaufen ein Baldachin auf vier hohen Bambusstangen errichtet, der auch nach der Verbrennung stehen bleibt. Der Baldachin wird mit farbigem Tuch oder Papier hergestellt. Auf diese hin werden nun die ganze Verwandtschaft und die Bekannten verbrannt.

Das Holz für die Verbrennungen wird stets aus einem heiligen Wald (*Iaw Kynding*) genommen. Es wird aber auch von den Hütte trockenes Holz entgegengenommen, in den Fällen, aus dem *Iaw Kynding* gefällte Holz nicht selbst benutzt werden kann. Dieses wird auf dem Verbrennungsplatz nicht auf das Feuer angezündet, sondern man nimmt den Feuerbrand aus der Hütte mit.

* Diese Zeremonien dürfte nicht aus dem Tale herstammen und von dort eingeführt worden sein.

Erst wenn alle Verwandten zusammengekommen und die Vorbereitungen für die Verbrennung beendet sind — denn am Verbrennungstage darf nicht gearbeitet werden —, wird der Tote auf den Verbrennungsplatz getragen. Er wird beisetzt auf eine Bambusbahre *(ha krung)* gelegt. An den vier Enden der Bahre, manchmal auch noch in der Mitte der Längsseiten, so daß es elf sind, werden Bambusstäbe in die Höhe gerichtet und ein weißes Tuch in denselben rund um den Genze befestigt oder kreuzweise — je nachdem es der Leichnam einer Frau oder eines Mannes ist. Den Männern werden ihre Waffen: Schild, Bogen, Pfeile und das Messer *(wat)*, den Frauen ihr Schmuck angelegt. Alles dieses wird aber nicht verbrannt, sondern vor dem Bringen des Feuers weggenommen, mit Ausnahme des weißen oder seidenen Tuches, das an den oberen Enden der Bambusstangen befestigt ist. Hat der Leichnam Geld auf Speise erhalten, so wird ein Opfer dargebracht, gewöhnlich eine Ziege. Ärmere Leute geben etwas Branntwein auf den Boden.

Nun bewegt sich der Leichenzug auf den Verbrennungsplatz. Dieser ist für jedes Dorf bestimmt und befindet sich gewöhnlich an Abhängen in der Nähe von Eisenwäldern[1]. Wie schon während der Nacht, als der Tote noch im Hause lag, so werden auch jetzt Flintenschüsse abgefeuert, und wenn es sich um Reiche handelt, Papierkuchen abgeworfen. Auf dem Wege werden Kupfermünzen an das Volk verteilt. Es ertönt der Trommel, der ewig eintönige Schlag auf die große Trommel und die melancholische Pfeife der Flöte *(khuen)*. Unter großem Geleit der Leidtragenden, worunter sich die Frauen der Verwandten des Toten besonders hervortun, ist man endlich am Verbrennungsplatz, der erst an vorem Nachmittag eingerichtet wird, angelangt.

Hier wird zuerst eine *Ziege (a lung mankjet)* geopfert. Dann wird der Tote mit dem Kopfe nach Westen und mit den Füßen nach Osten auf den bereits gemachten Scheiterhaufen gebettet. Nun wird ein Huhn geopfert, den sie *lar gnykhung* nennen. Bei dem Vorgehen wird noch ein Ziegenbock geschlachtet, der *a lung nai kaud* oder „der Ziegenbock", der den Teufel abwehrt" genannt wird. Der Sinn dieses ist: der Ziegenbock ist gleichsam der „Sündenbock", der die Sünden des Verstorbenen auf sich nimmt.

Bei Armen genügt bei jenen, die nur unbehauenes Holz, als auch bei jenen, die nur das mit dem *la wat* behauenen Holz gebrauchen, findet beim Leichenzuge statt.

Jetzt legen die nächsten Verwandten Feuer an, und nach denen die Kinder des Toten, wenn solche vorhanden sind. Hat Jemand den Tuch an den vieren Enden der Bambusstangen auf, und es fängt an zu brennen. Auch die wenigen Kleider des Toten sind bald in Flammen eingegangen, und nun beginnt die eigentliche Verbrennung der Leiche.

Ist das Feuer des Holzstoßes angezündet, so wird zuerst ein Huhn *a lar pulat* geopfert. Dieses Huhn wird dreimal über den Scheiterhaufen gewendet, wie man ein Kleidstück schwenkt, und sein Blut wird dreimal an den Scheiterhaufen gespritzt. Darauffin wird am Kopfende des Scheiterhaufens ein „Bauch-Ei" *(lung kyuk)* vergraben. Nun werden drei Pfeile *(mun tyke*

[1] Auf Tafel 8, Bild 2: Verbrennungsplatz der Khai [illegible]

pawi nach drei Seiten mit der Hand geworfen, so weit man kann. Der eine nach Osten, der andere nach Süden und der dritte nach Norden. Aber ja nicht nach Westen. Denn dort im Westen geht's ja ins Unendliche nach der Ansicht der Khasi, dorthin gehen die Seelen der Verstorbenen, dort liegt die Ewigkeit[1]

Währenddessen sind andere ganz mit dem Schmoren des Leichnams beschäftigt. Bald ergießen sich die Eingeweide in die Glut, worauf dieselben heftig zu zischen beginnen. Ein abscheulicher Geruch strömt aus den prasselnden Eingeweiden. Die durch das Feuer in der Hirnschale sich entwickelnden Dämpfe verursachen nun eine heftige Explosion der Hirnschädelknochen, die ganz wie ein Flintenschuß anhört. Nachdem der Holzstoß niedergebrannt ist und der gelblich grüne Rauch sich verzogen hat, sieht man in der bläulichen Glut immer noch die Umrisse des schwarzen, dampfenden und schmorenden Leichnams. Nun stechen die von Reisbranntwein bereits stark angetrunkenen Männer mit Bambusstangen darin herum, gießen Schnaps und Öl hinein, worauf die Flammen wieder lichterloh emporschlagen. In Laskin sah ich bei einer Verbrennung, wie als Letztes das Herz noch übrig war, das ganz unter dem traurigen Betragen der Leichenverbrenner noch eigens verbrannt wurde. Die widerliche Szene der Leichenverbrennung könnte ohne den übermäßigen Genuß von Alkohol gar nicht zustandekommen. Zum Schlusse wird an Ort und Stelle eine Ziege geopfert (*u 'long Jikrlai*), und die Verwandten nehmen Abschied, indem sie Bestimmt mit den Worten: *Mudiki Mie ieit bam kwai ka ing a kai* (Behüte dich Gott, gehe und ißt Beteinuß im Hause Gottes!) auf den niedergebrannten Scheiterhaufen legen.

In einigen Orten ist es Sitte, daß sich vor der Leichenverbrennung ein Mann mit Schnaps betrinkt, welcher sodann den Teufel vorstellen soll und allerhand Possen treibt.

Wenn der Leichnam verbrannt ist, dann sammelt man die Überreste der nicht ganz verbrannten Knochen[2]. Diese werden gewaschen und in ein Leinwandtüchlein gehüllt und sodann in eine Urne (Topf) gebracht. Während dies eine Frau besorgt, streut ein Mann Reis auf die Erde und beschwört den Geist des Verstorbenen, seine auf der Welt zurückgebliebenen Angehörigen ja nicht zu stören, da alles bei der Verbrennung richtig gemacht worden sei. Ist diese Beschwörung beendet, so wird die Urne mit den Knochenresten unter den Leichenstein (*mawi shyiang*) gestellt. Die Überreste der Armen kommen ohne Urne gleich unter den Leichenstein. Zur Urne wird auch der Opferreis (*ka jyrkha*) als Nahrung für den Verstorbenen gelegt (siehe den nächsten Abschnitt).

Am siebenten Tage rechnen sie in der Frühe die Auslagen zusammen, die sie hatten. Es werden vom *a kni a kpa* (dem Onkel mütterlicher Seite) Ansprüchen an die verstorbenen Kinder und Enkel gehalten. Dieser *a kni a kpa*

[1] Wenn die Khasi jemand weit weg haben wollten, sagten sie: [illegible] ist nur ein [illegible] *ka ing ka ingi shaba* soll a Kni, d. h. gehe hin, wo die Sonne untergeht, und der Mond aufgeht (Gehe hin, wo der Pfeiler steht!)

[2] Siehe Tafel II, Bild 1: Das Sammeln der Überreste und der nicht verbrannten Knochen und der Asche bei den Khasi.

ist der Priester und Richter der Sippe bisher gewesen. Nun ruhen drei Tage lang alle Geschäfte. Am dritten Tage aber würfeln sie (losen sie — *bad pylleng*) mit zwei Eiern, wer in Zukunft der Führer der Sippe dieses Verstorbenen sein soll, damit man weiß, an wen man sich zu wenden habe, wenn Opfer zu bringen oder Zwistigkeiten zu schlichten wären. Dabei spricht der bisherige *u kni u kpa* in bezug auf den Verstorbenen:

„Hei ap ia ka nia ka jalang yuda ia lum ia kynskew ia u kar u para u khan ka mainah ka mainan ym ia tai ia ka khein ka bi shar ym na lang ka ai bum ka ai ia ia ne ka kynrong ka kynlaw ka pynkkiah ka pynnang. dik ia ka kind ia ka sim ma!

Hei ungew synghat ma phi ka hini ka lashei ka nongiam nongkynshew shi ikrum ka mane ka nar ma!"

„So achte auf die Worte der Verheißung! Nachdem versammelt sind die Verwandten und Brüder und Schwestern der Schwiegermutter und Tanten, werden wir unser Wort sieben und unsere Opfer und Gerichte, und dann werden sein: Dich zu verpflegen und zu ernähren und Gebeine übertragen und dich pflegen in Krankheit und dich gesund machen. So wollen wir den Sibnaga und das Wasser trinken, nicht wahr?!

So höre denn, o Göttin, du *Jaslei*, die du uns versammelt hast Kind und Kugel[1], die ganze Sippe und Stein und Eisen, nicht wahr?"

Wie bei den Opfern verschiedene Gebräuche sind, so sind auch die Zeremonien bei der Verbrennung verschieden. Es wird berichtet[2], daß am Tage der Verbrennung von den Verwandten und Freunden des Toten Schweine geschlachtet werden. Jene, welche es nicht vermögen, Schweine zu opfern, bringen Sibnaga, wovon sie etwas auf den Scheiterhaufen gießen. Der Sarg wird auf eine Bambusbahre gehoben und etwas Geld neben den Leichnam gelegt, so daß der Geist des Verstorbenen sich auf der Reise Speise kaufen kann. Baumwollene oder (bei Reichen) seidene Tücher werden um den Sarg gewunden, und zwar kreuzweise, wenn der Verstorbene ein Mann ist, in Form eines Rechteckes, wenn die Verstorbene eine Frau ist. Bevor die Bahre gehoben wird, wirft man eine Handvoll Reis und etwas Wasser aus einem Krug vor die Türe hinaus und opfert eine Ziege. Dies sind Reinigungszeremonien. Die Leichenprozession wird nun zusammengestellt und geht langsam zum Weg unter vieler Musikbegleitung. Bei Reichen wird in Zwischenräumen mit Flinten geschossen. Auch werden Kopfschmuck auf den Weg gestreut. Bei der Annäherung an den Scheiterhaufen wird der Leichnam zur Schau gestellt, und die Fleischstücke der geopferten Tiere, welche bei dem Leichnam lagen, werden fortgeworfen. Dann richtet man her: drei gebratene Brote, ein Ei, die unteren Kinnbacken der Tiere, welche geopfert wurden, den linken

[1] Das Wissen ist ein konzentrierter Spiritismus, das verschiedentlich auch Reichtum gewinnt wird. Der letzte Satz hat den Sinn einer Beschwörung und einen Schwur.

[2] Die Skizzen an sagenhaft der Hohlmann, der Platz unter dem Haus.

[3] Gurdon, „The Khasis", S. 100.

Fuß des Hahnes *(a 'iar kraď lyntí)*, einen Krug Wasser, Lebensmittel in einer Schale und drei Pfeile. Nun wird eine Ziege geopfert. Der Leichnam wird in den Sarg hineingelegt, wenn ein solcher gebraucht wird, und dann auf den Holzstoß gehoben, und zwar mit dem Kopfe nach Westen und mit den Füßen nach Osten. Rund um den Leichnam werden nun Holzstücke gelegt und das Ei („Bauch-Ei") wird zerbrochen, aber nicht, wie vielfach gemeint wird, über dem Magen des Verstorbenen, sondern es wird in der Richtung der Füße an den Holzstoß hingeworfen. Nun wird das Feuer durch die *kur* oder Mitglieder der Clans und dann durch die Kinder, wenn solche da sind, angezündet. Ein anderer Hahn *(a 'iar pudaj)* wird geopfert, dessen Blut dreimal an den Holzstoß geschmiert und der dreimal über dem Holzstoß geschwungen wird. Nachdem die Kleider weggetan wurden, wird die Bahre in Stücke geschlagen. Die Eßwaren und die Kimbacken werden nun zu Häupten des Toten gelegt. Nach der Opferung des Hahnes werden die drei Pfeile von einem Bogen abgeschossen, einer nach Norden, einer nach Süden und einer nach Osten. Diese Pfeile nennt man die *'nam tympew*. Es ist vielleicht bemerkenswert, daß die Zahl der Pfeile, die man beim Verbrennen abschießt, mit der Zahl der Pfeile, die man bei der Namengebung gebraucht, übereinstimmt. Sobald das Feuer brennt, wird eine andere Ziege geopfert *(lang dhalia)*. In einigen Fällen werden mit dem Toten alle Kleider mitverbrannt, in anderen Fällen werden die Kleider nur über das Feuer gehalten und dann weggelegt zum weiteren Gebrauch (was aber nur bei den Armen der Fall ist). Bevor die Verwandten und Freunde den Verbrennungsplatz verlassen, stellen sie Reisbrei an den Holzstoß und sagen Lebewohl zum Toten mit den Worten: „*Khaddei*, geht und ist Reisbrei im Hause Gottes." (Soweit Gurdon.)

3. Beisetzung der Gebeine.

Es gibt eine dreifache Beisetzung der Gebeine, resp. der Überreste der nicht verbrannten Knochenteile und der Asche. Diese Beisetzungen sind aber nicht eine Art Klassen für die Reichen, Wohlhabenden oder Armen, wie bei der Verbrennung, sondern alle Gebeine der Verstorbenen werden dreimal an verschiedenen Orten beigesetzt. Der Beisetzungsritus ist bei der ersten und bei der zweiten Beisetzung im wesentlichen der gleiche. Der Ritus der dritten ist bedeutend feierlicher.

Die erste Beisetzung geschieht sofort nach der jeweiligen Verbrennung in der Nähe des Verbrennungsplatzes in das *mawsiyang*, dem Orte der vorläufigen Aufbewahrung.

Die zweite Beisetzung geschieht später, indem die Gebeine vom *mawsiyang* in das *mawphew* übertragen werden. *Mawphew* sind Aufbewahrungsorte für die Asche der Mitglieder eines engeren Familienkreises, hier werden die Gebeine der männlichen wie die Gebeine der weiblichen Verwandten getrennt von einander aufbewahrt.

Die dritte Beisetzung endlich geschieht in ganz feierlicher Weise, indem von den verschiedenen *mawphew* die Gebeine in das allgemeine Grab der ganzen Sippe *mawlah* übertragen werden.

Schematische Darstellung der Übertragung der Gebeine einer Sippe:

a) Erstes Begräbnis (*maw shying*).

Sobald die Verbrennung vorüber ist, sammeln sich die Teilnehmer zu einer Prozession, wobei sie die Asche bzw. die Gebeine zum *maw shying* bringen. Voraus eilt ein Mann, der Blätter (*diing shit* – heißes Holz) abwechselnd mit Reiskörnern auf den Weg streut. Dann folgt die Frau, welche die Gebeine trägt. Sie ist festlich gekleidet und hat eine Art Velum, wie die katholischen Priester ein solches zum Tragen der Monstranz benützen, um die Schultern. Ich sah in einem Dorfe südlich von Lamin bei einer solchen Gelegenheit ein Velum, das tief rot und mit Goldborten und Goldfransen verziert war. Während nun die nachfolgenden Verwandten gehen und sprechen dürfen, wie sie wollen, ist die mit dem Velum bekleidete Frau, welche die in weißes Linnen gehüllten Gebeine ehrfurchtsvoll auf der Brust trägt, verpflichtet, zu schweigen und weder nach rechts, noch nach links auszubiegen, sondern sie muß geraden Wegs zum *maw shing* gehen, soweit dies möglich ist.

Am Platze angekommen, wird zuerst ein Hahn geopfert, welchen man den „Wegweiser zum Himmel" (*u 'iar kraid lyuti*) nennt, weil er den Geist des Verstorbenen ins Jenseits geleiten soll. Nachher werden vom Opferpriester (*nongkniu*) drei Reisbrote, ein Ei und Branntwein geopfert, damit die Asche hier gut ruhen möge. Die Gebeine werden, nachdem sie neuerdings gewaschen worden, in einen irdenen Topf (Urne) gelegt, und dieser mit einem weißen Leinwandläppchen zugebunden. Die drei Brote werden nun mit dem Ei und dem linken Fuße des vorher geopferten Hahnes neben den Topf in die bereitete Gruft (wenn man das Loch so nennen kann) gelegt und dieselbe mit einem Steine verschlossen. Obendrauf kommt Betelnuß, Pfefferblatt und Kalk.

b) Zweites Begräbnis (*maw phew*).

Nach einiger Zeit werden die Gebeine der einzelnen *maw shying* genommen, aber die Gebeine der Männer und die Gebeine der Frauen werden getrennt aufbewahrt und getragen. In ähnlicher Weise wie oben geschieht nun die Übertragung ins *maw phew*. Dort werden die Gebeine wiederum getrennt in den vorbereiteten Ort hineingelegt und die gewöhnlichen Opfer des Hahnes, des Ayu und des Schnapses, gebracht.

c) Drittes Begräbnis (*maw bah*).

Die kultische Übertragung der Gebeine aus den verschiedenen *maw phew* ins allgemeine Sippengrab *maw bah* ist wohl die wichtigste aller Zere-

monien, welche die Khasi haben. Denn hier ist nicht bloß die genaue und ordentliche Erfüllung jeglicher, auch der kleinsten Zeremonien und Gebräuche vorgeschrieben, sondern hier ist sogar eine seelische oder geistige Vorbereitung nötig, die sonst bei den Khasi in keiner Weise vorkommt oder verlangt wird. Diese seelische oder geistige Vorbereitung besteht darin, daß alle Mitglieder der ganzen Sippe unter sich in Frieden leben müssen, da sonst die feierliche Übertragung der Gebeine nicht stattfinden darf.

Sind alle Zwistigkeiten und Reibereien geschlichtet, so wird dies peinlichst genau festgestellt, und ein Opferer, der der Sippe entnommen wird, frägt durch Eierwerfen und ein Hähneropfer an, welcher Tag wohl geeignet wäre für den festlichen Akt. Ist der Tag auf diese Weise gefunden, so kommen alle Verwandten der Verstorbenen im Hause der Stammutter *(ling seng)* zusammen: die Kinder und die Geschwister, die Neffen und Nichten *(shi kur shi paru ryngkat u khun ka meinah meisan barok)*, die Großonkel und die Kleinonkel *(u nie-bak u nierit)*. Stehend rufen sie die Göttin an, welche die Mitglieder der ganzen Sippe erschaffen hat, und sagen:

„Kiamno? hukum phi ha biri thaw hynriew buk hynriew ha ngan ieng ha lum ka hyn shew ha thep ha tian ia u suidiap u nongiap u lor u kap barok na tynrai ka lingseng lingkhaddak?"

„Wie willst du, o Göttin, daß ich stehe (vor dir, vor deinem Angesichte), zu sammeln das Erworbene, das Aufgespeicherte, die Geister der Verstorbenen, die Obern der Familie und die alten Familienhäupter der Verstorbenen aus diesem Stammhause?"

Wenn nun die Göttin es genehmigt, dann sammeln sie die Opfergaben und Opfergelder (die manchmal in die Tausende von Rupien gehen), um sie für die Festlichkeit zu verwenden.

Zwei Frauen gehen dann zu den verschiedenen *maw pkew* und holen ehrfürchtig die dort untergebrachten Gebeine. Die eine Frau trägt die Gebeine der männlichen Verstorbenen, die andere die der weiblichen Verstorbenen, und beide bringen sie in das Haus der Stammutter, wo sie feierlich hingestellt und mit Blumen und schönen Tüchern verziert werden. Nun erhalten die Geister der Verstorbenen Nahrung *(ai bam)*, indem ein Schwein, ein Huhn und ein Stier geopfert werden. Für eine spätere Verteilung an die Teilnehmer werden die besten Stücke dieser Tiere in einem Korbe im Hause aufbewahrt. Das übrige wird geopfert.

Nun wird gefeiert[1]. Dieser Zeremonienlauz zu Ehren der Verstorbenen dauert entweder drei oder fünf oder neun Tage, ganz wie man es für gut findet (und wie weit eben die gesammelten Gelder reichen). Ein Platz vor dem Hause wird festlich hergerichtet und als Tanzplatz *(lymphung)* benützt. Musik spielt und Schnaps wird verteilt.

An dem Tage nun, an dem sie beabsichtigen, die Gebeine zu übertragen, werden die Trommeln *(ka kiing)* und die Pauken *(ka nakra)* geschlagen,

[1] Siehe Tafel III, Bild 2: *Zeremonienlauz zu Ehren der Verstorbenen.*

die Flöten *(ka sharati)* geblasen, Flinten *(suloi)* und Böller *(ka man)* abgeschossen. Man verfertigt aus Bambus eine Ahnenpuppe, die entweder die Urgroßmutter (die *Jaubei* der Sippe) oder auch den Urgroßonkel *(suidnia)* vorstellen soll. Mit dieser Ahnenpuppe *(u tyngshop)* ziehen sie zu den *mawniam mawrukom* (den Zeremoniensteinen, Ahnensteinen[1]). Während die einen tanzen, errichten andere am Wege zu den *maw bah* „Ruhesteine" oder „Fußsteine" oder „Wegsteine" *(maw kjat* oder *maw lynti)* für die Geister der Verstorbenen, wo sie sich auf dem Wege zum allgemeinen Grab ausruhen können. Diese Steine sind ungefähr einen Meter hoch und stehen zu je drei in einer Reihe. Vor denselben wird auf vier kleinen Steinen gleichsam als Unterlage oder Füße (*maw kjat*, d. h. Steinfuß) ein flacher Stein wie eine Tischplatte hingelegt[2].

Am Tage nun, an dem der Tanz zu Ende ist, veranstalten sie *ka pyngrei*, d. h. ein Hochzeitsfest der Geister der Verstorbenen, die in ihrem Jünglingsalter (erwachsen, aber unverheiratet oder kinderlos) gestorben sind. Sie wählen dazu zwei arme, alte Leute von kleiner Statur, welche sie dafür bezahlen: einen Mann und eine Frau. Der Mann ist der Bräutigam der verstorbenen Jungfrau, das alte Weib die Braut des verstorbenen Jünglings. Sie lassen sich die zwei um den Geisterreis raufen *(ki pynlaknieh bam ka ju snaiap)* und lassen sie über den Reismörser *(thlong)* und den Mörserstößel *(synrei)* springen. Dann wirft man Pfeile so weit als möglich, welche die beiden erhaschen sollen. Dieses Fangspiel bedeutet die Vertreibung der Dämonen, welche den *maw bah* umgeben und den Zutritt zum Steine verwehren wollen. Dann streut man Saatreis *(u kaw rawai)* auf den Weg vom Hause bis zum Ende des Dorfes. Die zwei Leutchen müssen nun mit Stöcken *(da ki diengdah)* laufen und den Reis dreschen oder schlagen, und dies geschieht dreimal hintereinander.

Wenn es nun heller Tag geworden ist, so nimmt man von den Verwandten je eine Handvoll Reis, sowie die Beisteuer zur Bestreitung der Kosten für die ganze Feierlichkeit. Dann holt man einen „Altarbock" *(u' lang dawan)*, um ihn auf den Dorfaltar *(ha ka dawan ka shnong ka mulah)* zu köpfen. Nun belustigt man sich mit Trommeln und Fahnen *(ka king ka lama)*. Die Kinder und Kindeskinder setzen sich zusammen und begrüßen sich feierlich, besonders den „Vetter" *(u kha pha)*. Hierauf wird ein Schildtanz *(mastieh)*[3] abgehalten, und zwar macht man dabei drei Runden. Nun wird ein Ziegenbock geschlachtet und alle Tänzer mit den Schilden verneigen sich dreimal vor dem „Vetter" *(u kha kpu)*. So macht es auch jeder der Söhne des Stammhauses.

Jetzt erheben sich alle, und man opfert den Sündenbock *u' lang sali kasid*. Man hält einen Waffentanz ab, wobei die Söhne der Reihe nach (nach ihrem Alter) folgen[4] (*skad* wuid, d. h. Waffentanz).

---

[1] GURDON, „The Khasis", S. 141, gibt eine andere Schilderung dieser Gebräuche, er sagt: In Cherrapunjee werden zwei Puppen gemacht, genannt *ka pawne* und *u tyngshop*. Die erstere soll die *Jaubei*, die letztere den *suidnia* vorstellen. Diese Puppen halten die Tänzer in den Händen.

[2] Siehe Tafel III, Bild 2: „Fuß- oder Wegsteine" bei den Khasi.

[3] Siehe Tafel IV, Bild 1: Khasi-Männer, bereit zum Schildtanz.

[4] Siehe Tafel IV, Bild 2: Waffentanz der Khasi beim dritten Begräbnis.

Ist der Waffentanz beendet, so geht man prozessionsweise (wie oben bei *maw shying*) zu den *maw kjat* oder *maw lynti*. Hier angekommen, schlachtet jeder der Söhne einen Ziegenbock, indem er den Kopf des Tieres mit einem Schlag vom Rumpfe trennt. Es findet das gewöhnliche Opfer statt. Meistens aber werden nicht so viele Ziegenböcke geschlachtet (da das Geld nicht reicht), sondern nur einer, der dann *u' lang maw lynti* genannt wird. Hier endet das Geleite oder die Begleitschaft der Söhne *(hangne la kut ka jingleit on lynti ki khun kha)*.

Die Übrigen ziehen weiter zu den *maw bah*. Dort angekommen, öffnen sie die Türe (den Verschluß des Behälters für die Gebeine). Ein Mann, der dafür bezahlt wird, kräht dreimal, um den Geisterbahn *iar iap* vorzustellen. Dies geschieht vordem Steine. Dann werden alle Geister aufgeweckt *(kyrsiew)*, die sich in dem Kohlraum befinden, indem man spricht:

„To khie to kie la wan u khan la wan u ksiew!"

„Steht auf! Steht auf! Es sind gekommen die Kinder, es sind gekommen die Enkel!"

Nun legen sie die Gebeine der Verstorbenen, getrennt nach den Geschlechtern, hinein. Dazu kommen noch die Opfergaben: die Brote und der Kuchen, die sie ausbreiten *(siang)*. Auch Morgen- und Abendreis (d. h. gekochten Reis zum Essen fertig) stellen sie (*thah* — ausgießen) auf den Stein, ebenso Betelnuß und Pfefferblatt wie *ka reng ka ngiah* (die Backenknochen der [geopferten] Tiere). Auch kommt die Beisteuer *(u khrung u khwang)* dazu. Hierauf wird der Stein geschlossen.

Nun schlägt man mit einem Stock *(sympat da ki dieng)* dreimal auf den Stein, was man *tan ding* (dem Feuer entgegenkommen) nennt, wobei man spricht:

„Hei nga tar ding nga tan thah ioh don aba mang aba ihew u tynjuh u pan tien wat leit khik wat leit wein ap la ka khin ka bishar pyllan ho mei, ho iaw, ho nie, ho ma ski khram ka maw ka nar!"

„Siehe, ich komme dem Feuer entgegen, siehe ich gieße aus die Opfergabe[1], damit nicht etwa jemand komme und verletze und versuche, Opfer zu verlangen. Rühr' dich nicht! Sei ruhig! und warte geduldig deine Opferzeit ab! Nicht wahr, Mütterchen, nicht wahr, Schwiegermutter, nicht wahr, Uronkel, nicht wahr, Vetter, nicht wahr, alle ihr Vettern, die ihr da seid unter dem Steine!"

Am nächsten Morgen rechnen sie aus, was alles gekostet hat und verbraucht worden ist. Dann nehmen sie Opferschnaps und sagen (*suif* heißt eigentlich: sie nimmen ihn, präsentieren ihn und halten ihn feierlich hin):

„Hei ko nie o ma ko mei ko iaw ka suidiap ko nongiap ski khram

„Siehe, o Onkel, siehe, o Vetter, siehe, o Mütterchen, siehe, o Groß-

[1] D. h. ich versuche gutmütig die Zeremonien.

ka maw sngew ho la lut la sep katta to nang kyrsoi to nang kyrsih la iaid ka iew ka duwar ka kitnong ka byilla ka khali ka pateng!"

mutter der Verstorbenen, o alle ihr Verstorbenen, die ihr unter diesem Steine seid, höret! So und soviel haben wir verbraucht und ausgegeben, segne und vermehre es! Möge uns beglücken all unser Handel und Wandel, all unser Haushalt, all unser Taglohn, all unsere Geschäfte!"

Dann verteilen sie die Reste der Opfergaben (auch die Stücke Fleisch, die im Korbe aufbewahrt wurden) und verneigen sich und beweinen alle die verstorbenen Vettern und Tanten. Und wenn sie Opferreste verteilt haben, geben sie noch jedem 4 bis 5 Rupies (5 Mark 60 Pfennig bis 7 Mark Friedenswährung) dazu und sagen:

„Shim kein khun to leit long bynriew to leit man byn riew to roi to pa to long spah to man spah wei kamba ngn la kha la long shisha bam don ka sang bam don ka ma a yn sah ka nam yn sah ka rong yn sah ka ummai yn sah ka umpung mo."

„So nimm, mein Sohn, wachse und sei stark, sei glücklich und erfolgreich, es mehre sich dein Reichtum, da ich dich erzeugt habe ohne Schande und Makel, es bleibe dein Ruf und deine Ehre bestehen, und bestehen sollen auch die Tränen und die Schöpfbrunnen[1], nicht wahr."

So machen sie es allen Kindern der Reihe nach. Nach drei Tagen zerstören sie die Puppe, ob es nun eine männliche oder eine weibliche gewesen ist (d. h. vorstellen sollte).

Zum Schlusse opfern sie ein Schwein als Speiseopfer, das sie das „Puppenschwein" *(u niang ai bam tyngshop)* nennen.

Nach Verlauf eines Monats opfern sie wiederum ein Schwein als Speiseopfer, das sie das „Monatsschwein" *(u niang ai bam lait baai)* nennen.

Und endlich nach einem Jahre opfern sie noch ein Schwein als Speiseopfer, das sie das „Jahresschwein" *(u niang ai bam lait snem)* nennen[2].

GURDON[3] beschreibt auch diese Zeremonie anders, er sagt: „Nachdem man am Grabe angekommen ist, werden die Gebeine dreimal in einer Schüssel gewaschen (dies ist eine Sitte aus Cherrapoonjee). In Maushai werden die Gebeine der Hitze eines Feuers ausgesetzt, das man auf einer kleinen Plattform angezündet hat. Nun wird die Steintüre des Cinerariums geöffnet. Die Gebeine der Frauen werden mit der Urne hineingestellt, und zwar nächst der Wand, welche am weitesten von der Türe weg ist. Die Gebeine der Männer aber werden der Türe zunächst hingestellt. Manche Sippen legen die Gebeine der Männer auf die rechte Seite, die Gebeine der Frauen auf die linke Seite. Dann werden auf einem Steine vor dem Grabe den Ahnen Speise- und Trankopfer dargebracht. Die Männer vollziehen einen Zeremonientanz mit Schwert

und Schild (dreimal), und die Türe des Grabes wird geschlossen. Nachher wird eine Fahne am Grabe aufgepflanzt.

Alle Leute gehen weg, mit Ausnahme von drei Männern. Der eine von diesen opfert einen Hahn *(iar tanding)* vor dem Grabe, ein zweiter sitzt hinter dem Opferer und hält drei Feuerbrände in den Händen, welche er hin und her bewegt. Dieser Mann kräht dreimal wie ein Hahn. Der (dritte) Mann hinter dem Grabe hört peinlichst auf jedes Geräusch, das sich etwa unterdessen im Grabe bemerkbar mache. Es herrscht nämlich der Glaube, daß, wenn die Zeremonien nicht ordentlich gemacht wurden, nun das Grab zittere und bebe. Wenn die drei Wächter zufriedengestellt sind und sich überzeugt haben, daß keinerlei Bewegung im Grabe war, so gehen sie heim und berichten es den Angehörigen. Diese Zeremonie nennt man *tan ding* oder die Feuerprobe.

Am anderen Morgen verteilt die Frau, welche die Hausbesitzerin des Stammhauses ist, an alle Teilnehmer dieser Opfer die hinteren Viertel der Opfertiere. Es ist den Verwandten nicht erlaubt, an die Arbeit zu gehen, bevor drei Tage vorüber sind. Der dritte Tag wird genannt *ka sngi lait*.

Die ganze Zeremonie hat symbolische Bedeutung. Das massive Steingrab soll einen sicheren Platz für die Geister darstellen. Wenn jedoch die verstorbenen Geister mit der ganzen Zeremonie nicht zufrieden sind, so beunruhigen sie ihre Verwandten auf dieser Welt."

[211] Sacrifice and Sacrificial Customs of the Khasi by P.F. Stegmiller, S.D.S., Former Apostolic Missionary of Assam (India).

(With 6 Illustrations in the Text) 782

1. The Offerers of Sacrifices:
   a) Lyngdoh,
   b) Ceremonial introduction of the lyndoh.

2. The Sacrifices:
   a) State Sacrifices,
   b) Private Sacrifices,
   c) Secret Sacrifices

1. The Offerers of Sacrifices.

a) Lyndoh.

The religion of the Khasi is an (evil) 771
spirits worship, which has arisen out of fear 772
of misfortune and harm and which is carried 787
out by means of sacrifice. This definition of mine corresponds essentially with the definition of Bivar, (1) who says: "The Khasi reli-

1. Bivar, Administration Report of of the Khasi and Jaintia Hills District of 1876.

gion may be briefly defined as a form to cure illnesses and to ward off misfortune by finding out the name of the devil, who is the original cause of the evil, and by appeasing him by the necessary, sacrifices. Gurdon (2) calls "the 771
772

2. Gurdon, The Khasi (London, 1906) p. 105.

Khasi religion a cult of spirits, i.e., actually

[211] rather a reconciliation of the spirits, good as
721 well as bad, by sacrifices, which are offered occasionally, especially in times of distress."

Undoubtedly sacrifices belong to the practice of the Khasi religion. Now who offers these sacrifices? In order to answer this question, it is necessary to differentiate between the various sacrifices that are customary among the Khasi. We find there

a) public sacrifices,
b) private sacrifices,
c) secret sacrifices,

The public sacrifices are performed by specially designated persons of the male sex (lyngdoh).

Private sacrifices can be performed by the ordinary men of the people as well as by sacrificers (lyngdoh) specifically designated for this.

Secret sacrifices are offered by anybody of the masculine or feminine sex.

722 The Khasi do not have priests in the actual
723 sense of the word. There is also no caste or family from which the sacrificers would come. There is also no special school or training for beginning sacrificers. The sacrificers or lyngdoh have also no special mark of distinction. (3) To be a lyngdoh does not mean [212] having

3. Cf. P. Dr. C. Becker, Indisches Kastenwesen und christliche Religion [India Caste System and Christian Religion], (Aachen) p. 6.

a special profession. The sacrificers are ordinary people who may have any profession which they practice. Such men only appear occasionally as sacrificers. Even the chief sacrificers, who

782 preside over a whole district and are known as
793 lyngdoh rangbah (head sacrificer), are not sacrificers by profession. Thus, for example, the chief sacrificer of Lawin in the district of War is a coolie by trade and carries loads from one market to the other (Fig.1).[1] None of these sacrificers has a revered position among the people. It is rather the "fear" of them which makes them respected. For the Khasi firmly believe that the lyngdoh or even merely the ordinary sacrificers are masters over the (evil) spirits. Therefore they are very careful not to quarrel with the sacrificers, so that they will not conjure up spirits in their anger and set them on the guilty one and thus bring him to destruction.

782 The sacrificers are not actually offerers
796 of sacrifices in the strict sense of the word,
798 but only representative people at the sacrifice. For the Khasi live under a matriarchy. With a sharpness of logic and with thoroughness they have probably developed and put into effect as a social organization the most beautiful pattern of a matriarchy of anyone up to today. The mother is the head of the family, the only tie that gives the family unity; she is the sole possessor and sole owner of all property, and inheritance is only possible through her. The father has no right to the relationship of the children. These belong only to the maternal line. Even his ashes will not rest finally beside those of his wife or children, but in the grave of his mother. Whatever the father may earn or save does not belong to his children, but returns to the maternal line. It is not surprising that with such views it is also the mother who has all the spiritual power. And in reality she is in complete possession of the highest spiritual power. It is her duty to

[1] [See category 24, p. 10 -- Analyst]

preserve the customs of the family or sib; she must see to it that the ancient domestic customs of the household sacrifices are truly preserved; it is her duty, to keep the inherited ceremonies of the sacrifices pure and to hand them down conscientiously to the descendants. Therefore she has to arrange for the necessary sacrificial materials; she must prepare everything; she is the only one who must fast before the offering of many a sacrifice; she gives the order for the sacrifice, and she should also have to perform it herself.

But this does not happen. In reality no woman offers the sacrifice herself. (4) She is

4. With the exception of the secret sacrifices, about which, see later.

represented by a male person. But he must be related to her on the maternal side. Usually a maternal uncle (kni) represents her. Such representation by a relative is always necessary, whether it be for a public or a private sacrifice. But not merely the degree of relationship must lie in the feminine line; there is still something else that must be observed for each sacrifice. Even though the duties of the sacrificers and their methods of sacrificing are very different and are arranged according to the customs and inherited usages in the family or in the sib or in the state or community, yet in one point they are all similar: namely, all the sacrificers must be assisted by a woman during the performance of the sacrificial ceremony. This is usually called ka iyugbah (the priestess). (5) Because the man must function in her name and he is only her representative at the sacrifice,

192 Gordon (5) believes that his ka lynghoh is with-
376
193

5. Gordon, The Khasi, 1st. ed.

out doubt a holdover from that time of the matriarchy in which a priestess also performed the sacrifices herself.

b) The Public and Ceremonial Introduction as a lynghoh.

193 How does a person become a lynghoh?[8] This
194 question can also not be answered so easily.
XXX This is very different in the different districts. In general it may be assumed that the lynghoh arise from the practice of household (private) sacrifices. Since it is the duty of the woman to watch over the sacrificial ceremonies, she will introduce one of her sons to the rite of performing sacrifices that is peculiar to the family, so that he will be able to occasionally offer the sacrifice in the prescribed manner or in case of need (sickness, death, misfortune). But because the maternal uncle is usually called upon for the sacrifices, the son who has learned to offer sacrifices will have little chance to practice this art in his own family, but rather among his maternal relatives. And the other way around, people from there who know how to offer sacrifices will be called into this household. In this way the man who offers sacrifices becomes known in the neighborhood. If he has luck with his arrangements and if success crowns his offering, the more skilled spirit that he is an experienced sacrificer whom the spirits obey and that he knows how to seek them out, to drive them away, or to propitiate them, as the case requires. Thus it happens that such a man is called upon again and again to offer sacrifices,
[See Dr. Pfeer... Anoj.]

PES
PEA
PEF

especially in touchy cases. Thus of his own accord he becomes a lyngdoh and the people recognize him as such on the basis of his successes. Whoever is once esteemed a lyngdoh remains one for the rest of his life. Just as in our country ordinary people call a dental technician "Doctor" and a high school teacher "Professor," so the Khasi call a man who is well known for his good sacrifices their "lyngdoh," although this person would not be able to prove his right to the title officially. This way of becoming a lyngdoh is probably the usual practice in most of the cases.

PES
PEL

But it is not the way everywhere. There is a report from Lamin (6) that a group mother

6. Salvationistische Mitteilungen (Salvationist communications). 1906 No. 6, p. 84.

(Hammemutter) of the lyngdohs is there. Gordon (7) also writes about a lyngdoh tribe, from which

7. Gordon, loc. cit.

the lyngdohs are drawn. I have never found this to happen and I have never heard of a lyngdoh group (Hamm), or a lyngdoh eib (jaid). It could certainly happen that several sons of one and the same mother could by chance learn how to sacrifice and that they all excel in it and that they all have good luck so that these brothers are all called in as lyngdohs.

But the mother concerned has by no means become a lyngdoh group mother (Hammemutter) just because of that, and the eib involved has no claim to the title: lyngdohjaid (lyngdoh group (Hamm)). Naturally the correct art of sacrificing, which is often very involved and difficult,

777 is more easily handed on through the children
yet than outside of the family, although that can also occur. But this teaching each other would never be a justification for a community or group /Stamp/ relationship of lyngdohs.

/Ill/ In those Khasi territories in which the lyngdoh are still installed by public recognition so that they may function as lyngdohs during great community or state sacrifices, it is done in the following or in a similar way.

If a certain man has been decided upon to be choosen as lyngdoh for the district, for the community, or for the kingdom, he is invited to offer his first official sacrifice. First of all he must take a purification bath. Then he must go to the top of a nearby mountain with all his relatives or electors (who are usually his relatives). This is done with great ceremony. The new lyngdoh is festively dressed. Freshly washed clothes cover his body. His turban (jingapong) is decorated with white rooster feathers. He wears a leather belt around his body on which the short Khasi quiver hangs (ka ringkap). He has a long sword (ka waitlam) in one hand and a dancing brush of goat hair (u symtiah) in the other. The male escorts are also dressed like him, but instead of the white rooster feathers they have a bunch of bright colored (thula) flowers on their turbans. The entire distance from the house of the new lyngdoh up to the top of the mountain must be covered by dancing, which explains the ceremonial dancing clothes of the male escorts. But also the female participants in the parade, who do not have to dance, insist on appearing all dressed up even if they are not in dancing clothes. They are also dressed in freshly washed clothes. A snow white scarf on their heads and a sky-blue cloak marks them from a distance as participants in the festivities. In addition most of them wear the usual Khasi ornaments: chains of

3:Stagmiller-8 B4,5(no date) 1954 ART Khasi ART

gold and silver, of gilded beads alternating with real beads of coral. The women and girls also take some light refreshments along. They take care of the necessary pauses for quais (betel nuts) and smoking, for the Khasi are never in a hurry. Several coolies, who accompany the procession, carry the necessary utensils for the sacrifices on their backs in waterproof woven baskets (ka shang) with forehead straps (u star) woven of bamboo, while other coolies lead the living animals to be sacrificed: a goat and a rooster.

When everything is ready, a little band, consisting usually of only a flute player (ka 'tangmuri) and one or two drummers (kaing), begins to play and the procession moves up the mountain dancing. It proceeds slowly. From time to time everybody rests and the coconut pipe (ka jingdih duma) is passed from mouth to mouth. After a bite of betel nut (quai) has been taken, the procession moves on again dancing until the top of the mountain is reached. The Khasi must be known and admired because of the quietness and cheerfulness with which they do everything. There is no hurrying and haste, no rushing back and forth and no forgetting of anything. They give themselves time for everything and therefore succeed in what they attempt.

Hopping, skiing, and skipping they reach the top. If there are Khasi ladies there, the ones who have arrived break off leaves from them and strew them on the ground. Otherwise the Khasi lady leaves are brought along from home to this, they can be strewn on the ground on the top of the mountain. This makes the ground holy and consecrated to the spirits. The men now put aside the swords and the dancing brush. They begin to prepare the first ceremonial sacrifice

of the new lyngdoh. A hole is dug anywhere in the ground with a chopping knife (ka wait) and the humus (earth or loam) which is dug out is brought to the middle of the place, piled up and thus serves as the altar. [215] A gourd bottle with fermented rice water is placed on the altar beside a bunch of betel nut leaves and beside a little basket full of rice and pounded meal next a pepper leaf, and the whole is surrounded by leaves of the Khasi oak trees.

Now a circle is formed. Several men lead the goat into the ring and hold it tight by a rope. Another man seizes the goat by the hind-feet and lifts these so high that the goat is only standing on its forefeet, and since it is tied by a rope it cannot move easily.

Now the new lyngdoh steps forward. He steps in front of the sacrifical animal, head high and armed with a chopping knife (ka wait). He folds his hands and takes the chopping knife between the flat surfaces of his hands. Then he crouches down, while murmuring his verses. Everything is still around him. The lyngdoh prays, i.e., he murmurs something which is not understood, yet everyone knows that he is now speaking to the spirits. After he has done this, he stands up. Taking the chopping knife by the handle with both hands, he swings it high and cuts off the goat's head with one blow. Blood shoots out in a wide arc. The body of the animal falls sideways to the ground. [Fig. 1. The chief sacrificer of Lamin in his private occupation as a coolie]. A cry of joy bursts from the throats of the crowd when the neck is severed. Raising himself up from the blow, the lyngdoh presents the bloody knife towards all sides and then hands it over to someone else. Now he picks up the severed head from the ground and lets the blood drip on the altar and on the sacrifical

[The chief sacrificer of Lamon in his priestly occupation of a castle]

[Fig.]

Fig. 1

gifts carefully placed there. Finally he sets the goat's head on the top of the little pile of earth thereby flattening it out, and thus crowns the altar with the bloody head.

Now the body of the goat is dragged over and the new lyngdoh begins to divide it. He has certainly done this many times before when he offered private sacrifices, or perhaps when he offered sacrifices for his own family, or perhaps when he was called upon by others to perform such sacrifices. But this time he is particularly happy about it. After all it is the first ceremonial sacrifice which he is performing officially. This is not as it usually is when he must sacrifice for sick or dying people and must propitiate the spirits and perform the observation of the entrails very precisely. No, this is a sacrifice of joy. He only needs to place the nine prescribed parts on the altar. He does that, taking a piece of the liver, the heart, the lungs, the kidneys, the loin, the spleen, the gall bladder, [illegible] the small intestine and the large intestine. The others surround the bloody parts with leaves of the Khasi oak trees and the new lyngdoh shouts out joyfully: "The sacrifice is good!" The others repeat the cry and clap their hands as a sign of agreement. The goat is offered to the "god who commanded the sacrifice" (u 'lei Shillong). [Fig. 2. The state sacrifice at Mawkyrwat.]

Now a second sacrifice begins in honor of the god u 'lei lyngdoh. A rooster is slaughtered and placed in pieces on the altar. While the new lyngdoh is letting the blood of the rooster drip on the sacrificial gifts on the altar, he shouts out: "Hey! The blood of the rooster! Hurrah!"

The sacrifice is completed. Coolies pack up the sacrifical meat into the baskets that were

782 brought along and push the sacrificial gifts to
793 one side.

The new lyngdoh now gives the sign for the dance of joy. The men who are all in dancing clothes get up and seize the swords and dancing brushes they brought along. They place them-
782 selves one behind the other. The music begins
793 and slowly the dancers move away from the place.
835 Hopping and rocking from one leg to another, they move forward, forming a definite figure while doing it. Sometimes it is a circle, sometimes an eight, sometimes a spiral, which then slowly resolves itself. Now the dancers face each other in pairs. With loud cries each pair jumps at each other and they beat their swords together, uttering cries of joy which are seconded by the spectators. [Fig. 3. Egg throwing: placing rice].

Now they arrange themselves as at the beginning and the dance begins again. Thus the dance crosses the place several times, each time the peculiar dance (shad mastieh) ending
793 with the striking together of the swords. The
782 new lyngdoh, who has now performed his first ceremonial sacrifice which is concluded by the sword dance, declares his veneration for the god who has commanded the sacrifice. For this purpose all the men arrange themselves in order and with the lyngdoh at the head bow three times before the (invisible) god. While they are all standing, the lyngdoh takes several steps backward and standing repeats his bow. With this the ceremony is over.

They arrange themselves in the order they came in. Dancing they go down the mountain to the hut of the lyngdoh. As soon as possible a new sacrifice [21] is offered to the u 'lei lyngdoh, the god of sacrificers. With this the new lyngdoh has officially begun his new office

Investigation]

782 and can now also appear at the public state and
793 community sacrifices when any basis of relationship justifies it.

This ceremonial way of introducing lyngdohs is still the custom especially in the kingdoms of Nyrim and Mongkrem.

The number of active, official lyngdohs varies according to the region. A kingdom has at least one official lyngdoh. [Fig. 4. Egg throwing: Throwing of the egg.] [Fig. 5. Egg throwing: Investigation] But the kingdom
[794] of Mongkrem, for example, has six official lyngdohs, who together with the king and with other lyngdohs from neighboring villages annually offer the great state sacrifice. (8) Even

8. P. Dr. Becker, S.D.S., "Die Mongkrempuja in den Khasibergen" [The Mongkrem Puja in the Khasi; Mountains], Anthropos, Vol. 4, (1909), p. 898.

villages often have their own official lyngdohs.

For the services which they perform for the people by offering sacrifices, they do not receive money or a present of money. Usually their trouble is rewarded by natural products, such as a hen, a bottle of rice liquor or even, though more rarely, by a pig. Obviously they always have the right to participate in the sacrificial meal.

2. The Sacrifices.

a) State Sacrifices.

761 According to the report of the last census
764 the tribe of Khasi numbers about 200,000 people.
767 (9) These are not unified under one ruler, but

9. P. Dr. C. Becker, S.D.S. In

161

Stromtal des Brahmaputra [In the Valley of the Brahmaputra], (Aachen: Xaverius Publishing House, 1923) p. 293.

782 are divided into 10 kingdoms and 15 small states
621 (communities). In each of these kingdoms and communities an official state sacrifice is of-
782 fered each year. The smaller state units offer
776 it to the u basa shnong or to the u phan u
796 kyrpad (the tutelary god of a village), the larger one to the u 'lei Shillong (the god who has commanded the sacrifice) [218]. The purpose of this large sacrifice is to thank the revered god for the country (kingdom or community) and to beg him to make its inhabitants
782 healthy and happy. This is shown by the prayers
796 spoken at these sacrifices, namely: "O god Shillong! for thee is this prayer, this sacrifice of goat, of hen, of kpu and rymsi (a kind of bread of rice meal or cornmeal with pounded sugar), of utensils of preparation, as thou hast given them to the royal lineage, so that once in every year Puja is celebrated in thy name, so that we may live happily, be healthy and increase, so that kings will arise, so that their honor and that of the kingdom will grow and increase and the children of the kingdom will spread out to increase thy name and thy honor." (10)

10. P. Dr. C. Becker, S.D.S., "Die Nongkrempuja in den Khasibergen" [The Nongkrem Puja in the Khasi Mountains], Anthropos Vol. 4, 1909, p. 901.

In another prayer they say: "O lord, thou who hast created heaven and earth, thou hast placed a king that we may be children of his

782 kingdom, thou hast given the sun and the moon,
796 for reckoning the year, so that we may have Puja once in the year, so that kings may arise, the children of the valleys may increase and thrive, the children of the Khasi, the children of the Bhoi, the children of the War, so that the sacrificial gifts may increase before the face of thine altar." (11)

11. P. Dr. Becker, S.D.S., loc. cit., p. 902 (Anthropos).

782 At these state and community sacrifices, the
793 official lyngdohs are the chief one to appear,
622 who together with the ruling king or chieftain
796 and with other lyngdohs from the villages perform the sacrifices. These annual state sacrifices are introduced and performed with great ceremony. They take place in front of the house of the s'iem sad (high priestess) of the state involved. (Fig. 2) [Fig. 6. The village chief in his sacrificial coat and ornaments].

782 In addition to the usual sacrificial gifts,
796 which are grouped together on a small altar of earth and which consist of a banana leaf, betel nut leaves, pepper leaves, betel nuts, kpu and rynsi, fermented rice water in a gourd bottle, and oak leaves, there are chiefly hens and goats and at the end a pig. Goats are slaughtered in great numbers, so that the chief festival day of the state sacrifice is called pne blang (the goat heads) by the people.

782 Besides the slaughtering of the sacrificial
585 animals, the dance plays a chief part. At these
796 great sacrifices all the dances that are customary among the Khasi are performed: the dance [219] of the unmarried girls, the dance of the girls and men together, but both sexes are so placed that the men form an outer circle and the girls

[See category 46, p. 19 -- Analyst]

782
535
796

an inner circle; the dance of the men with torches; the sword dance of the men; the shield dance of the men; the dance of the men in couples; the solo dance of a girl and the solo dance of a man.

All the inhabitants of the kingdom combine for the state sacrifice. With the cheerfulness peculiar to the Khasi they watch the passage of the individual sacrifices and the dances for hours at a time. In the evening of the day of the chief festival a sacrifical meal is held, in which all the sacrificers, dancers, and spectators may participate.

b) Private Sacrifices.

782

In addition to the annual large state sacrifices, other sacrifices are also offered by the Khasi. These are the usual sacrifices which arise from the needs of daily life. The following can be mentioned as such:

1. The sacrifice for questioning spirits.
2. The sacrifice at the name giving.
3. The sacrifice before every important business, for example, before the market, before planting rice, before shooting arrows, before building a hut, before a journey, etc.
4. The sacrifice of thanks after recovering health.
5. The sacrifice in cases of sickness.
6. The sacrifice at the time of death.
7. Human beings also sacrifice for finding out which spirits must be propitiated. This is a matter of finding out past errors of those already dead).
8. The sacrifice at a cremation.
9. The sacrifice at the burial of bones:

782

a) at the mau shing (first burial),
b) at the mau phew (second burial),
c) at the mau bah (third burial).

10. The sacrifice in memory of the deceased:
a) the sacrifice at the end of a month,
b) the sacrifice at the end of a year.

These various sacrifices can be offered by the official lyngdohs as well as by other lyngdohs or even by ordinary men from the people, provided they know precisely the ritual which governs the family concerned and are guided by it.

782 A definite spiritual attitude is not required
784 for any sacrifice. There is only one exception
878 here: namely at the sacrifice for the third and last burial of the bones in the mau bah. This may only be carried out if all relatives of the sib concerned are living in peace with each other. This must be established by the lyngdoh himself who is performing the sacrifice. If any kind of enmity or a quarrel is discovered by the investigation, the burial and the sacrifice that goes with it must be postponed until the condition of general peace in the family is fulfilled.

782 [120] As concerns the place of the sacrifices, the areas may be divided in the following way:

1. Sacrifice is made in the hut:
at the name giving,
after recovering health.
2. Sacrifice is made in the courtyard in front of the hut:
when questioning spirits,
before important business,
in cases of sickness,
khein kauid,
in case of death.
3. Sacrifice is made away from the house:
at a cremation at the place it occurs,
at the three different burials of the bones at the places where they occur,

3:Stagniller-21 M-4,5(no date)1924 A47 Khasi A17

at a memorial sacrifice at the place where the bones rest.

The sacrificial gifts for the individual sacrifices are the following:

1. At the questioning of the spirits: eggs, hens,
2. At the name giving: rice brandy, rice meal, eggs, roots, leaves.
3. Important business: eggs, hens.
4. After recovering health: kpu and rynai, gourds and gourd bottles, rice brandy.
5. In cases of sickness: eggs, hens, goats, pigs, cows.
6. In case of death: egg (stomach egg), rooster, rice, pig, steer.
7. Khein kwid: eggs, gourds and gourd bottles, rice brandy, water, doves, hens, goats, pigs.
8. At a cremation: rice, kpu and rynai, cows, pigs, he-goats, rooster, egg (stomach egg).
9. At the burial: a) rooster, rice bread, egg, brandy,
   b) rooster, rice bread, rice brandy,
   c) pigs, rooster, steer, he-goat.
10. At the memorial sacrifice:
    a) pig,
    b) pig.

Three distinct sacrifices may be differentiated, which are repeated again and again in some form or other:

1. The food sacrifice.
2. The egg sacrifice (egg throwing).
3. The blood sacrifice with observations of the entrails:
   a)rooster (hen)
   b)goat (pig, steer, cow).

1. The Food Sacrifice.

772 An altar is necessary primarily for offering this sacrifice. This altar is made of earth and consists of a little heap of earth which has been dug out of the ground near where the sacrifice is to be offered by a ka wait (chopping knife).

The usual sacrificial gifts, ingredients, and sacrificial utensils are:

kpu: a kind of bread made of rice meal. The rice is first washed, dried, and then pounded into meal.

rynsi: a kind of bread shaped like a bullet of pounded rice meal or cornmeal mixed with sugar.

/771/ u khaw: uncooked, shelled rice.

u skan: a gourd bottle.

u kiad: rice brandy.

ka um : water.

kwai :betel nut.

tympeu: a pepper leaf.

ela kait: a banana leaf.

ka ding sning: leaves of the Khasi oak (botanical name: Cartanopsis sp.)

u luta: a silver water container.

ka pliang rupa: a silver plate like a dish.

ka pliang kynthei: a rather large brass dish.

The sacrificing of the gifts consists in their being placed on the altar in certain forms or figures and being reddened with the blood of the animals (which will be sacrificed afterwards) or at least being sprinkled with water and rice brandy.

772 2. The Egg Sacrifice (Egg Throwing)
777

The egg sacrifice or egg throwing (shad pylleng) as it is usually called is the most

782 common of all. It is used on those occasions
787 when something must be asked about or investigated. The spirits are supposed to inform at the egg throwing where the most favorable place is for the building of the hearth (building the hut,, from which forest the needed bamboo should be fetched for the construction of the hut, where the most productive huntings areas are, which is the most favorable day for setting out on a journey, in which week the cultivation of rice can begin, at which market the best sale may be expected, where a general archery contest can take place, for what reason somebody is sick, who has caused a difficult birth by a moral crime.

Lyngdohs are rarely called in for this sacrifice. For the Khasi are so familiar with egg throwing that probably most of the older men know how to do it. The process is also not too complicated, so that even a person with little practice can dare to try egg throwing. Only in very difficult cases, especially in cases of sickness, is a lyngdoh sought out to perform the sacrifice. Or also in\cases in which the spirits do not wish to answer. (12)

12. F. Stegmiller, S.D.S., "Teufelsopfer" [Devil Sacrifice], Missionsverlag für Indien [Missionary Publishers for India], (1922: Vienna) p. 51.

The following objects are needed for the offering of the egg sacrifice.

1. A wooden platter which is rounded at the corners and has a handle. It is called ka dieng shad pylleng (the wood for egg throwing). The middle part is called ka lieng (the little saucer).

2. Red earth for making distinguishable the outer side of the egg shells.

3:Stegmiller-24 N-4,5(no date)1974 A87 Khasi A87

3. Uncooked, husked rice which is placed in several piles (or also only in one pile) on the gaming board.

4. Last of all eggs, which one by one, after being strewn with rice (fig. 3), are rubbed with red earth, fondled, and called by flattering names and then thrown on the gaming board with great force (fig. 4). In this process the egg bursts and the white and the yolk splatter around, while the shells are scattered in all directions. So that the soft part in the egg will not obstruct the egg shells too much, the sacrificer speaks the following before he throws: "May the clear part come into the outermost corner! May it climb into the corner! Down with the left! May the left strike together!"

[222] The position of the egg shells provides the answer (fig. 5) and the various positions means approximately the following:

1. When the small pieces of shell lie with their insides down, on both sides of the board but not on the little saucer, then the question of the egg throwing is not answered. If this happens, the sacrificer asks beforehand at the throwing of the next egg with a sad voice: "Have I perhaps sinned? Have I washed and bathed the loam? the white loam? the yellow loam? the sticky loam? the piled up loam? Oh let me know what lies below and what lies above! Let me know that which is lying on the back and that which is lying on the stomach! Oh hear me, thou egg of the oracle!"

2. If a lot of little eggshells are lying around the saucer, that means that there are a lot of reasons (for example for the illness) which cannot be found out. In this case the sacrificer will express himself approximately thus with the next egg: "Oh egg of the oracle! Has a sin, has a crime been committed? Was the tutelary

372
377

spirit of our village insulted? I wish to consider and to enlighten the eye of understanding as to what may well be the cause and the guilt of the sorrow and vexation! Look hither! Very tiny is my desire and soft as cotton my will! Thou shalt say! Thou shalt explain! Thou shalt help! Oh line up the bits of shell together! Make smaller the spaces in between! Cross the left over the right! Say: No! It does not come from the family, it comes from outside, that which carries the guilt for the misfortune!"

3. If a little piece of egg shell is lying with its outside facing down at the end of the little saucer in the middle of the board, that means that the goddess wishes a blood sacrifice.

4. If a little piece of egg shell is lying quite alone at the upper end of the saucer, that means that the divinity is very angry.

Thus the Khasi have determined the meaning of all possible positions of the eggshells, according to whether they are lying up or down, in the middle, or at the end, or the side of the saucer. It is the meaning which the divinity wishes to make by the position. It is obvious that sacrifices are made until a position is finally reached which presents the desired result. Thus it happens that 80, 200, and more eggs are used at a single sacrifice.

This method of throwing eggs is the most usual. But there is a still simpler way. The sacrificer wraps the egg in a leaf (ka la mat). He takes it in his left hand and strews it with grains of rice. Now he tries to press in the tip of the egg with the thumb of his right hand while uttering sayings and magic formulae. If this succeeds, it is a good sign, if not, it means the opposite. (13)

13. P. Dr. G. Becker, S.D.S. "Das

Wa
W7

Alexerfan der Ghost" /Egg Throwing Among the Ghost/, Anthropos, 1917, p. 136.

Only in cases of sickness does the sacrificer not take the usual gaming board. In its place he uses a rather large brass dish (ka pilang kyrthet), on which he lays a lattice work made of thin bamboo sticks (lgre). The broken egg runs through the lattice work into the dish and from the eggshells the sacrificer then predicts in the same way as described above, since he considers the narrow bamboo lattice work as the gaming board. (14)

14. F. Stuppeller, S.J.S., "Bei der Erkrankung eines Familienmitgliedes" /At the Illness of a Member of a Family/, Anthropos, 1921-22, p. 129.

3. The Blood Sacrifice with Observation of the Entrails.

a) The Rooster Sacrifice (ptogmia sytar).

If the desired result is not obtained by egg throwing, the sacrifice of the rooster usually follows. A rooster is dedicated to the godhead by strewing it with rice, kind, kyn, and synat. The sacrificer now dips a sharp knife in the sacrificial water that is standing ready and then cuts through the rooster's throat. He lets the blood drip on the altar and on the sacrificial gifts. Now the observation of the entrails begins, which is not always the same but is described

)»Stagmiller 27 B4,5(no date)1931 Art Ehest AM

as follows since this is the usual way. (15)

15. F. Dr. G. Becker, S.J.S., Anthropos Vol. 4 (1909), p. 899.

"The gullet of bees is formed like a fork about in the middle between the neck and the stomach. The right part of the prong is called a Kiet (god), the left a bots (man). First the rectum is looked at to see if it is perhaps empty or has any symptoms of a disease or spots. In these cases, the little fowl is unsuitable for sacrifice. But even when everything is without fault, better indications are still wanted. The forking mentioned above is looked at and the sacrificer, holding the intestine in his hand, begins the ceremony with the questions: "Nga kyill nga kyrthem da ka shat khan, lang rangbah a bots, dam a Kiet?" (I ask and seek by throwing and by oracles, does the man rise and the god bow?) While saying that he sprinkles the forking of the gullet with a little rice with the other hand, whereby because of the cumulative trembling one part or the other actually raises itself. If "the man" raises itself, that is a good sign, since the opposite forking, the "god" that bows or stays still as a sign of agreement."

The sacrificing lyngbah calls upon the godhead and ends with the following words: "Hey, the blood of the constant Hurrah! Look there, I tear out its navel, its entrails, so that the advice maybe good. This here is the ornament, this the garment, this the silk, this the bag and the net, is it not so? See here the sign of collecting, here the sign of escaping from destruction and the guilt, is it not so?" (16)

16. P.F. Stagmiller, Anthropos, 1931-32, pp. 420 ff.

'ATZ
'PT

b) The Goat Sacrifice (pem blang).

The head of the goat is cut off with one blow. Only parts of the insides of the animal (na ka kpuh) may be taken for the actual sacrifice. Either 5, 7, or 9 parts are taken. If 5 parts are taken, they are from the heart, kidneys, lungs, gall bladder, and liver. If 7 parts are taken, parts of the spleen and loin are added. If 9 parts, the pieces mentioned above and pieces from the small and large intestines. If the parts are good, then the sacrifice is also good, but if spots and specklas are present (da ka thah da ka tar da ka brain da ka brieh) the sacrifice must be repeated, as it is nullified. The rest of the ritual is like the one described for the first celebration of a lynghih.

In the case of pigs, it is only observed whether liver, lungs, spleen and gall bladder are healthy.

'PZ

c) Secret Sacrifices.

Although the sacrifices already described and their offerers are in general known, a whole set of tales is woven around the "secret sacrifice." The Khasi themselves [Ti] speak of these only with shyness and abhorrence. After all it concerns a human sacrifice which is offered the devil "u thlen." The fact is that these sacrifices were offered and are still offered. I myself knew two persons who fell as sacrifice to this revolting superstition between the years 1905-10.

In order to describe the secret sacrifices of the "human sacrifices" of the Khasi it is necessary:

1. to sketch the thlen tale,
2. to discuss the preparations for the

772 sacrifice — that is the murder itself.

3. to describe the offering of the sacrifice.

Following from this, several questions arise of their own accord, namely:

1. How do the people accept these facts?
   a) the fear among the people,
   b) the liberation from thlen,
   c) story of former thlen possessors.

2. The position of the English-Indian government to these human sacrifices?

773 774 775 1. The Thlen legend

About five miles west of Cherrapungi, (15)

15. The following accounts are taken from the article "Menschenopfer unter den Khasi" (Human Sacrifice Among the Khasi) by Dr. C. Becker, S.J.S., Schweizerische Mitteilungen (Swiss Communications) 1959, No. 3, pp. 75 ff.

near the great waterfall Nohkalikai, there is the cave Pomblai, about which an old Khasi legend is concerned. The dwelling place of an enormous snake —called a thlen — which caused great destruction among men and animals was once here. People had to pass here to go to market; half of them were regularly swallowed by the thlen, the others could continue their way peacefully. It was a rule for the thlen, only to consume half the number of people or animals that came by. After many people had lost their lives in this fashion, the Khasi one day held a large meeting, a darbar, with the inhabitants of the villages, to consider how they could

703 remedy this great misfortune. A brave man named
704 Sulbuch volunteered to cause a change. He be-
705 gan to drive goats, pigs, and cattle to the thlen
to give them to the snake to eat. After he had
done this for quite some time, the thlen became
quite tame and trusting. One day Sulbuch brought
along a piece of glowing hot iron which he held
with a tongs. He ordered the snake to open its
mouth so that he could give it a piece of meat.
The snake believed him, opened its mouth and
Sulbuch quickly thrust the glowing hot iron in
its throat so that the snake burst with horrible
writhings. In another gathering it was decided
to cut the snake into two pieces: the inhabitants
of the valley were supposed to eat one half, the
Khasi the other half. Since the former are very
numerous, it was easy for them to manage their
portion; but the Khasi could not quite master
their share and left some of it. Others say that
in the village Maupho, west of Cherrapunji, an
old woman forgot to eat up her share. In short
the Khasi did not quite get rid of their share
and so it came about that the snake could grow
again and he still lives among them up to the
present day.

2. The Preparations for the Sacrifice

However the thlen is no longer the public
engineer of previous times. He has withdrawn
into the interior of the houses; also he no
longer is in just one place, but may be found in
several. There are certain families that are
considered possessors of such a devil snake and
are known as such among the people. They are
simply called the Bongri thlen, owners of a thlen.
The thlen is cared for and secretly kept by the
owner very carefully in a safe place. It is only
supposed to be seen by members of the household

776 of the thlen owner. It is also said of the snake
773 that it can reduce itself to the size of a thin
772 thread and therefore can easily find a place in
a basket or earthern jar. Others even say that
it has the power to change itself into a cat or
a rooster or a stone and to stay with the owner
in this form.

776 The possession of the thlen is a valuable
772 thing for the owner; for where the thlen makes
682 his home, it brings good fortune and wealth to
the family. However, the snake only does this
on the condition that it is provided with human
blood. If it does not receive this, it announces
itself from time to time in the family concerned
during the night in a dream. If its desires are
still not fulfilled, it then comes bringing
sickness, misfortune, impoverishment, and the
like. There is nothing that the owner can do
other than satisfy or propitiate the thlen by
human murder. In the night he waits for his
victim alone or with another whom he has hired
for this purpose. Often the thlen worshippers
have a so-called mongbylla, i.e., a wage earner
who shares the wealth of his master for his ef-
forts without having to bother with other work.
He goes out in ambush with his master and watches
hidden from the heights of a mountain, or along
the road, or at the edge of the forest to see
whether anyone is coming along the way. By
signs or shouts he warns his master who is waiting
some distance away, and then they commit the
murder together. Both are usually disguised and
armed with a wooden club for killing their
victim. The ordinary people call these murderers
in the service of the thlen as well as the thlen
worshippers in general only mogshok ash, litera-
ly, killers. They may not use iron weapons for
committing their dark deeds, as iron proved to
be fatal for the thlen tribal father, as was told
[illegible]

776 above. The tips of the hair and the finger-
772 nails of the slain person are cut off with
772 silver shears; then the murderer pricks the wing
of the nose with a silver lancet and catches
the blood that flows out in a bamboo tube. This
is called pjar snam. Again no dish or iron or
metal may be used for catching the blood.

]. The Offering of the Sacrifice.

772 The thlen owner now asks the oracle about
776 the actual time when he should sacrifice the
blood to the thlen. When this is revealed, the
whole family gathers together in the hut of the
thlen owner (male or female) in the dark night-
time. The doors are opened and costly cloths
are spread out on the floor. The blood of the
slain person is poured into a brass dish or a
plate (ka pliang); the hair and fingernails are
placed there. One member of the family begins
to strike a small drum and cries while doing
it: "O uncle, o father, come forth, we have
done everything to make thee satisfied, and now
we have succeeded. [776] Give us thy blessing,
so that we may receive health and wealth!"
They say that the thlen is only seen by the
members of the household of the owner. No matter
what form it otherwise has while staying in the
house, at the sacrifice of human blood it appears
in its true form as a snake. It is supposed to
crawl out of its hiding place when called upon,
then stretch itself out until it has attained
its full size. It approaches the platter and
waits a while in front of it until the spirit of
the slain person appears standing on the platter.
The spirit is supposed to laugh. The snake now
begins to swallow the entire form, beginning with
the feet; the victim is supposed to laugh con-
tinuously. Obviously it is difficult to find out

772 anything more certain and exact about activities
776 that are carried on in complete seclusion. The devil snake is satisfied again after receiving the sacrifice, and now pours forth a plenitude of good luck and wealth over the house.

Substitute sacrifice: Naturally it is not always easy to find a human sacrifice. In this case the thlen owner tries to help himself in another way. He sets out to catch at least some of the hair or the clothing of somebody or other and to sacrifice this to the devil snake. This means an evil fate for those, to whom the hair or the bit of cloth belongs, for the belief exists among the Khasi that the person concerned will become sick soon thereafter, will languish and die or at the very least misfortune and poverty will come to his. They are therefore very much on their guard that nothing of that sort will come into the hands of a thlen adherent. For example, if someone loses a hair, he is extremely careful to throw it into the fire at once and thus destroy it before a thlen owner can appropriate it. If the thlen owner cannot get hold of anything at all, he at least satisfies himself by throwing stones at a victim or knocking on strange doors during the night. He then calls upon the thlen to tell him that he has done his best to get booty for him but that unfortunately he was unsuccessful. The devil snake is supposed to be satisfied with this for a time until he again makes his desire for human blood known. Many heathen, on the other hand, try to get well when they are sick by putting themselves under the protection of the thlen. They give the thlen owner some of their hair, pieces of clothing, and a corresponding gift of money or food as a sacrifice for the thlen--ai thlen--in order to acquire their health again.

How Do the People Accept These Facts?

a) The Fear among the People

172 776 A great fear of these murderers who are in the service of the thlen permeates the whole life of the Khasi; this feeling is still especially strong in the kingdoms of Cherra, Mylliem, and Nongkrem. Naturally they guard themselves well from people who are supposed to be in possession of a devil snake and they often do not even dare to speak their names out loud for fear that misfortune could befall them. Many of them are certainly known by the people; others are just guessed at. We tried very hard to get a photograph of such people who are considered to be thlen owners; but we met only with complete refusal from them. Their bad consciences probably made them fearful. I was able to photograph the house of a woman thlen worshipper in Maurei, several [22] miles away from Cherra. In contrast to most of the Khasi huts, indications of wealth were evident on the outside, since the [23] hut was covered with tin. In spite of all my pleas the woman could not be prevailed upon to have herself photographed. Such an idea frightened her so that she cried out loud: "O, we are investigated so much!"

172 774 At night a Khasi does not really trust himself alone outside of his hut. If he is overtaken by darkness on the way home, he may be seen hurrying towards his home, singing or calling in a loud voice from time to time to give himself courage. A single man, even if he does not have to go far from his hut to work is not likely to go without his big knife — ka wait — under his arm to protect himself against all possible attacks. The people usually go together (in groups)

on the way to or from more distant markets. When they go to the even bigger markets which are several days' journey away, they only go to the markets where they have good friends along the way, where they can spend the night. Even the missionary has to endure this general feeling of fear. For example, if he has to send something from one place to another which one man could easily carry; or if he is on a journey then he might like to send on his small amount of luggage, his laundry, and food. Even if the place is only a day distant, it is not possible for him to hire one man for such an errand. There is nothing for him to do other than to hire two porters and naturally also to pay them, or to wait until a group of market people are going along the same way, to whom a single man can attach himself. If you criticize the people for the foolishness of their behavior or the inconvenience it causes, their simple answer is: "I am afraid of the nongshem ash" (killers).

On the other hand the people defend themselves against such criminals. According to ancient Khasi justice, the killing of such a nongshem ash is not considered murder and is not punished by death. Whoever has killed a nongshem ash does not need to do more than he who kills a rubber, namely to give 5 rupees (7 gold marks) and a pig to the S'iem (king). In the kingdom of Nongkrem the official lyngdoh has the right to confiscate all the property of those persons who are convicted for harboring an evil spirit — jinghih — in their house. The lyngdoh can keep the objects of value for themselves, while the house, including contents, is burned down. At the same time the people take justice into their own hands. In the year 1909 one of these murderers in the service of the devil snake was caught in the act in Nongkren. Without more ado his neck was cut off and he was left to rot with the snake of Christ.

Integrilar-30 m-4,3(no date)1921 Ad/ Khasi Ad/

776 off and he was let go with the mark of Cain.

b) Liberation from the Thlen.

776 It also happens that people who revered a
782 thlen and sacrificed to it wish to free themselves
783 from its power and sever all connections with it. This is called pyndud noh ia u thlen, which means throwing away, exposing the thlen. However this is connected with a great sacrifice for the family concerned. [228] To get free of the thlen, there is no other way than to give up all their possessions. House and contents must be burned down; money and objects of value of all kinds thrown away and even the household animals must be given up. This takes place with the observance of a certain ceremony which is performed by the lyngdoh of a village with the participation of men designated by the S'iem (Khasi king). The sacrificer (lyngdoh) first asks the oracle about the place, mountains, etc., where the thlen goods should be taken. When that is found out, the ones who were the thlen owners go with the lyngdoh and the men named, as well as with a crowd of spectators to the place that has been determined upon. All the movable goods, including clothes, that belong to the ones who wish to be free, are brought here. The lyngdoh speaks an oath and then commands the thlen owners, who have been deprived of all their property down to their naked skins, to return to the village directly without looking around. Then the rest of the spectators leave. This occurs during the night. It is the superstition of the people that the devil snake is inwardly joined with property and follows it. Whoever should appropriate it therefore would also be in the power of the devil snake. The snake would climb on him as the expression says (kin u thlen ha ki).
[Gurdon, op. cit., p. 2147 ... Hajo]

771 Therefore nobody dares to appropriate the ob-
772 jects that have been thrown away or even to touch
773 them. Only into the house of the S'iem and into the whole royal family can no entrance be found by the thlen, and therefore some valuable things may be given to the Khasi king. This may be connected with the fact that usually on the next morning after the above ceremony nothing more is to be found of the objects that were given away. Therefore it rarely happened in former times that anyone kept a found object from fear that it might be thlen property and he might bring the thlen devil into his house with it. But if they did take an object they found, a piece of money or such, home with them, the oracle was first asked by egg throwing whether it contained any evil, and only when this was denied and the real owner could not be found did they keep a part of it; the rest had to be used for sacrificial purposes.

The immovable property is treated the same way as the movable property. Fields which the family formerly possessed lie fallow; nobody dares to take them over or to plant anything on them. [771] But the whole village hastens to help the former thlen owners who have lost all their property. They are given clothes and rice and helped in building a hut so that they can begin an honest life again.

a) Story of a Former Thlen Worshipper.

774
775 How is all this known about the thlen, A many ask, if the owners try to hide their secret? An indirect answer is already given by the whole previous presentation. Then it also happens, for example, that men marry into the house of a woman who is a thlen owner. Certainly this is not always known beforehand, although real thlen

[Cf. infra; see ref. no. pp. 28 ff. --Ed.]

776 owners can only conceal this for any length of
573 time with difficulty. Now when the woman gathers the members of her household and the unsuspecting man together for the thlen sacrifice, this man dashes out from fright and tells the horrible things that he has seen. He never returns to his wife by whom he was deceived by the concealment of such an important condition and he seeks another wife.

776 [229] The accounts of previous thlen owners
573 finally give further information. I will only
773 introduce one case as it was told by one of these. I am indebted for this to the kindness of the missionary in Cherrapunji, P. Cordinian Bonhein S.V.D. who has been there many years and to whom a former thlen owner related his experiences. This he translated into our language as follows:

"Formerly we were very poor people. Then one day we found a wonderfully beautiful smooth stone on the mountain when we were chopping wood, and we brought it home and preserved it. From this time on we had good luck everywhere; every undertaking succeeded, we never had losses and our fortune increased from day to day and even at gambling we never lost. Gradually we became rich people. Thus matters continued for four or five years. Then I had a strange dream. A woman appeared to me who said to me: "Look, I have given you such great wealth, now I also demand a sacrifice of you. You should sacrifice a long thah khlih to me, i.e., a goat with a spotted head." The next morning I told my dream to the members of the household, and they thought that she was the goddess who was demanding the sacrifice owing to her. So we sacrificed a goat. But soon after I had a dream again and the same voice as before spoke to me again: "I have demanded ka long thah khlih of you and you only gave me a goat. The goat, however, that I demand,

776 is human blood ka snam brin!" The next morning
682 I told my dream again and all my relatives were
783 frightened, for they knew now that it was the thlen
devil and not the goddess who made them rich. But
now we had to decide what we would do: give up
all our wealth and possession or fulfill the will
of the thlen. We decided to do the latter. But
we let week after week go by until the thlen be-
gan to threaten that he would consume our whole
house. Now we went, my brother and I out stalk-
ing to see if we could murder someone. We saw
a woman from our village go alone to the forest
to gather wood. We crept after her and when we
thought the moment was right we fell upon her
with blows and beat her till she was dead. Im-
mediately thereafter, however, we fled deeper in-
to the forest with the intention of taking the
blood from the slain woman somewhat later when we
could do it undisturbed. But after a while the
woman came to her senses and luckily escaped back
to the village by a different way. When she ar-
rived home she told what had happened and named
the two of us brothers as her murderers. Her
relatives went at once to the chief and accused
us. When we now came out of our hiding place to
get the blood from the woman who we supposed was
dead, we found to our astonishment that she had
disappeared. We hurried along the road to pursue
her but we could not find her anywhere. When we
came home we were told at once that a woman had
luckily escaped from murderers, but that it was
still questionable whether she would live. We,
however, wished secretly that she would die. But
the chieftain had commanded that the woman be
cared for carefully. When she had so far re-
-covered that she could come to a judicial meet-
ing, the chieftain ordered all the inhabitants
of the village to the gathering. Our hands and
feet trembled, and stuttering we confessed our

996 guilt. The chieftain then said to us: "You
IPL will pay the woman the entire cost of her care
783 and agree that I have your thlen driven out and that you give up your property; if you will do that, nothing more will be done to you. A hut where you can live temporarily, a cloth (IX) so that you can at least cover your honor, and rice which you need will be given you by the village until you can again save something. But if you do not wish to do that then a severe punishment will be meted out to you without mercy or pity." We submitted to the judgment of the chieftain. We then had all our possessions carried away and our houses burned down to the ground. And when we had moved into the hut which was built for us by the inhabitants of the village at the command of the chieftain, lo, this wonderful stone was there. We reported this to the chieftain and he took counsel with his elders as to what should now be done. They came to the conclusion that at the time of the first exorcism the Iyngdoh had not given us the command to go home directly without looking around. We had looked around and therefore the thlen had come to us again. Therefore the chieftain now commanded that the expulsion and exorcism and destruction should be undertaken again. This time we went straight home without looking around and so we were then free of the thlen. We have never seen the thlen itself." This much the report of the thlen worshipper.

The Position of the English-Indian Government in Respect to these Human Sacrifices.

IPL 784

But is it possible, many will ask, that such crimes can occur in a British province of the Indian Empire? Why are such things not called to the attention of the English government and why

does the government not interfere? These things are known by the English government and it did and does its best, although the Khasi Mountains still possess their independence in part. Thorough mention of this superstitious immoral custom was made in the administrative report of the government concerning the Khasi Mountains and the Jaintia Mountains of the year 1881-82. Attached to it was the decision of the head of the government of Assam at that time (Chief Commissioner), dated August 5, 1882, in which among other things he stated: "Among the cases, which received judicial treatment in this year, were three murders of quite particular barbarous: two occurred to harmless old women, one to a boy. In none of these cases was a suitable reason given, and it is believed of at least two of them that they are connected with the remarkable superstition of the Ulam." After a presentation of this superstitious custom the report continues: "Many families in these mountains are known as Ulam supporters or are suspected of being so and are therefore feared and avoided. Whenever a dead body is found with the marks described above (blood drawn off through the nostrils, hair, and fingernails cut off) and especially when death is not caused by a wound but by strangulation, it may be assumed with almost absolute certainty that the purpose of the murder was the propitiation of the Ulam. This was observed in one of the three cases indicated; in the two others these signs could not be found; however, since there was no cause at all for a murder, it was more than probable that these two are also to be ascribed to the horrible superstition. In each of these three cases one or two persons were convicted although they might not have been the only guilty

ones; one man was hanged and the rest were sentenced to exile either of many years or for life."

There are also cases of murder in the following years in the government reports which are ascribed to the Uhlen superstition. Particularly noticeable and indicative was a case which occurred in the year 1890. The murder was committed only about ten miles from Shillong, the seat of the English government of Assam, about several hundred meters to one side of the government road, which leads from there to Cherrapunji. No trace of the murderers could be discovered, since the inhabitants of the nearby village did not care to appear as witnesses against them because of their superstitious feat that this would invite the revenge and anger of the Uhlen. They much preferred putting up with the government's sending to the village as a punishment a division of military policemen who had to be harbored and maintained by the inhabitants for a whole year at a great sacrifice. Those are the great difficulties with which the government has to struggle in spite of their best will: with the conditions that obtain there it is not at all difficult to have a person vanish without any trace; but if such a case of murder does come to daylight, it is still a long way to the punishment of the guilty ones because of the lack of witnesses or their refusal to testify. An improvement here can only come from the inside by a change in their religious views. At any rate it is a comfort for Europeans to know that their blood as well as the blood of any foreigner who is not a Khasi is not at all acceptable to the Uhlen and would not suffice to propitiate him.

Opfer und Opferbräuche der Khasi. [p. 211]

Von P. F. Stegmüller, S.D.S., röm. apostolischer Missionär von Assam (Indien).

(Mit 9 Abbildungen im Text.)

1. Die Opferdarbringer:
   a) lyngdoh,
   b) feierliche Einführung der lyngdoh.
2. Die Opfer:
   a) Staatsopfer,
   b) private Opfer,
   c) geheime Opfer.

1. Die Opferdarbringer.

a) Lyngdoh.

Die Religion der Khasi ist eine aus Furcht vor Unglück und Schaden entspringende, durch Opfer sich betätigende Verehrung der (bösen) Geister. Diese meine Definition deckt sich im wesentlichen mit den Definitionen von Bivar[1]), welcher sagt: „Die Khasireligion mag kurz definiert werden als eine Form, Krankheiten zu kurieren und Unglück abzuwehren durch Herausfinden des Namens des Teufels, welcher der Urheber des Übels ist, und durch die Opfer, die nötig sind, ihn zu versöhnen", und Gordon[2]) nennt „die Khasireligion einen Geisterkult, d. h. eigentlich mehr eine Versöhnung der Geister, sowohl guter wie böser, durch Opfer, welche gelegentlich dargebracht werden, besonders in Zeiten der Trübsal".

Unzweifelhaft gehören also Opfer zur Ausübung des Khasireligion. Wer bringt nun diese Opfer dar? Um diese Frage zu beantworten, muß man die verschiedenen bei den Khasi gebräuchlichen Opfer unterscheiden. Wir finden dort

a) öffentliche Opfer,
b) private Opfer,
c) geheime Opfer.

Die öffentlichen Opfer werden von eigens dazu bestimmten Personen männlichen Geschlechtes vollzogen (lyngdoh).

Die privaten Opfer können sowohl von den gewöhnlichen Männern des Volkes als auch von den eigens bestimmten Opferern (lyngdoh) vorgenommen werden.

Die geheimen Opfer werden von irgendeiner Person männlichen oder weiblichen Geschlechtes dargebracht.

Die Khasi haben keine Priester im eigentlichen Sinne des Wortes. Es gibt auch keine Kaste oder kein Geschlecht, aus dem die Opferer hervorgehen würden. Ebenso gibt es keine besondere Schule oder Ausbildung für angehende Opferer. Die Opferer oder lyngdoh haben auch keinerlei Abzeichen.[3]) Lyngdoh sein bedeutet

[1]) Bivar, Administrative Report of the Khasi and Jaintia Hills District of 1976.
[2]) Gordon, „The Khasis", London 1906, S. 105.
[3]) Vgl. P. Dr. C. Becker, „Indischen Kastenwesen und christl. Religion", Aachen, S. 6.

nicht eines eigenen Stand. Die Opferer sind Leute aus dem Volke, die irgendeinen Beruf inne haben, dem sie nachgehen. Nur gelegentlich treten solche Männer als Opferer auf. Selbst die obersten Opferer, die einer gewissen Gegend vorstehen und als lyngdoh rangbah (Chorepiscopi) bekannt sind, sind nicht Opferer von Beruf. So ist z. B. der oberste Opferer von Lamin im Bezirke der War von Beruf Kuli und trägt Lasten von einem Magazin zum andern (Abb. 1). All diese Opferer haben keinerlei angemessene Stellung im Volke. Es ist mehr die „Funktion" vor Ihnen, die sie angenehm macht. Denn die Khasi glauben heut daran, daß die Lyngdoh oder auch nur die gewöhnlichen Opferer Herr über die (bösen) Geister seien. Daher haben sie sehr darauf, sich mit den Opferern nicht zu überwerfen, damit jene nicht in ihrem Zorne die Geister beschwören und den Schuldigen auf den Hals hetzen und ihnen so zum Verderben werden.

Die Opferer sind auch nicht eigentliche Opferdarbringer im strengen Sinne des Wortes, sondern nur stellvertretende Personen beim Opfern. Denn die Khasi leben im Mutterrecht oder in der Mutterverwandtschaft. Mit scharfer Logik und Gründlichkeit haben sie wohl das schlimmste Muster des Mutterrechts ausgebildet und als soziale Organisation bis heute noch durchgeführt. Bei ihnen ist die Mutter das Haupt der Familie, das einzige Band, das der Familie die Einheit gibt, sie ist die einzige Besitzerin und einzige Inhaberin alles Besitzes und durch sie allein ist Erbschaft möglich. Der Vater hat kein Recht auf die Verwandtschaft der Kinder. Diese gehören nur der mütterlichen Linie. Selbst seine Asche wird einst nicht neben der seiner Gattin oder Kinder beigesetzt, sondern sie wird ruhen im Grabe seiner Mutter. Was auch immer der Vater erarbeitet oder erspart, gehört nicht seinen Kindern, sondern geht zurück an die mütterliche Linie. Bei solchen Anschauungen kann es nicht wundernehmen, wenn es auch die Mutter ist, der alle geistige Gewalt zukommt. Und sie ist in Wirklichkeit auch im Vollbesitze der höchsten geistigen Gewalt. Ihr steht es zu, die in der Familie oder Sippe gebräuchlichen Sitten zu bewahren; sie hat dafür zu sorgen, daß die von ihnen her heimischen Gewohnheiten bei den häuslichen Opfern treu bewahrt werden; ihre Pflicht ist es, die angestammten Zeremonien bei den Opfern rein zu erhalten und diese den Nachkommen gewissenhaft zu überliefern. Sie hat daher für die nötigen Opfermaterialien zu sorgen, sie hat alles vorzubereiten, muß allein lesen vor der Darbringung mancher Opfer, sie hat den Auftrag zu einem Opfer zu geben und sie hätte es auch selbst zu vollziehen.

Doch dies geschieht nicht. In Wirklichkeit bringt keine Frau selbst ein Opfer dar.[1]) Sie läßt sich vertreten durch eine männliche Person. Diese muß aber mütterlicherseits mit ihr verwandt sein. Gewöhnlich vertritt sie ein mütterlicher Onkel (kni). Solch eine verwandtschaftliche Vertretung ist stets nötig, sei es bei öffentlichen oder privaten Opfern. Aber nicht bloß der Verwandtschaftsgrad muß auf der weiblichen Linie liegen, es ist auch noch etwas anderes, das bei jedem Opfer zu beachten ist. Wenn auch die Pflichten der Opferer und deren Opfermethoden im allgemeinen sehr verschieden sind und sich jeweils nach den Sitten und angenommenen Gebräuchen in der Familie oder Sippe oder innerhalb eines Staates oder einer Gemeinde zu richten haben, so sind sie doch in einem Punkte alle gleich: nämlich sämtliche Opferer müssen während der Ausübung ihrer diesbezüglichen Dienste von einer Frau assistiert werden. Sie wird einfachhin ka lyngdoh (die Priesterin) genannt.

[1]) Mit Ausnahme der geheimen Opfer, davon später.

[illegible] Lynghöhle und er ist nur für Sadhuvrasen [illegible] Opfer. Gordon[1]) meint, dieser bei Lynghöhl sei einer Zeitlei die Überlieferung von jener Zeit des Matriarchats, in der eine Prinzessin auch die Opfer selbst noch vollzogen hat.

d) Öffentliche und heimliche Einführung als Lynghöhl.

Wie wird man Lynghöhl? Auch diese Frage kann nicht so einfach beantwortet werden. Es ist dies in den verschiedenen Gegenden sehr verschieden. Im allgemeinen darf wohl angenommen werden, daß die Lynghöhl von der Praxis der heimlichen (privaten) Opfer herrührt. Da es ja die Pflicht der Frau ist, dem die Opferzeremonien zu machen, wird sie im heimlichen Kreise einer dieser Söhne in dem der Familie eigenen Ritus der Darbringung der Opfer einführen, damit dieser gelegentlich oder im Falle der Not (Krankheit, Todesfall, Unglück) selbst und nach der vorgeschriebenen Weise die Opfer darbringe. Wird aber gewöhnlich der weibliche Chibel zu dem Opfern herangezogen wird, so kommt der das Opfern erlernte Sohn nicht leicht in der eigenen Familie zur Anwendung seiner Kunst dazu, sondern bei seinen mütterlichen Verwandten. Umgekehrt werden von dort ephebenhafte Personen ins eigene Haus gerufen. Somit wird der die Opfer darbringende Mann bald in der Gegend bekannt werden. Hat er nun Glück bei seinen Verrichtungen, und haben Erfolg seine Bitten, so wird sich bald der Ruf verbreiten, daß er ein gewaltiger Opferer ist, dem die Götter gehorchen und der so vermögend, die ausmerzenden, zu vertreiben oder zu vernichten, je nachdem der Fall es erheischt. So kommt es eine ganz von selbst, daß er ein Mann immer wieder zum Opfern gerufen wird, besonders in heiklen Fällen. Er wird also von selbst zum Lynghöhl und das Volk erkennt ihn auf Grund seiner Erfolge an. Wie einmal ein Lynghöhl gilt, der bleibt es für sein Leben lang. Ähnlich wie bei uns die gewöhnlichen Leute einen Zahnarzt als „Herr Doktor" und einen Gymnasialleiter als „Herr Professor" anreden, so nennen die Khasi einen als guten Opferer bekannten Mann einen Herrn „Lynghöhl", ohne daß sich dieser weiteren über das Recht, den Titel zu führen, durch ein amtliches Vorgehen auszuweisen hätte. Dieser Weg, zum Lynghöhl zu kommen, dürfte in den weitaus meisten Fällen die Praxis sein.

Doch nicht überall gilt er so. Aus Lawin wird berichtet[2]), daß dort eine Stammesmutter der Lynghöhl sei. Ähnlich schreibt Gordon[3]) von einem Lynghöhlstamme, dem die Lynghöhl entnommen würden. Es ist nur eigenartig dieser Fall vorgekommen und ich habe niemals etwas von einem Lynghöhlstamme oder einer Lynghöhlsippe (jaid) gehört. Gewiß kann der Fall eintreten, daß zufällig mehrere Söhne einer und derselben Mutter das Opfern erlernen, daß sie es als vorzüglich erkennen und daß alle Glück haben und so diese Brüder als Lynghöhl gerufen werden.

Damit ist aber die betreffende Mutter auch lange keine Lynghöhlstammesmutter geworden und die betreffende Sippe hat auch kein Anrecht auf den Titel: Lynghöhljaid (Lynghöhlstamm). Es vererbt sich eben sehr selten die richtige Kunst des oft sehr verwegenen und mühsamen Opferns leichter durch die Kinder als außerhalb einer Familie, was auch vorkommt. Diesen Einzelerscheinungen würde aber einmal eine Bevorzugung zu einer Gemeinschaft oder Stammesverwandtschaft der Lynghöhl geben.

---

[1]) Gordon, „The Khasis", l. c.
[2]) Sahnerlaubnis Mitteilungen, 1908, Nr. 6, S. 64.
[3]) Gordon, a. a. O.

In [illegible] Gesangsliedern, in denen die Lyngbiê nach durch öffentliche Versammlung eingeladen wurden, dient die Lyngbiê bei den großen Gemeinde- oder Gesangsfesten. Verwendung finden einmal, gleich dem in folgender oder ähnlicher Weise von sich:

Hat man sich genügend auf einen bestimmten Mann, den man eine Lyngbiê für den Bezirk, für die Gemeinde oder das Dorf erwählen will, so wird dieser eingeladen, dann wird ein öffentliches Opfer zu bringen. Vor allem hat er die Genugtuung zu nehmen. Dann muß er sich mit all seinen Verwandten oder Nähern (die ja meist seine Verwandten sind) auf die Spitze eines nahen Berges begeben. Dies geschieht unter großen Feierlichkeiten. Der neue Lyngbiê ist festlich angetan. Frischgewaschene Kleider umhüllen seinen Leib. Sein Turban (Ungarang) ist mit großen Kalmusblättern geschmückt. Um den Leib trägt er einen Gürtel, an dem unten die beim Kleiderlichen (ka ringkiap) hängt. In der einen Hand führt er ein langes Schwert (ka wattang), in der anderen einen Tanzwedel aus Zugschwanz (a ryndiak). Durch ihn sind auch die männlichen Begleiter gekennzeichnet, die jedoch statt der weißen Kalmusblätter einen Bambus tragen (kawa) auf dem Turban haben. Der ganze Zug vom Hause des neuen Lyngbiê bis auf die Spitze des Berges muß ähnlich tanzend zurückgelegt werden, dabei auch die weiblichen Teilnehmer die männlichen begleiten. Aber auch die weiblichen Teilnehmer am Zuge, die nicht zu jenem Bereiche, lassen es sich nicht nehmen, so reiche Schmuck, wenn auch nicht in Tanzkostüm zu erscheinen. Auch sie sind in Trachtgewändern Kleider gekleidet. Die erforderlichen Kopfhaut und ein bemerkbarer Mantel oder Umhang lassen sie schon von weitem als Festteilnehmer erscheinen. Dann tragen die meisten den gewöhnlichen Kleidbestandteil: Ketten von Gold und Silber, von mannigfaltigen Kugeln, die mit edlen Kostbarkeiten ausgeschmückt. Die Frauen und Mädchen nehmen auch diese Gelegenheiten mit. Sie tragen für die übrigen Gast (Bekannt) und Bekannten, denen ein Ring haben an die Hand nennen. Einige Kette, die den Zug begleiten, tragen mit sich Bambus geflochtenen Strohgeschirr (a ma) auf dem Rücken in wunderbar geflochtenen Körben (ka ulang) die übrigen Opfertiere, während andere Kette die lebendigen Opfertiere mit sich führen: eine Ziege und einen Hahn.

Ist alles bereit, so beginnt eine kurze Ansprache, gewöhnlich nur von einem Priesterpriester (ka Tangkuan) und einem oder zwei Trommlern (Gong) begleitend, so spielen und tanzend bewegt sich der Zug langsamer. Langsam geht's vorwärts, die und so wird gewartet und geht die Kokosnußgleiste (ka jugiik dunia) von Mund zu Mund. Nachdem auch ein Bisam Geschwulst (jaat) gemessen worden, geht es tanzend weiter, bis die Spitze des Berges erreicht ist. Man muß die Gleiste kennen und wird sie nur bewundern wegen ihrer Reife und Gewichtigkeit, mit der alles vor sich geht. Die gibt es keine Eile und keine Hetze, kein Hin und Her und keine Vergessen. Sie lassen sich eben zu allem Zeit und so gelingt, was sie angehen.

Hingelend, trippelnd und tänzelnd kommt man eben an. Drei Gleistücken dort, nachdem, so breiten die Angekommenen Blätter von dreierlei und streuen sie auf den Boden. Anderseits werden diese Gleistücken-Blätter neben von Dienst abgenommen, um sie eben auf der Spitze des Berges auszustreuen zu können. Dadurch wird der Boden geheiligt und den Geistern geweiht. Die Männer legen nun die Schwerter und Tanzwedel beiseite. Man beginnt, das erste heutige Opfer des neuen Lyngbiê vorzubereiten. Mit einem Hackmesser (ka wat) wird langsam ein Loch in den Boden gegraben und der ausgegrabene Humus (Erde oder Lehm) wird auf die Mitte des Platzes gebracht, aufeinander gehäuft und dient so als Altar.

[illegible]

[illegible]

[illegible] Ziege [illegible] Ziege [illegible] Ziege [illegible] Tier [illegible] [illegible]

[illegible] Lyngbyit [illegible] [illegible] [illegible]

[illegible] Dämonen und [illegible] Dämonen dienen. Die Zeremonien verschlingen die Kräfte und Gebäuden der Klausurhöhle und bewirkt nach der neuen Lyngdjok [illegible] „Das Opfer ist gut!" Die Zeremonien verschlingen den Auszug und Bläschen [illegible] Zeichen der Zusammenzug in die Höhle. Die Zeige wird dem „Gott, der das Opferen bekämpfen hat" in [illegible] Ordnung dargebracht.

Abb. 4. Das Klausurzelt [illegible]

Nun beginnt ein zweites Opfer [illegible] Dämon dem Gottes [illegible] bei Lyngdjok. Man schlachtet einen Hahn und legt ihn zerteilt auf den Altar. Während der neue Lyngdjok das Blut des Hahnes und die Opfergaben des Altars [illegible] hält, ruft er aus: „Hier das Blut des Hahnes! Nimm!"

Das Opfer ist vollendet. Nun verwenden die Opferflamm in die mitgebrachten Kiste und [illegible] die Opfergaben bestatte.

Der neue Lyngdjok gibt nun die Zeichen zum Freudentanz. Die Mönche, die in [illegible] Tanzbekleidung [illegible] schreiten sich und gruppieren sich den mitgebrachten Schwertern und Tanzwerkzeugen. So [illegible] sie sich nacheinander auf. Die Musik setzt ein und langsam beginnen die Tänzer, sich vom Platz zu bewegen. Hüpfend und [illegible] [illegible] sich auf den anderen [illegible], [illegible] [illegible] [illegible] bestimmte Figuren. Bald ist es ein Kreis, bald ein Achter, bald eine Spirale, die sich wieder langsam auflöst. Jetzt stehen die Tänzer sich [illegible] gegenüber. Mit lautem Geschrei springen [illegible] zwei aufeinander zu und schlagen [illegible] Schwerter aneinander, dabei Freudenzeichen [illegible], die von den Zuschauern [illegible] werden.

Abb. 5. Das [illegible] Opfer

Nun stellt man sich wieder auf [illegible] Reihe und der Tanz beginnt von vorn. Es gilt [illegible] [illegible] über den Platz, [illegible] [illegible] [illegible] mit dem Zusammenschlagen der Schwerter beendigend. Der neue Lyngdjok, der nun zum ersten feierlichen Opfer dargebracht hat, das mit dem Schwerttanz beschlossen wurde, bezeugt jetzt dem Gott, der das Opfern bekämpfen hat, seine Ehrerbietung. Zu diesem Zwecke stellen sich alle Mönche in Ordnung auf und mit dem Lyngdjok an der Spitze verbeugen sie sich dreimal vor dem (unsichtbaren) Gott. Während alle stehen bleiben, macht der Lyngdjok einige Schritte rückwärts und wiederholt stehend die Verbeugungen. Damit ist die Feier zu Ende.

Man stellt sich wieder auf, wie man gekommen. Tanzend begleitet man sich den Berg hinunter bis an die Hütte des Lyngdjok. Dort wird beendigt ein neues Opfer

[illegible]

[illegible]

[illegible]

a) [illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible] Frau gebiert [illegible] Kinder, damit sie gesund bleiben, gesund seien und nicht verschlecht, damit die Kinge [illegible] kommen, damit Ihre und die Kinder Ihre machen und zunehmen und die Kinder des Reiches sich ausbreiten, wie sie vermehren deinen Namen und deine Ehre.[1])

In einem anderen Gebete wird gesagt: „O Herr, der du Himmel und Erde erschaffen hast, du hast den Kinge gemacht, daß wir Kinder unsere Geschlecht seien, du hast die Sonne gegeben und den Mond, um das Jahr zu berechnen, damit wir [illegible] ihr jedes Frau [illegible] Gebete [illegible], auf daß der Kinge [illegible] kommen, die Kinder des Tiger zunehmen und gedeihen, die Kinder des Elefanten, die Kinder des Bär, die Kinder des Wildes, die Opfergaben [illegible] mit dem Angesicht deinen Kinge."[1])

Bei diesen Steuer- oder Gebetsmonographien treten in einem Lied die offiziellen Lyrgedichte auf, die [illegible] dem regierenden Kinge oder Kinge [illegible] im Vordrag mit anderen Lyrgedichten aus den Gebieten der Opfer [illegible]. Diese jährlichen Staatsopfer werden als großer Feierlichkeit eingeleitet und durchgeführt. Sie finden vor dem Palast der [illegible] und [illegible] Kinge statt. [illegible]

Zu den jährlichen Opfergaben, die auf einem [illegible] Altar gruppiert werden und aus einem Bananenblatt, Betelnußkörben, Pfefferkörben, Reisbrüchen, Eier und [illegible], [illegible] Reisbrüchen in einer Kokosschale und Eiweißkörben bestehen, kommen [illegible] Hühner und Ziegen, am Schluß noch ein Schwein. Ziegen werden in großen Mengen geschlachtet, so daß der Hauptbetrag dieser Staatsopfer im Vieh vor den zum Kinge (zum Ziegenkörper) gemacht wird.

Neben dem Schlachten der Opfertiere spielt der Tanz eine Hauptrolle. Bei diesen großen Opfern werden als bei den Kinge jährlichen Tänze aufgeführt: an der Tanz

[1]) P. Dr. C. Bruhn, S. D. S., „Die Feuergewinnung in den Kinschingen", Anthropos VIII, Sei. [illegible]

[1]) P. Dr. Bruhn, S. D. S., l. c. S. 992 (Anthropos)

[illegible]

Zum Sexualopfer selbst vereinigen sich alle Bewohner des betreffenden Bezirkes. Mit der dem Kinde eigentümlichen Geschicklichkeit schauen sie einstweilen dem Vorgang der einzelnen Opfer und den Tänzen zu. Am Abend des Hauptbetrages wird zur Opfermagd gebeten, an dem alle Opferenden, Tänzer und Zuschauer teilnehmen dürfen.

[illegible] Opfer.

Außer den jährlichen großen Sexualopfern werden von den Kinni auch noch andere Opfer dargebracht. Es sind dies die gewöhnlichen Opfer, die den Bedürfnissen des täglichen Lebens entspringen. Als solche können angeführt werden:

1. Opfer vom Beginn der Ernte.
2. Opfer bei der Hausweihung.
3. Opfer vor jedem wichtigen Geschäfte, z. B. vor der Jagd, vor dem Kampf, vor dem Gerichte, vor dem Pflanzen, vor dem Hämmern, vor [illegible] Ehe usw.
4. Dankopfer nach erhaltener Gesundheit.
5. Opfer in Krankheitsfällen.
6. Opfer bei einem Todesfall.
7. Einen dritte Opfer vom Aufbringenden zu bedürftigenden Gutes bei [illegible] sich hier um die Aufbrechen begangenen Fehler heute [illegible]
8. Opfer bei der Leichenverbrennung.
9. Opfer bei der Reinigung der Gebeine:
   a) beim man ohne [illegible] Reinigung),
   b) beim man [illegible] Reinigung),
   c) beim man bei [illegible] Reinigung).
10. Opfer zum Gedächtnis der Verstorbenen:
    a) das Monatsopfer,
    b) das Jahresopfer.

Diese verschiedenen Opfer können sowohl von den offiziellen Lyngdoh als auch von anderen Lyngdoh oder auch von gewöhnlichen Männern aus dem Volke dargebracht werden, vorausgesetzt, daß sie den Ritus, der in der betreffenden Familie herrscht, genau kennen und sich danach richten.

Zu keinem Opfer wird eine bestimmte [illegible] Verlesung verlangt. Nur [illegible] Ausnahme gibt es beim [illegible] Opfer für die dritte und letzte Bestattung der Gebeine [illegible]. Dieses darf nur durch durchgeführt werden, wenn alle Verwandten der betreffenden Sippe [illegible] in Frieden leben. Dies muß von dem das Opfer vollziehenden Lyngdoh eigens festgestellt werden. Würde sich irgendeine Feindschaft oder ein Zwist bei der Untersuchung herausstellen, so müßte die Bestattung mit dem durch verhandelnden Opfer so lange hinausgeschoben werden, bis die Bedingung des allgemeinen Familienfriedens erfüllt ist.

Was den Ort der Opfer betrifft, so verteilen sich diese auf folgende Weise:

1. In der Hütte wird geopfert:
   bei der Namensgebung,
   nach erfolgter Genesung.
2. Im Hofe vor der Hütte wird geopfert:
   beim Befragen der Geister,
   vor einem wichtigen Geschäfte,
   in Krankheitsfällen,
   [illegible],
   bei einem Todesfall.
3. Außerhalb des Anwesens wird geopfert:
   bei der Leichenverbrennung am Ort derselben,
   bei den drei verschiedenen Bestattungen der Gebeine am Ort derselben,
   beim Gedächtnisopfer am Ort, wo die Gebeine ruhen.

Die Opfergaben für die einzelnen Opfer sind folgende:

1. Beim Befragen der Geister: Eier, Hühner.
2. Bei der Namensgebung: Reisbranntwein, Reismehl, Eier, Gewürze, Hühner.
3. Wichtiges Geschäft: Eier, Hühner.
4. Nach erlangter Gesundheit: kyo und ryoni, Kürbis und Kürbisflasche, Reisbranntwein.
5. In Krankheitsfällen: Eier, Hühner, Ziegen, Schweine, Rüben.
6. Bei einem Todesfall: Ei (Bauchei), Huhn, Reis, Schweis, Stier.
7. [illegible]: Eier, Kürbis und Kürbisflasche, Reisbranntwein, Wasser, Tauben, Hühner, Ziege, Schweis.
8. Bei der Leichenverbrennung: Reis, kyo und ryoni, Ochsen, Schweis, Ziegenbock, Huhn, Ei (Bauchei).
9. Bei der Bestattung: a) Huhn, Reisbrei, Ei, Branntwein,
   b) Huhn, Reisbrei, Reisbranntwein,
   c) Schweis, Huhn, Stier, Ziegenbock.
10. Beim Gedächtnisopfer: a) Schweis,
    b) Schweis.

Man unterscheidet also drei bestimmte Opfer, die sich immer wiederholen in regelmässiger Form:

1. Das Speiseopfer.
2. Das Kopfer (Eierweihe).
3. Das Blutopfer mit Eingeweidescheue:
   a) beim Huhn (Hahn),
   b) bei der Ziege (Ziege, Schweis, Stier, Kuh).

1. Das Speiseopfer.

Zur Darbringung dieses Opfers gehört vor allem ein Altar. Dieser wird aus Erde gemacht und besteht in einem kleinen Häufchen Erde, das man mit einem ka weit (Hackenmesser) von dem Boden in der Mitte des darzubringenden Opfers herausholt.

Die gewöhnlichen Opfergaben, Zutaten und Opfergeräte sind:

kyo: eine Art Brot, aus Reismehl gemacht, wobei der Reis zuerst gewaschen, gemahlen und dann zu Mehl zerstampft wird.

ryoni: eine Art Brot in Kugelform aus gestampftem Reis- oder Maismehl, mit Zucker versetzt.

o Wein: ungebrauchter, ambitiöser Wein.
o Öl: Kleinbäuerlich.
o Mehl: Reichsmannsmehl.
ka ma: Wasser.
kwal: Reichsmehl.
Gruppen: Pfahlbaut.
ka kali: Bauernmehl.
ka ding ning: Bäcker der Klassischen Dichterischer Hexen: Carmenpunk ep.)
o lula: ein silberner Wasserbehälter.
ka pilang rupa: ein silberner, schlangenartiger Teller.
ka pilang kpelbe: eine ziemlich große Schüssel aus Messing.

Die Opferung der Gaben bestehe darin, daß diese in bestimmten Formen oder Figuren auf den Altar gelegt und mit dem Blute der (meistens zu opfernden) Tiere gerötet oder wenigstens mit Wasser und Reichsmannsmehl besprengt werden.

3. Das Eingeben (Einwerfen).

Das Eingeben oder Einwerfen (ninu) zylong), wie es gewöhnlich genannt wird, ist das häufigste von allen. Es wird bei dreipeugen Gelegenheiten angewandt, bei denen etwas zu erfragen und zu erforschen ist. Sie sollen die Gnaden beim Einwerfen kund tun: wo der günstigste Ort für ein zu errichtendes Heiligtum (Hütten-Haus) ist; aus welchem Wasser der für den Hüttenbau nötige Bambus zu holen wäre; wo das angelegtigste Jagdfeld sich befinde; welchen wohl der günstigste Tag zum Ausritt einer Reise ist; in welcher Woche man den Reisebau beginnen könne; an welchem Wochen der beste Almanb zu erbeiten wäre; wo ein allgemeinen Pfahlwohnschiffen stattfinden könne; aus welchen Ursache jemand krank darnieder liege; wer wohl eine stattfindende Schwangerschaft durch ein sittlichen Vergehen verschuldet habe.

Zu diesem Opfer werden ein unbenutzes Lyngefäß gerufen. Dem die Kinnt sind mit dem Einwerfen so vertraut, daß wohl die meisten Männer damit umzugehen verstehen. Auch ist der Vorgang durchaus nicht so kompliziert, so daß auch ein weniger Gebildeter sich an das Einwerfen wagen kann. Nur in ganz schwierigen Fällen, besonders in Krankheitsfällen, macht man einen Lyngefäß, das Opfer zu vollziehen. Oder auch in Fällen, in denen die Gnaden nicht anwesend werden.[1])

Zur Darbringung des Eingebens gehört:

1. Eine Holzplatte, die an den Ecken abgerundet ist und einen Handgriff hat. Man nennt sie ka ding ninu pylong (das Holz zum Einwerfen). Der mittlere Teil wird ka lung (das Schiffchen) genannt.

2. Rote Erde zum Kenntlichmachen der Außenseite der Eierschalen.

3. Ungebrochen, unbildlicher Reis, der in verschiedenen Häufchen (oder auch nur in einem) auf das Wurffeuer gelegt wird.

4. Endlich auch Eier, die der Reihe nach, nachdem sie mit Reis bestreut (Abb. 3), mit der roten Erde eingerieben, bekleidet und mit Schneckenhäusern besteckt werden, mit Gewalt auf das Wurffeuer geworfen werden (Abb. 4). Durch diesen Vorgang zerplatzt das Ei und spritzt das Klar und der Dotter heraus, während die Eierschalen sich in die verschiedensten Richtungen zerstreuen. Damit nun das Weiche zu Ei die Eierschalen nicht zu sehr beschädigen, spricht der Opferer vor dem Werfen: „Es kommen das Klar in die äußerste Ecke! Es springe hinein in die Ecke! Hinunter mit dem Linken! Es klappe zusammen, das Linke!"

---

[1]) P. P. Stengelitten, S. D. S., „Dualismus", Missionsverlag St. Gabriel, Wien 1933, S. 21.

Die Lage der Eierschalen gibt nun die Antwort (1000 B), und neue Gebete die verschiedenen Lagen angefüllter Körperteile.

1. Wenn die kleinen Schalenteile mit der Innenseite nach unten zu liegen kommen, und zwar auf beiden Seiten des Bettes, aber mit Ausnahme des Schlafzimmers, so wird die Frage des Eierwerfers nicht beantwortet. Tritt dieser Fall ein, so fragt der Opferer beim nächsten E. mit nachdrücklichen Stimme vorher an: „Habe ich etwas gesündigt? Habe ich gewuchert und gebeutet das Leben? den weißen Leben? den gelben Leben? den kleinigen Leben? den aufgeblähten Leben? O laß mich erkennen, was nach rechts liegt und was nach links liegt! Laß mich erkennen das auf dem Rücken Liegende und das auf dem Bauche Liegende! O kläre mich, du E. des Gebiets!"

2. Liegt eine Menge kleiner Eierschalen rund um das Schiffchen, so bedeutet das, daß die Menge Gründe (für eine Krankheit u. B.) vorhanden sind, die man nicht herausfinden kann. In diesem Falle wird der Opferer sich beim nächsten E. ungefähr ausdrücken: „O E. des Gebiets! Ist dem eine Sünde, ein Verbrechen begangen worden? Wurde der Schwiegervater-unserer-Tochter beleidigt? Ich will erwägen und den Augen am Vorangehen erhellen, man sucht die Ursache und die Schuld des Kummers und auf Verdrauen wie mag! Stehe mir! Wirung-kann-es-nicht-Begehren-und-wieder-wenn-mein Wille! Du sollst sagen! Du sollst aufklären! Du sollst helfen! O sollst doch die Schuldverteile [illegible]! Verkünden den Zeitschwerpunkt! Überzeugen den Lieben über den Bruder! Sagt mir! Es kommt nicht von der Familie her, es kommt von außen her, daß die Schuld an dem Unglück trägt!"

3. Liegt ein Bruchteil Eierschale mit der Außenseite nach unten unterhalb des Schiffchens in der Mitte des Bettes, so bedeutet dies, daß die Gottin ein Blutopfer will.

4. Liegt ein kleines Bruchteil Eierschale ganz allein am oberen Ende des Schiffchens, so bedeutet dies, daß die Gottheit schwer erzürnt ist.

Sei halten die Eier für alle möglichen Stellungen der Eierschalen, je nachdem sie offen oder umgekehrt, in der Mitte, unten oder seitlich vom Schiffchen liegen, die Bedeutung herausfinden, die die Gottheit durch die Lage machen will. Es liegt auf der Hand, daß es lange weiter gegangen wird, bis endlich eine Stellung erreicht ist, die den gewünschten Erfolg angibt. Sei kommt es vor, daß Wi 100 und mehr Eier bei einem einzigen Opfer gebraucht werden.

Diese Art die Eier zu werfen ist die gewöhnliche. Es gibt aber noch eine einfachere Methode. Der Opferer hält das E. in eine Hand (da ja rund). Sie nimmt er in die linke Hand und bestreicht es mit Reinigungen. Nun versucht er unter Anwendung von Spröchen und Zauberformeln mit dem Daumen der rechten Hand das Spitze des Eies einzudrücken. Gelingt dies, so ist dies ein gutes Zeichen, wenn nicht, so bedeutet es das Gegenteil.[1])

Nur in Krankheitsfällen wendet der Opferer nicht das gewöhnliche Wurfbrett, sie dessen Stelle gebraucht er eine zirkelförmig große Schüssel aus Nemering (ein pflanzenartiges), auf welche er ein Gitter aus dünnen Bambusstäben legt. Das entscheidende E. wirft durch das Gitter in die Schüssel und aus den Eierschalen versucht der Opferer dann ähnlich, wie oben beschrieben, indem er das ganze Bambusgitter als Wurfbrett betrachtet.[2])

2) P. P. Scapellier, S. D. S., „Bei der Eierwerfung eines Familienzeichenbuches", Anthropos 1921, 21/2, S. 449.

5. Das Stabopfer und Eingeweideorakel.

a) Das Stabopfer (Jagdzauber).

Wird durch Gewerbe der gewünschte Erfolg nicht erreicht, so liegt manchmal das Stabopfer. Die Ratio wird der Gottheit gewiesen durch Begegnungen mit Berg, Stein, Baum und Quell. Der Opferer taucht nun die scharfen Messer in das kristallene Opferwasser und schneidet dann den Halm, die Rute durch. Das Blut fällt in auf den Altar und die Opfergaben schaffen. Nun beginnt die Eingeweideschau, die zwar nicht immer gleich ist, aber im folgenden, wie allgemein üblich, beschrieben wird[1]: „Die Spreuartikel der Hühner ist angeblich in der Mitte zwischen Hals und Magen gelegentlich gefunden. Der rechte dieser Zacken wird von a Ber (Gott), der linke a Ber (Mensch) genannt. Trennt sich man nach dem Messiaen, ob er etwa etwas bei sich, irgendwelche Krankheitssymptome oder Fehler aufweist, in diesem Falle ist das Hühnchen schon untauglich zum Opfern. Aber selbst wenn (die) tadellos ist, will man noch besseren Ausschlag. Man nimmt nach der oben erwähnten Vorgehung und der Opferrede beginnt, den Darm in der Hand haltend, das Zwiegespräch mit der Frage: „Nga bzlit nga bzrdzes. Ga ka shal da ka Gtsa, ang rangkhak a Ber, shak a Ber?" (Ich frage und kneipte durch das Wortes und durch Gnade, erhebt sich der Mensch und ringt sich Gott?) Dabei benetzt er mit der anderen Hand pour Vergatterung der Spreuartikel mit ein wenig Bier, wodurch sich durch die konvulsivischen Zuckungen tatsächlich der eine oder andere Teil demarkieren tut. Erhebt sich „der Mensch", so ist es ein gutes Zeichen, da ebenfalls die gegenüberstehende Vereinigung, der „Gott", sich dann vorwärts tut, sich ruhig verhält zum Zeichen des Einverstandenseins."

Dabei ruft der opfernde Lungdzik die Gottheit an und schließt mit folgenden Worten: „Ha, das Gtsa das Hakaua? Hurra? Seha da, ich verrolle hier den Halm, den Gedanken, damit gut sei die Bewegung. Dieses hier ist das Geschwindi, dieses das Gewand, dieses die Seide, dieses der Mond und das Bier, nicht wahr? Seha hier das Rote das Sonnenlos, hier das Rote das Eingetreue vom Vorderhaus und der Schwarz, nicht wahr?"[2]

b) Das Ziegenopfer (gsum blang).

Der Ziege wird mit einem Holz der Kopf abgeschlagen. Zum eigentlichen Opfer dürfen nur Teile aus dem Innern des Tieres (na ka lpak) genommen werden. Man nimmt verwendet 3, 7 oder 9 Teile. Werden 3 Teile genommen, so sind dieses von Herz, Niere, Lunge, Gallenblase und Leber. Werden 7 Teile genommen, so kommen noch Stücke von der Milz und dem Lendenstück dazu. Bei 9 Teilen die eben erwähnten sehen Stücke von Dünn- und Dickdarm. Sind die Teile gut, so ist auch das Opfer gut, sind aber Flecken und Sprenkeln (da ka thak da ka ter da ka bzang da ka brtsi) vorhanden, so muß das Opfer wegen Nichtigkeit wiederholt werden. Der übrige Ritus ist gleich dem oben bei der Erstlingsopfer dem Lungdzik angeführten.

Bei Schweinen wird zu allgemeinem nur darauf geachtet, ob Leber, Lunge, Milz und Gallenblase gesund sind.

c) Geheime Opfer.

Sind die bisher beschriebenen Opfer und ihre Darbringer allgemein bekannt, so spinnt sich um das „geheime Opfer" ein ganzes Netz von Sagen. Die Khasi selbst

2) P. F. Gregorius, Anthropos 1910—11, S. 419 f.

Mitteilungen d. Anthrop. Gesellschaft in Wien, Bd. LIII, 1923 9

[illegible] Opfer und Kultus dieses Gottes [illegible] wie [illegible] Menschenopfer, das dem Tuskar „zu Ehren" dargebracht wird. Tatsache ist, daß diese Opfer dargebracht worden und noch immer dargebracht werden. Ich selbst kannte vier Personen, die in den Jahren 1909 – 10 diesem abscheulichen Aberglauben zum Opfer fielen.

Um die geheimen Opfer oder die „Menschenopfer" der Khasi zu beschreiben, ist es nötig:

1. die Tiersage zu skizzieren,
2. die Verkörperungen zum Opfer — oder den Mord selbst — zu behandeln,
3. die Durchführung des Opfers zu schildern.

Dieses vorläufig angeben soll wir uns selbst einige offene Fragen, erstens:

1. Wie kommt das Volk diese Tatsachen auf?
   a) die Furcht unter dem Volke,
   b) die Verfolgung von Tiger,
   c) Erzählung einzelnen Tiergeschichten.
2. Die Stellung der englisch-indischen Regierung zu diesen Menschenopfern?

I. Die Tiersage

Eines Tags Mutter weilten von Cherrapunjee[1], unter dem großen Wasserfalle Nuh ka Likai, befindet sich die Hütte Freudalis, von der sich eine alte Geschichte erzählt. Hier war einmal der Aufenthaltsort einer riesengroßen Schlange — a Khasi gesprochen — welche große Verheerungen unter Menschen und Tieren anrichtete. Die Leute mußten ihr weichen, als zum Mahle zu gehen; die Hütte von denen wurde regelmäßig von dem Tiger verschlungen, die andere konnte ruhig ihren Weg fortsetzen. Es war ein Gesetz für den Tiger, immer nur die halbe Anzahl der Menschen oder Tiere, welche vorher kamen, zu verzehren. Nachdem schon viele Leute auf dem Wege zum Leben gekommen waren, hatten die Khasi einen Tages zusammen mit den Talfreundinnen eine große Versammlung, eine Diskussion, ob, um zu beraten, wie sie diesem großen Unglück abhelfen könnten. Ein einziger Mann, namens Sunduk, erhob sich, dieses Wunder zu schaffen. Er fing an, Zinger, Schwerter und Kreuter zu dem Tiger zu rufen, um diese dazuhaben zu können zu gehen. Nachdem er den Bogen fertig gelegt hatte, wurde der Tiger ganz wahn und verfolgt zu ihm. Eines Tages brachte Sunduk ein Stück glühend rotes Eisen mit, das er mittels einer Zange hielt. Er öffnete die Schlange auf, den Mund zu öffnen, um ihr ein Stück Fleisch hinein zu geben. Diese gierte darauf, öffnete ihr Maul und Sunduk steckte ihr rasch das glühendhelle Eisen in den Schlund, so daß sie unter schrecklichen Zuckungen verkam. In einer phonetischen Versammlung kam man dann überein, daß man die tote Schlange in zwei Hälften zerlegen wolle: die eine Hälfte dann sollen die Talfreundinnen aufessen, die andere die Khasi. Da die erstere sehr zähnisch sind, war es dann ein Leichtes, ihre Portion zu bewältigen; die Khasi konnten der Sache jedoch nicht ganz Herr werden und halfen etwas davon übrig. Andere sagen, daß in dem Dorf Mawphu, westlich von Cherrapunjee, eine alte Frau ihren Anteil aufzunehmen vergaß. Kurzum, die Khasi verzehrten ihren Teil nicht ganz und so kam es, daß der Tiger sich wieder vermehren konnte und unter ihnen noch lebt bis auf den heutigen Tag.

[1] Die folgenden Ausführungen sind dem Artikel „Menschenopfer unter den Khasi" von P. Sn. C. Hicks, S. D. S., Serai Mitteilungen 1909, Nr. 3, S. 73 ff., entnommen.

2. Die Verbereitungen zum Opfer.

Der Tiboo ist jedoch jetzt nicht mehr der öffentliche Wegbereiter von [illegible]. Er hat sich in den besten der Häuser zurückgezogen; auch ist er die nicht mehr [illegible] [illegible] Platze, sondern vorzüglich zu [illegible] zu finden. Es sind besondere Familien, die die Besitzer eines solchen Schlangenbuches gelten und die selbst auch [illegible] Tiboo bekannt sind. Man nennt sie einfach die Wunga-Tiboo-Besitzer eines Tiboo. Dieser wird von seinem Besitzer sorgfältig an einem sicheren Platze aufbewahrt und geheim gehalten. Er soll nur von den Nachkommen des Tiboo-[illegible] gesehen werden. Auch sagt man von ihm, daß er auch die auf den Umfang [illegible] Fußbrett [illegible] sind, so leicht in einem Korbe oder [illegible] Gefäße Platz finde. Andere sagen sogar, er habe die Macht, sich in eine Kuhle, einen Kolben oder Stein zu verwandeln und in diesem Falle bei seinem Besitzer zu verweilen.

Für diesen ist der Besitz des Tiboo ein kostbares Ding; denn wo der Tiboo seine Wohnung aufgeschlagen hat, da bringt er Glück und Reichtum in die Familie. Dies hat er jedoch nur unter der Bedingung, daß er mit Wohlwollen [illegible] wird. Gefällt er diesem nicht, so meidet er sich von Zeit zu Zeit in der betreffenden Familie den Nachts im Traume. Wird sein Verlangen auch da nicht mehr erfüllt, so kommt es mit Krankheit, Unglücksfällen, Verarmung u. dgl. Es macht somit den Besitzer nicht anders abhängig, als den Tiboo durch Menschenmund zu befriedigen oder zu verscheuchen. In sichtlichster Weise kann er auf sein Opfer einen oder auch mit einem anderen, den er dazu dingt. Vielfach haben nicht die Tiboowesen einen angemessenen Lohnplatz, d. h. Tagelöhner, der ihr seine Verrichtungen am Reichtum seines Herrn einstreichen darf, ohne sich weiter mit anderen Arbeiten zu plagen. Derselbe gilt mit seinem Herrn gewissermaßen auf die Lauer und gibt von der Höhe eines Berges oder am Wege oder Wasserlauf vorzüglich gut Obacht, ob nicht irgend jemand allein den Wegen kommt. Durch Zuruf oder Zeichen verständigt er den in einiger Entfernung sich aufhaltenden Herrn, um dann nunmehr den Raub zu begehen. Beide sind gewöhnlich vermummt und mit einer Hutkaule bewaffnet, um damit den Opfer zu erschlagen. Im Vollmonde kommt man dem Wunder im Dienste des Tiboo sowie der Tiboowesen im allgemeinen nicht nur sorglos sich, sondern [illegible] Tätigkeit. Von Eisenwaffen dürfen demselben bei Begehung ihrer heimlichen Tätigkeit keinen Gebrauch machen, sondern das Eisen, wie oben erwähnt, vermeidet sich so verhängnisvoll für den Tiboo-Spannenden erweisen. Dem Erschlagenen werden mit einer eisernen Schere die Spitzen der Hände und die Fingerspitzen abgeschnitten; dann sticht ihn der Wunder mit einer eisernen Lanzette in die Nasenflügel hinein und fängt das herausfließende Blut in einem Bambusrohre auf. Was nennt den pur man. Um das Blut aufzufangen, darf wiederum kein Gefäß aus Eisen oder Metall benutzt werden.

3. Die Darbringung des Opfers.

Der Tiboozauber befragt nun das Orakel über den Zeitpunkt, wann er das Blut dem Tiboo opfern soll. Ist dieser gekommen, so wird zur dunklen Nachtzeit die ganze Familie in der Hütte des Tiboozauberers oder der Tiboozauberin versammelt. Die Tiboo werden geöffnet und auf dem Boden kostbare Tücher ausgebreitet. Das Blut des Erschlagenen wird auf eine Messingplatte oder einen Teller (ka ploug) gegossen; dann legt man dessen Hände und Fingerspitzen. Ein Glied der Familie beginnt eine kleine Trommel zu schlagen und ruft dabei: „O Orakel, O Vater, komm hervor, wir haben alles getan, um dich zufrieden zu stellen, und nun ist es uns gegückt.

Gibt man diesen Sagen, dass wir Gesundheit und Geschick erlangen?" Man sagt, der Tiger werde nur von den Hausangehörigen seines Bezirkes gemieden. In eine [illegible] für einen Gegner er sich [illegible] dem Hause denselben aufhält, wer hat der Ortsgruppe von Menschenblut [illegible] er in seiner weiteren Gestalt als Schlange. Derselbe soll auf die Anschauungen bei den Dorfbewohnern [illegible] und anfangen, sich auszudehnen, bis sie ihre volle Größe erreicht habe. Sie nähere sich nun der Pforte und wenn sie wenig vor derselben, bis der Geist des Erschlagenen auf der Pforte stehend erscheint. Derselbe sollte daher lachen. Die Schlange fängt nun an, die ganze Gestalt zu verschlingen, indem sie bei den Füßen beginnt; dem Opfer soll dabei hergestellt lachen. Selbstverständlich ist es schwer, über solche in vollständiger Körperlichkeit vor sich gehende Handlungen etwas Sicheres und Genaueres zu erfahren. Der Schlangenzauber ist nach Erhalten des Opfers wieder beendigt und geht nun das Fühlen des Glücks und Geschickes über das Haus aus.

Opferzauber. Es ist notwendig nicht immer leicht, ein Menschenopfer zu finden. In diesem Falle macht sich der Thiendoctor in anderer Weise zu helfen. Es gilt darauf aus, wenigstens etwas von den Haaren oder der Kleidung irgendeiner Person zu erwerben und dann den Schlangenzauber zu üben. Für diejenigen, denen die Haare oder das Stückchen Tuch gehören, bedeutet dies ein Verhängnis, denn es besteht der Glaube unter den Khasi, daß der oder die Betreffende bald darauf erkrankt, bisweilen und nicht oder durch wenigstens Unglück und Armut über sie kommen. Man ist darum sehr auf der Hut, daß einem Thiendoctor nichts derartiges in die Hände fällt. Vielfach z. B. jemand ein Haar, so ist er begreiflich darauf bedacht, es sogleich im Feuer zu verbrennen und es so der Vernichtung anheim zu geben, bevor noch ein Thiendoctor sich dieselbe aneignen könnte. Kann dieser gar nichts auffinden, so begnügt er sich damit, wenigstens mit Steinen auf irgend ein Opfer zu werfen oder zur Nachtzeit an besonder Tiere zu gehen. Es soll dann den Thiere ein, um ihn mitzutreten, daß er sein Bestes gethan habe, ihm eine Beute zu verschaffen, dass aber leider erfolglos geworden sei. Hierauf soll der Schlangenzauber für eine Zeitlang unterbleiben, bis er wiederum sein Verlangen nach Menschenblut kund gebe. Manche Kinder machen sich allerdings bisweilen in Krankheitsfällen dadurch Heilung zu verschaffen, daß sie sich unter den Schutz des Thiers begeben. Sie geben dem Thiendoctor einige ihrer Haare, Stückchen vom Kleide, reihen einer entsprechenden Gabe an Geld oder Lebensmittels als Opfer für den Thiers- ei Kinder, um so die Gesundheit wieder zu erlangen.

Wie äußert das Volk diesen Tatsachen auf?

a) Die Furcht unter dem Volke.

Eine sehr Furcht vor diesem Wildere im Dienste des Thiers durchdringt das ganze Leben der Khasi; besonders stark ist diese Gefühl noch in den Kleingemeinden von Cherra, Mylliem und Nongkrem. Man hütet sich selbstverständlich sehr vor Personen, die im Besitz eines Schlangenzauberers gelten, und wagt es vielfach nicht einmal, deren Namen auszusprechen aus Furcht, ein Thei könnte einem befallen. Manche derselben sind unter dem Volke mit Sicherheit bekannt; bei anderen vermutet man es nur. Es war uns viel daran gelegen, eine photographische Darstellung solcher Leute, die als Thiendoctor gelten, zu erhalten; jedoch stoß man dabei bis jetzt nur auf vollständige Weigerung von seiten derselben. Das böse Gewissen läßt sie wohl etwas dabei befürchten. Das Haus einer Thiendoctorin in Mawrei, einige

[illegible]

Bei Nacht gelangt sich die Kraft [illegible] [illegible] Wird er einmal unterwegs von der [illegible] [illegible] [illegible]

kommen. Ob von dem Tiere bei so weiten, bleibt für einige andere Dinge, die auch dem ganzen Bestimmen zu entdecken. Haus und Einrichtung müssen vorhanden, Geld und Werkzeuge aber bei hergewerfen und selbst die Kosten geringgeschätzt werden. Dies geschieht unter Bedeutung einer gewissen Zeremonie, die durch den Lyngbrik einen Dorfes unter Mitwirkung der vom Dorfe (Kiwuchtung) bestimmten Männer vorgenommen wird. Der Opferer (Lyngbrik) befragt zunächst den Orakel nach dem Ort, Berge usw., wo die Tätigkeiten hingetragen werden sollen. Ist das erreicht, so begeben sich die Betreffenden Männerleuten mit dem Lyngbrik und den genannten Männern nach einer Menge Zuschauer an den betreffenden Ort. Hinter werden auch alle beweglichen Güter der anderen, selbst mit Einschluß der Kinder gebracht. Der Lyngbrik spricht mehrere eine Abschreckungsformel und bittet hierauf den Ba auf die nächste Frist von all denen Fall und Gut verbliebenen Tätigkeiten, gewünschte und eine unverbrauchen bei Dorf verbindenden. Hierauf nehmen sich auch die übrigen Zuschauer Dies alles geschieht während der Nacht. Es ist Vorbedingung, daß die Schlangenzeichen mit dem Eigentum wenig verbunden ist und dies bringt. Wer eine [illegible] übernehmen würde, könne dadurch auch unter die Gewalt des Schlangenzeichens, dessen wären auf die übrigen, wie die Ausdruck lautet: Sie a dies ba bi. Hierauf wagt es darum, die hergeworfenen Gegenstände sich anzueignen oder auch nur sie zu berühren. Nur in dem Haus des Diebes und in die ganze bewegliche Familie kann der Tiger seinen Eingang finden und darum können auch einige Wochen dem Kiwuchtung übergeben werden. Hierauf mag es zusammenbringen; daß gewöhnlich erhält ein anderes Dorfes nach der übrigen Zeremonie von den geringgeworfenen Gegenständen sich nichts mehr verfindet. Dieses kann es damit in früheren Zeiten dadurch erhoben wird, daß jemand sich einen gefundenen Gegenstand aneignete und Familie, so bildete Tiger aber und er erhielt sich dadurch den Tiger mit dem Dorfe bei. Hatte man jedoch einen gefundenen Gegenstand, ein Geldstück oder dergleichen mit nach Hause, so wurde sodann der Orakel durch Dienerfrau befragt, ob derselbe nicht einen Bann erhalte, und nur, wenn das verneint wurde und die notwendigen Bannen nicht gefunden werden konnte, behielt man einen Teil davon zurück, das übrige mußte zu Opfervorrichtungen verwendet werden.

Das gleiche wie für die beweglichen Güter gilt auch für die unbeweglichen. Felder, welche die Familie ziehen konnte, blieben brach liegen, niemand wagt es, dieselben zu übernehmen oder etwas darauf anzubauen. Das so von einer Gesellschaft verbliebene abgelegene Tiger-Gebiet springt jedoch das ganze Dorf bei. Was vorzüglich ist mit Kindern und Frau und hilft dann eine Hütte bauen, damit sie wieder ein rechtschaffenes Leben beginnen können.

c) Erschlagung ehemaliger Tigerangehörigen

Wollen wollt man dann aber ob dieses Ban den Tiger, wird manchen Tiger, wenn dieses bisher ihr Gemeinde zu verbrechen ausfindet? Eine indirekte Antwort auf diese Frage ergibt sich schon aus der ganzen bisherigen Darstellung. Dann aber kommt es auch vor, daß z. B. Männer in das Haus einer Frau betreten, die Tigerangehörigen ist. Bestimmt wollt man das ja vorher nicht wissen, obwohl wirklich Tigerangehörigen auf die Dauer schwer ganz verheimlichen können. Wenn nun die Frau ihre Haustürgegenstände und den erschlagenden Mann aus Tigerangehörigen verstoßen, dann dann vor Schrecken Bedauen und erzählt das Schwerbrechen, was er gemacht. Er bittet nicht mehr zurück zu seiner Frau, von der er durch Verheimlichung eines so wichtigen Umstandes betrogen war, und sucht sich eine andere Gefährtin.

Weiteren Aufschluß geben endlich auch die Erzählungen einzelner Tätowierten. Ich will hier nur einen Fall wiedergeben, wie er von solchen selbst erzählt wird. Dementsprechend verdanke ich der Güte des langjährigen Missionärs in Cheveyeuyen, P. Corrinder Bakujkem S. D. S., welchem ein tätowier Tätowierter seine Erlebnisse erzählte und der Ihn, wie folgt, in unserer Sprache übertragen hat:

„Wir waren Diebe wie unser Lande. Da landen wir eines Tages auf den Bergen beim Dörfchen einen wunderbar schönen glatten Stein, trugen ihn nach Hause und verwendeten ihn. Von dieser Zeit an hatten wir überall Glück, es gelang uns jeder Unternehmen, ich hatten ein Verlangen, unsere Vorväter mehrere mit von Tag zu Tag und wollen keine Spur verlassen wie sie. Wir wurden allgemach reiche Leute. So ging es fort etwa 2 bis 3 Jahre. Da hatte ich einen wunderbaren Traum. Es erschien mir eine Frau, die sagte zu mir: „Seit, ich habe dir jetzt so großen Reichtum verschafft, nun verlange ich auch ein Opfer von dir. Du sollst mir eine lang Hab Hitti, d. h. eine am Kopf gefaßte Ziege opfern. „Am anderen Morgen erzählte ich meinen Gesellschaftsgenossen den Traum und dieser meinten, daß sei die Göttin gewesen, die verlange das die goldbraunen Opfer. So opferten wir also die Ziege. Allein bald darauf hatte ich wieder einen Traum und dieselbe Stimme wie zuvor sprach wieder zu mir: „Ich habe von dir so lang Hab Hitti verlangt und du gibst mir nur so eine Ziege. Die Ziege also,die ich verlange, ist Menschenblut, so eine lang!" Am anderen Morgen erzählte ich wieder meinen Traum und da erschraken alle meine Angehörigen, denn sie wußten nun, daß es der Tätowerhut und nicht die Göttin war, der sie nicht gemacht. Nun aber hatten wir uns zu entschließen, was wir anfangen wollten: eines unserer Geschlecht, Hab und Gut geringgeben oder den Willen des Tätos erfüllen. Wir entschlossen uns für das letztere. Aber wir hatten Wochen um Wochen vergehen, bis uns der Täto im Traume zu drohen anfing, er werde unser ganzes Haus verderben. Nun gingen wir, ich und mein Bruder, auf die Lauer, um irgend jemanden ermorden zu können. Wir sahen eine Frau von unserem Dorfe allein in den Wald gehen, um Holz zu sammeln. Dieser erschien wir recht, und es war den Augenblick für geeignet halten. Überfielen wir sie mit Prügeln und erschlugen sie tot. Gleich darauf aber Stickten wir tiefer in den Wald in der Absicht, der erschlagenen Frau eines spitzen Stab abzuschneiden, wenn wir dies ungestört tun könnten. Nach einer Weile kam aber die Frau wieder zu sich und entkam glücklich im Dorf zurück auf einem anderen Wege. Zu Hause angekommen, erzählte sie den Geschehenen und nannte uns beide Beider als ihre Mörder. Ihre Angehörigen aber gingen gleich zum Häuptling und verklagten uns. Als wir uns nun den unseren Vorwurfe konfrontierten, um die ungemeinten Frau Stat abzuzapfen, fanden wir zu unserem Staunen, daß sie verschwunden war. Wir eilten auf den Weg, um sie zu verfolgen, konnten sie aber irgendwo nicht finden. Als wir nach Hause kamen, erzählte man uns gleich, daß eine Frau glücklich den Mördern entkommen sei, es sei aber doch fraglich, ob sie noch mit dem Leben davon kommen würde. Wir aber erkannten in gehörnem, daß sie doch sterben sollte. Der Häuptling aber hatte befohlen, daß die Frau sorgsam gepflegt werde. Als sie daher so weit sich wieder erholt hatte, daß sie zur Gerichtsstätte kommen konnte, befahl der Häuptling alle Dorfbewohner zur Versammlung. Wir zitterten an Händen und Füßen, und stotterend bekannten wir unseren Schuld. Der Häuptling sagte dann zu uns: „Ihr bezahlt der Frau ähnliche Kosten für ihre Verpflegung und gebt zu, daß ich euch meine Thäre verbrennen und vor Hab und Gut geringgeben lasse; wollt ihr das tun, so soll euch weiter nichts geschehen. Eine Hütte, wo ihr einstweilen wohnen könnt, ein Tuch

Kamit ist vorgegangen zum Elen bedeutet Stein, und Ben und wenn ihr somit noch nötig habt, wird auch noch Dieß angegeben werden, bis ihr wieder etwas ungewöhnlich scheint. Wenn ihr aber das nicht wißt, dann soll noch eine kurze Strafe treffen ohne Gnade und Barmherzigkeit." Wir unterwarfen uns dem Urteil des Häuptlings. Dieser hat darauf all unser Hab und Gut weggegeben und unser Haus bis auf den Grund und Boden niedergerissen. Und als wir nun die Hütte bauten, welche uns von den Dorfbewohnern auf Geheiß des Häuptlings erbaut wurde, siehe da fand sich wiederum dieser wunderbare Stein vor. Wir berichteten das dem Häuptling und dieser beriet sich mit seinen Ältesten, was man zu tun habe. Sie kamen zum Schlusse, daß uns bei der ersten Besichtigung die Lingkoh nicht den Beistand gegeben hatten, gemäßigt, ohne unsuchtsvoll, vorangegangen. Wir hatten umgesonnen und darum war der Thlen wieder auf uns gekommen. Daher befahl nun der Häuptling, die Vertreibung und Abschreckung und Vernichtung noch einmal vorzunehmen. Diesmal gingen wir gemäßigt hin, ohne unsuchtsvoll, und so waren wir diesmal frei vom Thlen. Den Thlen nahm halten wir wir gemieden." Soweit der Bericht des Thlenvertreibers.

Die Stellung der englisch-indischen Regierung zu diesem Menschenopfer.

Aber ist es denn möglich, wird mancher fragen, daß solche Verbrechen in einer britischen Provinz des indischen Kaiserreiches geschehen können? Warum werden solche Dinge der englischen Regierung nicht bekannt gemacht oder warum greift diese nicht ein? Diese Dinge sind der englischen Regierung bekannt und sie ist und ist gewiß das einzige, trotzdem die Khasiberge noch zum Teil ihre Selbständigkeit besitzen. Schon in den Verwaltungsberichten der Regierung über die Khasi- und Jaintiaberge des Jahres 1881–82 wurde dieser abergläubischen Unsitte eingehende Erwähnung getan. Anschließend daran veröffentlichte der damalige Hauptmann der Regierung Assams (Chief Commissioner) unterm 1. August 1882 eine Entschließung, in welcher unter anderem ausgeführt wird: „Unter den Fällen, welche in diesem Jahre zur gerichtlichen Verhandlung kamen, waren drei Erwürgungen von ganz besonderer Niederträchtigkeit: zwei geschahen an harmlosen alten Frauen, eine an einem Knaben. In keinem dieser Fälle wurde irgendeine entsprechende Ursache angegeben und nur wenigstens zwei derselben glaubt man, daß sie mit dem bemerkenswerten Aberglauben des Thlen in Verbindung stehen." Nach einer Darlegung dieser abergläubischen Sitte heißt es weiter: „Viele Familien in diesen Bergen sind als Thlenhalter bekannt oder stehen im Verdachte es zu sein und sind infolgedessen gefürchtet und gemieden. Wo immer ein toter Körper gefunden wird mit den oben beschriebenen Merkmalen (Blut durch die Nasenöffnungen abgezapft, Haare und Fingerspitzen abgeschnitten) und besonders, wenn der Tod durch keine Wunde, sondern durch Halsumdrehen herbeigeführt wurde, kann man mit nahezu absoluter Gewißheit annehmen, daß der Zweck des Mordes die Besänftigung des Thlen war. Dies wurde in einem der drei angeführten Fälle beobachtet; in den beiden anderen konnte man diese Ansichten nicht finden; da jedoch keinerlei Ursache für einen Mord vorlag, war es mehr als wahrscheinlich, daß auch sie dem schrecklichen Aberglauben zuzuschreiben sind. In jedem dieser drei Fälle wurden eine oder zwei Personen ermordet, obgleich das vielleicht nicht alle Mitschuldigen sein dürften; ein Mann wurde gehängt und die übrigen wurden zu lebenslänglicher oder mehrjähriger Verbannung verurteilt."

Auch in den folgenden Jahren finden sich in den Regierungsberichten noch Mordfälle, die dem Tibetanerglauben zur Last gelegt werden. Besonders auffällig und bezeichnend war ein Fall, der sich im Jahre 1890 ereignete. Der Mord wurde vor ungefähr zehn Meilen von Shillong, der Residenz der englischen Regierung von Assam, begangen, einige hundert Meter abseits von der Regierungsstraße, die von dort nach Chirrapunjee führt. Von den Mördern konnte man keine Spur entdecken, da die nahen Dorfbewohner es nicht wagten, als Zeugen gegen sie aufzutreten aus übergläubischer Furcht, die Rache und den Zorn des Thian auf sich zu laden. Sie erlangten es darum lieber, daß die Regierung zur Strafe eine Abteilung Polizeisoldaten in diesem Dorf schickte, welche von den Bewohnern unter schweren Opfern ein ganzes Jahr lang beherbergt und unterhalten werden mußten. Das sind die großen Schwierigkeiten, mit denen trotz des besten Willens die Regierung zu kämpfen hat; einmal ist es bei den obwaltenden Verhältnissen ja überhaupt nicht allzu schwer, eine Person spurlos verschwinden zu lassen; kommt dazu aber doch ein solcher Mordfall ans Tageslicht, so ist bei Erzwingung oder Weigerung von Zeugen immerhin noch ein guter Schritt bis zur Bestrafung der Schuldigen. Hier kann eine Besserung nur allein nur von innen heraus kommen durch Änderung der religiösen Anschauungen. Für Europäer ist es immerhin ein Trost, zu wissen, daß ihr Blut sowie das eines jeden Ausländers, der nicht Khasi ist, dem Thian keineswegs angenehm ist und nicht geneigt würde, ihn zu beschützen.

Arrow Shooting and Hunting Customs of the Khasi
by P.F. Stegmiller, S.D.S., Apostolic Missionary
of Assam.

411

1. Arrow Shooting and Its Implements.

Corresponding to the general interest which is shown in arrow shooting, the tools that belong to this art are prepared with great skill and ability, (1) namely the bow, the arrow, and

1. Hermann Meyer, Pfeil und Bogen in Zentralbrasilien, (Leipzig, 1895), p. 16. [Bows and Arrows in Central Brazil].

the target.

411 A kind of bamboo with many knots is used
422 for the Khasi bow (ka rynthieh), and it is cut out in one piece so that there are at least five knots on the bow. The length of the bow is about 1.5 meters. It is not a matter of indifference how long the bow is. The best shots claim that the bow must be made to measure and must be made shoulder height. The size of the man determines the size of the bow. (2)

2. Bruno Adler, Internationales Archiv für Ethnographie, [International Archive for Ethnography] Vol. 14, Supplement: "Der nordasiatische Pfeil", [The North Asian Arrow], p. 14: "The long arrow of the Japanese corresponds to the longest bow which we find in Asia-phenomena which are in the grossest contrast to the small figure of the Japanese."

Fig. I

When a strong bamboo with many knots is found, it is cut off and split after the length has been determined. The outside of the bow in smaller bows is rounded off; (3) 411 322

3. Illustration I, fig. 1c.

for the usual bows and the larger ones almost the full half of the bamboo is taken. A little is cut off only on the sides so that the profile of the bow nearly forms a right angle. (4) In each case the shiny

4. Illustration I, figs. 2,3,4c.

outer side of the bamboo becomes the inside of the bow. The bow becomes smaller towards the ends. The ends are rounded off. Underneath one end, about 3 centimeters from the end, a notch is made, into which the string is put directly without any other means of fastening. The string remains fastened by pulling the loop taut. At the other end of the bow a peg is cut, around which the string is hung just before the bow is used. Often both ends of the bow end in a point. (5)

5. Illustration I, fig. 1, 2b.

The bow must not be kept strung but must be unstrung when left unused for a while. Stringing the bow is always done in this way. The archer takes the bow in his left hand while standing, resting on the ground the end to which the string always remains attached, and then pressing down the other end with his right hand as far as is necessary to hang the loop of the string around 411 284

411 the peg. In many cases with bows with the
284 points indented the string is attached by means of a special loop of bast or split bamboo (u thri), but it is also fastened directly by hanging around the peg. [608] [Illustration I. Khasi Bows. 1a, 1b, 1c, 2a, 2b, 2c, 3a, 3b, 3c, 3d, 3e, 4a, 4b, 4c]. [609] The bow is carved flat in the middle and a strip of reed palm is wound around it so that there is a band 12 to 15 centimeters wide around it. The purpose of this is to provide a surer grip, as the left hand, which carries the bow when shooting, gets a better grip on the ribbed foundation. In other places also, primarily at the ends of the bow, such reed strips are fastened and merely serve the purpose of ornamentation.

411 When the bow is completed, it is thorough-
322 ly smoked. The smoking takes place in the hut. In the center of the hut a fire burns constantly in a hearth of earth or of stone, the smoke of which, since there is no vent or chimney, seeks a way out the best it can. Above the fire a swing is set up from the ceiling on which the wood lies for drying. The bow and also the string are left lying on this swing until the desired result occurs. Smoked bows are more resistant to dampness, longer lasting, and considerably tougher. The smoking has no effect on the flexibility of the bow. (6)

411
284

6. Ethongraphic Museum Munich: Bows As, 108, a, b, c, have 3 knots; bow As, 28, has 4 knots; bow J has 3 knots; bow S has 5 knots; bows As, 108, a, b, c, have a length of 119.5 centimeters; bow As, 28 has a length of 144 centimeters; bow J has a

length of 141 centimeters; bow S has a length of 156 centimeters; bows As, a, b, c, have a breadth of 22 millimeters in the middle, and 17 millimeters at the ends; bow As, 28, has a breadth of 27 millimeters in the middle and 18 millimeters at the ends; bow J has a breadth of 25 millimeters in the middle, and 12 to 16 millimeters at the ends; bow S has a breadth of 32 millimeters in the middle, and 12 to 18 millimeters at the ends; bow S gets smaller and smaller at an even rate towards the end to which the string is attached just before the bow is shot, while it gets too high at the other end. Height of the bow in the middle is 15 millimeters, at one end 12 millimeters, at the other 17 millimeters; bow J gets smaller and smaller at an even rate towards the end where the string is attached just before the bow is shot, while at the other end it becomes too round. Height in the middle 15 millimeters, at one end 12 millimeters (in the breadth), at the other end 12 millimeters (about on the average). None of the bows has either a wrapped handgrip nor any other ornamentation.

411
284

411
283

For making the string (u ksai) the Khasi split a bamboo and split a strip of it off which they smoke thoroughly. The string is uniform for bows with a circular notch; for bows with tapered points, it becomes thicker towards the ends, on which braces are cut from the bamboo knots made from one piece with the string. The kinds of bamboo used for the strings are called u spit, u skhen and u siej-lieh by the Khasi. Bast string, twisted many times, is also used for the string. The bamboo strings are smoked (see above).[1] The strings obtained thus are extremely strong and can stand great tension. With a bow of 150 centimeters the height of the arc, i.e., the span of a strung bow amounts to 10 to 12 centimeters. Often, however, the string is almost the length of the bow and no arc results. When shooting the arc is increased by tightening the string to 60 centimeters. Thus the bow is a powerful, mighty /o107 sling, which sends off the arrow without any mechanism other than pulling back the string and moving back the bent bamboo. (7)

411
284

7. Bow As, 108, b, has a bamboo string with 5 knots, the shiny side facing inward. The string is 4 millimeters wide in the middle and 7 millimeters wide at the ends. At each end there is a brace cut out of a piece with the string. The string is fastened to the indented tips by means of a threefold bamboo lace (u thri). The string and the bamboo lace are fastened by a strip of bamboo 3 millimeters wide. Illustration I, fig. la, height of the arc 9 centimeters,

1 [See category 116, p. 4--Analyst]

weight of the bow 190 grams. Bows 108, a, b, c, can scarcely have been used for sport, more probably they are children's bows, unless they were made deliberately for selling to Europeans. Bows As, 28, has a bamboo string with five knots, 3 millimeters wide in the middle and 8 millimeters wide at the ends and at both ends there are braces made out of a piece with the string. The outer shiny side of the bamboo string that is turned inward is scraped off with the exception of the ends of the string. There it is split and bent back as a covering for the brace. The string is fastened on both sides of the indented tips by means of a double bast lace. Both are held together with wire. Illustration I, fig. 2a, height of the arc 8 centimeters, weight of the bow 330 grams. Bow J has a bamboo string with two knots, 3 millimeters wide throughout without a brace. It is fastened at the pegs by hanging directly. Weight of the bow 330 grams. Illustration I, fig. 4a, 4b. Bow S has a threefold string of bast. This bast string is hung around the notch and the peg (indented tip) like a loop. The knots that tie the loop are 30 centimeters and 19 centimeters respectively from the ends. Weight of the bow is 449 grams. Illustration I, figs. 3a, 3b, 3c, 3d. Both of the bows mentioned last have no

411
284

411
284

arc height since the strings are as long as the bows.

411
526

The Khasi make the followings kinds of arrows:

1. Feathered arrows ('nam-pur).
2. Unfeathered arrows ('nam).

Feathered or unfeathered ones are: a) hunting arrows, b) arrows for sport. Always feathered are c) children's arrows.

Ad a) Hunting arrows (u 'nam-pliang) are about 70 centimeters long, and have tips like a spear with barbs. (8) The weight of the hunting

8. Illustration II, figs. 2a, 2b.

arrows is about 25 grams. These arrows are still poisoned nowadays.

Ad b) Arrows for sport (u 'nam-sop) are about 60 centimeters long and have round, conical iron tips. (9) Weight of the arrow for

9. Illustration II, fig. 1.

sport is about 8 grams.

Ad c) Children's arrows (u 'nam-phiah) are about 50 centimeters long, and have round points or none at all. The feathering is different from that of the other arrows (cf. the latter).

411

Shafts of the Arrows

All the arrows are made of a very thin bamboo (u 'nam-long or igrâ) and smoked. When possible bamboo free of knots is used. The arrow is about 6 to 7 millimeters thick. The length of the arrow varies greatly. For the arrow and the bow must complement each other inwardly just as they belong together externally. (10)

411
526
326
531

Fig. 2

10. Dr. R. Karutz, Die afrikanischen Bogen, Pfeile und Köcher im Lübecker Museum für Völkerkunde /African Bows, Arrows and Quivers in the Lübeck Ethnological Museum/ (Lübeck, 1900) p. 219.

There is no doubt that the length of the arrow depends on the length of the bow. A large, but less flexible bow does not need so long /611/ /Illustration II. Khasi Arrows. Figs. 1, 2a, 2b, 3a, 3b, 4, 5a, 5b, 6a, 6b, 7a, 7b, 8a, 8b./ /612/ an arrow as a smaller more flexible one. The absolute length of the bow conditions the length of the arrow to the extent that usually a longer bow requires a longer arrow. (11) Arrows for sport will [526]

11. Bruno Adler, op. cit. p. 13.

float horizontally on water. (12)

12. "Weniaminoff relates (Sapiski ob ostrovah Unalaschkinskago otdjela /Notes on the Island of the Unalaska Territory/, Vol. 2, St. Petersburg, 1840) of the Aleutians that the tips of their arrows, especially the ones used in hunting beaver, have such a weight distribution that the arrow does not sink in the water in spite of the heavy shaft nor does it lie on the water, but floats upright, so that a piece almost a foot long sticks up above the surface of the water."

Arrow Tips

411
326 The arrow tips are made of iron in the village smithies. The tips of the hunting arrows ('nam-pliang) are flat, raised a little towards the middle and have smooth or toothed edges and two or more barbs (shaped like a spear). Length of the tip is about 9 to 15 [531] centimeters. Beautiful wrought iron arrow tips with pierced designs are also made. (13)

13. Illustration II, figs. 3a, 3b.

[526] The tips of the arrows used for sport ('nam-sop) are round and conical. Length is about 3 to 6 centimeters.

The spear-shaped arrow tips are poisoned with (ka bih) poison which the Khasi obtain from the tuber of a plant (aconitum ferox Wallich, aconite).

Attaching the Arrow Tips.

411 The arrow tips are attached in two ways:

1. either the shaft of the arrow is pointed in front and the arrow tip, which is hollow inside, is placed on it-both are joined with sealing wax;

2. or there is a separate shell of copper which connects the arrow tip with the shaft. Sealing wax is not used, since the shell acts as a clamp. Length of the shell is about 1.5 centimeters.

The Notch of the Arrow

At the tip of the opposite end a notch is cut in every arrow. The arrow is taken from a whole 'nam-long or igrâ (kind of bamboo) in

such a way that the notch can be cut directly after a knot. The purpose of the notch is to be able to set the arrow easily on the string. There are two kinds of notches: 411

1. Notches which resemble the curve of a Moorish bow. (14)

14. Illustration II, figs. 5a, 5b.

2. Notches which have an even flatness at the bottom and a point on the left and the right. (15)

15. Illustration II, figs. 6a, 6b.

Relationship of the Cut Surface to the Notch.

The large spear-shaped tips of the hunting arrows ('nam-pliang) are made with the wide flat part at right angles to the notch and thus to the string of the bow. (16)

16. Bruno Adler, op. cit., p. 607.

Markings on the Arrows.

/613/ Many arrows (arrows for sport 'nam-sop) are marked with black lacquer from the end of the base of the feathering to the notch, so that the arrows of the teams can be told apart in shooting competitions. (17) [526]

17. Illustration II, fig. 8a.

Feathering the Arrows 411

The Khasi have two ways of feathering: 237

1. Radial sewn feathering.
2. Tangential tied feathering.

411 Ad 1. Radial sewn feathering is the common
237 method. Feathers are taken from geese, cranes, cormorants, Buluwar vultures and the horn bird. The feathers of the carrion vultures are used less often as they are brittle. The feathers are split along the quill (shaft), cut on the top and on the bottom and sewn onto the base. At one end the feathers are 4 millimeters wide, on the other end (towards the notch) 8 millimeters wide. The split quill is 5 centimeters, the outer flags of the feathers 7 to 8 centimeters.

411 The base consists of tinfoil and is divi-
237 ded variously. A strip of tinfoil (not colored) alternates with a strip of tinfoil colored red.
531 Thus the bases have a red tinfoil strip in the middle and two red ones at each end. Or there are three in the middle and at the ends two or three red strips of tinfoil. The space in between is filled out with uncolored tinfoil (silver). The red strips of tinfoil are two millimeters wide. (18)

18. Illustration II, fig. 8a.

There are also bases of leather which is cut very fine and gilded. As in the examples just mentioned red strips of tinfoil alternate with the base that is not colored; similarly, uncolored strips of leather alternate with the gilded base. The uncolored strips of leather are 7 millimeters wide. (19)

19. Illustration II, fig. 7a.

The feathers which have been cut properly are now sewn onto the bases with uncolored natural silk, in a spiral form, (20), although

20. Illustration II, fig. 4

lightly. The stitches are made exactly and evenly throughout. Figures 7b and 8b of illustration II, though greatly enlarged show how the silken threads are put on. With a base 5 centimeters long the number of stitches is 22 to 24, with bases of 7.5 the number of stitches is 29 to 31. 411 237 531

The feathers are at right angles to the split quill on the shaft and are sewn on five together, more rarely three together.

On the underside of the base (towards the tip of the arrow) black colored pitch is smeared, to unite the cut off feather ends to the shaft of the arrow. (21)

21. Illustration II, figs. 7a, 8a.

/014/ Ad. 2. Tied tangential feathering is only used still on children's arrows ('nam-phiah). A completely uncut feather is fastened lengthwise on the end of the arrow by silk or bast and the join is smeared with pitch. 111 237

Hunting arrows and arrows for sport are also used unfeathered (hunting arrows especially in the neighborhood of Lamin) and are then simply called 'nam, but if they are feathered they are called 'nam-pur. 411 526

The target is made of the soft wood of a root and is called ka soh pdung by the Khasi. A piece of wood about 8 to 10 centimeters wide and 50 centimeters long is cut from the root, smoothed on the front side and pointed somewhat towards the ground, so that the whole thing resembles a relatively wide but short lath. This target is set up by putting the somewhat pointed end into the earth and placing two bamboo sticks behind as braces, so that the target cannot be tipped

411 over backwards by th impact of the arrows.
526 Bunches of grass of straw, u skum, are taken and fastened to a pole. The distance between the shooters and the target is quite varied, 50 to 200 meters being the usual distance. The Khasi bows can shoot an arrow a great distance with accuracy. Good shots hit the target even at a distance of 200 meters. The average shot can stand at a distance of 130 to 170 meters. Consideration is taken of younger archers, but if the distance has been established, it must be very carefully adhered to. A string is stretched along the ground which indicates exactly where the shooter must stand.

411

Ways of Bending the Bow

It takes a lot of practice and especially a great deal of strength to hit a definite mark. The archer usually gets down on his right knee and grasps the bow, with his left arm stretched out, somewhat below the middle of the ribbed band and braces his thunb against the bow. He places the arrow with his right hand. The arrows shoot out on the left side of the bow. Some release the arrow between the middle finger and the index finger which is held somewhat bent. The right hand braces the end of the arrow in the notch on the string and holds it firm with the thumb and bent index finger. With the head bent a little to the left and aiming with the right eye, string and arrow are pulled at the same time and after the bow has been pulled to the correct tension, the arrow is released. (22) Only the best shots

22. Hans von Stüssi, Mit Pfeil und Bogen /With Bow and Arrow/,

411

achieve calm aiming and a calm posture.

Another method of bending the bow is also used a great deal. The archer takes the arrow in his right hand, places it to the left on the bow and pulls the string with his middle finger and ring finger while his thumb and index finger hold the arrow. /614a/ /Table I, Khasi at an Archery Contest/ /614b/ Table II. Khasi at an Archery Contest/

/615/ The Quiver

The quiver (ka ryngkap) is made of plaited bamboo which is covered on the outside with a very finely plaited cover of reed palm. Its shape resembles a closed umbrella. At the opening the plaited work is raised in front in the shape of an arc, and in the back it is raised in a more rounded form. On each side where the quiver curves down and around a stick is attached. Quivers are not used for shooting or hunting. The Khasi carry their arrows in their hands then. The use of quivers is restricted to dances and even this is very rare. (23) [535]

23. Ethnographic Museum, Munich, Quiver As, 106, is 57 centimeters long and 9 centimeters wide at the opening. The plaited part in front is 40 centimeters high behind 38 centimeters, and on the sides where it curves in 33.5 centimeters. The very finely plaited reed palm has 16 smooth inlays at distances of 1.3 to

526

Table II

411

2 centimeters. On the two sticks on each of the same sides is a bamboo strip covered around with palm reed which is tied with palm reed at intervals of 3 to 5 centimeters. Weight of the quiver 220 grams.

2. Archery Contests

526 Arrows are shot on every big market day which occurs every eight days. The men and youths of a village gather together, go to the place chosen for the contest and practise industriously, because everyone wants to win in the big contest. These usually take place from January to May. Large factions develop then: village against village. The number of participants must be equally large. Each faction has its own shooting place with its own target, each next to one another. The archers by tens are placed in a line and are the same distance from the target as the string stretched on the ground indicates. Each receives three arrows for a round. The watchers and the judges are placed near the target at right angles to the archers. Both factions name their judges themselves. The latter select a fortunate day by egg throwing; (24) they choose the

24. Becker, "Das Eierwerfen der Khasi", /Egg Throwing Among the Khasi/ Anthropos, 1917-1918, pp. 494 ff.

place of the contest as well as the number of participants and the arrows to be shot. They also measure the exact distance from the target, place the string on the ground, examine the

arrows for their markings and arrange the whole contest. 526

Early in the morning on the day of the contest, each judge, accompanied by the archers and several curious people, goes to the place of the festivity. There he stands before the target, which was set up the day before. The bows and arrows are placed beside the target. The judge now proclaims aloud again 526 all the conditions of the contest. He calls 782 upon the Khasi Eve (ka-mei-ka-nong-hukum (25)

25. The Khasi believe that arrow shooting began with the creation of the world. For the Khasi Eve had two sons. She taught them the art of arrow shooting but warned them at the same time never to lose their tempers while playing. Gurdon, The Khasis, p.55. [772]

for her help and in a rambling speech recites all the errors of the opponents (26). While

26. The Khasi believe that the opponents' arrows will be kept from hitting the target by invoking the Khasi Eve and by the utterances of the judge. Gurdon, p. 55.

he is speaking thus, he pours water [616] from time to time out of a bamboo tube that was brought along in front of the target. Because of the talkativeness of the Khasi and their peculiarity of talking extemporaneously and their slowness this lasts about two hours.

526 hours. Meanwhile all the archers and many people have arrived. The judge gets up and turns to the archers, talking eagerly and spurring them on to do their best, so that they may emerge as victors in the contest. Shrieking loyally and making a noise, the archers take their places by the string lying on the ground and each pays one anna (about 10 pfennigs, peace evaluation) as a contribution. It is customary in many places to charge a larger amount. The money is collected by the judge (u-nong-khang-khnam) and kept until the end of the year. After the last contest it is spent for the "festival after the archery contest."

When the money has been paid and some liquor (ka-kiad-um) is poured on the ground, the contest begins. The archers bend their bows and each one aims and shoots as he wishes. If an arrow hits the mark, a loud cry comes from the spectators. The men jump in the air and utter cries of joy. The archer himself gets up, turns around in a circle a couple of times, jumps in the air and swings his bow, uttering
526 cries of joy continuously. Now, since first
522 this one and then that one hits the mark, whether it is someone in one's own faction or one of the opponents, cries of joy and rejoicings may be heard almost without interruption. The people of one's own team try to spur on each archer during his round by shouts. For example, if an archer has a black (marked) arrow, they shout: "to, to ba iong ba iong! i.e., hit, hit black one, black one!" In this case the opponent has the white arrows. If such an arrow goes crooked and flies past the target, they shout at it: "Phui, phui kyndat shiliang, rakaid me, u rakaid! i.e. fie, fie you fly to one side, you bungler, you

bungler!" (27) When the opponent aims and 526 522

27. P.C. Bohnheim, "Das Pfeilshiessen der Khasi" /Arrow Shooting Among the Khasi/, Salvatoranische Milleilungen /Salvatorian Communications/, 1910, No. 2.

shoots they shout at him: "Bam khyndeu, bam shiap! i.e., eat earth, eat sand!" (The opponent's arrow is supposed to fly into the earth or sand). There is ample opportunity here for talking extemporaneously as the Khasi so love to do. Following the examples mentioned above they shout at the archers of their own team or of the opponents' team. At the same time I have never noticed that [578] anybody felt insulted or that quarrels and fights ever arose. If somebody feels affected by the remarks, he or one of his team tries to overtrump his opponent by a really potent remark. If that is successful everybody rejoices in the comment and the round 526 of shooting continues peacefully. When a round of ten or more archers who have each shot three or more arrows is finished, the judge enters the closed-off place and counts out loud the arrows sticking in the target. With a great hullabaloo the crowd confirms the number of hits; the opponents do the same and then the contest begins again with all the /617/ action described above. When this process has been repeated often, a longer pause occurs. During this, and often during the shorter recess after each round, the women and girls hand out refreshments. The water pipe makes the rounds and no one spares praises. Thus it continues till

526 sunset. (28)

28. The two large photographs were taken at this late hour. One picture (Plate I) during the sunset. Notice the long shadows. The other picture (Plate II) just after sunset.

When the target is no longer easily visible because of the twilight, the shooting is stopped. The judges now announce the final result out loud, which provokes stormy applause. After the judges are remembered with presents by their own factions, the archers come together in a group. They stand one behind another in a row, each row with about four to six archers. The battling factions stand opposite each other. Waving their bows longways up and down --the men on the outside swing theirs--they march up and down on the festival place, stamping their feet in a quick rhythm. Singing and shouting they go back and forth. First one team then the other goes backwards. This kind of joyful utterance cannot actually be called singing; it is rather a quick uniformly modulated recitative uttered in an excited tone, interrupted again and again by "ha, ha, hoi, hoi" (kynha, kynhoi is the same as ha, hoi, i.e. shouting, calling). Someone or other of the victorious team makes a verse on the spur of the moment, which is about the contest, and the dancing, marching crowd repeats it noisily. Or rather after each verse they burst out with cries of joy and pleasure (ha, ha, hoi, hoi).

533 To give an example how these verses sound approximately, I will give an original text with a literal and a free translation. (29)

29. For the German translation and

the added explanations I am 533
indebted to the Khasi missionary
R.P. Dominikus Daunderer, S.D.S.,
who has been here many years and
knows the language and who very
kindly placed his experiences
in this field at my disposal.

It should be noticed in general that the [771]
content of such extemporaneous verses has a
religious slant and the language adheres to
the mysterious method of expression of magic
formulae and other formulae usual in the reli-
gious customs of the Khasi. Nevertheless, we
may not seek for either secrets or magic in
the following chant (jingphawar) just as the
Khasi do not. The solo singer (u nongphawar) 526
goes in front of the victorious team and begins: 533

1. U dieng-duh u kyndeh
The placing, the rice.
U sohbyrthit ia u pathaw.
The bur, the gourd.

2. To ngin khynniuh tyngeh.
Let us shake mightily.
Ban shon shit la ka daw.
May our matter be in easy circumstances.

Then the rest shout, swinging their bows
and stamping the earth: "ha, ha, hoi, hoi-hui!"
[618]

3. Ka syrdeng u jasieh
The fence, the meadow.
Shi kynda ka kyndad.
Four moles.

4. To pynieng ka dieng ryntieh.
Let us place upright the wood
of the bow.

4:Stegmiller-25 M-4,5(no date)1925 AR7KhasiAR7

526 Ko samila kynrad
533 Youths, o lords.

All: "ha, ha, hoi, hoi-hui!"

5. Ka syrdeng u jasieh.
The fence, the meadow.
U thylliej ka shohthah.
The tongue, the little red
throat.

6. To pynieng ka dieng ryntieh.
Place upright the wood of the
bow.
Ban ieit ka daw bah.
So that the affair be loved,
the big one.

All: "ha, ha, hoi, hoi-hui!"

7. U narsuh, shibidi.
Iron, wire, four pieces.
U bisin ia ka syrdeng.
The snake, the fence.

8. La kynduh bad ngi.
When one battles with us.
Ngin pynkhein ia ka reng.
Then we break the horn.

All: "ha, ha, hoi, hoi-hui!"

9. U kyndeh ia u bisong.
The rice, the weasel.
Ka lengsangem halor dieng.
The hawk on the tree.

10. To lyngngeh la ka jingong.
Make your word hard.

Ba un jem ka jabieng
That the forehead may become
soft.

All: "ha, ha, hoi, hoi-hui!"

11. Ka liengsangem halor dieng.
The hawk on the tree.
U pathau u jalimut.
The gourd, the chrysamthemum.

12. Ba un jem ka jabieng.
That the forehead may become soft.
Ba un jaw ka eit mut.
That the mucous discharge from
the nose become soft.

All: "ha, ha, hoi, hoi-hui!"

13. U synrem u kyndok.
The nettle, the brimstone.
U sohryngkham shi hynda.
Wild plums, four pieces.

14. Wat iam rem ko lok.
Do not weep defeated, friend.
Ba la bam hi ka pasa.
For the Pasa itself has consumed it. (30)

30. Ka pasa is probably a demoness, guardian spirit of the shooters and hunters (-hsau?). Sanskrit: pasa--string, snare (Los?).

As may be seen, such a song (jingohawar) is not easily understood. In the first odd lines, words that are (seemingly) without

526 meaning are placed next to each other usually
533 a nominative before the objective case (accusative--dative). These words form the frame for the words contained in the second (even lines) sayings.

The poem can be reproduced in the following way to make sense (only the even lines):

2. Let us stamp mightily so that the earth groans.
So that it is known for certain that we have conquered.
4. Set up the bows, you brave youths!

6. Set up the bows so that the mighty victory shows.
8. Whoever dares to battle us, we will fix his comb.
10. May your mockery be sharp, the opponent must weep.
12. He must weep, his eyes weep, his nose runs.
14. Do not be sorry, comrades, it was so determined!

[522] /619/ Singing in this way with mocking songs
526 to the defeated opponent, shouting and rejoicing, the crowd moves across the place of the
273 festival. Liquor is brought and drunk zealously, only too zealously, so that the crowd lighted by the torches, aroused by the brandy, and excited by the shooting competition, makes a wild impression. The raw, wild joy breaks forth in a deafening racket. Finally tired of the rushing around they return slowly but still shouting to their village, and scatter to their huts, still disputing violently about the happenings.

526 The cost of an archery contest varies

The cost of an archery contest varies [435]
considerably. In general it can be said that 526
a shooter pays one anna (about 10 pfennigs, 525
peace evaluation) for each shot. All the various competitions together produce a tidy little sum, especially when the attendance is good. I have come across figures as high as 50 to 70 rupees which were got together in this way during the course of a year and were then spent at the end of the year together at a great feast after the main competition.

It is frequently the custom among the Synteng, not to collect this contribution, anna by anna; rather, a large sum, which is raised by collecting signatures, is bet with the opponent at the main shooting (the final game). This also occurs occasionally among the Khasi. (31)

31. Gurdon, The Khasis, reports on page 56 that a sum of 500 rupees was bet in the Nongkrem state in Khadar Blang at a shooting competition.

3. The Feast after the Archery Contest 527

A general feast is arranged with the money bet or saved. Everything is just as wild during this feast as during the archery competition. Several strong men go forth to fetch the pigs bought for this occasion. The living animals are tied to bamboo poles by their feet. Four men, two and two alternately, carry each a burden on their shoulders to the place of the festival. There is lively activity at that place. The men stand around huge fires and chat. Others busily arrange dishes and pots of brass --everything polished

527 clean. Others break off palm leaves and twigs
from trees to decorate themselves and the
place. A music ban takes care of the neces-
527 sary noise. The three pigs and goats are re-
252 ceived with shouts. Without much ceremony the
animals are slain and now the actual festival
begins: the cooking, the dancing and the
eating.

The people divide into various groups.
Some divide the slaughtered animals by the
light of a great fire. The pieces of meat
are put in one pile, the fat in another.
About ten men sit around in a circle and begin
to cut the meat into small cubes. These are
then placed on little three-sided bamboo
sticks. All the rest of the meat, such as
lungs, heart, kidneys, and brains are put to-
gether in a cooking pot. [620] The girls and
women sit at a third fire. They hold the fat
and lard on long bamboo sticks over the fire
to roast it on all sides by constant turning.
527 The rest of the men dance to the peculiar
music. Each person dances alone. They hold
long bamboo sticks in their right hands, and
in their left hands they hold a bunch of
branches from a tree or large leaves. Some
make huge turbans for themselves out of rice
straw. Decorated thus they hop from one foot
to another, make deep bows now to the left,
now to the right and alternately swing their
bamboo sticks or their bunches of leaves.
Others turn around in circles, beating time
with their palm leaves. When the dancers
are tired they take over the job of cutting
the meat and cooking and the others decorate
themselves for the dance. In reply to my
question, what this all means, I received the
following answer: "We are happy and for once
we want to have a thoroughly good time. We

won the money in the archery contest and now 527
we should have a big feast. It is full moon now and much more beautiful during the night than the day. Oh, we are just having a good time." At once he swung his bunches of leaves and hopped away. The women take care of stirring the cooking pots. They are not choosy about the spoon. A bamboo, which a tired dancer might have just thrown away, is quite adequate for this purpose. When everything is ready, the people sit down in groups and eat the meat. Rice brandy is handed around. When the archers and other guests at the festival are more than sated and exhausted from all the dancing, they leave the place towards morning.

It should be pointed out that contrary [262]
to their usual customs the Khasi eat no rice at the great feast after the archery competition but only meat, with which brandy is drunk. There is a good deal of overindulgence in food and drink on this occasion. (32)

32. P.F. Stegmiller, "Das Fest nach dem Pfeilschiessen" /The Feast after the Archery Contest/, Salvatoranische Mitteilungen /Salvatorian Communications/, 1910, No. 3.

4. Hunting Customs

Although there are all sorts of wild 224
animals in the Khasi hills and Jaintia hills 136
that can be hunted -- flying foxes which visit the orange gardens during the night, jackals, which annoy the villages with their howling, antelopes, does, deer and wild pigs which damage the rice fields, wild dogs, wolves,

224 bears, leopards and tigers, which seize their
136 prey not merely among the goats and calves, but also among the grown cattle, and at times are even dangerous to man; although there are lots of tasty birds -- quails, partridges, lapwings, coots and wild geese -- in spite of all this the Khasi are not actually hunters. Only when an opportunity either presents itself to catch such birds, or when a wild animal has shown itself or even caused damage in the village, then the Khasi go hunting. Exceptions occur. The Khasi who use bows and arrows from childhood on, who practise shooting conscientiously, dare to hunt bears, leopards, and tigers. [621] Today they often have guns for this purpose, but bown and arrows are always taken along.

224 When a lucky day has been determined upon
187 by egg throwing, (33) and often the hunting area

33. Dr. P.C. Becker, "Das Eierwerfen der Khasi" [Egg Throwing Among the Khasi], Anthropos, 1917-1918, pp. 494 ff.

is often determined in this way, the Khasi set
224 out with a pack of hounds. As soon as the dogs have come upon the scent of the wild animal, the Khasi begin driving it with howlings and noise. The first shooter is lucky (called u nongsiat by the Khasi) because he gets the lion's share of the prey. Whoever is the second one to hit the animal (called u nongban by the Khasi) also receives special consideration. The other shooters divide the rest of the slain animal among themselves after the hunting dogs have each been given a piece. The Khasi are very persevering on the hunt and do not bother about the time or the distance. For the efforts expended on the hunt are richly rewarded by the

triumphal procession with the slain beast through the home village. 224

A litter is prepared outside of the village of firm bamboo and decorated with palm leaves and other tree branches. In the middle of the litter a strong frame of bamboo is set up so that the spoil of the hunt (gazelle, antelope, bear, tiger, leopard, etc.) is placed on it belly down. The feet hang down stretched out. The head is held high by a forked branch, and a bunch of grass is placed in the animal's open mouth. The slain animal thus has an appearance of being alive. Arrow and bow are placed on the bier to the left and right of the animal. If the animal has been killed by a bullet, the Khasi carry the guns in their hands; if it was hit by an arrow, the first arrow which wounded it is placed in front on the bier before the animal. Then eight men lift the decorated bier with the slain animal on their shoulders and they all go towards the village with great ceremony. Blank shots announce the approach of the triumphal procession. The Khasi come from all sides. The hunters are congratulated, and all rejoice in the booty. Everybody watches the parade with pleasure. Some bring fresh rice brandy in bamboo pipes as thick as an arm; others bring betel nuts and water pipes. [redacted] this as well as other refreshments are offered the hunters. The crowd surges around the bier, and after the slain animal has been thoroughly discussed, the procession begins.

224 224 483 224

The village boys run noisily ahead. Beaters and hunters follow. Then comes the bier carried by eight men. To the left and right go the women and girls of the village, swinging branches and bunches of leaves. Shouts of joy resound. Several hundred people

224 have gathered and go either behind the bier or sit down on the edge of the road to be spectators. There is not much difference because the parade goes so slowly that it is hard to see if it is moving at all. The triumphal parade takes a full four hours to go a distance of about 800 to 900 meters. [622] Although the Khasi are never in a hurry, in this case they are the
224 slowest ever. But there is something ceremonial
533 in this and when the solo singer (the nongphawar) raises his voice in extemporaneous song, to celebrate the dead animal when the crowd answers rejoicing and shouting, assuring the singer again and again that he is doing it well and thus spurring him on to new verses, when blank cartridges are shot off and the spectators are lit up brightly by torchlight, milling around in their colorful costumes, when the rice brandy has done its share, then the climax is reached!

The solo singer goes in front of the bier, 1 but with his face always turned towards it. Gesticulating violently with his hands, he bows now to the left, now to the right; he bends his upper body now forwards, now backwards. Jumping in the air from time to time, he only shows signs of joy and praise. According to his whim and invention he sings about the animal. The crowd joins in the improvised refrain, which is sometimes a repetition of the solo song, sometimes a shout of applause.

533 The solo singer sings approximately: (34)

34. P.D. Daunderer, "Khasi-Sitten" [Khasi Customs], Missionar [Missionary] 1905, pp. 179 ff.

Solo singer: "Hey! strong mother of bears, hungrilly thou eatest thine own children!"

1 [carrying the hunters' prey-- Analyst]

All: "Ha, ha, ho, huh!"
S : "Hey! Beautiful she-bear! Truly beautiful mother, most exalted in the circle of thirty animals!"
All: "Ha, ha, ho, ha, huh!"
S : "Now thou hast been brought to the marketplace, o mistress! To the marketplace! Hey!"
All: "Ha, ha, ho, huh!"
S : "Thou has written thy death sentence thyself, when thou tookest booty from the house of the poor!"
All: "Ha, ha, ho, ha, huh!"
S : "The pack of hounds, however, the wonderfully raging hounds and the man, the clever one, brought luck on their side!"
All: "Ha, ha, ho, huh!"
S : "The hunting demon, the spirit of the field, the household spirit! Therefore we rejoice mightily and celebrate and exult!"
All: "Ha, ha, ho, huh!" etc.

One man sang about as follows at such a triumphal procession in Laitkynsew, when an antelope was brought home:

S : "From the mountains, from the cold land thou has come to us into this land, into the kingdom of Laitkynsew!"
All: "Ha, ha, ho, huh!"
S : "Thou wast free and rejoiced in the forest, thou didst thyself well by the green grass for a goodly long time!"
All: "Ha, ha, ho, huh!"
S : "The hunters saw thee young and powerful — beautiful -- in the circle of thirty animals. They went forth with arrow and bow, with gun, lead and powder!"
All: "Ha, ha, ho, huh!"

533 S. : "Thou fledst into the thicket! Did that help thee?
Shyly thou retreated before the brave crowd of hunters!"
All: "Ha, ha, ho, huh!"
S. : "Quickly indeed thou retreated; quickly the pursuers pressed after thee and arrow and bow brought thee low!"
All: "Ha, ha, ho, huh!"
S. : "O mistress! Why didst thou come hither? Thou gavest thyself over to death and destruction — but we rejoice and celebrate and exult!"

Thus it continues for a long time. When one person has sung until he is hoarse, another takes his place and continues the song.

224 Exhausted from the exertions of the hunt, exhausted from the activity of the parade home, hoarse from shouting and screaming, heated from the enjoyment of brandy, the crowd drags itself to the house of the hunter who placed the first arrow or shot in the wild animal. Sacrifice is made there to the village god and the slain animal is divided up. The first shooter (u nongsiat) receives the hind quarters, the second shooter (u nongban) the front quarters of the animal.

In the Jaintia Hills the Synteng go to a hill in the neighborhood of the village when they have hunted and killed a tiger or a leopard. An altar is set up there under an oak tree and the head of the animal, which has been severed from its body, is placed on it and sacrificed to the u'lei lyngdoh (the god of the Dolloi district).

782 224

411 778 Arrow and bow are not only necessary weapons to the Khasi for hunting or pleasant sporting equipment for archery contests; Arrow and bow are also holy to him in a certain

sense. For at his entrance into life and at his departure from it both are used in the religious ceremonies. If a boy is born, a bow and three arrows are placed beside him at the name giving, (35) After various ceremonies, 411 778 [KS]

35. P.F. Stegmiller, "Aus dem religiösen Leben der Khasi" [The Religious Life of the Khasi], Anthropos, 1921-1922, pp. 425 ff.

which cannot be described here, the sacrificer shows the boy the bow and three arrows, and calls upon him to become a good shooter. At the end of all the ceremonies the bow and the arrows are carefully attached to the inside of the straw roof of the hut.

It should be mentioned that at a Khasi cremation (36) a bow and three arrows are also 411 764

36. P.F. Stegmiller, loc. cit., p. 430 ff.

used. They are kept in readiness with the other ceremonial objects of the dead, while the corpse is being shown for the last time to the participants in the funeral. As soon as the fire flames up on the funeral pyre, three arrows are also shot off: one towards the north, one towards the south, and the third towards the east. The Khasi call these arrows 'nam-tympem.

Pfeilschießen und Jagdgebräuche der Khasi.

Von P. P. Stegmüller, S. D. S., apost. Missionar von Assam.

1. Das Pfeilschießen und seine Geräte.

Dem allgemeinen Interesse entsprechend, welchem dem Pfeilschießen entgegengebracht wird, sind auch die dazu gehörigen Utensilien mit großer Geschicklichkeit und Kunstfertigkeit[1] ausgestattet, nämlich der Bogen, die Pfeile und die Zielscheiben.

Zum Khasi-Bogen (ka rynthiah) nimmt man eine vielknotige Bambusart, und zwar schneidet man denselben so aus einem Stück heraus, daß wenigstens fünf Knoten am Bogen sind. Die Länge des Bogens beträgt rund 1·50 m. Es ist nicht gleichgültig, wie lang der Bogen ist. Die besten Schützen behaupten, daß der Bogen nach Maß, und zwar nach dem Längenmaß der Schützen bis zur Schulterhöhe gemacht sein soll. Die Größe des Mannes bestimmt die Größe des Bogens[2].

Ist ein vielknotiger starker Bambus gefunden, so wird er, nachdem die Länge bestimmt ist, abgeschnitten und halbiert. Die Außenseite des Bogens wird bei kleineren Bögen stark abgerundet[3], bei den gewöhnlichen und bei größeren Bögen wird fast die volle Hälfte des Bambus genommen. Nur an den Seiten wird etwas abgeschnitten, so daß der Durchschnitt dieser Bögen fast ein Rechteck bildet[4]. Die glänzende, äußere Seite des Bambus kommt in jedem Falle in die Innenseite des Bogens. Gegen die Bogenenden verjüngt sich der Bogen. Die Enden werden abgerundet. Unterhalb des einen Endes wird ungefähr 3 cm entfernt ringsum ein Einschnitt gemacht, in welchen die Sehne direkt, ohne weitere andere Verbindungsmittel, eingehängt wird. Durch strammer Anziehen dieser Schlinge bleibt die Sehne befestigt. Am anderen Ende des Bogens wird ein Zapfen geschnitten, um den die Sehne vor dem Schuß gehängt wird. Vielfach setzen beide Bogenenden in einer Spitze ab[4]. Der Bogen darf nicht gespannt aufbewahrt werden, sondern muß bei längerem Nichtgebrauch entspannt sein. Das Einhängen der Sehne geschieht stets in der Weise, daß der Schützen den Bogen stehend in die linke Hand nimmt, fest mit dem einen Ende, an dem die Sehne stets befestigt bleibt, auf die Erde stützt und dann mit der rechten Hand das andere Ende soweit herabdrückt, daß die Sehnenschlinge in den Zapfen eingehängt werden kann. Bei Bögen mit abgesetzten Spitzen wird in vielen Fällen die Sehne mittels einer besonderen Schlinge aus Bast oder gespal-

[p. 607]

Abb. 1. Kharé-Degen.

treuem Bambus *(u ikri)* eingehängt, aber auch direkt durch Umhängen um den Zapfen befestigt.

In der Mitte wird der Bogen flach geschnitzt und ein Rotangstreifen um denselben gewickelt, so daß ein 12 bis 15 *cm* breites Band entsteht. Zweck desselben ist ein sicherer Halt, da die linke Hand, welche den Bogen beim Schießen trägt, an der gerippten Unterlage einen besseren Halt bekommt. Auch an anderen Stellen, vorzüglich an den Enden des Bogens werden solche Rotrbänder befestigt, die lediglich den Zweck eines Ornamentes haben.

Ist der Bogen fertiggestellt, so wird er tüchtig angeräuchert. Das Räuchern geschieht in der Hütte. Im Mittelpunkte der Hütte brennt ständig in einem Erd- oder Steinherd ein Feuer, dessen Rauch, weil ohne Abzug oder Kamin, sich so gut als möglich einen Ausweg sucht. Oberhalb des Feuers ist von der Decke herab eine Schwinge angebracht, auf der das Holz zum Trocknen liegt. Auf dieser Schwinge wird nun der Bogen und ebenso die Sehne solange liegen gelassen, bis der erwünschte Erfolg eingetreten ist. Geräucherte Bogen sind widerstandsfähiger gegen die Nässe und dauerhafter, da bedeutend stärker. Einen Einfluß auf die Biegsamkeit des Bogens hat das Räuchern nicht*.

Zur Herstellung der Sehne *(u kaai)* spalten die Khasi einen Bambus und splittern davon einen Streifen ab, den sie stark anräuchern. Die Sehne ist für Bogen mit ringförmigem Einschnitt gleichmäßig, für Bogen mit abgesetzten Spitzen verdickt sie sich gegen die Enden, an welchen Widerlager aus Bambusknoten (mit der Sehne aus einem Stück) geschnitzt werden. Die zur Sehne verwendeten Bambusarten werden von den Khasi *u ṡpit*, *u ṡkhew* und *u siej-lieh* genannt. Zur Sehne werden auch Bastschnüre mehrfach gedreht, verwendet. Die Bambussehnen werden geräuchert (siehe oben). Die so gewonnenen Sehnen sind äußerst stark und vertragen eine große Spannung. Bei einem 150 *cm* großen Bogen beträgt die Segmenthöhe, d. h. die Spannung bei eingehängter Sehne 10 bis 12 *cm*. Manchmal hat aber die Sehne fast die Länge des Bogens und es resultiert daher daraus keinerlei Spannung. Beim Abschuß wird die Spannung durch Anspannen der Sehne bis auf 60 *cm* erhöht. Der Bogen stellt somit eine starke, wuch-

tige Schleuder dar, der den Pfeil ohne weitere Mechanik nur durch Anziehen der Sehne und Rückbewegung des gebogenen Bambus fortbewegt[7].

Die Khasi verfertigen folgende Arten von Pfeilen:

1. Befiederte Pfeile *('nam-pur)*.
2. Unbefiederte Pfeile *('nam)*.

Befiedert oder unbefiedert sind: *a)* Jagdpfeile, *b)* Sportpfeile; stets befiedert sind *c)* Kinderpfeile.

Ad *a)* Jagdpfeile *(u 'nam-pliang)* sind ungefähr 70 *cm* lang, haben speerförmige Spitzen mit Widerhaken[8]. Gewicht der Jagdpfeile ungefähr 25 *g*. Diese Pfeile werden auch heutzutage noch vergiftet.

Ad *b)* Sportpfeile *(u 'nam-sop)* sind ungefähr 60 *cm* lang, haben runde, konische Eisenspitzen[9]. Gewicht der Sportpfeile ungefähr 8 *g*.

Ad *c)* Kinderpfeile *(u 'nam-phiah)* sind ungefähr 50 *cm* lang, haben runde oder gar keine Eisenspitzen. Befiederung ist von den anderen Pfeilen verschieden (siehe diese).

Pfeilschäfte.

Sämtliche Pfeile werden aus einem sehr dünnen Bambus hergestellt *(u 'nam-long* oder *igrd)* und geräuchert. Man nimmt möglichst knotenfreies Bambus. Die Dicke der Pfeile beträgt ungefähr 6 bis 7 *mm*. Die Länge der Pfeile variiert sehr. Denn Pfeil und Bogen müssen sich eben so innerlich ergänzen, wie sie äußerlich zusammengehören[10]. Es unterliegt keinem Zweifel, daß die Länge des Pfeiles von der Länge des Bogens abhängt. Ein großer, aber wenig biegsamer Bogen braucht keinen ebenso langen

---

[7] Bogen As, 108, *b*, hat eine fünfknotige Bambussehne, die glänzende Seite nach innen gekehrt. Die Sehne ist in der Mitte 4 *mm*, an den Enden 7 *mm* breit. Am Ende selbst ist je ein Widerlager aus einem Stück mit der Sehne geschnitzt. Die Sehne wird mittels einer dreifachen Bambusschnur *(u thri)* an den abgesetzten Spitzen befestigt. Die Sehne und die Bambusschnur wird von einem 3 *mm* breiten Bambusband festgehalten. Abb. I, Fig. 1 *a*, Segmentfhöhe 9 *cm*. Gewicht des Bogens 190 *g*. Bogen 108, *a*, *b*, *c*, haben schwerlich zu Sportzwecken gedient, wahrscheinlicher sind sie Kinderbogen, wenn sie nicht gar absichtlich für den Verkauf an Europäer angefertigt wurden. Bogen As, 28, hat eine fünfknotige Bambussehne, in der Mitte 3 *mm*, an den Enden 8 *mm* breit, an beiden Enden sind Widerlager aus einem Stück mit der Sehne. Die innen gekehrte, äußere, glänzende Seite der Bambussehne ist abgeschabt, mit Ausnahme der Sehnenenden. Dort ist sie abgesplittert und als Deckung für die Widerlager zurückgebogen. Die Sehne ist mittels einer zweifachen Bastschnur beiderseitig an den abgesetzten Spitzen befestigt. Beide werden mit Draht zusammengehalten. Abb. I, Fig. 2 *a*, Segmentfhöhe 8 *cm*. Gewicht des Bogens 330 *g*. Bogen J hat eine zweiknotige Bambussehne, 3 *mm* gleichmäßig breit, ohne Widerlager. Befestigung an den Zapfen durch direktes Einhängen, Gewicht des Bogens 330 *g*. Abb. I, Fig. 4 *a*, 4 *b*. Bogen S hat eine dreifach gedrehte Sehne aus Bast. Diese Bastschnur wird schlingenartig um die Kerbe und um den Zapfen (abgesetzte Spitze) eingehängt. Die Knüpfungsknoten der Schlingen befinden sich 30, resp. 19 *cm* vom Ende entfernt. Gewicht des Bogens 449 *g*. Abb. I, Fig. 3 *a*, 3 *b*, 3 *c*, 3 *d*. Beide letztgenannten Bögen haben keine Segmentfhöhe, da die Sehnen so lang sind wie die Bögen.

[8] Abb. II, Fig. 2 *a*, 2 *b*.

[9] Abb. II, Fig. 1.

Abb. II. Khasi-Pfeil.

4: Stegmiller AR7 Khasi

Pfeil, wie ein kleiner biegsamer. Die absolute Länge des Bogens bedingt die Länge des Pfeiles insofern, als einem längeren Bogen in der Regel auch ein längerer Pfeil entspricht[11]. Sportpfeile schwimmen wagrecht auf dem Wasser[12].

Pfeilspitzen.

Die Pfeilspitzen werden aus Eisen in den Dorfschmieden gemacht. Die Spitzen für die Jagdpfeile *('nam-pliang)* sind flach, gegen die Mitte etwas erhaben, haben glatte oder gezähnte Ränder und zwei oder mehrere Widerhaken (speerförmig). Länge der Spitzen ungefähr 9 bis 15 *cm*. Es werden auch schöne schmiedeiserne Pfeilspitzen mit durchbrochenen Mustern gemacht[13].

Die Spitzen der Sportpfeile *('nam-sop)* sind rund und konisch. Länge ungefähr 3 bis 6 *cm*.

Die speerförmigen Pfeilspitzen werden vergiftet mit *(ka bih)* Gift, das die Khasi aus den Knollen einer Pflanze *(aconitum ferox Wallich*, Eisenhut) gewinnen.

Befestigung der Pfeilspitzen.

Auf zweierlei Arten werden die Pfeilspitzen befestigt:

1. Entweder wird der Pfeilschaft vorne zugespitzt und die Pfeilspitze, die innen hohl ist, darübergestülpt. Beides wird mit heißem Siegellack verbunden.

2. Oder man hat eine eigene Hülse aus Kupfer, die die Pfeilspitze mit dem Pfeilschaft verbindet. Siegellack wird nicht verwendet, da die Hülse wie eine Zwinge wirkt. Länge der Hülse ungefähr 1·5 *cm*.

Pfeilkerbe.

An dem der Spitze gegenüberliegenden Ende wird bei jedem Pfeile eine Kerbe eingeschnitten. Der Pfeil wird so aus einem ganzen *'nam-long* oder *igrâ* (Bambusart) genommen, daß die Kerbe gerade nach einem Knoten geschnitzt werden kann. Zweck der Kerbe ist ein ruhiges Aufsetzen auf die Sehne. Es gibt zweierlei Arten von Kerben:

1. Kerben, die der Kurve eines maurischen Bogens gleichen[14].

2. Kerben, die eine gerade Fläche im Untergrund und links und rechts eine Spitze haben[15].

Verhältnis der Schneidefläche zur Kerbe.

Die großen speerförmigen Spitzen der Jagdpfeile *('nam-pliang)* stehen mit der breiten Fläche im rechten Winkel zur Kerbe und somit zur Sehne des Bogens[16].

---

[11] BRUNO ADLER, wie oben, S. 13.

[12] „So erzählt WENIAMINOFF (Sapiski ob ostrowah Unalaschkinskago Otdjela, Bd. 2, St. Petersburg 1840) von den Aleuten, daß die Spitzen der besonders auf Biberjagden verwendeten Pfeile solche Gewichtsverhältnisse haben, daß der Pfeil trotz des schweren Schaftes nicht im Wasser untergeht oder auf dem Wasser liegt, sondern aufrecht schwimmt, so daß ein beinahe fußgroßes Stück über die Wasserfläche herausragt."

[13] Abb. II, Fig. 3 *a*, 3 *b*.

[14] Abb. II, Fig. 5 *a*, 5 *b*.

[15] Abb. II, Fig. 6 *a*, 6 *b*.

[16] BRUNO ADLER, wie oben, S. 607.

Pfeilmarkierung.

Vom Ende der Befiederungsunterlage bis zur Kerbe werden manche Pfeile (Sportpfeile *'nam-sop*) durch Lack schwarz markiert, damit man beim Pfeilwettschießen die Parteien auseinander kennt[17].

Pfeilbefiederung.

Die Khasi haben eine zweifache Befiederung:

1. Radiale Nahtfiederung.
2. Tangentiale Stegfiederung.

Ad 1. Radiale Nahtfiederung ist das Gewöhnliche. Man nimmt die Federn von Gänsen, Kranichen, Kormoranen, Buluwargeiern und vom Hornvogel. Die Federn von Aasgeiern werden seltener gebraucht, da sie spröde sind. Die Federn werden am Kiel (Schaft) gespalten, oben und unten beschnitten und auf der Unterlage aufgenäht. An dem einen Ende sind die Federn 4 *mm*, am anderen Ende (der Kerbe zu) sind sie 8 *mm* breit. Der gespaltene Kiel hat 5 *cm*, die äußeren Fahnen der Federn haben 7 bis 8 *cm*.

Die Unterlage besteht aus Stanniol und ist verschiedentlich abgeteilt. Ein Stanniolstreifen (ungefärbt) wechselt mit einem rot gefärbten Stanniolstreifen ab. So hat man Unterlagen, die in der Mitte einen und an den Enden je zwei rote Stanniolstreifen haben. Oder es sind in der Mitte drei und an den Enden je zwei oder drei rote Stanniolstreifen. Der Zwischenraum ist mit ungefärbtem (silberglänzendem) Stanniol ausgefüllt. Die roten Stanniolstreifen sind 2 *mm* breit[18].

Es gibt auch Unterlagen aus Leder, das sehr fein geschnitten und vergoldet ist. Wie bei den eben angeführten Beispielen rote Stanniolstreifen mit der nicht gefärbten Unterlage abwechseln, so wechseln hier ungefärbte Lederstreifen mit dem vergoldeten Untergrund ab. Die ungefärbten Lederstreifen sind 7 *mm* breit[19].

Die zurechtgeschnittenen Federn werden nun mit ungefärbter Naturseide auf diesen Unterlagen aufgenäht, und zwar spiralförmig[20], wenn auch sehr schwach. Die Nähte sind durchaus exakt und regelmäßig durchgeführt. Auflage der Seidenfäden zeigen die Fig. 7 *b*, 8 *b*, auf Abb. II, in starker Vergrößerung. Bei den Unterlagen von 5 *cm* Länge beträgt die Anzahl der Nähte 22 bis 24, bei den Unterlagen von 7·5 beträgt die Anzahl der Nähte 29 bis 31.

Die Federn stehen mit dem gespaltenen Kiel am Pfeilschafte rechtwinklig auf und werden zu je fünf, seltener zu je drei Stück angenäht.

Am unteren Ende der Unterlage (gegen die Pfeilspitze zu) wird schwarzgefärbtes Pech geschmiert, um die abgeschnittenen Federenden mit dem Pfeilschafte zu einem Ganzen zu verbinden[21].

[20] Abb. II, Fig. 4.
[21] Abb. II, Fig. 7 *a*, 8 *a*.

+: Stegmiller AR7 Khasi

Ad 2. Tangentiale Stegfiederung findet sich nur noch an den sogenannten Kinderpfeilen *('nam-phiah)*. Es wird eine ganze unbeschnittene Feder der Länge nach am Pfeilende befestigt mittels Seide oder Bast und der Übergang mit Pech verschmiert.

Sowohl Jagdpfeile wie Sportpfeile werden auch unbefiedert gebraucht (Jagdpfeile besonders in der Gegend von Lamin) und heißen dann einfach *'nam*, während sie befiedert *'nam-pur* genannt werden.

Die Zielscheibe besteht aus dem weichen Holze einer Wurzel, von den Khasi *ka soh pdung* genannt. Man schneidet von der Wurzel ein ungefähr 8 bis 10 *cm* breites und 50 *cm* langes Stück ab, glättet es auf der Vorderseite und spitzt es gegen den Boden etwas zu, so daß das Ganze einer verhältnismäßig breiten, aber kurzen Latte gleicht. Diese Zielscheibe wird aufgestellt, indem man das untere, etwas zugespitzte Ende in den Boden steckt und von rückwärts zwei Bambusstangen als Stützen anbringt, so daß die Zielscheibe durch den Anprall der Pfeile nicht nach rückwärts umgeworfen werden kann.

Auch werden Gras- oder Strohbüschel *u skum* genommen, welche an einen Pfahl gebunden werden. Der Abstand zwischen Schützen und Ziel ist sehr verschieden, 50 bis 100 *m* ist das gewöhnliche. Der Khasibogen trägt zwar einen Pfeil auf große Strecken mit Sicherheit. Gute Schützen treffen ein Ziel noch bei einem Abstand von 200 *m*. Der Durchschnitt kann auf 130 bis 170 *m* gesetzt werden. Auf jüngere Schützen wird Rücksicht genommen, ist aber einmal der Abstand bestimmt, so muß er peinlichst genau eingehalten werden. Man spannt auf dem Boden eine Schnur, welche dem Schützen genau den Platz zum Abschießen anzeigt.

Spannweisen.

Es erfordert viel Übung und besonders viel Kraft, mit Pfeil und Bogen ein bestimmtes Ziel zu treffen. Der Schütze läßt sich meistens auf das rechte Knie nieder und faßt mit ausgespanntem linken Arm den Bogen etwas unterhalb der Mitte an dem gerippten Band und stemmt den Daumen gegen den Bogen. Mit der rechten Hand legt er den Pfeil an. Man läßt den Pfeil links vom Bogen vorbeigleiten. Einige lassen den Pfeil zwischen dem Mittelfinger und dem etwas gebogen gehaltenen Zeigefinger durch. Die rechte Hand stemmt das Pfeilende in die Kerbe auf die Sehne und hält ihn mit dem Daumen und gekrümmten Zeigefinger fest. Den Kopf etwas nach rechts geneigt und mit dem rechten Auge zielend, wird Sehne und Pfeil gleichzeitig angezogen und nachdem die richtige Spannung erreicht ist, der Pfeil abgeschossen[22]. Ruhiges Zielen und ruhiges Halten gelingt nur den stärksten Schützen.

Vielfach wird auch eine andere Spannweise angewendet. Der Schütze nimmt den Pfeil in die rechte Hand, legt ihn links am Bogen an und zieht die Sehne mit dem Mittel- und Ringfinger an, während der Daumen und der Zeigefinger den Pfeil halten.

[p. 614 : A]

4: Stegmüller AR7 Khasi

Tafel II. Khasi beim Pfeilwettschießen.

[p. 614: B]

4: Stegmiller AR7 Khasi

Der Köcher.

Der Köcher *(ka ryngkap)* besteht aus einem Bambusgeflecht, das außen mit einem sehr fein geflochtenen Rotangüberzug bedeckt ist. In der Form ähnelt er einem geschlossenen Schirm. Bei der Mündung hat das Geflecht vorne eine bogenförmige und rückwärts eine mehr abgerundete Erhöhung. In den seitlichen Einbuchtungen ist je ein Stab angebracht. Beim Pfeilschießen oder zur Jagd werden die Köcher nicht gebraucht. Da tragen die Khasi die Pfeile in den Händen. Der Gebrauch der Köcher beschränkt sich nur auf den Tanz und dies noch äußerst selten[33].

2. Das Pfeilwettschießen.

An jedem großen Markttage, der jeweils am achten Tage wieder trifft, wird Pfeil geschossen. Es versammeln sich die Männer und Jünglinge eines Dorfes, gehen auf den dazu bestimmten Platz und üben sich fleißig, denn man will beim großen Pfeilschießen gewinnen. Diese finden gewöhnlich von Jänner bis Mai statt. Da bilden sich große Parteien: Dorf gegen Dorf. Die Zahl der Teilnehmer muß gleich groß sein. Jede Partei hat ihren eigenen Schießplatz mit ihrem eigenen Ziel, beides nebeneinander. Die Schützen sind je zu zehn und zehn in einer Linie aufgestellt und durch die am Boden liegende Schnur gleichweit vom Ziele entfernt. Jeder erhält drei Pfeile für eine Runde. Die Zuschauer und Preisrichter haben ihren Platz nahe dem Ziele im rechten Winkel zu den Schützen. Beide Parteien ernennen ihre Preisrichter selbst. Diese wählen einen glücklichen Tag durch Eierwerfen[34], sie bestimmen den Platz des Wettschießens ebenso wie die Zahl der Teilnehmer und die der abzuschießenden Pfeile. Auch messen sie genau den festgelegten Abstand vom Ziele ab, ziehen am Boden die Schnur, untersuchen die Pfeile auf ihre Merkmale und ordnen das ganze Wettschießen.

Am frühen Morgen des Wettschießens begibt sich jeder Preisrichter, begleitet von den Schützen und einigen Neugierigen, zum Festplatz. Dort setzt er sich vor das Ziel hin, das bereits am Tage zuvor befestigt wurde. Die Bogen und Pfeile werden neben das Ziel gelegt. Der Preisrichter verkündet nun nochmals laut alle Bedingungen des Wettschießens. Er ruft die Khasi-Eva *(ka-mei-ka-nong-hukum)*[35] um ihre Hilfe an und zählt in langer weitschweifender Rede alle Fehler des Gegners auf[36]. Während er so spricht,

---

[33] Ethnographisches Museum München, Köcher As, 106, hat 57 *cm* Länge und an der Mündung 9 *cm* Breite. Geflecht vorne 40 *cm*, hinten 38 *cm* und seitlich in den Einbuchtungen 33·5 *cm* Höhe. Das sehr feine Rotanggeflecht hat 16 glatte Einlagen in Abständen von 1·3 bis 2 *cm*. An den zwei Stäben auf je der gleichen Seite ein mit Rotang umwickelter Bambusstreifen, der in Abständen von 3 bis 5 *cm* mit Rotang festgebunden ist. Gewicht des Köchers 220 *g*.

[34] BECKER, „Das Eierwerfen der Khasi", Anthropos 1917/1918, S. 494 ff.

[35] Die Khasi glauben, daß das Pfeilschießen bereits mit der Erschaffung der Welt begonnen habe. Denn die Khasi-Eva *ka-mei-ka-nong-hukum* hatte zwei Söhne. Diesen lehrte sie die Kunst des Pfeilschießens, warnte sie aber zu gleicher Zeit, beim Spiele niemals das Temperament zu verlieren. GURDON, „The Khasis", pag. 55.

[36] Die Khasi glauben, daß bei diesen Reden durch die Anrufungen der Khasi-Eva und durch Äußerungen des Preisrichters dieser die gegnerischen Pfeile vom Treffen des Zieles abhalten könne. GURDON, S. 55.

4: Stegmiller AR7 Khasi

gießt er aus einem mitgebrachten Bambusrohre von Zeit zu Zeit Wasser vor das Ziel auf den Boden. Bei der Gesprächigkeit und der Eigenart der Khasi aus dem Stegreif zu reden und bei ihrer Langsamkeit dauert das ungefähr zwei Stunden. Unterdessen haben sich alle Schützen und viel Volk eingefunden. Der Preisrichter erhebt sich und wendet sich in eifriger Rede an die Schützen, spornt sie an, ihr Bestes zu tun, um als Sieger aus dem Wettschießen hervorzugehen. Laut schreiend und lärmend, nehmen dann die Schützen bei der am Boden liegenden Schnur Platz und jeder zahlt als Beitrag eine *anna* (ungefähr 10 Pfennig Friedenswährung). In manchen Orten ist es Sitte, daß eine größere Summe zusammengesteuert wird. Das Geld wird vom Preisrichter *(u-nong-khang-khnam)* gesammelt und aufbewahrt, bis das Jahr vollendet ist. Nach dem letzten Preisschießen wird es zum „Feste nach dem Pfeilschießen" verwendet.

Ist das Geld gezahlt und etwas Schnaps *(ka-kiad-um)* auf den Boden geschüttet worden, so beginnt das Wettschießen. Die Schützen spannen ihre Bogen und jeder zielt und schießt ab, wie es ihm gerade paßt. Trifft ein Pfeil, so ertönt ein lautes Geschrei von seiten der Zuschauer. Die Männer machen Luftsprünge und stoßen Freudenschreie aus. Der Schütze selbst erhebt sich, dreht sich ein paarmal im Kreise herum, springt in die Höhe und schwingt seinen Bogen, fortwährend Freudenschreie ausstoßend. Da nun abwechselnd bald dieser, bald jener trifft, sei es in der eigenen Partei, sei es in der des nebenan schießenden Gegners, so hört man ein fast ununterbrochenes Freudengeschrei und Jauchzen. Die Leute der eigenen Partei suchen jeden Schützen bei seiner Runde durch Zurufe anzuspornen. Hat ein Schütze z. B. einen schwarzen (markierten) Pfeil, so rufen sie: „*To, to ba iong ba iong*! d. h. triff, triff Schwarzer, Schwarzer!" Der Gegner hat in diesem Falle die weißen Pfeile. Geht ein solcher fehl und fliegt er am Ziele vorbei, so rufen sie ihm zu: „*Phui, phui kyndat shiliang, rakaid me, u rakaid!* d. h. pfui, pfui, du fliegst abseits, du Stümper, du Stümper[77]!" Dem Gegner wird beim Zielen und Abschießen zugerufen: „*Bam khyndeu, bam shiap*! d. h. friß Erde, friß Sand!" (Des Gegners Pfeil soll in die Erde, in den Sand fliegen.) Das bei den Khasi so beliebte Stegreifreden findet hiebei ausgiebigen Boden. Nach den eben genannten Beispielen wird mehr oder weniger eifrig auf die Schützen der eigenen Partei oder auf die der Gegner eingesprochen. Dabei habe ich aber noch nie bemerkt, daß sich jemand beleidigt gefühlt hätte oder daß es zu Zank und Streit gekommen wäre. Fühlt sich jemand betroffen, so sucht er oder einer seiner Partei durch einen wuchtigen Spruch seinen Gegner zu übertrumpfen. Ist das gelungen, so freuen sich alle der gemachten Bemerkung und friedlich wird die Runde weitergeschossen. Ist eine Runde von je zehn oder mehr Schützen, die je drei oder mehr Pfeile abgeschossen haben, abgelaufen, so betritt der Schiedsrichter den abgesperrten Platz und zählt laut die im Ziele steckenden Pfeile. Unter großem Hallo bestätigt die Menge die Zahl der Treffer; das gleiche macht die Gegenpartei und nun beginnt das Wettschießen mit all dem ge-

[77] P. C. BOHNHEIM, „Das Pfeilschießen der Khasi", Salv. Mitteilungen 1910, Nr. 2.

schilderten Leben aufs neue. Hat sich dieser Vorgang öfters wiederholt, so tritt eine größere Pause ein. Während dieser und öfters schon während der kleineren Pausen, je nach einer Runde, verteilen die Frauen und Mädchen Erfrischungen. Die Wasserpfeife macht die Runde, und es wird mit Lobsprüchen nicht gekargt. So geht es fort bis zum Sonnenuntergang[18].

Ist das Ziel infolge der Dämmerung nicht mehr gut sichtbar, so wird das Schießen eingestellt. Die Schiedsrichter verkünden nun laut das Endresultat, welches einen stürmischen Beifall auslöst. Nachdem die Schiedsrichter von ihren Parteien mit Geschenken bedacht wurden, gruppieren sich die Schützen zusammen. Sie stellen sich in Reihen hintereinander auf, jede Reihe ungefähr vier bis sechs Schützen. Dabei stehen sich die kämpfenden Parteien gegenüber. Ihre Bogen der Länge nach auf und ab senkend — die äußeren Männer schwingen dieselben — marschieren sie auf dem Festplatze auf und ab, mit den Füßen in raschem Takte den Boden stampfend. Singend und schreiend geht es hin und her. Dabei trifft es abwechselnd bald die eine, bald die andere Partei rücklings zu gehen. Singen kann man eigentlich diese Art der Freudenäußerung nicht nennen, es ist vielmehr ein in aufgeregtem Tone hervorgestossenes, rasches, einförmig moduliertes Recitativo, immer wieder von „ha, ha, hoi, hoi" unterbrochen (*kynha, kynhoi* ist gleich ha, hoi, d. h. jauchzen, rufen). Der eine oder andere der siegenden Partei macht im Stegreif einen Vers, der auf das Wettschießen Bezug hat, und lärmend wiederholt die tanzend dahermarschierende Menge denselben. Oder besser gesagt, sie bricht nach jedem Verse in Freuden- und Jubelrufe (ha, ha, hoi, hoi) aus.

Um ein Beispiel anzuführen, wie diese Verse ungefähr lauten, will ich einen Urtext mit der wörtlichen und sinngemäßen Übersetzung geben[19].

Im allgemeinen ist zu bemerken, daß der Inhalt solcher Stegreifreden einen religiösen Anstrich hat und die Sprache die geheimnisvolle Ausdrucksweise der Zauberformeln und sonstiger bei religiösen Bräuchen der Khasi üblichen Formeln befolgt. Trotzdem dürfen wir hinter dem vorliegenden Gesang *(jingphawar)* weder Geheimnis noch Zauber suchen, sowenig wie es die Khasi selbst tun. Vor der siegenden Partei geht also der Solosänger *(u nongphawar)* einher und hebt an:

1. *U dieng-duh u kyndeh.*
Der Stecken, den Reis.
U sohbyrthit ia u pathaw.
Die Klette, den Kürbis.

2. *To ngin khynniuh tyngeh.*
Laßt uns erschüttern kräftiglich.
Ban shon shit la ka daw.
Daß sitze warm unsere Sache.

Daraufhin schreien die Übrigen, den Bogen schwingend und die Erde stampfend: „ha, ha, hoi, hoi-hui!"

---

[18] Die beiden großen Photographien sind zu dieser späten Stunde aufgenommen worden. Das eine Bild (Taf. I) während des Sonnenunterganges. Man beachte die langen Schatten. Das andere Bild (Taf. II) gleich nach Sonnenuntergang.

[19] Die deutsche Übersetzung nebst den anschließenden Erläuterungen verdanke ich dem sprachkundigen und langjährigen Khasi-Missionär R. P. DOMINIKUS DAUNDERER, S. D. S., welcher mir in liebenswürdiger Weise seine Erfahrungen auf diesem Gebiete zur Verfügung stellte.

4: Stegmiller AR7 Khasi

3. *Ka syrdeng u jasieh*
Der Zaun, die Weide.
Shi kynda ka kyndad.
Vier Maulwürfe.

4. *To pynieng ka dieng ryntieh.*
Laßt uns aufrecht stellen das Holz des Bogens.
Ko samila kynrad
O Jünglinge, o Herren.
Alle: „ha, ha, hoi, hoi-hui!"

5. *Ka syrdeng u jasieh.*
Der Zaun, die Weide.
U thylliej ka shohthah.
Die Zunge, das Rotkehlchen.

6. *To pynieng ka dieng ryntieh.*
Stellt auf das Holz des Bogens.
Ban ieit ka daw bah.
Damit man liebe die Sache, die große.
Alle: „ha, ha, hoi, hoi-hui!"

7. *U narsuh shibidi.*
Eisendraht, vier Stück.
U bisin ia ka syrdeng.
Die Schlange, den Zaun.

8. *La kynduh bad ngi.*
Wenn man streitet mit uns.
Ngin pynkhein ia ka reng.
Dann brechen wir das Horn.
Alle: „ha, ha, hoi, hoi-hui!"

9. *U kyndeh ia u bisong.*
Der Reis, das Wiesel.
Ka liengsangem halor dieng.
Der Habicht auf dem Baum.

10. *To lyngngeh la ka jingong.*
Macht hart euer Wort.
Ba un jem ka jabieng.
Daß weich werde das Hirn.
Alle: „ha, ha, hoi, hoi-hui!"

11. *Ka liengsangem halor dieng.*
Der Habicht auf dem Baum.
U pathau u jalimut.
Der Kürbis, die Wucherblume.

12. *Ba un jem ka jabieng.*
Daß weich werde das Hirn.
Ba un jaw ka eit mut.
Daß weich werde der Nasenschleim.
Alle: „ha, ha, hoi, hoi-hui!"

13. *U synrem u kyndok.*
Die Nessel, den Schwefel.
U sohryngkham shi kynda.
Schlehen vier Stück.

14. *Wat iam rem ko lok.*
Weinet nicht unterlegen, o Freunde.
Ba la bam hi ka pasa.
Denn die *Pasa* selbst hat es aufgezehrt**.

Wie man sieht, ist so ein Gesang *(jingphawar)* nicht leicht zu verstehen. In den ersten ungeraden Zeilen sind meist Wörter (anscheinend) sinnlos nebeneinandergestellt, gewöhnlich ein Nominativ vor einem Objektiv (Akkusativ — Dativ). Diese Wörter bilden den Rahmen für die in den zweiten (geraden Zeilen) enthaltenen Sprüche.

Sinngemäß kann man diese Dichtung folgendermaßen wiedergeben (nur die geraden Zeilen):

2. Stampfen wir kräftig, daß die Erde dröhnt.
Damit man sicher wisse, daß wir gesiegt.
4. Pflanzt auf den Bogen, Ihr wackeren Jungen!
6. Pflanzt auf den Bogen, daß sich zeige der gewalt'ge Sieg!
8. Wer's mit uns wagt, dem stutzen wir den Kamm.
10. Euer Spott sei scharf, der Gegner muß weinen.
12. Weinen muß er, tränen das Auge, fließen die Nase.
14. Bedauert es nicht, Kameraden, es war so bestimmt!

** *ka pasa* ist wahrscheinlich eine Dämonin, Schutzgeist der Schützen und Jäger *(-ksau?)*. Sanskrit: *pasa* — Schnur, Strick (Los?).

In dieser Weise den unterlegenen Gegner mit Spottreden besingend, bewegt sich die Menge schreiend und jauchzend über den Festplatz. Schnaps wird gebracht und fleißig, nur zu fleißig, getrunken, so daß die von Fackeln beleuchtete, vom Branntwein erhitzte, vom Wettschießen aufgeregte Menge einen wilden Eindruck macht. Die rohe, wilde Freude bricht hervor in einem geradezu ohrenbetäubenden Lärmen. Endlich des Treibens müde, ziehen sie langsam, aber schreiend ihrem Dorfe zu und verteilen sich, heftig über das Erlebte disputierend, in ihre Hütten.

Der Preis eines Wettschießens ist ganz verschieden hoch. Im allgemeinen kann man sagen, daß bei jedem Pfeilschießen ein Schütze je eine *anna* (ungefähr 10 Pfennig Friedenswährung) zahlt. Die verschiedenen Wettschießen zusammen ergeben dann, besonders wenn der Besuch ein guter war, immerhin ein nettes Sümmchen. Ich habe von Zahlen in der Höhe von 50 bis 70 Rupies erfahren, die während des ganzen Jahres auf diese Weise zusammenkommen und nun am Ende des Jahres beim großen Feste nach dem Pfeilschießen gemeinschaftlich verzehrt werden.

Bei den Synteng ist es vielfach Sitte, diesen Betrag nicht *anna*-weise zusammenzusparen, sondern man wettet mit dem Gegner beim Hauptschießen (beim Endspiel) eine große Summe, die durch eine Unterschriftsammlung erhoben wird. Vereinzelt kommen auch bei den Khasi solche Fälle vor[41].

3. Das Fest nach dem Pfeilwettschießen.

Für das gewettete oder zusammengesparte Geld wird ein allgemeines Festessen veranstaltet. Bei diesem Feste geht es gerade so urwüchsig zu, wie beim Pfeilwettschießen. Mehrere starke Männer gehen fort, um die für diesen Zweck gekauften Schweine zu holen. Die lebenden Tiere werden mit den Füßen an feste Bambusstangen gebunden. Vier Männer, abwechselnd zwei und zwei, tragen je eine Last auf ihren Schultern zum Festplatz. Auf demselben ist ein reges Leben. Um große Feuer stehen die Männer und plaudern. Andere besorgen geschäftig Schüsseln und Töpfe aus Messing — alles fein säuberlich geputzt. Wieder andere brechen Palmblätter und Zweige von Bäumen ab, den Platz und sich selbst damit zu schmücken. Eine Musikkapelle sorgt für den nötigen Spektakel. Mit Hallo werden die drei Schweine und Ziegen empfangen. Ohne lange Zeremonien wird den Tieren der Garaus gemacht und nun beginnt das eigentliche Fest: Das Kochen, der Tanz und das Essen.

Man teilt sich in verschiedene Gruppen. Beim Scheine eines großen Feuers zerteilen einige die geschlachteten Tiere. Die Fleischteile kommen auf einen Haufen, das Fett auf einen anderen. Zehn Männer etwa setzen sich im Kreise herum und fangen an, das Fleisch in viereckige kleine Stückchen zu zerschneiden. Diese werden dann an dreikantig zugeschnittenen Bambusstäbchen aufeinandergesteckt. Alles übrige Fleisch sowie Lungen, Herz, Nieren und Hirn kommt kunterbunt zusammen in den Kochtopf. An

[41] GURDON, „The Khasis", berichtet S. 56, daß im Nongkremstaat bei einem Wettschießen in Khadar Blang eine Summe von 500 Rupies gewettet worden sei.

4: Stegmiller AR7 Khasi

einem dritten Feuer sitzen Mädchen und Frauen. Sie halten an langen Bambusstangen das Fett und den Speck über das offene Feuer, um es durch beständiges Drehen allseits zu braten. Die übrigen Männer tanzen nach der eigenartigen Musik. Jeder tanzt für sich allein. In der rechten Hand halten sie lange Bambusrohre, in der linken einen Büschel Baumzweige oder große Blätter. Einige machen sich aus Reisstroh mächtige Turbane. So geschmückt, hüpfen sie von einem Fuß zum anderen, machen nach links und nach rechts tiefe Verbeugungen und schwingen abwechselnd ihre Bambusrohre oder Blätterbüschel. Andere drehen sich im Kreise herum, dabei mit den Palmblättern den Takt schlagend. Sind die Tänzer müde, so übernehmen sie das Geschäft der Fleischzerschneider und Köche und diese schmücken sich zum Tanze. Auf meine Frage, was dies alles zu bedeuten habe, erhielt ich die Antwort: „Wir freuen uns und wollen uns einmal gründlich freuen und vergnügen. Beim Pfeilschießen haben wir das Geld gewonnen und nun soll auch ein großes Fest sein. Jetzt ist ja Vollmond und bei der Nacht ist es viel schöner als am Tage. O, wir freuen uns nur." Und gleich schwang er seinen Blätterbüschel und hüpfte weiter. Das Umrühren bei den Kochtöpfen besorgen die Frauen. Sie sind nicht wählerisch mit dem Kochlöffel. Ein Bambus, den vielleicht soeben ein müder Tänzer weggeworfen, genügt diesem Zwecke vollständig. Ist alles bereitet, so setzen sich die Leute in Gruppen und verzehren das Fleisch. Reisbranntwein wird herumgereicht. Sind die Schützen und sonstigen Festgäste bis zum Übermaß gesättigt und ermüdet vom vielen Tanzen, so wird gegen Morgen der Platz verlassen.

Zu bemerken ist, daß die Khasi, entgegen ihrer sonstigen Gewohnheit, bei dem großen Feste nach dem Pfeilschießen keinen Reis, sondern nur Fleisch essen, zu dem Reisbranntwein getrunken wird. Dem Genusse von Speise und Trank wird bei dieser Gelegenheit vielfach im Übermaß gehuldigt[11].

4. Jagdgebräuche.

Obwohl es in den Khasi- und Jaintia-Hügeln allerlei jagdbares Wild gibt — fliegende Füchse, die zur Nachtzeit die Orangengärten besuchen, Schakale, die die Dörfer mit ihrem Geheul belästigen, Antilopen, Rehe, Hirsche und wilde Schweine, die den Reisfeldern schaden, wilde Hunde, Wölfe, Bären, Leoparden und Tiger, die nicht bloß von den Ziegen und Kälbern, sondern auch von dem ausgewachsenen Vieh ihre Beute holen, ja bisweilen dem Menschen gefährlich werden, obwohl es eine Menge genießbarer Vögel gibt — Wachteln, Rebhühner, Kibitze, Wasserhühner und wilde Gänse — trotz alledem sind die Khasi keine eigentlichen Jäger. Nur wenn sich entweder Gelegenheit bietet, solche Vögel zu fangen, oder wenn sich ein wildes Tier gezeigt oder gar im Dorfe Schaden angerichtet hat, dann gehen die Khasi auf die Jagd. Ausnahmen kommen vor. Die Khasi, die mit Pfeil und Bogen von Jugend auf umgehen, die sich jeder beim Pfeilschießen gründlich üben, sie getrauen sich auch den Bären, den Leoparden und den

[11] P. F. STEGMILLER, „Das Fest nach dem Pfeilschießen", Salv. Mitteilungen 1910, Nr. 3.

Tiger zu stellen. Heutzutage haben sie vielfach Feuerwaffen für diese Zwecke, doch werden Pfeil und Bogen stets mitgenommen.

Ist durch Eierwerfen ein glücklicher Tag bestimmt[33] und manchmal auch das Jagdgebiet auf diese Weise gefunden worden, so ziehen die Khasi mit der Meute aus. Sobald die Hunde die Spur des Wildes aufgenommen haben, beginnt das Treiben mit Geheul und Lärmen. Glücklich der erste Schütze (von den Khasi *u nongsiat* genannt), denn er bekommt den Löwenanteil an der Beute. Auch wer den zweiten Schuß auf das Tier abgibt (von den Khasi *u nongban* genannt), wird bei der Verteilung der Beute besonders bedacht. Die übrigen Schützen teilen unter sich den Rest des erlegten Tieres, nachdem auch die Jagdhunde je ein Stück erhalten haben. Die Khasi sind auf der Jagd sehr ausdauernd und fragen nicht nach Zeit, noch nach Entfernung. Denn die auf der Jagd ausgestandenen Mühen werden reichlich belohnt durch den Triumphzug mit dem erlegten Wilde durch das heimatliche Dorf.

Außerhalb des Dorfes wird aus festem Bambus eine Tragbahre angefertigt, die mit Palmblättern und sonstigen Baumzweigen festlich geschmückt wird. In der Mitte der Bahre wird aus Bambus ein starkes Gestell errichtet, so daß die Jagdbeute (Gazelle, Antilope, Bär, Tiger, Leopard usw.) mit der Bauchseite darauf zu liegen kommt. Die Füße hängen ausgestreckt herunter. Der Kopf wird mit einem gegabelten Aste in die Höhe gehalten, und ins geöffnete Maul des Tieres wird ein Grasbüschel gesteckt. Das erlegte Tier macht somit einen lebendigen Eindruck. Pfeil und Bogen werden links und rechts vom Tiere auf die Bahre gelegt. Ist das Tier durch eine Kugel getötet worden, so tragen die Khasi die Flinten in den Händen, ist es von Pfeilen getroffen worden, so wird der erste Pfeil, der es verwundete, in Front vor das Tier auf die Bahre gelegt. Nun heben acht Männer die geschmückte Bahre mit dem erlegten Wild auf ihre Schultern und feierlich geht man dem Dorfe zu. Blinde Schüsse verkünden das Nahen des Triumphzuges. Von allen Seiten kommen die Khasi herbei. Man beglückwünscht die Jäger und freut sich der Beute. Alles sieht mit Vergnügen dem Einzug entgegen. In armdicken Bambusrohren bringen einige frischen Reisbranntwein, andere holen Betelnuß und Wasserpfeife. Dieses alles, sowie noch andere Erfrischungen werden den Jägern angeboten, Die Menge schart sich um die Bahre und nachdem das erlegte Tier ausgiebig besprochen wurde, beginnt der Einzug.

Die Dorfjugend rennt lärmend voraus. Treiber und Jäger folgen. Nun kommt die Bahre, getragen von acht Männern. Links und rechts gehen Frauen und Mädchen aus dem Dorfe, sie schwingen Baumzweige und Blätterbüschel. Freudenrufe ertönen. Mehrere hundert Personen haben sich eingefunden und gehen entweder hinter der Bahre her oder setzen sich an den Wegrand nieder, um Zuschauer zu sein. Viel Unterschied ist nicht, denn der Zug geht so langsam, daß schwer wahrzunehmen ist, ob überhaupt Bewegung darin ist. Zu einer Strecke von ungefähr 800 bis 900 *m* braucht der Triumphzug volle

[33] Dr. P. C. Becker, „Das Eierwerfen der Khasi", „Anthropos", 1917—1918, S. 494ff.

4: Stegmiller AR7 Khasi

vier Stunden. Wenn es die Khasi auch sonst nicht eilig haben, so liefern sie in diesem Falle wohl die Höchstleistung ihrer Langsamkeit. Aber gerade darin liegt etwas Feierliches, und wenn der Solosänger (der *nongphawar*) seine Stimme erhebt, um aus dem Stegreif das erlegte Tier zu besingen, wenn die Menge jauchzend und schreiend antwortet, immer wieder dem Vorsänger bestätigend, daß er es gut gemacht, und ihn so zu neuen Versen anspornt, wenn blinde Schüsse abgefeuert werden und die Zuschauer, vom Fackelschein grell beleuchtet, in ihren farbigen Trachten zwar am Platze bleibend, sich doch bewegen, wenn der Reisbranntwein das übrige getan, dann ist der Höhepunkt erreicht!

Der Solosänger geht vor der Bahre her, das Gesicht aber immer gegen dieselbe gewendet. Mit den Händen heftig gestikulierend, macht er bald nach links, bald nach rechts Verbeugungen, beugt den Oberkörper bald nach vorwärts, bald nach rückwärts. Ab und zu in die Luft springend, zeigt er nur Zeichen der Freude und des Jubels. Je nach Laune und Einfall besingt er das Tier. Die Menge stimmt in den selbstgemachten Refrain ein, der bald eine Wiederholung des Sologesanges, bald ein sonstiger Beifallsruf ist.

Der Solosänger singt etwa**:

Solosänger: „Ei! Starke Bärenmutter, gehätlig zehrst du auf die eigenen Kinder!"

Alle: „Hau, hau, hoh, huh!"

S.: „Ei! Schöne Bärin! Wahrhaft schöne Mutter, Erhabenste im Kreise der dreißig Tiere!"

A.: „Hau, hau, hoh, hau, huh!"

S.: „Jetzt hat man dich auf den Marktplatz gebracht, o Herrin! Zum Markte! He!"

A.: „Hau, hau, hoh, huh!"

S.: „Dein Todesurteil hast du dir selbst geschrieben, als du die Beute holtest aus dem Hause des Armen!"

A.: „Hau, hau, hoh, hau, huh!"

S.: „Die Schar der Rüden aber, die trefflich grimmes Packer und der Mensch, der kluge, brachten das Glück auf ihre Seite!"

A.: „Hau, hau, hoh, huh!"

S.: „Den Jagddämon, den Geist des Feldes, den Hausgrist! Drum höchlich freuen wir uns und jubeln und jauchzen!"

A.: „Hau, hau, hoh, huh!" usw.

Bei einem solchen Triumphzug in Laitkynsew, wobei eine Antilope heimgebracht wurde, sang einer etwa:

S.: „Aus den Bergen, aus dem kalten Lande bist du zu uns gekommen in, dieses Land, in das Reich von Laitkynsew!"

A.: „Hau, hau, hoh, huh!"

S.: „Frei warst du und freutest dich im Walde, am frischen Gras taltest du dir gütlich lange Zeit!"

A.: „Hau, hau, hoh, huh!"

** P. D. DECHENBREN, „Khasi-Sitten", Missionar 1905, S. 1798.

S.: „Jung und kräftig — schön — haben dich die Jäger im Kreise der dreißig Tiere, sie zogen aus mit Pfeil und Bogen, mit Flinte, Blei und Pulver!"

A.: „Hau, hau, hoh, huh!"

S.: „Du flohst ins Dickicht! Half dir das? Scheu wichst du zurück vor kühner Jägerschar!"

A.: „Hau, hau, hoh, huh!"

S.: „Schnell freilich wichst du zurück; schnell drängten die Verfolger nach und Pfeil und Bogen brachten dich zur Strecke!"

A.: „Hau, hau, hoh, huh!"

S.: „O Herrin! Was kamst du hierher? Du hast dich selbst dem Tode und dem Verderben ausgeliefert — wir aber freuen uns und jubeln und jauchzen!"

So geht es lange Zeit fort. Hat sich einer heiser gesungen, so tritt ein anderer an seine Stelle und setzt den Gesang fort.

Ermüdet von den Anstrengungen der Jagd, übermüdet von dem Treiben bei diesem Einzug, heiser vom Lärmen und Schreien, erhitzt vom Genusse des Branntweins, schleppt sich die Menge durchs Dorf zum Hause desjenigen Jägers, der den ersten Pfeil oder Schuß auf das Wild abgegeben hat. Dort wird dem Dorigott geopfert und das erlegte Tier zerteilt. Der erste Schütze *(a nongsiat)* erhält nun die hinteren Viertel, der zweite Schütze *(a nongbun)* die vorderen Viertel des Tieres.

In den Jaintia-Hügel ziehen die Synteng, wenn sie einen Tiger oder einen Leopard erjagt haben, zu einem Hügel in der Nachbarschaft des Dorfes. Dort wird unter einer Eiche ein Altar errichtet und der abgeschlagene Kopf des Tieres darauf gesetzt und dem *u'lei lyngdoh* (dem Gott des Dolloi-Bezirkes) geopfert.

Pfeil und Bogen sind dem Khasi nicht nur nötige Waffen für die Jagd oder angenehme Sportartikel für das Wettschießen: Pfeil und Bogen sind ihm in gewissem Sinne auch heilig. Denn beim Eintritt ins Leben und beim Hinscheiden werden beide bei den religiösen Zeremonien verwendet. Wird ein Knabe geboren, so legt man bei der Namensgebung[33] neben ihm einen Bogen und drei Pfeile. Der Opferer zeigt nach verschiedenen Zeremonien, die hier zu beschreiben nicht der Platz ist, dem Kinde den Bogen und die drei Pfeile und fordert es auf, ein guter Schütze zu werden. Am Schlusse sämtlicher Zeremonien werden der Bogen und die Pfeile sorgfältig an der Innenseite des Strohdaches der Hütte befestigt.

Bemerkenswert ist, daß bei der Totenverbrennung[34] der Khasi ebenfalls ein Bogen und drei Pfeile gebraucht werden. Dieselben werden mit den anderen Totenzeremonialgegenständen bereitgehalten, während der Leichnam zum letztenmal den Teilnehmern der Bestattung gezeigt wird. Sobald nun am Scheiterhaufen das Feuer aufflammt, werden auch die drei Pfeile abgeschossen: einer nach Norden, einer nach Süden und der dritte nach Osten. Diese Pfeile nennen die Khasi *'nam-lympem.*

The Market Life of the Khasi
(With ten original photographs by the author)
by P.F. Stegmiller, S.D.S., Munich

The mountains in the northeast corner of India which lie between the valleys of the Brahmaputra and the Barak are inhabited by a tribe, the Khasi, numbering about 200,000 people. Although they rarely cross the borders of their homeland and live almost cut off from their neighbors, they have an active traffic amongst themselves and travel a lot. This traveling is determined by the very distinct market life of the Khasi. It is truly the pulse beat of the people. The rest of their homelife, their activities, and their private, public, and religious life. (1) Time is divided according to the market; the market replaces the daily newspaper and the information service; the market unites the individual villages; the market offers a living to many and for many has become a source of wealth.

1. P.F. Stegmiller, "Aus dem religiösen Leben der Khasi' [The Religion Life of the Khasi], Anthropos, 1921-1922, pp. 425 ff.

How much the Khasi depend on a thriving market may be seen in their prayers which are spoken every year at the great state sacrifices in honor of the god Shillong by the sacrificer (lyngdoh) presenting the service: "O god, Shillong! Thou who receivest this prayer, this sacrifice of goats, of fowl, of kpu and rynsi (a kind of bread of rice flour or cornmeal with pounded sugar), of utensils used in the preparation, as thou has given them to the royal

race, so that once in every year a sacrifice 443
can be celebrated in thy name, so that we will 782
live happily and be healthy and increase in numbers, so that kings will arise, the markets will enjoy progress and success, and the children of the kingdom will spread out and increase in thy name and to thy honor."

After this prayer the chief sacrificer (lyngdoh rangbah) pours rice liquor (ka kiad um) out of a gourd bottle (u klong) onto the ground in honor of the goddess of the markets (ka blei jeu lei hat) and prays thus: "Hear us, o goddess, so that the markets will be good and safe and everything be blessed, so that the kingdom will progress and develop,mo (is it not so)!" (2)

2. P.F. Stegmiller, "Opfer und Opferbräuche der Khasi"[Sacrifice and Sacrificial Customs of the Khasi], Mitteilungen der Anthropologischen Gesellschaft in Wien"[Proceedings of the Vienna Anthroplogical Society], Vol. LIV (1924).

[704] Among the Khasi, the women [The Market 443
Personnel] are so in the majority among the 462
selling personnel that it is tempting to consider them the founders of the markets. Since provisions form the chief articles of the market, and these are grown by the women, this may be the reason why the woman dominates the market. The masculine element certainly participates actively in the market, but only dealing in such articles as belong to him specially, such as dishes of iron which he has made or goats and sheep which he has raised. Although the men as an average only go to

443 market for pleasure, I cannot agree with the
462 view, (3) that they would consider market busi-

3. P.C. Becker, S.D.S., Salvatorianische Mitteilungen /Salvatorian Communications/, 1911, No. 4, p. 60.

ness beneath their dignity, if they had a wife or a grown girl (daughter) at home, to whom they could turn over this business. Not because the men would consider the business of the market beneath their dignity, but because the market is once and for all the preferred business of the women, men stay away from the market. If men are rarely seen offering provisions for sale, they are more frequently seen bringing the provisions to the women at the market. The men only sell personally birds they have caught themselves. Thus if the buying and selling of things is the business of the Khasi women, this position is not a subordinate and shameful one but a well established and dominant one.

2. The Market Wares

443 Food provisions are the chief items at the
438 Khasi markets. Sold are: rice (khau), dried fish (doh kha), potatoes (phan), sugar cane (u bai), an edible root which is eaten raw (u soh phlang; botanical name: flemingia vestita Baath); Job's tears (u soh rieu; botanical: name coix lachryma Jobi); Italian millet (u 'rai soh, botanical name: setreria italica); blood millet (u 'rai shan, botanical name: paspalum sanguinale); spadix millet (u 'rai truh, botanical name: eleusine Coracana); Khasi beans, two [illegible] (u rymbai ja, botanical name: paseolus

calcaratus) and (u rymbai ktung, botanical 443
name: glycine soja); corn (u 'rieuhadem); 438
pineapple (u soh trun); lemons (u soh myndong);
oranges (u soh niamtra); mangoes (u soh pieng);
melons (u pathau); breadfruit (u soh kpu,
botanical name: artocarpus incisa); Khasi
cherries (u soh jong, botanical name: prunus
ferrunginea); bananas (ka kait), pepper (u soh
mrit); chilis (u soh myngken); papayas (u soh
kynphor, botanical name: carica papaya); a
kind of wild potato (u soh pyrsiu); cinnamon
(ka sisia, botanical name: cinamum cassia);
nutmeg (u joi phol); ginger (u 'sieng);
honey in honeycombs (ka ngap).

Goats, sheep, and cattle are sold, sometimes alive, sometimes slaughtered in small quantities. There are many chickens on the market, especially for sacrificial purposes.

In addition things are brought for sale that are necessary for the construction of houses or the cultivation of fields, such as grass for roofing huts; cut beams, bamboo poles, bamboo plaited into lattice work, dried cow manure, spades for the fields (mokhiu); Khasi knives (ka wait); [704: A]1 [P.W. sizes , waterproof plaited containers, carry-
ing baskets (tappa), bands for the forehead
(u star), drinking cups of bamboo, gourd bot-
tles, wooden mortars, water pipes made of
cocoanuts, pipe bowls made out of clay and
dried in the sun, plates and saucers of brass,
cooking pots of iron, and earthern dishes;
everything is the work of the Khasi.

Recently European wares, such as loin
cloths, stockings, caps, combs, mirrors,
mouth harmonicas, matches, and cigarettes are
also seen in larger amounts.

443 At the markets of the Khasi not only food-
464 stuffs and other things necessary for life may
445 be obtained, but workers are also hired there.
Whoever wishes to hire himself out goes to the
market and stands around, hoping to find some
kind of work for the coming (market) week.
Day laborers can only be hired at the market.
Therefore it is hard during the week to get
any kind of a worker. It is also necessary
when hiring a t the market to hire the worker
for the whole "market week," i.e., until the
next market day, as the coolies otherwise
would have a hard time finding work and would
not accept the work at all for only one or
two days. The porters needed for traveling
may also be sought out and hired at the markets.

must also be sought out and hired at the markets.(443

3. The Customs of the Market

a) The Preparation for Market. The sellers of both sexes normally carry their wares to the market themselves. They form smaller or larger groups and travel together. The wares are carried on their backs. The burden is packed according to its bulk or content. Larger objects, such as bamboo poles, beams, sugar cane, grass, and mats are carried without any covering by means of a forehead band plaited of reed grass (u stam). Smaller items, such as salt or potatoes, are packed in sacks; others such as betel nuts pepper leaves, fruit, vegetables, etc. are carried in baskets made of bamboo. The baskets are either pointed baskets which are round at the top or square baskets, which narrow to a point at the bottom but still are four feet long in size. The latter baskets are usually made with a cover, which, like the basket itself, is plaited and almost waterproof, so that flour or salt can be transported in them even during the rainy season. A round or oval object shaped like a shield, which in case of need is used as an umbrella (ka trap) and which is plaited out of bamboo, is inserted between the back and the burden (jingkit). On the one hand this object has the purpose of ameliorating the pressure of the burden and on the other hand it is pulled out in rainy weather to serve as an umbrella when it is held up against the rain by hand. [484] 443 482 438 285 443 [293]

With regard to the weight which the Khasi carry to market, the men carry about 100 and more pounds while the women seldom 482

482 laden themselves with more than 80 to 85 pounds.

484 Many Khasi have to start during the afternoon because of the great distance to the market. They spend the night with acquaintances. In the dark [706] they march by torch light. The torches consist of several igra, i.e., very thin bamboo tube, saturated with petroleum and lighted. Or a large bamboo tube is filled with cloth that has been saturated in petroleum. The burning torches are swung in circles while the Khasi march so that only a glow is provided, but this prevents the torches from going out. The glow is quite sufficient for giving enough light for the road (foot path).

[276] Betel nuts are chewed (4) all the way and

4. The length of the road is also measured in "betel nuts."

water pipes are smoked during the rests.

443 b) The Market Place. It is not possible
361 to talk about a definite place where the Khasi usually hold the market. This varies considerably according to the region. First of all the place chosen for the market lies outside the village. By preference they hold their markets on high ground or some such safe place. A place that has once been chosen remains the
[278] market place for that particular village. The market place is often found very close to the memorial stones, just as if the spirits of the ancestors honored there should offer aid and protection to the visitors to the market. On the southern slopes of the Khasi Mountains the market is often held on the bank of a river for the reason that the people come to these markets in boats. The market place in each case is quite isolated. Also the one in

Laban, but there is a small wood near there. 443
The market place is also often found under 361
trees, at the edge of a forest or near the
memorial stones.

c) Market Huts. Usually the market is 443
held in the open air. Grass offers places 347
to sit as well as places for laying out the
wares. But in many places there are also
market halls or market huts. These are
simple halls, open on all sides, made with a
framework of bamboo poles and a roof of
straw or palm leaves. The market huts or
market halls are built with square corners
and have gabled roofs. They offer the women
sellers protection from the sun or rain only,
but no other comforts. Neither tables nor
chairs nor other arrangements for displaying
wares are there. On the side where the wind
blows these market halls are often covered
with bamboo mats.

d) Choosing the Place for Selling. 443
The choice of the place for selling is left 462
up to the seller. Yet a certain division can
be recognized at every market. This division
could be called a division according to sex.
In the middle the food stuffs are usually
sold which the women take care of. Utensils
and cattle which are the business of the men,
are sold at the edges. Therefore there is a
definite arrangement to the market which is
taken for granted by the Khasis: in the middle
the women, outside the men (there is a similar
order for the dance: in the middle the feminine
sex, outside the masculine sex). The indivi-
dual types of wares have [707] their definite
places, although individual sellers are not
assigned definite places.

The women settle down at any place that 443
seems good to them after their arrival at the
market. They spread out in front of them the

443 food provisions which they have brought to sell. They sit close to each other and form long lines which double or treble when the market is heavily attended. There is little room for the visitors to the market, who must work their way through the wares that are spread out and through the women sellers who are sitting so close together. A woman seldom sits off to one side. Since there is no stealing at the market, sitting apart is also unnecessary, although a better view of the wares that are laid out for sale would be obtained.

The large objects, such as bamboo and beams are always set up on the outer side of the market and sold there even when the selling is managed by women (which is an exception).

443 e) Selecting the Time. 1. Choosing the
805 market day. The Khasi have a week that is eight or four days long. Every eight (5) days

5. P.P. Stegmiller, "Pfeilschiessen und Jagdgebräuche der Khasi" [Arrow Shooting and Hunting Customs of the Khasi], Anthropos, 1925, pp. 615 ff.

there is a large market and every fourth day there is a small market, always at the same place. The large and the small markets are also held daily, but at different places in a certain district. In this district or defined area the market days for the various villages are so determined that they never coincide with each other, and each Khasi can attend this market or that one as he wishes. The sequence of the markets is regulated so precisely that every Khasi knows exactly where a market is being held at the moment. The days are also named from the markets that are to be held. They do not talk about a Sunday or a Wednesday, but of the

jeu duh (large market) in Shillong, in Nongkrem, 443
in Umlong, in Rangkheu, in Pomtiah, in Imnih, 805
etc. Thus each day is precisely established, and at the same time the market for the place concerned.

In the territory of the War the markets are held every fourth day in the following order: In Nongjiri, in Maubang, in Tyllap and in Shella. Here the week days are either named according to the market days or they say: the day before the market dy, the market day, the day after the market dy and the day between the markets. Every Khasi in this district knows then without any doubt which day is meant.

2. Determining the time of day. As concerns the tie of day during which the markets are held, no generally valid rule can be set up. This varies according to the individual places. In general from noon until late in the afternoon is the time for the chief market. The market paces are usually still empty before 10 o'clock in the morning. The end is about 5 o'clock in the afternoon, if not earlier.

The duration of the markets results from what has been already said. In general [706] the duration of a large market is about six hours, while a small market lasts only about four hours.

f) Order at the Market or Market Peace. 943
Although thee are no guards or other agents of 944
order on dut at the Khasi markets, the great peace and order at even the largest Khasi markets seem most pleasant to everyone. I have never heard any complaint of foodstuffs or other objects for sale being stolen. The Khasi consider the market as something holy, as something to be respeced, as something that belongs to everybody, which nobody can claim for his own. Attacks on a person's life also do not occur.

443 Quarrels and fights are exceptional. It is most
778 natural to the Khasi not to disturb the peace of the markets, since the markets stand under the protection of the goddess. (Cf. The prayer in the introduction to this article.)* Also the memorial stones, in the shadow of which the markets are so often held, may exert some influence on the visitors to the markets, since the Khasi imagine themselves to be protected by the spirits of their ancestors and believe that any kind of disorder at the market would be avenged by these spirits.

443 Nearly all the men at the market are armed.
784 The reason for this lies in the fact that the
911 people are thus protected on the way to the market and are safe from the attacks of the "killers" (nongshohnoh), i.e., those who got out to murder people in order to dedicate their victims to the devil snake. Therefore the visitors to the market never go alone but always in groups. The men are armed with the ka wait (a chopping knife), with which they know how to defend themselves very well.

4. The Law of the Market

443 a) The Market Toll. All sellers who at-
651 tend the market must pay a contribution on entering the market place. Only those inhabitants of the village or district in which the market is held are excepted. This market tax is paid partly in money and partly in products. In many villages it is paid only in cash. The amount of the tax laid is 2 or 3 paisas, often even one anna (5--8--10 pfennigs, German peace evaluation). Only betel nuts and pepper leaves are preferred to money. In many villages everything is paid in produce, insofar as foodstuffs are concerned. The market tax collector reaches

*[See category 116, pp 1-2--Author]

right into the carrying baskets of the arriving sellers with little ceremony and takes as much as he can with one or two hands. 443 651

Toll is levied at the approaches to the market. Here and there is a toll hut where the people passing must pay their contribution. These receipts belong to the king in whose kingdom the market is located. These market tolls often form very good sources of income for the royal families, as the markets are held regularly and are well attended. In return for the market tolls the king must maintain the market halls (if there are any).

[709] b) Market Coercion. There is no actual market coercion. But nothing can be bought outside of the market, since the Khasi do not have any stores. Only in the larger villages are there one or two shops, which, however, do not count. These shops must all pay the "market toll" for all the articles which they sell at home with the exception of the sale of kiad, "rice liquor," which is never sold at the market.

c) Prices and Measures. The prices are based on supply and demand. They are freely determined by the sellers. It is not the custom to bargain and haggle. An exception is the price for the daily rice, which often causes quarrels. The sellers sit by their wares without shouting or praising. The visitors come to the market, look at the wares, touch them, weigh them in their hands, and finally ask about the price. 437

If the prices seems to them to be too high, they put the wares back in their places and go their way without making any remarks.

Coins are used for paying. The Khasi have the following names for the English-Indian money: 436

5:Stegmiller-23 M-4,5(no date) 1928 AR7KhasiAR7

436

4 sh'ing	equal	1 kynda
5 kynda	"	1 peisa or 3 damli
4 peisa	"	1 anna
16 anna	"	1 tyngka
15 tyngka	"	1 muhor ksiar equals 20.83 gold marks

804 The following norms are valid for wares sold according to weight:

4 suka	equals	1 tula
1 1/4 tula	"	1 katsha
5 katsha	"	1 shatak
4 shatak	"	1 pauwa
4 pauwa	"	1 ser
5 ser	"	1 pusari
8 pusari	"	1 mon
27 1/2 mon	"	1 ton equals 20 hundredweight

The following norms are valid for wares which are sold according to the square foot:

4 saudong	equals	1 kanda
20 kanda	"	1 shatak
16 shatak	"	1 katha
20 katha	"	1 bigha equals 120 square feet

The following norms are in general valid for wares which are sold by the piece:

12 tylli	equals	1 dorjon
20 tylli	"	1 kuri
5 kuri	"	1 scah (hundred)
24 tau	"	1 dista
20 dista	"	1 rim
10 rim		1 sing bah

[110] The sale of oranges is an exception. 804
These appear on the market by the thousands. This fruit is sold by the spah, i.e., the hundred, but this is not to be taken literally. For the spah have various meanings according to the region. Thus the people on the Bogapani River (in Phali) sell according to the following system:

1	hali	equals	4 oranges
8	hali	"	1 bhar
100	bhar	"	1 spah, i.e., 3200 oranges

They are reckoned as follows in Shella:

1 gai	equal	6 oranges
5 gai and 2 oranges	"	1 bhar
4 bhar	"	1 hola
27 hola and 2 bhar	"	1 spah or 3520 oranges

The price for a spah varies from 10 to 40 rupees (tyngka), according to the amount of fruit that appears at the market. [435]

Quai leaves (tympeu) are sold according to the following scale:

2 sla	equal	1 jur
10 jur	"	1 khongshi
3 khongshi	"	1 blah
4 biah	"	1 tap
20 tap	"	1 kuri
4 kuri	"	1 shalia

But among the War the quai leaves are sold 435

435 in bundles. Each bundle is four bunches and each bunch has 48 leaves. The price for 10 to 20 bundles costs a rupee (tyngka) on the average. But when the rain stops and the dry season begins, the price climbs to 2.3 rupees and more. Four thousand to five thousand bundles of tympeu are sold daily at a well-attended market.

Das Marktleben der Khasi.

(Mit zwei Originalaufnahmen des Verfassers)

Von P. F. Stegmiller, S. D. S., München.

Die zwischen den Tälern des Brahmaputra und des Barrak liegenden Berge in der Nordostecke Indiens werden von einem etwa 200.000 Menschen zählenden Stamme, den Khasi, bewohnt. Obwohl diese äußerst selten die Grenzen ihrer Heimat überschreiten und fast abgeschnitten von ihren Nachbarn leben, so haben sie unter sich doch einen regen Verkehr und sind viel auf Reisen. Dieser Reiseverkehr wird bedingt durch das sehr ausgeprägte Marktleben der Khasi. Es ist so recht der Pulsschlag des Volkes. In ihrem Marktleben findet sich wie in einem Spiegel das übrige Leben: die Häuslichkeit, die Beschäftigung, das private, das öffentliche und das religiöse Leben[1] des Volkes. Nach dem Markte wird die Zeit eingeteilt, der Markt ersetzt die tägliche Zeitung und den Nachrichtendienst, der Markt verbindet die einzelnen Dörfer untereinander, der Markt bietet vielen den Unterhalt und ist manchen die Quelle des Wohlstandes geworden.

Wieviel den Khasi an einem gedeihlichen Marktleben liegt, ersieht man aus den Gebeten, welche alljährlich beim großen Staatsopfer zu Ehren des Gottes Shillong vom dienstuenden Opferer *(lyngdoh)* gesprochen werden: „O Gott Shillong! Der du dieses Gebet, dieses Opfer der Ziege, der Henne, des *kpu* und *rynai* (eine Art Brot aus Reismehl oder Mais mit gemahlenem Zucker), der Vorbereitungsgerüte, wie du sie gegeben hast dem königlichen Geschlechte, auf daß alle Jahre einmal in deinem Namen ein Opfer gefeiert werde, damit wir glücklich leben und gesund seien und uns vermehren, damit die Könige emporkommen, die Märkte sich des Fortschrittes und des Erfolges erfreuen und die Kinder des Reiches sich ausbreiten und vermehren in deinem Namen und deiner Ehre."

Nach diesem Gebet gießt der oberste Opferer *(lyngdoh rangbah)* Reiswasser *(ka kiad um)* aus einer Kürbisflasche *(a kiang)* auf den Boden zu Ehren der Göttin der Märkte *(ka blei jiu lai hat)* und betet dabei: „Erhöre uns, o Göttin, auf daß die Märkte gut und gewinnbringend und erfolgreich seien, daß die Wege gut und sicher und alles geeignet sei, daß das Reich fortschreite und sich entwickle, *ner* (nicht wahr)?"

---

1. Das Marktpersonal

Bei den Khasi herrschen unter dem Verkaufspersonal die Frauen derart vor, daß man versucht ist, in ihnen die Begründerinnen des Mutterrechts zu vermuten. Da die Lebensmittel den Hauptartikel des Marktes bilden, diese aber von den Frauen gezogen werden, so liegt auch hierin ein Grund, warum die Frau auf dem Markte dominiert. Das männliche Element beteiligt sich zwar auch aktiv auf dem Markte, doch nur in solchen Artikeln, die ihm, sei es durch deren Herstellung, wie Geräte aus Eisen oder sei es durch eine Eigenart, wie die Aufzucht von Ziegen und Schafen speziell zukommen. Wenn die Männer durchschnittlich auch nur zum Vergnügen auf den Markt gehen, so kann ich der Ansicht nicht beipflichten[5], daß sie das Marktgeschäft unter ihrer Ehre halten würden, falls sie eine Frau oder ein erwachsenes Mädchen (Tochter) zu Hause haben, denen sie diese Geschäfte überlassen würden. Nicht weil die Männer das Marktgeschäft unter ihrer Ehre halten würden, sondern weil der Markt einmal das bevorzugte Geschäft der Frau ist, bleiben sie vom Markte fern. Sieht man auch äußerst selten Männer, die Nahrungsmittel feilbieten, so sieht man öfters Männer, die die Nahrungsmittel den Frauen auf den Markt tragen. Nur selbst gefangene Vögel verkaufen die Männer persönlich. Wenn also das Kaufen und Verkaufen Sache der Khasifrauen ist, so ist diese Stellung nicht etwa eine untergeordnete und beschämende, sondern eine lang eingebürgerte und dominierende.

2. Die Marktware

Vorwiegend sind auf den Khasimärkten die Lebensmittel. Verkauft werden: Reis *(khaw)*, getrocknete Fische *(dieh khe)*, Kartoffel *(phun)*, Zuckerrohr *(u pei)*, eine eßbare Wurzel, die roh genossen wird *(u soh phlang*, bot. Name: Tinospora cordifolia Benth); Johannisbeeren *(u soh riew*, bot.: coix lachryma Jobi); italienische Hirse *(u 'rai soh*, bot.: setaria italica); Rispenhirse *(u 'rai shan*, bot.: panicum sanguinale); Kolbenhirse *(u 'rai truh*, bot.: eleusine Coracana); Kheilebohnen, zwei Arten: *(u rymbai ja*, bot.: psoralea calcaratus) und *(u rymbai khang*, bot.: glycine soja). Mais *(u 'rimbaiem)*; Ananas *(u soh tram)*; Zitronen *(u soh myeiong)*; Orangen *(u soh niemtra)*; Mango *(u soh piang)*; Melonen *(u pathaw)*; Brotfrucht *(u soh kyu*, bot.: artocarpus incisa); Kirschbäume *(u soh jing*, bot.: prunus serrulata); Bananen *(ka kait)*; Pfeffer *(u soh sarit)*; Chilli *(u soh myrphah)*; Papaya *(u soh kynphar*, bot.: carica papaya); eine Art wilder Kartoffel *(u soh kyrsiar)*; Zimmt *(ka sisia*, bot.: cinnamon cassia); Muskatnuß *(u jai phat)*; Ginger *(u 'siang)*; Honig in Waben *(ka ngup)*.

Ziegen, Schafe und Vieh werden teils lebend, teils geschlachtet in kleinen Quantitäten verkauft. Hühner kommen viele, besonders zu Opferzwecken auf den Markt.

Außerdem kommen Dinge, die zum Haus- und Feldbau nötig sind, zum Verkauf, wie Gras zum Decken der Hütten; gezimmerte Balken; Bambusstangen; Bambusgeflechte; getrockneter Kuhmist; Feldspaten *(mukhu)*; Khasimesser *(ka*

wal); geflochtene Körbe in allen Größen; wasserdichte geflochtene Behälter; Tragkörbe *(tapu)*; Strohhüte *(a star)*; Trinkbecher aus Bambus; Körbeflaschen; bitterne Mörser; Wasserpfeifen aus Kokosnüssen; Pfeifenköpfe aus an der Sonne gerösteten Lehm; Teller und Schalen aus Messing; Kochtöpfe aus Eisen und eisene Gefäße: alles Arbeiten der Khasi.

Neuerdings sieht man auch noch europäische Waren, wie Lendentücher, Strümpfe, Mützen, Kämme, Spiegel, Mundharmonikas, Streichhölzer und Zigaretten in größeren Mengen.

Auf den Märkten der Khasi kann man nicht bloß Lebensmittel und andere zum Leben nötige Dinge erwerben, sondern dort werden auch die Arbeiter gemietet. Wer sich bei anderen verdingen will, geht auf den Markt und sieht herum, hoffend, irgendeine Arbeit zu finden für die kommende (Markt-) Woche. Nur auf dem Markte kann man Tagelöhner mieten. Es wäre daher unter der Woche sehr schwer, irgendwelche Arbeiter zu bekommen. Auch beim Dingen auf dem Markte ist man genötigt, die Arbeiter für die ganze „Marktwoche" zu mieten, d. h. bis zum nächsten Markttag, da die Kuli sonst schwerlich Arbeit finden würden und wegen ein oder zwei Tage Beschäftigung die Arbeit gar nicht annehmen würden. Auch die Lastträger für Reisen müssen auf den Märkten gesucht und gemietet werden.

6. Die Marktsitten.

a) Die Vorbereitung zum Markte. Die Verkäufer und Verkäuferinnen tragen durchschnittlich ihre Waren selbst zum Markte. Sie schließen sich zu kleineren oder größeren Gruppen zusammen und gehen so gemeinsam. Die Waren werden auf dem Rücken getragen. Die Last wird je nach dem Umfang oder Inhalt verpackt. Größere Objekte, wie Bambusstangen, Balken, Zuckerrohr, Gras und Matten werden direkt mittels des *a star*, eines aus Rotang geflochtenen Strohhutes getragen, ohne weitere Umhüllung. Kleinere Objekte, wie Salz oder Kartoffel, werden in Säcke verpackt, andere, wie Bettstroh, Pfefferblatt, Obst, Gemüse usw., werden in Körben aus Bambus getragen. Die Körbe sind entweder Spitzkörbe, die oben rund sind oder viereckige Körbe, die unten zwar spitz zulaufen, aber doch noch den Ansatz von vier Füßen haben. Letztere Körbe sind meist mit einem Deckel versehen, die, wie die Körbe selbst, fast wasserdicht geflochten sind, so daß man Mehl oder Salz auch während der Regenzeit transportieren kann. Zwischen Rücken und Last *(ingbi)* wird ein aus Bambus geflochtener runder (oder ovaler), schildähnlicher Gegenstand eingeschoben, der im Bedarfsfalle als Regenschirm *(ka rup)* gebraucht wird. Einerseits hat dieser Gegenstand den Zweck, der Drückende der Last zu mildern, andererseits wird er bei Regenwetter hervorgezogen, um als Regenschirm zu dienen, indem er mit einer Hand gegen den Regen gehalten wird.

Was das Gewicht betrifft, das die Khasi zum Markte tragen, so beläuft sich das der Männer ungefähr auf 100 und mehr Pfund, während die Frauen selten mehr als 80 bis 85 Pfund sich aufladen.

Viele Khasi müssen wegen der großen Entfernung vom Markte bereits den Nachmittags aufbrechen. Sie übernachten bei Bekannten. In der Dämmerung ver-

schieren sie bei Fackelbeleuchtung. Die Fackeln bestehen aus mehreren Igra, d. h. ganz dünnen Bambus, die in ein großes Bambusrohr gesteckt und mit Petroleum übergossen, angezündet werden. Oder man füllt auch ein großes Bambusrohr mit Lappen, die mit Petroleum getränkt sind. Die brennenden Fackeln werden beim Gehen stets im Kreise geschwungen, was zwar nur ein Glimmen derselben ermöglicht, aber auch ein Erlöschen verhindert. Das Glimmen genügt vollauf zur nötigen Beleuchtung des Weges (Fußweges).

Auf dem gesamten Weg wird Betelnuß gekaut* und während der Rast die Wasserpfeife geraucht.

b) Der Marktplatz. Man kann bei den Khasi nicht von einem bestimmten Platze reden, auf dem sie im allgemeinen den Markt abhalten. Es ist dies nach den Gegenden sehr verschieden. Zumeist liegt der für den Markt gewählte Platz außerhalb des Dorfes. Mit Vorliebe halten sie die Märkte auf Anhöhen oder sonst exponierten Plätzen. Ein einmal gewählter Platz bleibt als Marktplatz für die betreffende Ortschaft bestehen. Oftmals findet sich der Marktplatz in nächster Nähe der Totengedenksteine, gleichsam als sollten die dort verehrten Geister der Ahnen den Marktbesuchern Schutz und Beistand leisten. In den südlichen Abhängen der Khasiberge wird der Markt vielfach an den Ufern der Flüsse abgehalten, was darin seinen Grund hat, daß die Khasi zu diesen Märkten in Booten kommen. Der Marktplatz in Mawkhlieng ist ganz isoliert. Ebenso der in Lahan, doch ist dort in der Nähe ein Gehölz. Auch findet man öfters den Marktplatz unter Bäumen, am Waldesrande oder in der Nähe der Totengedenksteine.

c) Markthütten. Man hält die Märkte durchschnittlich unter freiem Himmel ab. Der Rasen bietet hinreichendst so gut wie Platz zum Auslegen der Waren. Doch finden sich an manchen Orten auch Markthallen oder Markthütten. Diese sind einfache, nach allen Seiten offene Hallen, deren Gerüste aus Bambusstangen und deren Bedachung aus Stroh oder Palmenblättern besteht. Die Markthütten oder Markthallen sind im Rechteck gebaut und haben Giebeldächer. Sie bieten den Verkäuferinnen nur Schutz gegen Sonne resp. Regen, aber keine anderen Bequemlichkeiten. Weder Tische, noch Stühle, noch sonstige Vorrichtungen zum Auslegen der Waren sind vorhanden. Gegen die Windseite findet man diese Markthallen vielfach mit Bambusmatten abgedeckt.

d) Auswahl der Verkaufsstelle. Die Auswahl der Verkaufsstelle ist dem Verkäufer freigegeben. Doch ist eine gewisse Einteilung auf jedem Markte nicht zu verkennen. Man könnte diese Einteilung eine Einteilung nach den Geschlechtern nennen. Denn in der Mitte werden gewöhnlich die Lebensmittel verkauft, was die Frauen besorgen. An den Außenrändern kommen die Gerte und das Vieh zum Verkauf, was Sache der Männer ist. Es gibt daher eine bestimmte Marktordnung, die sich bei den Khasi von selbst versteht: in der Mitte die Frauen, außen herum die Männer (beim Tanz ist eine ähnliche Ordnung: in der Mitte das weibliche, außen herum das männliche Geschlecht). Die einzelnen Branchen haben

* Nach „Betelnuß" wird auch die Länge des Weges berechnet.

Sr Stegmüller AR7 Khasi

ihre bestimmten Plätze, ohne daß dadurch den einzelnen Verkäufern ein bestimmter Platz angewiesen wäre.

Die Frauen lassen sich nach der Ankunft auf dem Marktplatze auf irgendeinem, ihnen gut scheinenden Platz nieder. Vor sich breiten sie dann die zum Verkaufe bestimmten Nahrungsmittel auf dem Boden aus. Sie sitzen hart neben einander und bilden so lange Reihen, welche sich bei starkem Marktbesuche verdoppeln und verdreifachen. Es gibt wenig Platz für die Marktbesucher, welche sich zwischen den ausgelegten Waren und den dicht beisammen sitzenden Verkäuferinnen durcharbeiten müssen. Selten findet man eine Frau abseits sitzen. Da auf dem Markte nicht gemahlen wird, so erübrigt sich auch das Abseitssitzen, wodurch freilich eine bessere Übersicht über die zum Verkaufe ausgelegten Waren erlangt würde.

Die großen Gegenstände, wie Bambus und Balken, werden stets an den Außenseiten des Marktplatzes aufgestellt und dort verkauft, auch wenn der Verkauf (ausnahmsweise) durch Frauen geschieht.

e) Zeitbestimmung. 1. Bestimmung des Markttages. Die Khasi haben eine achttägige bzw. eine viertägige Woche. Jeden achten Tag findet ein großer [5], jeden vierten Tag ein kleiner Markt statt, und zwar immer wieder am gleichen Ort. Die großen wie die kleinen Märkte werden also täglich abgehalten, nur an verschiedenen Orten in einem bestimmten Bezirk. In diesem Bezirk oder bestimmten räumlichen Gebiet sind die Markttage für die verschiedenen Ortschaften, respektive Marktplätze so bestimmt, daß sie nie miteinander kollidieren und jeder Khasi nach Belieben diesen oder jenen Markt besuchen kann. Die Reihenfolge der Märkte ist so genau geregelt, daß jeder Khasi bestimmt weiß, wo gerade Markt ist. Nach den abzuhaltenden Märkten werden auch die Tage benannt. Man spricht also nicht von einem Sonntag oder Mittwoch, sondern vom *jau duh* (großen Markt) in Shillong, in Nongkrem, in Umlong, in Rangkhei, in Pomtiah, in Imnih usw. Damit ist jeder Tag genau fixiert und zugleich der Markt für den betreffenden Ort.

Im Gebiete der War werden die Märkte jeden vierten Tag abgehalten, und zwar in der Reihenfolge: in Nongjiri, in Maubang, in Tyllap und in Shella. Entweder werden hier die Wochentage auch nach den Märkten benannt oder man sagt: der Tag vor dem Markttag, der Markttag, der Tag nach dem Markttag und der Tag zwischen den Märkten. Jeder Khasi in diesem Bezirke weiß dann unzweifelhaft, welcher Tag gemeint ist.

2. Bestimmung der Tageszeit. Was die Tageszeit betrifft, in der die Märkte abgehalten werden, so lassen sich hier allgemein gültige Regeln nicht aufstellen. Es ist dies verschieden nach den einzelnen Orten. Im allgemeinen wird die Mittagszeit bis spät in den Nachmittag hinein als Hauptmarktzeit genommen. Vor 10 Uhr früh sind die Marktplätze meist noch leer. Um 5 Uhr nachmittags ist Schluß, wenn nicht früher.

Die Dauer der Märkte ergibt sich aus dem bisher Gesagten. Im allgemeinen

F. W. Schmidt-Fürstenfeldt

Photo: F. Fr. Angelika

Alte Zuckerrohr auf dem Weg zum Markt nach Lub[illegible]

beträgt die Dauer eines großen Marktes ungefähr sechs Stunden, während ein kleiner Markt nur etwa vier Stunden währt.

l) Marktordnung bzw. Marktfrieden. Obwohl auf den Khasimärkten keinerlei amtliche Wächter oder sonstige Ordnungsorgane tätig sind, so fällt die große Ruhe und Ordnung auf jedem noch so großen Khasimarkt nur angenehm auf. Es ist mir niemals eine Klage zu Ohren gekommen, daß Nahrungsmittel oder sonstige Verkaufsgegenstände auf dem Markte gestohlen worden wären. Die Khasi betrachten den Markt als etwas Heiliges, als etwas Ehrwürdiges, als etwas allen gemeinsam Gehörendes, das niemand für sich allein in Anspruch nehmen darf. Auch Angriffe auf das Leben kommen nicht vor. Zank und Streit gehören zu den Ausnahmen. Es ist den Khasi etwas Selbstverständliches, den Marktfrieden nicht zu stören, da die Märkte doch unter dem Schutze der Götter stehen. (Siehe Götter in der Einleitung zu diesem Artikel.) Auch dürften die Tanzgelegenheiten, in denen Schutzes die Märkte vielfach abgehalten werden, einen Einfluß auf die Marktbesucher ausüben, da die Khasi sich von den Ahnengeistern beschützt wähnen und glauben, daß etwaige Unruhen auf dem Markte durch diese Geister gerächt würden.

Fast sämtliche Männer auf dem Markte sind bewaffnet. Dies hat einen Grund nur darin, daß die Leute auf dem Wege zum Markte beschützt und vor den Angriffen der „Totschläger" (*nongkhnuit*), d. h. derjenigen, welche auf Menschenmord ausgehen, um ihre Opfer dann den Schlangengeistern zu weihen, sicher sind. Deshalb gehen die Marktbesucher auch niemals allein, sondern immer in Gruppen zusammen. Die Männer sind bewaffnet mit dem *da* wait (einem Hackmesser), mit dem sie sich vortrefflich zu verteidigen wissen.

4. Der Marktzoll.

a) Der Marktzoll. Die den Markt besuchenden Verkäufer müssen beim Betreten des Marktplatzes eine Abgabe entrichten. Ausgenommen hiervon sind nur die jeweiligen Bewohner des Dorfes oder Bezirkes, in dem der Markt abgehalten wird. Die Marktabgabe wird teils in Geld, teils in Naturalien abverlangt. In manchen Dörfern wird alles nur in bar bezahlt. Die Höhe des zu erlegenden Zolles beträgt 2 oder 3 Paisa, manchmal auch eine Ana (in deutscher Friedenswährung 5—8—10 Pfennige). Nur Betelnuß und Pfefferblatt wird lieber als Geld genommen. In manchen Dörfern wird alles nur in Naturalien bezahlt, soweit die Nahrungsmittel in Betracht kommen. Der Marktzolleinnehmer greift ohne lange Zeremonien in den Tragkorb der angekommenen Verkäuferinnen und nimmt sich so viel, als er mit einer Hand, respektive mit zwei Händen fassen kann.

Der Zoll wird erhoben an den Zugangswegen zum Markte. Hie und da findet sich eine Zollhütte, bei dem Passieren der Abgabe gemacht werden muß. Die Einnahmen gehören dem Könige, in dessen Reich sich der Markt befindet. Diese Marktzölle bilden vielfach recht gute Einnahmequellen für die königlichen Familien, da die Märkte regelmäßig abgehalten und gut besucht werden. Als Gegenleistung für die Marktzölle muß der Königs die Marktbauten (wenn solche vorhanden sind) instand setzen.

b) **Marktordnung.** Die eigentliche Marktordnung besteht nicht. Doch kann man außerhalb des Marktes nicht handeln, da die Kiosk keine Läden haben. Nur in größeren Städten findet sich der eine oder andere Krämerladen, der aber nicht in Betracht kommt. Diese Kiosker nennen für alle Artikel, die sie zu Tisch verkaufen, auch den „Marktpreis" entrichten, mit Ausnahme für den Verkauf von *Zwei „Frühstücken"*, die sonnabends auf dem Markte verkauft wird.

c) **Preise und Maße.** Die Preise richten sich nach dem Angebot und der Nachfrage. Sie werden von den Verkäufern bei gemischte Fischchen und Fleischchen in nicht Stück. Eine Ausnahme bildet der Preis für den täglichen Fisch, der [illegible] festgesetzt wird. Ohne Zweifel aber kommen einem die Verkäuferinnen bei ihren Waren. Die Marktbesucher kommen, kaufen die Waren, berühren die [illegible], wägen sie in den Händen ab und fragen schließlich nach dem Preis.

Scheint ihnen der Preis zu hoch zu sein, so legen sie die Ware wieder an ihren Ort und gehen, ohne irgendeine Bemerkung zu machen, ihren Wegen.

Gezahlt wird mit Münzen. Die Kiosk haben folgende Bemessung für den englisch-indischen Geld:

4 shilling	=	gleich	1 kyatte
2 kyatte	=	=	1 pulse oder 2 annas
4 pulse	=	=	1 anna
16 anna	=	=	1 rupiee
15 rupiee	=	=	1 mohur, dazu ist gleich 30 Mk. [illegible]

Für Waren, die nach Gewicht verkauft werden, gelten folgende Normen:

4	tola	=	1 tola
1½	tola	=	1 [illegible]
2	[illegible]	=	1 [illegible]
4	[illegible]	=	1 [illegible]
8	[illegible]	=	1 [illegible]
2	[illegible]	=	1 [illegible]
4	[illegible]	=	1 [illegible]
37½	[illegible]	=	1 [illegible] ist gleich 30 [illegible]

Für Waren, die nach Quadratfuß verkauft werden, gelten folgende Normen:

4	[illegible]	=	1 [illegible]
20	[illegible]	=	1 [illegible]
16	[illegible]	=	1 [illegible]
20	[illegible]	=	1 [illegible] ist gleich 100 Quadratfuß

Für Waren, die nach Stückzahl verkauft werden, gelten im allgemeinen folgende Normen:

12	[illegible]	=	1 [illegible]
20	[illegible]	=	1 [illegible]
5	[illegible]	=	1 [illegible]
24	[illegible]	=	1 [illegible]
20	[illegible]	=	1 [illegible]
12	[illegible]	=	1 [illegible]

Eine Kaneliene bildet der Verband von Orangen. Diese kommen an vielen Tausenden auf den Markt. Diese Früchte werden nach qualität, d. h. besser verkauft, an aber nicht wirklich so schlecht. Dazu die qualität haben verschiedene Bezeichnungen, je nach der Gegend. So verbinden die Leute am Tiggenschiff (in Fluß) folgendermaßen:

1 karf	ent gleich	6 Orangen
6 karf	= =	1 Meer
100 Meer	= =	1 qarf, d.h. 600 Orangen

In Delta rechnet man so:

1 gur ent gleich 6 Orangen
1 gur ent 3 Orangen ent gleich 1 Meer
2 Meer = = 1 karf
37 karf und 1 Meer = = 1 qarf oder 1000 Orangen

Der Preis für ein qarf bewirt sich von 10 bis 40 Rupien (rupiffe), je nach der Menge der Früchte, die an Markte kommen.

Quabbiben (rynyne) werden verkauft nach folgender Zählung:

2 ein-	ent gleich	1 jar
10 jar	= =	1 Mengarit
5 Mengarit	= =	1 karf
4 karf	= =	1 kip
20 kip	= =	1 bert
6 bert	= =	1 mwim

Bei den Wirt aber werden die Quabbiben in Dzaddis verkauft. Jeder Dzaddi hat vier Blachet und jeder Blachet hat 40 Stück. Der Preis für 10 bis 20 Dzaddi beträgt durchschnittlich 1 Rupie (rynyfe). Wenn aber der Regen anfängt und die trockene Zeit beginnt, so steigt der Preis auf 2/3 und mehr Rupien. Bei einem gut besuchten Markt werden täglich 4000 bis 5000 Dzaddi rynyne verkauft.

/ABT/ The Hongkem Puja in the Khasi Mountains (Assam) (I)

/24 1. All the pictures attached to this article are prepared from photographs taken by P. Promotion Dagmillan, S.D.S., missionary in Shillong. The photographs were in part very difficult to take as they had to be made without being observed and in some cases the day was already well advanced.

by P. Dr. C. Berkan, S.D.S., Apostolic Prefect of Assam.

4.5) About five English miles to the east of Shillong, the chief town of the Khasi Mountains, lies the town of Hongkem. It is the seat of the king (U S'iem) who governs the state Hongkem of Khyrim, the largest of the 25 Khasi little states and which is partly independent (semi-independent) of the English government. Hongkem is best known for the great sacrifice, simply called Hongkem Puja or also be from Hang-u-S'iem Hongkem (Slaying the goat of the S'iem of Hongkem) which takes place there annually. This festivity offers, in little also data, an interesting insight into the religious and social views and customs of the interesting mountain people and should therefore be given a concise description, which may be divided into three parts.

I. The Preparations for the Sacrificial Feast,

II. The Sacrificial Feast,

III. The Celebration that Follows.

I. The Preparations for the Sacrificial Feast

Just as monarchy prevails in the family among the Khasi [illegible] similar arrangement has been kept in the management of the Khasi state, Hongkem. In the state, the S'iem is not the actual head but a high priestess, called Ka S'iem (Ka). (Ka) is not the dignity which [illegible] the social [illegible]. The temporal government is handled by the S'iem and by the S'iem [illegible] independent in the direction [illegible] working with his advisers, whose advice he must obtain in matter of importance. The temple of the Hongkem

[illegible] kept by the S'iem ঠিঙ্গ. Everything that comes in, such as taxes, 779
[illegible] contributions, or that which comes in through the administra- 775
tion of justice must be given to her. She may dispose of it as she
[illegible] best, while the S'iem receives from her the money necessary for
paying the costs of the government.

The S'iem ঠিঙ্গ is the sole authority in matters of religion. She
must watch over the religious sacrifices and determine the time and
place for them. /Seting p. 697 Fig. 1.[illegible] The Sacrifice (Nongbem
Pujo) among the Khasi/ /693/ the state sacrifices are held in her
house or in front of her house, and they must be performed in her
presence. The actual S'iem is her son or nephew or even more dis-
tant male relative, who is chosen by the "state council," the Dorbar.

After the death of the S'iem ঠিঙ্গ, this office passes to her eld-
est living daughter, and lacking such to the eldest daughter of her
eldest daughter, and lacking such granddaughters to the eldest daugh-
ter, and so forth. In case there are no daughters or granddaughters,
the eldest living sister takes the office; if there are no sisters, then
the eldest daughter of the eldest sister of the mother of the deceased
S'iem ঠিঙ্গ is the successor, and so it goes further. In this way the
office always remains within the royal lineage.

In the house of the S'iem ঠিঙ্গ (called ka-ing ঠিঙ্গ), which is 778
one of the largest and most attractive in the Khasi Hills, there is a 782
post in the middle which reaches from the floor to the ridge of the 776
roof. It is called a niduh Doi (post, pillar of gold) and serves at the
same time as the altar before which many sacrifices are performed.
The pillar is nothing other than the trunk of the Khasi oak (ka dieng
[illegible], botanical name: [illegible] sp.), which is holy to the Khasi. [824]
If the house of the S'iem ঠিঙ্গ burns down, or if it is built up anew, a
new pillar must be brought. Only certain families (jaid) have the
privilege of cutting down the tree for this purpose. As soon as it is
cut down, dancing and music begins, the trunk is covered with a
cloth and carried away on a carrying frame. Hundreds of persons
participate in this. As long as the pillar is not set up, it is guarded
night and day. A person or an animal might jump over it and then
would be sing[illegible]. In ancient times the trunk would be defiled and another
tree would have to be cut down. If something dreadful happens in
the kingdom, or if a danger threatens, the S'iem ঠিঙ্গ goes with the
official [illegible] priests of the kingdom Nongbem before the post
and offers sacrifice there in order to avert the evil.

The foregoing has to be mentioned in order to give a better
understanding of the following. 776

The Nongbem Pujo usually takes place in the month of May. 782

[See category 16, p. 16 - - - Budget]

One month before the celebration rice liquor is poured into a hollowed-out gourd bottle in the house of the S'iem ïïï

and cash are bought with these contributions, the balance, as with other money, is handed over to the S'iem ebi for management.

Until the approach of the actual festival, the fish sacrifice (nai-dohbha) takes places on the day called jea pomthiah, on which all who appear are fed with dried fish and brandy. This is supposed to be a further announcement to the u Blei Shillong, u Sumbria Iang Siem and ka Blei Iang Siem of the imminent Puja. Twelve different kinds of drums (kong) are beaten.

Thus the drum, kong thad tynghoh, is beaten three times, and the fore sacrificial priest (Soh Blei) and a flute player dance. The dance, tynghoh, will be described in more detail below. After it is finished, the kong kynthei (women drum) have a turn, to the sound of which the S'iem and the flute player (dohalia) dance three times. Usually only women dance to this drum. About the method of dancing it is sufficient to remark that in a Khasi dance the dancing persons do not touch each other, and each carries out the motions independent of the others. After the women drums are beaten, then the sword dance drum (kong mawlieh) and the large drum (nakra) are beaten. Torches are carried around and down of joy uttered nine times. Various drums, flute music, and clashes of cymbals follow, while dancing takes place. /facing p. 994. (A) Fig. 2. Drums, flutes and cymbals of the Khasi. Fig. 3 Sacrificial knives and ka wait of the Khasi. Phot. P. From. Stegmiller S. D. S. Fig. 4. Sacrificial dress of the Soh Blei (Khasi). Phot. P. From. Stegmiller, S. D. S. / /facing p. 994. (B) Fig. 10 (bis?). Khasi ornaments. Phot. P. Fro. Stegmiller, S. D. S. / /995/ At the end the S'iem dances alone, while the drums and flutes are not silent the whole night through. Fig. 3 shows several Khasi drums, a flute, and cymbals which are never missing from a dance.

The day of the large market, on which the actual ceremony begins, approaches meanwhile. On the day before -- ka ingi omsi -- the roads are swept and the place for the sacrifice of the goat put in order. As a sign of joy as to what will happen, drums are beaten again and flutes (lengmuri) played. In front of the house of the S'iem ieit, the S'iem and other men perform a sword dance. Although interesting, this dance is not very artistic. Hopping and skipping from one foot to the other, the men, one behind the other, move slowly in a circle on the open place. (cf. Fig. 6).[5] They hold a bunch of goat hair in one hand and a sword in the other. A shout of joy is uttered from time to time, then they stop again, jump at each other two by two, and hit each other with quick blows of their swords. Each one quickly draws back again and moves in a circle again as before. In this way the dance continues.

[5] See illustrations, see category 16, pp. 16-18 ... [illegible]

[96] this way the dance continues.

[97] After it has become dark a hen is sacrificed in front of the
[98] house of the S'iem ïdi: to the ka S'iem synshar (the queen who rules the world) and to the Bokuroh, the god who instructs in the playing of flutes and other instruments. Then various drums are beaten.

Then everyone goes inside the ïing ïdi. The S'iem ïdi hands the Sob Blei, the first sacrificial priest, who is from the family (jaid) Ramsong, a hollowed-out gourd bottle (u khaw) with rice liquor. The Sob Blei pours out the contents in front of the ridiut Blei in honor of the goddess of the markets (ka Blei jow lei hat) so that the markets will be good, remunerative, and successful; so that the roads will be good and safe and everything will be blessed; so that the kingdom itself will progress and develop. It must be remembered here that the market system is very studied among the Khasi and of the chief sources of their income. After this "salt" the same sacrificial drink is offered
[99] to the Ka Blei long S'iem in order to receive her blessings, so that the kings will be good and may make progress. Music and dancing then lasts until day break.

II. The Sacrificial Feast

The actual ceremony begins on the day of the large market. This day itself is called por ïlang (great heath). The S'iem ïdi may not eat rice for three days, only a kind of bread, which is made from rice flour. On the large open plain in front of the ïing ïdi the men hold their sword dance (ïhad wait) and guns are shot off until the S'iem ïdi, the S'iem and the Rungsh (elders) come out of the ïing ïdi. Following the S'iem ïdi, is her dawn-girl (mawi), who carries the utensils and sacrificial gifts. These are arranged by the S'iem ïdi herself and consist of a banana leaf, of which however only the upper part is taken (ka ïa kait), five betel nut leaves (tymphew), five portions of betel nuts, as much as is usually put in the mouth at one time (kwai) /096/, a kind of bread made of rice flour (kpu), for which the rice is first put in water, then taken out, dried, and pounded into flour; then ryni bread, which is also baked with pounded rice or corn mixed with sugar and rolled into the shape of ballets; some uncooked, shelled rice (u khaw), a gourd bottle with rice liquor (u klang) and several leaves of the Khasi oak tree. The following utensils are used: a golden or silver water container (u lota), a silver dishlike plate (ka pilung rupa). All these are now given by the S'iem ïdi to the Sob Blei and in addition a rooster and a white he-goat are brought to the place of sacrifice.

The spectators now go to the side. The S'iem and the Bangbain come down to the place of sacrifice, while the Bah Blei receives the unmilk and the sacrificial gifts and spreads them out in order on the ground. Then he takes the rooster in both hands and calls on the god Shillong with these words: "O god Shillong, thou who hast been feared since time immemorial! (ho Blei Shillong bumba la bah o long dwa!)" With a deep bow he then offers the sacrifice five times. Rooster and goat are sprinkled with water, rice, and the flour from lipu and rynai, and are then beheaded. Then the examination of the entrails (dylhor) takes place in order to see if the sacrifice was acceptable. The way of doing that will be given below.

After the end of the sacrifice the Bah Blei and a flute player lead the sword dance. After them the S'iem and the other dancers follow in turn. Various drums are beaten alternately and flutes are played through the whole night. When night falls the guests of the S'iem and those of the various districts of the kingdom of Nongkrem are brought for the sacrifice of the next day.

The day following the great market is called ka ngi Lynghe. It is the center point and climax of the whole ceremony. From early in the morning the crowds pour in from all sides of the Khasi Mountains.

Early in the morning an unmarried girl of the royal lineage (ka S'iem ka dang Myrsiew) dances in the house of the S'iem ñdi before the rishot Blei. Usually a granddaughter or nearer relative of the S'iem ñdi is chosen for this. Two men then take the girl in their arms and carry her with a rocking motion to the large open place in front of the ïing ñdi.

Then the great folk dance begins. In the middle of the place musicians squat on the ground and play the drums and flutes, and strike the cymbals. The music is quite without art, only a repetition of the same monotonous tones.

The women dancers move in a rather narrow circle around the musicians. Only the unmarried girls dance. The clothes they wear for it are very rich and frequently very valuable. Fine cloths, usually of red, yellow, or blue silk are draped over their bodies; the upper body and arms are covered by a satin jacket. Long hair is bound together in a bun behind their heads, a swing hanging /facing p. 198/ down from the bun which usually ends in three tassels. The head is covered by a golden or silver crown of fine chased work, which is topped by a bunch of feathers or a bunch of artificial flowers. Around their necks they wear chains of gold or

Fig. 5 Khasi Men Dancers in front of the ïing ñdi. Phot. F. From Stegmüller, S.D.S. Fig. 6. Sword Dance of the Khasi. Fig. 7. S'iem ñdi and S'iem of Nongkrem. / /197/ /198/ /199/ /200/ /201/ /202/ /203/

silver and enamel in various sizes made of real coralb. Their ear lobes are decorated with heavy earrings; shoes and stockings are not worn. Around their arms and wrists are massive silver rings or hoops, the latter being quite wide and in the same shape as cuffs. Fig. 10 shows the ornaments in detail. The very grand women dancers usually have a servant carrying an opened umbrella behind them.

The Khasi dance does not have the exciting and lively motions that are characteristic of our dances. Each woman dancer with her arms hanging down at her sides and her eyes cast modestly to the ground could be considered a model of modesty. Each completes her motions alone and completely independent of the others. She continuously makes a circle around the musicians, moving sideways, forwards, or backwards. At the same time the feet are kept close together and are moved seemingly so little that the motion is scarcely visible. When a woman dancer is tired she withdraws to rest a bit, and then enters again into the rows of the other dancers.

Fig. 8 and 9 illustrate the above description of the Khasi woman dancers. Fig. 8 shows the girls in the dance in front of the ring 24, of which only the front part may be seen above in the picture on the right.

At a proper distance from the girls the men dance in a wider circle around the place. They also have special clothing. Over the usual white cloth that covers the lower part of the body they wear a skirt, and over it a silk coat embroidered with many colors without sleeves which ends in a long fringe. Cf. Fig. 9 for this. A turban [illegible] large over over the back. Finally could [illegible] the head. A bunch of artificial flowers (?) about 12 inches long of black and white feathers is placed in the [illegible], while the right hand holds a bunch of green leaves. The [illegible] of all are now worn by many people fully with the exception perhaps [illegible].

The musicians of the dance are [illegible] the dancing girls, but still quite [illegible]. In a shuffling manner they hop from one foot to another in a [illegible] way, without lifting their legs very [illegible]. In this way they [illegible] forward, describing a circle of the [illegible] they wave the bunch of [illegible] toward to the sky. Every time [illegible] they hop and at a group [illegible] a bow towards the middle of the circle with a loud resounding [illegible] of pleasure, which they bring the bunch of [illegible] downwards at the same time. Fig. 11.

[see category 16, pp. 16-17 --- Anthy 17]

Then the dance continues for hours at a time inside the wave of the music. Thousands of spectators who do not seem to get tired throng around the great place. In the afternoon, at about three o'clock /935/ the dance, which plays a large part in all the religious festivities is ended. 935

Then preparations are made for the large sacrifice. In front of the house of the S'iem ñá several boards are placed in a row beside each other, and in front of them at certain intervals twelve little heaps of leaves are made. Music now plays inside of the ïing ñá. All the sacrificial gifts are given to the S'iem ñá in front of the Khasi Blei and then distributed to the sacrificers by her. These then go out of the hut to the place of the sacrifice. There are twelve of them, namely the six official sacrificial priests of the kingdom and several lyngdohs from the villages; the Soh Blei is at their head, wearing a special sacrificial coat (cf. Fig. 4),[1] while the others wear everyday clothes. Each one carries a dish in his hand with some rice, pounded flour for lipu and ryni, betel nuts and the pepper leaf that belongs with them, a small young hen, a water container, leaves of the Khasi oak tree, as well as a small gourd bottle with rice liquor. The dish and the water container of the sacrificial priests are of ornamented brass, those of the Soh Blei of silver -- all clean and polished until gleaming. 796 782

The spectators are arranged to the right and the left of the sacrificers, so that there is a wide alleyway open through the middle of the place to the gate of the board fence which surrounds the place and the ïing ñá. Several men are constantly busy keeping the crowd within these bounds. No one may come in through the gate during the whole ceremony, because the god comes here during the sacrifice - therefore the broad path must be left open. If anyone should chance to wish to come in through the gate during the performance of the sacrifice, he is driven back with loud shouts. If he dared to come in anyway, in earlier times he would have been a child of death; now the fear of the English government might present him to a certain extent, although this could hardly be an absolute guaranty of his life because of the religious excitement of the people. [illegible]

The twelve now squat down on the boards placed in front of the ïing ñá, the Soh Blei in the middle. Behind them the S'iem ñá sits alone on the steps which lead from the ïing ñá to the place of the sacrifice. Somewhat further back sits the S'iem surrounded by his bloodsib and relatives (cf. Fig 7).[2] The Soh Blei sets the example in all that follows; the others watch him and copy him. While each of the sacrificers slaughters only a small hen or a goat, the Soh Blei has

[1] [For illustrations, see Calcutta 1926, pp. 14-18 --- Analyst]

the right to kill two of them, since he sacrifices to the ka Blei long Sohem and to the u Blei Shillong at the same time.

Each one places the little liquor bottle on the little pile of earth in front of him. This also represents the altar. Then they take pepper leaves and oak leaves and place them in a certain pattern beside and on top of each other, pieces of betel nuts are placed on them, and the whole is strewn with rice, kpu flour and ryngi flour, while the [illegible] are murmured (cf. Fig. 1). Then follows the sacrifice of the little hens. The sacrificers each take one between both hands, murmuring soft prayers, then /99b/ the head of the little animal is sprinkled with water and strewn with rice, kpu flour, and ryngi flour. Each one dips a kind of pocket knife in the water and then cuts through the throat of the chicken. The freshly flowing blood is allowed to drip on the altar -- the little pile of earth with the bottle of liquor and the leaves. Then the entrails are taken out of the animals in order to see whether god is favorable to them or is angry with them because of the sins and wickedness of men. The sacrificers hold them up high with their right hands and look at them carefully. A joyful "u bhai (it is good)" escapes their lips and spreads through the circle of spectators.

This observing of entrails (dyhtor) occurs at all the sacrifices. Although there are many kinds of soft augaries, the following are more or less the usual ones. The gallet of chicken is about in the middle between the neck and the stomach and shaped like a fork. The right prong is called u Blei (god), the left one u brin (man). First the [illegible] is looked at to see if it is empty or shows any symptoms of sickness or spots; in these cases the hen is not suitable for sacrifice. But even when everything is faultless, better signs are wanted. The forking mentioned above is looked at and the sacrificer, holding the intestines in his hand, begins the ceremony with the question: "Nga kylli nga hynniam da ka shai ka khun, ieng ranghah u brin, dum u Blei? (I ask and seek through the morning and the evening, does the man rise and god bow?)" With his other hand he throws a little rice on the forking of the gallet, and because of the convulsive twitching actually one part or the other does rise. If the "man" rises, it is a good sign since the opposite branching, the "god" then bows or stays still as a sign of agreement.

If the omens are unfavorable, then it must be determined by throwing /perhaps a minister -- Kiwanrlon instead of Kiwanrlon - egg throwing: tr./, why the god is angry and which sacrifice would be [illegible] to him. Then the sacrifice begins again until the omens show that the god is reconciled and propitiated.

[illegible] to our Sanglewon Pala. After the observing of the

[illegible] of the hens is completed with good results, the main part of the ceremony begins. Goats are brought out of the inside of the *ing* *ñá* and one is placed behind each of the sacrificers. This [illegible] captured in Fig. 1. The hens that have already been sacrificed and the other sacrificial objects that have been mentioned can be seen lying in front of the Soh Blei and the other sacrificial priests on the ground. The Soh Blei now takes a long knife (ka wait) between both his outspreched hands and squeeting speaks a prayer with bowed head. Fig. 3 shows various kinds of such knives, the smaller folding ones are the ones mentioned above in describing the killing of the hens.

Meanwhile a kind of leaping place is thrown around the neck of one of the goats, one the the people present pulls it into the middle of the place where it /facing p. 698. Fig. 6. Dance of the Khasi Girls in front of the *ing ñá*. Two photographs by P. Frum. Snegmilled, S. D. S. Fig. 9. Women Khasi Dancers. Two photographs by P. Frum. Snegmillov, S. D. S. / /800/ is held fast by a rope. The Soh Blei gets up, walks up to the animal with the ka wait in his hand and waits for the instant when it holds still. With one blow the head flies on the ground. It is at once picked up and placed beside the good barrie standing on the little pile of earth. The twitching rump is dragged in front of the *ing ñá*. This is continues until five goats are beheaded.

Now the Siem comes down to the sacrificial place. He takes the slaughtering knife in his hand, squats down in the place of the head priest, and observes as the latter had done the same ceremonies. Then he gets up and strides into the middle of the place in full costume with raised head and a self-conscious dignity. A goat has already been led out there. One blow and its head also rolls on the ground. He sacrifices the first goat to the divinity which made him king, whereas the four others are sacrificed to the u Blei Shillong. A salve of guns and a loud shout of joy accompanies each blow of the Siem.

The slaughter is now continued by others in endless turns. Sixty, eighty and more goats must lose their lives. The poor victims are not always lucky enough to be killed with one blow. The animal might move at the last minute or an unskilled hand may lack a certain firmness. Then the goat is only lightly wounded and crying seeks to escape. The sacrificer throws the knife away in order to disappear hastily among the spectators, some pick up earth and throw it at him with reproachful cries, while others seize the poor animal, throw it on the ground and saw the head off with the knife. That is a horrible sight. It is considered an unfavorable sign when the goat is not

796 beheaded with one blow. If it happens to one of the five twelve goats, 797 the man concerned must inquire through new sacrifices why his sacri- 798 fice was not pleasing to god.

The observing of the entrails is only done with the twelve fine goats decapitated by the S'iem and the sacrificial priest. As in the case of pigs, it is only observed whether the liver, lungs, spleen and gall bladder are healthy and without spots, in which case the sacrifice is a good one and pleasing to god, otherwise through throwing /sic: could be egg throwing - Eierwerfen/ and new sacrifices a more favorable result must be brought about.

During the night a pig is sacrificed to the honor of the a Sohbia long S'iem and he is informed thereby that Puja has now taken place and that it will take place once annually to the honor of the a Blei Shillong so that the kings will be lucky and healthy, the markets will enjoy progress and good results, and the children of the kingdom will be happy. This closes with the address to the Sohbia long S'iem: "Bring it about that the augury turns out well, and if the god Shillong should still not be satisfied, then reveal it to us through the augury."

The Soh Blei now takes a chicken in his hand, sprinkles it with water, rice, flour of kpu and ryni and speaks: "Now thou art sprinkled in order to lose thy life by having thy neck cut so that I can see the good or the evil (ka pynsem pynsieh ban dah ka mynsem ban dyhut a ryndang; ka ngan khmih ia ka tha ka eiei)." Then /NB/ the animal's neck is cut, the blood, as mentioned above, is allowed to drip on the leaves and the gourd bottle, and the entrails are taken out. After the augury has turned out favorably, a white he-goat is brought in and the Soh Blei speaks: "O god Shillong, this prayer is for thee, this sacrifice of the goat, of the lac, of the kpu and ryni, of the utensils of preparation are for thee which thou hast given the royal family so that once annually the Puja may be celebrated in thy name, so that we may live happily, be healthy and increase, so that kings will arise so that their honor and that of the kingdom will grow and increase and the children of the kingdom will spread out to increase thy name and thy honor. O god Shillong, when thou hast received the sacrifice, bring it about that the heart, the lungs, the spleen, the gall bladder and the other parts are good."

Meanwhile dancers are arranged on both sides, they swing the sword (ka wait) and the bench (a symbolic) around in the air and utter shouts of joy. As mentioned above, the goat is now sacrificed three times with the various sacrificial gifts, and guns are shot off three times with shouts of joy afterward. Then the S'iem gets up, takes the ka wait in his hand and sits down on the place of sacrifice. He takes

all his turban (ka jain spong) and thanks god three times in a loud voice, then he hands over the ka wait to the Sah Blei who does the same and then gives the knife to the sacrificer from the jaid Nongkrem, this one hands it on to the one from the jaid [illegible], and this one finally gives it to the one from the jaid Nongpoing. Only one from these three families may undertake the beheading. When this has taken place, the head is placed on the leaves in front of the good bowls, and the entrails are taken from the body in order to read the omens. If these come out right, the dance of joy is set in motion. All members of the kingdom are invited to the feast, which consists of rice, sacrificial meat, and rice liquor and which lasts until early in the morning.

III. The Celebration that Follows.

On the evening of the following day -- called rind Mawbong -- a special meeting of the council takes place, which is called Darbar ka in order to announce that all the sacrifices are now past. The Siem has mats spread out inside the house and in the front room for the people to sit on; he himself takes his place on a pulong, a raised seat, in the front room. Goat meat and pork is distributed to all those present, while the person who is designated as the speaker in the Darbar and the five of the flute players receive betel nut. After Siem went to the village and has it announced three times that as long as the Darbar lasts nobody may leave his hut.

Then he takes his turban off, raises both hands and offers thanks in the name of the lord and creator (ka ka kynong u trai u nongthai) who made him king, gave him subjects as well as the districts of the kingdom, the markets and the roads leading thither and prays that he will ever give strength, growth and progress and prosperity to the faith. Then he cries out: "O god, lord and creator, give me, the Siem, happiness and prosperity also, so that my thanks and submission to thee may become ever greater (Ah Blei, trai kynrad u nongthaw u nongbah to ai tha ai ki ia nga I Siem ban nongkhraw ka ngah ka dong." Then he steps back.

The one who has been made the speaker now follows from the jaid Rynjah. He thanks the Siem three times and then says: "O lord, thou who hast created heaven and earth, thou hast created the king that we may be children of his kingdom; thou hast given thereon and the moon for reckoning the year, so that we can have Puja once in every year, so that the king appears, the children of the valleys in-cream and thrive, the children of the Khasi (3), the children of the

Die Nongkrem-Feja in den Khasi-Bergen (Assam)[1].

Von P. Dr. C. [illegible], S.D.S., Apost. Präfekt von Assam.

[illegible] Dorf [illegible] Siebten Monat des Khasi-Kalenders, bedeutet sich der Ort Nongkrem. Es ist die Residenz des Königs (u *Syem*), der dort von der englischen Regierung bei [illegible] (*Jaintia-Hügelland*) Staat Nongkrem oder Khyrim, den größten der 25 Khasi-Kleinstaaten, installiert. Am Schauplatze ist Nongkrem durch die gleich drei nebeneinanderliegenden großen Opfer, Nongkrem-Feja einbezogen gewesen, aber auch die *Ñam Kiang-u-Ñam* Nongkrem (der Zugang-Tiber des *Ñam* von Nongkrem). Diese Festzeitzeit bietet, wie wenigen, einen interessanten Einblick in die religiösen und noch sonstigen Anschauungen und Gebräuche dieses bisher unbekannten Bergvolkes, und erlaubt davon hier eine gedrängte Schilderung zu finden, die sich von selbst in drei Teile gliedert:

I. Die Vorbereitungen zu dem Opferfeste.
II. Das Opferfest.
III. Die Nachfeste.

I. Die Vorbereitungen zu dem Opferfeste.

Wie das Mahlzeitfest bei den Khasis in der Familie beweist, so ist auch eine direkte Einrichtung in der Leitung des Khasi-Staates Nongkrem erhalten geblieben. In diesem ist der eigentliche Haupt nicht der *Syem*, sondern eine Priesterinnerin, die *Ñam* oder genannt. *Ñam* bedeutet die Gottheit, welche über die irdischen Geschicken wacht. Die wichtigste Begleitung ist dem *Ñam* von der *Ñam* oder Wahrsagerin, er handelt gleichsam als Ihr Beschützer, wenigstens erscheinbar in seinem Entschluß [illegible], sonstiges mit seinen Befehlen, Anordnungen, denen Sie er in Sachen von einiger Bedeutung einholen muß. Die Gelder des Staates sind bei der *Ñam* oder in Verwahr; Alles, was an Steuern, Wertsachgaben, durch Bestrafungen u. dgl. eingeht, muß an sie abgeliefert werden. Sie kann darüber nach Gutdünken verfügen, während der *Syem* die einzigen Geldmittel zur Bestreitung der Regierungsausgaben von Ihr erhält.

In Sachen der Religion ist die *Ñam* oder einzige Person. Sie hat über die religiösen Opfer zu wachen, Zeit und Ort derselben zu bestimmen, in

[1] Die sämtlichen diesem Artikel beigegebenen Bilder sind nach photographischen Aufnahmen von P. Franciscus Diagnéville, S.D.S., Missionar in Shillong, angefertigt. Die Aufnahmen waren zum Teil bereits schwierig durchzuführen, da sie unbedingt gemacht werden mußten, und der Tag bei einigen schon vorgerückt war.

oder von dieser Kasse werden die Staatsgelder eingezahlt, in Khasi-Gegenwart entnommen und weggenommen werden. Der jeweilige *Siem* ist der Sohn oder Neffe, oder auch entfernterer mütterlicher Verwandter, der von dem „*Siemship*", dem Adelstitel, geerbt wird.

Nach dem Tode der *Siem* und geht diese Würde auf den ältesten lebenden Tochter über, in Ermangelung von solchen auf die älteste Tochter von seiner ältesten Tochter, in Ermangelung solcher Enkelinnen auf die älteste Tochter von seiner dritten Tochter und so fort. Im Falle lebender Tochter oder Enkelinnen vorhanden sind, tritt die älteste lebende Schwester in das Amt ein; lebt es auch an Schwestern, so ist die älteste Tochter von der ältesten Schwester der Mutter der verstorbenen *Siem* und Nachfolgerin, und so geht es weiter. Auf diese Weise bleibt die Würde immer innerhalb der königlichen Gesellschaft.

Im Hause der *Siem* sind *the ling* und gewerkt, welches einen der größten und ehrwürdigsten in den Khasi-Hügeln ist, befindet sich in der Mitte ein Phoisa, der vom Boden bis zum Dachfirst hinaufreicht. Es wird a *rukar Bar* (Phoisa, Säule Gottes) genannt und dient gleichzeitig als der Altar, vor dem verlacht Opfer stattfinden. Die Säule ist nichts anderes, als der Stamm der Khasi-Eiche *the ulong rang* (wörtl. Name: Castanopsis sp.), die dem Khasi heilig ist. Bevor der Phoisa der *Siem* sind ab, oder wird er neu aufgerichtet, so muß eine neue Säule herbeigeschafft werden. Nur bestimmte Geschlechter (*jaid*) haben das Vorrecht, tapfer den Baum zu fällen. Sobald er angehauen ist, wird gewartet und musiziert, der Stamm wird mit einem Tuch bedeckt und auf einer Tragbahre weitergeschafft. Hunderte von Personen beteiligen sich daran. Solange der Phoisa noch nicht aufgerichtet ist, wird er Tag und Nacht bewacht. Es könnte ein Mensch oder Tier darüber springen und das wäre *ung* (= tabu): der Stamm wäre entweiht und es müßte ein anderer Baum gefällt werden. Geschieht etwas Böses im Reiche, oder droht demselben eine Gefahr, so geht die *Siem* und mit den weiteren offiziellen Opferpriestern den Reichen Nongkrem vor die Säule hin und bringt dort ein Opfer dar, um das Übel abzuwenden.

Dies mögen vorausgeschickt sein, zum besseren Verständnis des folgenden.

Die Nongkrem-*Puja* findet gewöhnlich um den *Monat Nai* herum statt. Einen Monat vor der Feier wird im Hause der *Siem* und Bevollmächtigte in eine eingehende Kürbisflasche gegossen und vor der *rukar Bar* als *sad* (Trankopfer) dargebracht. Dies geschieht, um dem *a Sniéna ling Siem* (dem Genie des ersten Gedenkens mütterlicher Seite, der der erste Königl war), der *Ka Bar ling Siem* (die Gottheit, welche die Königl zu Königen macht) und dem *a Bar Skilling* (dem Gotte Skilling) mitzuteilen, daß für die *Puja* nun Vorbereitungen getroffen werden und sie dazu helfen möchten.

Der *a Bar Skilling* spielt bei der ganzen Feier die Hauptrolle. Er erhebt sich bei den Khasi besonders in dem Reiche Nongkrem und Nylliem, einer großen Vertiefung. Unweit von Nongkrem erhebt sich eine Bergspitze, 6430 Fuß über dem Meere. Es ist die höchste Spitze in den Khasi-Bergen, der Name ist „Skilling-Spitze" (Skilling peak). Hier ist der Sitz des Gottes Skilling. Die Sage geht, hier sei einmal ein Mensch erschienen, der gesagt habe, er

[facing p. 994: (B)]

[illegible] nicht gefunden werden, [illegible] aus [illegible] (*Ma Jong*). Auch [illegible] er den Lehrer gezwungen, daß sie Königin, *Fiawu*, [illegible] wurden. Sie wurde [illegible] der Gott, der [illegible] wohnt, *a Sha Jong* (der [illegible] aus [illegible] ist gemacht), wonach die Europäer seit der Zeit Stiftung machten [illegible] auch die [illegible] Hügelketten im Norden der Klassi-Berge diesen Namen, gaben.

Nachdem nun die *Fiawu* [illegible] den Tag der Feierlichkeiten genau bestimmt hat, ergeht zwei Wochen vor der Feier an die Dorfältesten (*Bongfuh*) [illegible] die Mitteilung davon. Dies geschieht am Tage des großen Markts (*Ale dofu*), der jeden achten Tag stattfindet. Zwei Wochen darauf ist der zweite Abschnitt, gewissermaßen am Tage des großen Marktes, wovon unten die Rede ist.

Die Art und Weise, wie die Einladung von statt geht, ist interessant. Es werden eine Anzahl, vielleicht eine Elle langer Ketten aus Bambusstängeln gemacht. Diese nennt man *Kyiwuh*. An den Knoten einer jeden Kette wird eine solche geschnitzt. Die *Ala* Kinds in [illegible] Zeiten [illegible] Schicksalsschläge [illegible], dienen diese Bambusketten [illegible] bei Festlichkeiten, Kriegsgefahren, Gerichtsverhandlungen u. dgl. als Zeichen der Einladung oder Verladung zu dem *Fiawu*. Durch die Form der Glieder der *kyiwuh* war der Grad der Dringlichkeit angezeigt; im Falle großer Eile waren diese lenghalt fach, [illegible] wurden. Die Chiemendung der *kyiwuh* an die Dorfältesten war [illegible] als Zeichen der Einladung für das ganze Dorf, an den Ortsbeschlüssen zu [illegible], und zugleich als Aufforderung, die [illegible] Opfergaben zu [illegible]. Jeder der sechs Bezirke, in welche das Dorf Nangbeto [illegible], muß eine Ziege liefern; jede einzelne *Hiyiw* muß außerdem eine Bananen-Quantität gewinnen von einer Rippe und vier *Aviaga* [illegible]. Ganz dem [illegible] Arme, [illegible] auch nur [illegible] zu geben. Von diesen Gaben [illegible] die Opfergaben, wie: Reis, verschiedene Opferkuchen, Fisch, [illegible] usw. angeschafft; der Rest wird, wie die übrigen Gelder, der *Fiawu* als [illegible] wahrung eingehändigt.

Bis zum Heranmahnen der eigentlichen Festtage [illegible] Tage, die zwischen den Festtagen (*sub-dokkhi*) [illegible], bei dem alle, welche erscheinen, mit getrocknetem Fisch und Reisschnaps bewirtet werden. Dies soll eine weitere Mitteilung, an den *a Sha Skilling*, *a Sadhoi Jong Fiawu* und *Ba Ziai Jong Fiawu* von [illegible] bevorstehenden *Fiyia* sein. Hierbei werden zwölf verschiedene Arten Trommeln (*Jong*) geschlagen.

Dann wird die Trommel *Aziog ahid* (*yaghuh*) dreimal geschlagen, wobei der erste Opferpriester (*Sola Bish*) und ein Flötenspieler tanzen. Der Tanz (*yaghuh*) wird weiter unten [illegible] Beschreibung finden. Nachdem er beendigt ist, kommt die *Aziog Kyiwuh* (Frauentrommel) an die Reihe, zu deren Schall der *Fiawu* und ein Flötenspieler (*Ja Sikabolo*) dreimal tanzen. Für gewöhnlich tanzen nur Frauen zu dieser Trommel. Über die Tanzart möge es hier im allgemeinen genügen, zu bemerken, daß bei diesem Klassi-Tanz eine Bewegung der tanzenden Personen untereinander stattfindet und jede unabhängig von der anderen ihre Bewegungen ausführt. Nach der Frauentrommel wird die Schwert-Tanztrommel (*Aziog mantiéh*) und die große Trommel (*sadoe*) gerührt. Hierbei werden Fackeln herumgetragen und neunmalige Freudenrufe ausgestoßen. Verschiedene Trommeln, Flötenspiel und Zimbelrasseln folgen auch, wobei immer wieder

getanzt wird. Zum Schlusse tanzt der *S'iem* noch allein, während das Getrommel und Flöten die ganze Nacht nicht mehr verstummt. Bild 2 zeigt einige Khasi-Trommeln, eine Flöte und Zimbeln, die bei keinem Tanze fehlen.

Der Tag des großen Marktes, an dem die eigentliche Feier beginnt, naht unterdessen heran. Am Tage vor demselben — *ka ingi amni* — werden die Wege gekehrt und der Platz für das Ziegenopfer in Ordnung gebracht. Als Zeichen der Freude hierüber, daß das geschehen, werden wieder Trommeln geschlagen und Flöten *(langmari)* gespielt. Vor dem Haus der *S'iem sâd* führt der *S'iem* und andere Männer einen Schwertertanz auf. Wenn auch interessant, so ist dieser Tanz doch wenig kunstvoll. Hüpfend und trippelnd, von einem Fuß auf den andern, bewegen sich die Männer hintereinander, langsam im Kreise, auf dem freien Platz umher (siehe Bild 6). In der einen Hand halten sie einen Busch aus Ziegenhaaren, in der andern das Schwert. Von Zeit zu Zeit wird ein Jauchzen ausgestoßen, dann halten sie wieder an, springen je zwei aufeinander zu und schlagen mit raschem Hieb ihre Schwerter aneinander. Mit lautem Aussuf zieht sich jeder wieder schnell zurück und bewegt sich im Kreise weiter wie zuvor. In dieser Weise geht es lange fort.

Nach Einbruch der Dunkelheit wird vor dem Hause der *S'iem sâd* eine Hymne gesungen: der *ka S'iem synshar* (die Königin, welche die Welt regiert) und dem *Biakarem*, dem Gott, der Flöten und andere Instrumente spielen lehrte. Hierauf werden verschiedene Trommeln geschlagen.

Man begibt sich dann in das Innere des *ûing sâd*. Hier überreicht die *S'iem sâd* dem *Sok Blei*, dem ersten Opferpriester, der aus dem Geschlechte *(jaid)* Rumnong ist, eine ungebühlte Kürbisflasche *(ka shaw)* mit Reiswein. Der *Sok Blei* gießt den Inhalt vor der *riskor Blei* aus, zu Ehren der Gottheit der Märkte *(ka Blei jria ïei sud)*, damit die Märkte gut, gewinnbringend und erfolgreich seien, daß die Wege gut und sicher und alles geeignet sei, daß das Reich selber fortschreite und sich entwickle. Man muß sich hier erinnern, daß bei den Khasis das Märktesystem sehr ausgeprägt und die Hauptquelle ihrer Einnahmen ist. Nach diesem *said* wird das gleiche Trankopfer der *ka Blei ïïing S'iem* dargebracht, um ihren Segen zu erhalten, auf daß die Könige gut wirken und Fortschritte machen mögen. Musik und Tanz ziehen sich dann bis Tagesanbruch hin.

II. Das Opferfest.

Mit dem Tag des großen Marktes beginnt nun die eigentliche Feier. Dieser Tag selbst wird *pom blang* (Ziegenkopfen) genannt. Die *S'iem sâd* darf nun drei Tage lang keinen Reis essen, nur eine Art Brot, das von Reismehl hergestellt wird. Auf dem großen freien Platz vor dem *ûing sâd* halten die Männer ihren Schwertertanz *(shad sûsi)* und wird mit Gewehren geschossen, bis die *S'iem sâd*, der *S'iem* und die *Rangbah* (Ältesten) aus dem *ûing sâd* herauskommen. Der *S'iem sâd* folgt ihre Sklavin *(mraw)*, welche die Geräthschaften und Opfergaben trägt. Diese sind von der *S'iem sâd* selber hergerichtet und bestehen aus einem Bananenblatt, von dem jedoch nur der obere Teil genommen wird *(ka sla kuit)*, fünf Betelnußblätter *(tympru)*, fünf Portionen Betelnuß, soviel man gewöhnlich auf einmal in den Mund nimmt

[facing p. 896]

(kwai), eine Art Brot aus Reismehl gemacht *(kpu)*, wovon der Reis zuerst ins Wasser getan, dann herausgenommen, getrocknet und zu Mehl gestoßen wird; dann aus *rynsi*, das gleichfalls aus gestoßenem Reis oder Mais gebacken, mit Zucker vermischt und in Form von Kugeln gerollt wird, etwas ungekochtem, enthülstem Reis *(u khaw)*, einer Kürbisflasche mit Reisschnaps *(u klong)* und einigen Blättern der Khasi-Eiche. An Gerätschaften kommen hierzu noch: ein goldener oder silberner Wasserbehälter *(u lata)*, ein silberner, schüsselartiger Teller *(ka pliang rupa)*. Alles dies wird nun von der *S'iem sâd* dem *Soh Blei* übergeben, dazu werden ein Hahn und ein weißer Ziegenbock auf den Opferplatz gebracht.

Die Zuschauer gehen jetzt zur Seite, der *S'iem* und die *Rangbah* kommen zum Opferplatz herab, während der *Soh Blei* die Gerätschaften und Opfergaben in Empfang nimmt und sie in Ordnung auf dem Boden ausbreitet. Dann nimmt er den Hahn in beide Hände und ruft den Gott *Shillong* an mit den Worten: „O Gott *Shillong*, der du gesetzt bist von unvordenklichen Zeiten! (*ho Blei Shillong kumba la buh u long shwa man shwa!*)" Mit tiefer Verneigung bietet er ihm dann fünfmal das Opfer dar. Hahn und Ziegenbock werden mit Wasser, Reis, dem Mehl von *kpu* und *rynsi* besprengt und dann geköpft. Hierauf findet die Eingeweideschau (*dykhôt*) statt, um zu sehen, ob das Opfer wohlgefällig war. Die Art und Weise derselben wird weiter unten mitgeteilt werden.

Nach Beendigung des Opfers führen der *Soh Blei* und ein Flötenspieler den Schwertertanz auf; nach ihnen kommen der *S'iem* und die übrigen Tänzer an die Reihe. Es werden abwechselnd verschiedene Trommeln geschlagen und Flöten gespielt, die ganze Nacht hindurch. Bei Anbruch der Nacht werden die Ziegen des *S'iem* und die der verschiedenen Bezirke des Reiches Nongkrem für die Opfer des nächsten Tages herbeigebracht.

Der folgende Tag nach dem großen Markt wird *ka sngi Lyngka* genannt. Er ist der Mittel- und Höhepunkt der ganzen Feier. Vom frühen Morgen an strömen von allen Seiten der Khasi-Hügel die Scharen herbei.

In der Frühe tanzt ein unverheiratetes Mädchen aus dem königlichen Geschlechte *(ka S'iem ba dang khynraw)* im Hause der *S'iem sâd* vor der *rishot Blei*. Gewöhnlich wird eine Enkelin oder nähere Verwandte der *S'iem sâd* hierzu genommen. Zwei Männer nehmen dann das Mädchen auf ihre Arme und tragen es mit schaukelnder Bewegung auf den großen freien Platz vor dem *ïing sâd*.

Nun beginnt der große Volkstanz. In der Mitte des Platzes hocken die Musikanten auf dem Boden und trommeln, flöten und schlagen die Zymbeln. Die Musik ist sehr kunstlos, immer nur eine Wiederholung der gleichen einförmigen Töne.

In einem engeren Kreise um die Musikanten herum bewegen sich die Frauentänzerinnen. Es tanzen nur unverheiratete Mädchen. Die Kleidung, welche sie dabei tragen, ist überreich und häufig sehr wertvoll. Feine Tücher, gewöhnlich von roter, gelber oder blauer Seide, fallen über die Körper herab; Oberkörper und Arme sind durch eine Sammetjacke verdeckt. Das Haar ist am Hinterkopfe in einen Knäuel zusammengebunden; eine Schnur fällt von

demselben herab, die gewöhnlich in drei Quasten endigt. Das Haupt wird von einer goldenen oder silbernen Krone von feiner ziselierter Arbeit bedeckt, die noch dazu von einem Federbusch oder einem Busch künstlicher Blumen überragt ist. Um den Hals tragen sie Ketten von Gold und Silber und mehrere in verschiedenen Größen von echten Korallen. Die Ohrläppchen sind mit schweren Ohrringen geziert; Schuhe und Strümpfe werden nicht getragen. Um die Arme und Handgelenke legen sich massiv silberne Ringe oder Reifen, die bei letzteren eine beträchtliche Breite, gleichsam in Form von Manschetten, haben. Die Schmucksachen im einzelnen zeigt das Bild 10. Bei vornehmeren Tänzerinnen pflegt noch ein Diener den aufgespannten Schirm hinterher zu tragen.

Der Khasi-Tanz zeichnet sich keineswegs aus durch die aufregenden und lebhaften Bewegungen, wie sie unseren Tanzarten eigen sind. Jede Tänzerin könnte mit den seitwärts herabhängenden Armen und den züchtig zu Boden gesenkten Augen als ein Typus von Bescheidenheit gelten. Eine jede vollführt ihre Bewegungen allein und vollständig unabhängig von den andern. Sie beschreibt fortwährend einen Kreis um die Musikanten entweder seitwärts, vorwärts oder rückwärts sich bewegend. Dabei werden die Füße dicht nebeneinander gehalten und nur ganz unscheinbar soviel weiter bewegt, daß die Bewegungen kaum sichtbar sind. Ist eine Tänzerin ermüdet, so zieht sie sich zurück, um ein wenig auszuruhen, und dann wieder in die Reihen der Übrigen einzutreten.

Die Bilder 8 und 9 illustrieren die obige Beschreibung der Khasi-Tänzerinnen; Bild 8 zeigt die Mädchen im Tanze vor dem *ling sâd*, von dem auf dem rechten Bild oben noch der vordere Teil zu sehen ist.

In einem gehörigen Abstande von den Mädchen tanzen in einem weiteren Kreise um den Platz die Männer. Sie haben gleichfalls eine besondere Kleidung. Über dem gewöhnlichen weißen Leinentuch, das den Unterkörper bedeckt, tragen sie ein Hemd, darüber einen seidenen, vielfarbig bestrickten Rock ohne Ärmel, der in langen Fransen endigt. Siehe hierzu die Bilder 9. Ein Schweif von Tierhaaren hängt über dem Rücken herab. Die Brust zieren kostbare Korallenketten. In dem seidenen Turban steckt ein Busch gegen 18 Zoll langer künstlicher Blumen *(thuia)* oder schwarzer und weißer Hahnenfedern, während die Rechte einen Busch aus Ziegenhaaren hält. Die modernen Schuhe und Strümpfe, welche jetzt vielfach getragen werden, passen schlecht zu der sonst hübschen Tracht.

Die Bewegungen der Männer sind lebhafter als die der tanzenden Mädchen, immerhin jedoch noch ganz gemütlich. In einem mehr schlenderndem Gange hüpfeln sie nach Kinderart von einem Bein auf das andere, ohne diese jedoch besonders aufzuheben. Auf diese Weise bewegen sie sich vorwärts, einen Kreis beschreibend; dabei fuchteln sie mit dem Haarbusch in der Luft herum. Von Zeit zu Zeit halten sie an und machen gruppenweise mit einem lauten jauchzenden Freudenausruf eine Verbeugung gegen die Mitte des Kreises, indem sie gleichzeitig den Haarbusch nach unten schwenken (siehe Bild 5).

So geht es unter dem Lärm der Musik stundenlang fort. Rings um den großen Platz drängen sich Tausende von Zuschauern, die scheinbar ohne zu ermüden ausharren. In den Nachmittagsstunden, ungefähr gegen drei Uhr,

9. Khasi-Tänzerinnen.

[facing p. 898]

wird der Tanz beendigt, der bei allen religiösen Feierlichkeiten eine große Rolle spielt.

Nun geht es an die Vorbereitung für das große Opfer. Vor dem Hause der *S'iem sâd* werden mehrere Bretter in eine Reihe nebeneinander gelegt und davor in bestimmten Zwischenräumen zwölf kleine Häufchen aus Lehm gemacht. Die Musik spielt nun im Innern des *ïing sâd*. Hier werden vor dem *rishot Blei* alle Opfergaben der *S'iem sâd* übergeben und von dieser dann den Opfernden zugeteilt. Diese gehen dann aus der Hütte heraus auf den Opferplatz. Es sind ihrer zwölf, nämlich die sechs offiziellen Opferpriester des Reiches und noch einige *Lyngdoh* aus den Dörfern; an ihrer Spitze ist der *Soh Blei*, der einen besonderen Opferrock trägt (siehe Bild 4), während die übrigen ihre Alltagskleidung tragen. Ein jeder trägt eine Schüssel in der Hand mit etwas Reis, gestoßenem Mehl für *kpu* und *rynsi*, Betelnuß und das dazu gehörige Pfefferblatt, ein junges Hühnchen, einen Wasserbehälter, Blätter der Khasi-Eiche, sowie einen kleinen Flaschenkürbis mit Reisschnaps. Die Schüssel und der Wasserbehälter der Opferpriester sind von ornamentiertem Messing, die des *Soh Blei* von Silber — alle glänzend rein gescheuert.

Die Zuschauer werden rechts und links von den Opfernden aufgestellt, so daß vor diesen durch die Mitte des ganzen Platzes eine breite Gasse frei bleibt bis zum Tor des Bretterzaunes hin, der den Platz und das *ïing sâd* umgibt. Mehrere Männer sind fortwährend damit beschäftigt, die Menge in diesen Schranken zu halten. Durch das Tor darf während der ganzen Feier niemand eintreten, denn hier hält während des Opfers der Gott seinen Einzug: darum muß auch die breite Gasse frei bleiben. Sollte jemand zufällig während der Opferhandlung durch das Tor eintreten wollen, so wird er mit lautem Zurufen zurückgetrieben. Würde er es trotzdem noch wagen einzutreten, so wäre er in früheren Zeiten ein Kind des Todes gewesen; jetzt dürfte ihn die Furcht vor der englischen Regierung wohl einigermaßen schützen, wenngleich selbst dies bei der religiösen Erregung des Volkes schwerlich eine absolute Garantie für sein Leben bieten dürfte.

Die Zwölfe kauern nun auf den vor dem *ïing sâd* hingelegten Brettern nieder, der *Soh Blei* in der Mitte. Hinter ihnen sitzt auf den Stufen, die von dem *ïing sâd* zum Opferplatz herabführen, die *S'iem sâd* allein in einer Reihe. Etwas weiter rückwärts sitzt der *S'iem*, umgeben von seinen *Mentris* und Verwandten (siehe Bild 7). Der *Soh Blei* gibt in allem folgenden das Beispiel: die übrigen sehen auf ihn und machen ihm alles nach. Während jedoch jeder der Opfernden nur ein Hühnchen oder eine Ziege schlachtet, hat der *Soh Blei* das Vorrecht, deren zwei zu töten, da er zugleich der *ka Blei long S'iem* und dem *u Blei Shillong* opfert.

Ein jeder stellt das Schnapsfläschchen auf das vor ihm befindliche Häufchen Lehm. Dies stellt gleichsam den Altar vor. Dann nimmt man die Pfeffer- und Eichenblätter und legt sie vor demselben in einer bestimmten Form neben- und aufeinander, Stücke Betelnuß werden darauf gelegt und das Ganze mit Reis, *kpu*- und *rynsi*-Mehl bestreut, indem kurze Gebetsformeln gemurmelt werden (siehe Bild 1). Hierauf folgt das Opfer der Hühnchen. Die Opfernden nehmen es zwischen beide Hände, leise Gebete vor sich hinsprechend, dann

wird der Kopf des Tierchens mit Wasser begossen und Reis, *kpu-* und *ryngi-*Mehl darauf gestreut. Ein jeder taucht eine Art Taschenmesser in das Wasser und durchschneidet dann damit dem Huhn die Kehle. Das frisch fließende Blut wird um den Altar — das Lehmhäufchen mit dem Schnapskürbis und den Blättern — träufeln gelassen. Hierauf werden den Tieren die Eingeweide herausgenommen, um daraus zu ersehen, ob der Gott ihnen günstig ist, oder etwa wegen der Sünden und Bosheit der Menschen ihnen zürne. Die Opferer halten sie mit der rechten Hand in die Höhe und betrachten dieselben aufmerksam. Ein freudiges „*U bha*! (Er ist gut!)" entschlüpft ihren Lippen und pflanzt sich im Kreise der Umstehenden weiter.

Diese Eingeweidenschau (*dykhot*) findet bei allen Opfern statt. Trotzdem es verschiedene Arten solcher Haruspizien gibt, dürfte doch die folgende als mehr oder weniger allgemein übliche gelten. Die Speiseröhre der Hühner ist ungefähr in der Mitte zwischen Hals und Magen gabelartig geformt. Der rechte dieser Zacken wird nun *u Blei* (Gott), der linke *u briu* (Mensch) genannt. Vorerst sieht man nach dem Mastdarm, ob er nicht etwa leer ist, irgendwelche Krankheitssymptome oder Flecken aufweist; in diesen Fällen ist das Hühnchen schon untauglich zum Opfern. Aber selbst wenn alles tadellos ist, will man noch bessere Anzeichen. Man sieht nach der oben erwähnten Vergabelung und der Opfernde beginnt, den Darm in der Hand haltend, das Zeremoniell mit der Frage: „*Nga kylli nga byrthen da ka shat ka khan, ieng rangbah u briu, dem u Blei?* (Ich frage und forsche durch das Werfen und durch Orakel, erhebt sich der Mensch und neigt sich Gott?)". Dabei bewirft er mit der andern Hand jene Vergabelung der Speiseröhre mit ein wenig Reis, wobei sich durch die konvulsivischen Zuckungen tatsächlich der eine oder andere Teil derselben hebt. Erhebt sich „der Mensch", so ist es ein gutes Zeichen, da nämlich die gegenüberstehende Verzweigung, „der Gott", sich dann verneigt, bzw. sich ruhig verhält zum Zeichen des Einverständnisses.

Sollte das Haruspizium ungünstig verlaufen, so muß durch Einwerfen erforscht werden, warum der Gott böse ist, und welches Opfer ihm etwa angenehm wäre. Darauf beginnt dann das Opfer wieder von neuem, bis die Haruspizien ergeben, daß der Gott nun versöhnt und befriedigt ist.

Doch kehren wir zu unserer *Nongkrem-Puja* zurück. Nachdem die Eingeweideschau der Hühner vorüber und mit gutem Resultat verlaufen ist, beginnt der Hauptteil der Feier. Ziegen werden aus dem Innern des *ïïng sïïd* herausgebracht und hinter jedem der Opfernden eine aufgestellt. Dieser Augenblick ist auf Bild 1 festgehalten. Man sieht die bereits geopferten Hühner und die übrigen obengenannten Opfergegenstände noch gleichfalls vor dem *Soh Blei* und den übrigen Opferpriestern am Boden liegen. Der *Soh Blei* nimmt nun ein langes Messer (*ka wait*) zwischen beide flachgestreckte Hände und spricht mit nach vorn geneigtem Haupte in kauernder Stellung ein Gebet. Bild 3 stellt verschiedene Arten solcher Messer dar; von den kleineren zusammenklappbaren unten in der Mitte war oben bei der Tötung der Hühner die Rede.

Unterdessen wird einer der Ziegen eine Art Schlingpflanze um den Hals geworfen; einer der Anwesenden zieht sie in die Mitte des Platzes, wo sie

von ihm einfach an der Leine festgehalten wird. Der *Soh Blei* erhebt sich, schreitet mit dem *ka walt* in der Hand auf das Tier zu und erwartet den Moment, wo es sich ruhig verhält. Mit einem Hiebe liegt das Haupt am Boden. Es wird sofort aufgehoben und neben die auf dem Lehmhäufchen stehende Kürbisflasche gelegt. Der zuckende Rumpf wird vor das *ïing sïd* geschleift. So geht es weiter, bis fünf Ziegen geköpft sind.

Jetzt kommt der *S'tem* auf den Opferplatz herab. Er nimmt das Schlachtmesser zur Hand, kauert sich an den Platz des Opferpriesters und beobachtet wie dieser vorher die gleichen Zeremonien. Dann erhebt er sich und schreitet in vollen Schmuck, erhobenen Hauptes und mit selbstbewußter Würde in die Mitte des Platzes, wo bereits wieder eine Ziege vorgeführt ist. Ein Hieb und auch ihr Haupt rollt am Boden. Die erste Ziege opfert er der Gottheit, die ihn zum König gemacht hat; die vier andern nachher dem *u Blei Shillong*. Eine Gewehrsalve und lauter Freudenruf begleitet jeden Hieb des *S'tems*.

In endloser Reihe wird die Schlächterei nun von andern fortgesetzt. Sechzig, achtzig und noch mehr Ziegen müssen ihr Leben lassen. Nicht immer sind die armen Opfer so glücklich, mit einem Hieb ums Leben gebracht zu werden. Das Tier bewegt sich im letzten Augenblick noch, oder eine ungeschickte Hand entbehrt der sicheren Festigkeit. So wird es nur leicht verwundet und sucht schreiend zu entkommen. Der Opfernde wirft das Messer fort, um eilends unter den Zuschauern zu verschwinden; einige heben Erde auf und bewerfen ihn mit vorwurfsvollem Ausruf damit, während andere das arme Tier ergreifen, auf den Boden werfen und ihm mit dem Messer förmlich den Kopf heruntersägen. Das ist ein grausamer Anblick. Es gilt als ein ungünstiges Zeichen, wenn die Ziege nicht mit einem Schlag enthauptet wird. Geschieht es bei den zwölf ersten Ziegen, so muß der Betreffende durch neuerliche Opfer nachforschen lassen, warum sein Opfer Gott nicht angenehm war.

Die Eingeweideschau wird nur bei den vom *S'tem* und den Opferpriestern enthaupteten zwölf ersten Ziegen vorgenommen. Hier, wie auch bei den Schweinen, wird im allgemeinen nur darauf gesehen, ob Leber, Lunge, Milz und Gallenblase gesund und ohne Flecken sind, in welchem Falle das Opfer ein gutes und dem Gott angenehmes ist; sonst muß eben durch Einwerfen und neue Opfer ein günstigeres Resultat herbeigeführt werden.

In der Nacht wird dann noch ein Schwein geschlachtet zu Ehren des *u Suidnia long S'tem* und ihm dabei mitgeteilt, daß jetzt *Puja* gewesen sei, und daß sie diese jedes Jahr einmal zu Ehren des *u Blei Shillong* vornehmen werden, damit die Könige glücklich und gesund seien, die Märkte sich des Fortschrittes und guten Erfolges erfreuen, und die Kinder des Reiches glücklich seien. Dies schließt mit der Anrede an den *Suidnia long S'tem*: „Mache, daß die Opferschau gut ausfalle, und wenn der Gott *Shillong* noch nicht zufrieden sein sollte, so zeige es uns durch die Opferschau."

Der *Soh Blei* nimmt nun ein Huhn zur Hand, besprengt dasselbe mit Wasser, Reis, dem Mehl von *kpu* und *rynsi* und spricht: „Jetzt wirst du bestreut, um den Geist zu verlieren durch Halsabschneiden, damit ich sehe das Gute oder Böse (*La pynsum pynsleh ban duh ka mynsiem ban dykut u ryndang; ba ngan khmih ia ka bha ka sniw*)." Hierauf wird dem Tier der

6: Becker AR7 Khasi

Hals abgeschnitten, das Blut, wie oben erwähnt, auf die Blätter und Kürbisflasche träufeln gelassen und die Eingeweide herausgenommen. Nachdem die Opferschau günstig verlaufen ist, wird ein weißer Ziegenbock herbeigeführt und der *Soh Blei* spricht: „O Gott *Shillong*, dir ist dieses Gebet, dieses Opfer der Ziege, der Henne, des *kpu* und *rynsi*, der Vorbereitungsgeräte, wie du sie gegeben dem königlichen Geschlecht, auf daß alle Jahre einmal in deinem Namen *Puja* gefeiert werde, damit wir glücklich leben, gesund seien und uns vermehren, damit die Könige emporkommen, damit ihre und des Reiches Ehre wachse und zunehme und die Kinder des Reiches sich ausbreiten, um zu vermehren deinen Namen und deine Ehre. O Gott *Shillong*, wenn du das Opfer empfangen hast, mache, daß gut seien das Herz, die Lunge, die Milz, die Gallenblase und die übrigen Teile."

Auf beiden Seiten sind unterdessen Tänzer aufgestellt; sie schwingen das Schwert (*ka wait*) und den Busch (*u symphiah*) in der Luft umher und stößen Freudenrufe aus. Der Ziegenbock wird nun, wie oben, dreimal mit den verschiedenen Opfergaben besprengt, wobei dreimal geschossen wird, und Freudenrufe ausgestoßen werden. Hierauf erhebt sich der *S'iem*, nimmt das *ka wait* zur Hand und läßt sich am Opferplatz nieder. Er nimmt den Turban (*ka jain spong*) ab und dankt Gott dreimal mit leiser Stimme; dann übergibt er das *ka wait* dem *Soh Blei*, der das gleiche tut und hierauf das Messer dem Opferer aus dem *jaid Nongkseh*, dieser dem aus dem *jaid Thangkieu* und dieser zuletzt dem aus dem *jaid Niangnong* weitergibt. Nur einer aus diesen drei Geschlechtern darf die Köpfung vornehmen. Hat dieselbe stattgefunden, so wird der Kopf auf die Blätter vor die Kürbisflasche gelegt und der Körper ausgeweidet, um das Haruspizium vorzunehmen. Ist dieses glücklich verlaufen, so setzt sich der Freudentanz in Bewegung. Alle Angehörigen des Reiches sind hierauf zu dem Mahle eingeladen, das aus Reis, Opferfleisch und Reisschnaps besteht und sich bis in den frühen Morgen hinauszieht.

III. Die Nachfeier.

Am Abend des folgenden Tages — *mied Maulong* genannt — findet eine besondere Ratsversammlung statt, die man *Dorbar sla* nennt, um auszudrücken, daß alle Opfer nun vorüber sind. Der *S'iem* läßt im Innern des Hauses und dem Vorraum desselben Matten zum Sitzen für das Volk ausbreiten; er selbst nimmt auf einem *palong*, einem erhöhten Sitz, im Vorraum Platz. Allen Anwesenden wird Ziegen- und Schweinefleisch ausgeteilt, während derjenige, welcher zum Sprechen im *Dorbar* bestimmt ist, und der erste der Flötenspieler Betelnuß erhalten. Dann sendet der *S'iem* ins Dorf und läßt dreimal ausrufen, daß während der Dauer des *Dorbar* niemand mehr seine Hütte verlassen dürfe.

Hierauf nimmt er den Turban ab, hebt beide Hände empor und dankt im Namen des Herrn und Schöpfers (*ha ka kyrteng u trai u nongthaü*), der ihn zum König gemacht, ihm Untertanen gegeben sowie die Distrikte des Reiches, die Märkte und die Wege dazu, und betet, er möge immer mehr Kraft, Wachstum und Fortschritt geben und Gedeihen der Felder. Dann ruft

er aus: „O Gott, Herr und Erschaffer, gib Glück und Wohlfahrt auch mir, dem *S'iem*, damit immer größer werde meine Danksagung und Hingebung an dich *(Ah Blei, trai kynrad u nongthau u nongbuh to ai bha ai roi ia nga i S'iem ban nangkhrau ka nguh ka dem).*" Hiermit tritt er zurück.

Es folgt nun derjenige, welcher als Redner aufgestellt ist, aus der *jaid Rynjah*. Er dankt dem *S'iem* dreimal und spricht dann: „O Herr, der du Himmel und Erde erschaffen hast, du hast den König gesetzt, daß wir Kinder seines Reiches seien; du hast die Sonne gegeben und den Mond, um das Jahr zu berechnen, damit wir einmal im Jahr *Puja* haben können, auf daß der König vorankomme, die Kinder der Täler zunehmen und gedeihen, die Kinder der Khasi[1], die Kinder der Bhoi[2], die Kinder der War[2], damit die Opfergaben sich vermehren vor dem Angesicht deines Altars *(Ko trai ba thau ia ka bneng ka khyndew uba pynlong i S'iem i kynrad ba long ma ngi ki khun ki hajar kumba phi buh ka sngi ban khein ia u bnai, phi buh u bnai ban khein ka snem ban long ka puja shi sien shi snem ban im ban roi i S'iem ban roi ki khun dykhar, khun Bhoi, khun Khasi, khun War ban khrau u blang u bhet ha khmat ka duwan jong phi).*"

Dann wird die Freudentrommel geschlagen *(ksing risa)* und allen wird Reisschnaps gegeben, soviel sie nur verlangen. Der *S'iem* und die *S'iem sâd* verkosten von den inneren Teilen der Eingeweideschau des vorhergehenden Tages. Musik und Tanz dauern die ganze Nacht hindurch bis zum frühen Morgen, wo die Festteilnehmer ihre Dörfer und Hütten wieder aufsuchen.

---

[1] Das heißt die Khasi selbst.

New Haven, 1956

[Title Page]

7:Becker--i M-4, 5(190-11)1924 AR7 Khasi AR7

Editor's Note:

114 The author of this paper apparently uses several words to denoe the same social group: Familie, Stamm, Sippe, Clan Stammesfamilie, Familienstamm, Famliensippe.

Stamm is translated as tribe when it refers to the Khasi as a whole, otherwise it is translated clan especially in the compounds Stammesgott, Stammgut, Stamneshütte, Stammesmutter. Sippe is also translated as clan; Stammesfamilie as clan-family; Familensippe and Familienstamm as family-clan. The German word is occasionally kept in brackets.

Family Property and Maternal Rights

/127/ by C. Becker S.D.S., Wurzburg

The fall of 1910 and the entire following year found the distin-
114 guished head of the Ethnographic Museum in Munich, to whom this anniversary volume is dedicated, on a research and collection trip in the extensive and inexhaustible territories of India. He was accompanied by his active wife, who served as his scientific assistant. From Burma, a mine of rich, ethnographic treasure and where the greatest part of their Indian stay was spent, their journey led the research couple into Assam, situated in the northeast of India, a country of equal significance. Assam certainly belongs politically to an-
101 terior India, but forms a bridge to interior India both ethnographically and linguistically.

Among the mountain peoples who inhabit the chain of hills which traverses the length of present-day Assam, and which separates the two largest parts of the country from each other, the Brahmaputra Valley in the north and the Surma Plain in the south, is one of the most interesting and doubtless the most advanced of the tribes, the Khasi, who inhabit the so-called Khasi and Jaintia Mountains. It
[631] was in Shillong, the center of this area, which is now the capital of the country Assam under the English government, where towards the end of September, 1911, I first became acquainted with Professor D. L. Scherman and his wife and where a friendship of many years
133 had its beginning. Therefore this little study will lead us to the Khasi Mountains, to its slopes overgrown with its peculiar pine trees, which receive greetings across the plains from the snow-crowned peaks of the Himalayas, which are flooded by the mighty waves of the Brahmaputra River and the alternating inundations of the Surma River. Here a contented and cheerful little people live who have maintained their own special characteristics in spite of the many European influences and those of neighboring cultures.

162 /128/ Of the entire population of 243,263 people, who form the inhabitants of the Khasi and Jaintai Mountains (1), 203,855 are Khasi.

1. The following statistical estimates are taken from the Census of India 1921, Vol. III, Assam, (Shillong, 1923) pp. I and II.

162
797 Of those, 37,852 have adopted Christianity, while the others are still adherents of ancient animistic cults, with the exception of somewhat

more than a thousand of them who have been converted to the Hindu 162 [797]
religion.

This group of people possesses the possibility of expansion, since they have at their disposal within the area of the Khasi and Jaintia [311]
Mountains a territory of 6,022 English square miles, with only 40 persons per square mile. Although wide areas are not built up and the system of shifting fields prevents the full utilization of the land, it is still true that with this small population figure by far the largest part of the whole population (200,781) is dependent on agriculture; trade and manufacturing only play a subordinate part.

With regard to the division of the sexes, the two large religions 562
of Assam, Hinduism and Mohammedanism, show the same proportion 162
as in the rest of India, a lesser number of women than men. But among the Khasi the women are more numerous than the men. In the Brahmaputra valley with its greater Hindu population there are only 892 women for every 1,000 men; in the Surma valley, with a greater Moslem element, there are 937. But the situation is reversed among the Khasi, where there is a surplus of 74 women for every thousand men. The position of the women is basically different among this people. It is based on the customs and usages of maternal rights that prevail among them, which are predominantly based on possession and which find honorable expression in possession.

1. Property Rights in the Family Property.

The great principle which governs property among the Khasi, is 421
that all family property rests in the hands /128: A/ /Fig. 1. Khasi 613
Girls and Women with their Carrying Baskets. Fig. 2. An Old Clan 596
Mother in the Village Laitumkhra. / /128: B/ /Fig. 3. At the Oracle of Egg Throwing/. Fig. 5. Khasi Girls and Men in Festive Dance Clothing. / /128: C/ /Fig. 4. A Group of Synteng/ /128: D/ Fig. 6. A Holy Grove and Part of the Village Raliang/ /129/ of the women and not of the man. The man can never be the owner of family property, and it can never be transferred to him. He may perhaps acquire some property through his own industry and work, but even that will pass into feminine hands by the path of inheritance. The concept of family is not as narrowly drawn here as in our country. This is a question of the clan-family, the clan. The head of it is always the youngest daughter, who, even when she has become old, bears the honorable name ka barit in the Jaintia Mountains, and in the Khasi Mountains ka khadduh, the last, the youngest. Around her gather her nearest 613
blood relatives, brothers and sisters, and children. For example let 596

613 us take such a clan mother with the name Ka Sing Lau. She has two
596 sons and five daughters, and in addition two brothers and two sisters who are all married. Also each of the five daughters and two sisters has four children. These forty-six people live with the clan mother and form the family clan of the Lau. To these we also add the sons
[582] and brothers, the nephews and grandsons, but not their children. The latter have nothing to do with the family Lau but belong to the family clan of their wives, live with that clan and are counted in it. Likewise neither the husband of Ka Sing Lau, nor the husbands of the various daughters, sisters, nieces, and granddaughters belong here. They are all counted with their own clans, live and work with them according to Khasi custom, and only visit their wives occasionally perhaps after dark.

621 The entire clan-family of Lau is housed in 5 or 6 huts, which all
351 stand next to each other in a semicircle or are built one above the other on the slope of a hill, according to the character of the land. A
[241] garden frequently surrounds them in which maize, sweet potatoes, potato-like roots of Soh-ot and Schrut, bananas and, on the southern slopes of the Khasi Mountains, also coffee, pineapples, and other fruits are cultivated. A circle of bamboo cane that is so important for building purposes, household objects, and /130/ implements surrounds the garden and huts. This bamboo cane grows up as thick as an arm to a height of 10 or 15 meters and at the same time forms a good protection against bad weather. A wall (morscha) of thrown-up earth encloses everything, forming an enclosed farm, prevents unimpeded access, and protects cattle and crops from the attacks and devastations of wild animals.

423 What is considered the family property of such a clan? Primarily it is the land, the gardens, the rice fields, woods, fallow mountain and grazing lands. On the southern slopes of the Khasi Mountains there
[241] are fields for the cultivation of rape, orange groves, laurel groves, plantations of betel palms and of pepper leaves which far and wide are so highly treasured for betel chewing as a source of pleasure. (2)

2. Cf. Becker, Im Stromtal des Brahmaputra, /In the River Valley of the Brahmaputra/ (Munich, 1923). pp. 357 ff.

[311] Usually there is so much land available that the family-clan can nourish itself properly and also increase in number

423 According to its size and wealth a family clan also owns a
231 corresponding number of cows, oxen, hens, pigs, and goats. Neither the milk nor the flesh of the cows is used. They are kept for the

423 manure, and primarily for breeding, since the oxen cannot be dis-
231 pensed with for the cultivation of the fields, especially of the rice fields, where the soaked earth must be trampled to a slimy mush. From the fowl the eggs are particularly prized, since they find an almost daily use in the questioning of oracles in cases of misfortune and sickness. (3) Hens, pigs and goats serve for sacrificial purposes, (4)

and they are also a welcome addition to rice at all festive occasions such as arrow shooting, (5) at the name giving, /131/ at weddings,

5. Becker, Im Stromtal etc., /In the Valley, etc./, pp. 298 and 387.

and at the cremation of the dead.

421 Further the various huts belong to the family property, the erec-
613 tion and maintenance of which is the work of the members of the clan, the brothers, nephews, and grandsons. The hut of the clan mother is likewise considered the center of the whole family, and its possession forms the outer sign of the dominance of the clan mother. Here she holds the family sacrifices and also keeps the special treasures. These are considered to be those things which are connected with the religious cult. Special reverence and sacrifice is due the oldest clan mother, as the original founder of the clan, and her brother in each clan family; in addition there are a series of other spirits which vary according to the family clan. The branch of the Khasi people who live in the Jaintia Mountains, the so-called Synteng, have probably pre-
776 served the old Khasi customs the most faithfully. There in the hut of the
778 clan mother are found the following utensils for the service of the divinities, who are nearly always feminine: mats, little baskets for rice, gourd bottles, a little basket made of bamboo cane and decorated with feathers, as well as antlers of deer or antelopes. The latter are fastened to the wall: they are supposed to be the seat of the

776 divinities of the forest and of the chase. The little basket is at-
778 tached to a post in the hut; the special divinities of the clan-family are supposed to have their dwelling there; two hazelnut twigs fastened underneath symbolize their power. The gourd bottles are used as containers for the sacrificial drink of rice liquor. (6)

6. Cf. Die Nongkrem-Puja, /The Nongkrem Puja/, loc cit.

422 As treasures, which are handed down from generation to generation,
[301] are considered the rich ornaments of gold and silver, the heavy chains of coral, and the silk scarves, which are worn by the women at dancing ceremonies.

Also those things which the family huts contain in the way of furnishings and utensils, such as baskets, mats, lances, shields, arrows and bows, and brass pots for cooking and for water, earthen containers and brass plates are considered common property of the family.

421 /132/ The clan mother at the time has the entire property in
425 her hands; she is the legal and sole guardian and manager of the prop-
688 erty. Nothing can be lent even without her permission. No part of either the movable or immovable family possessions may be sold without her agreement. For the execution of the proper legal deed, as she is often ignorant of writing, she must place her fingerprint. Nothing may ever be given away: that would be an insult to the clan divinity since that would not mean treasuring and honoring their property but giving it away as being of no value. As a punishment for that the clan /stamm/ would also lose its other possessions and then live in poverty and disgrace. The individual members of the clan could sometimes be recruited for work for other clan-families as a kind of slave (mrau). But they may not be taken up in their society as they do not belong to that clan and the clan gods of that family would not permit it. Therefore if, for example, a clan-family has rice fields which they do not cultivate and would gladly give to poorer relatives, they must at least receive the smallest rent as a charge for it. This consists annually of a gourd bottle of rice liquor, which has the value of about 70 pfennigs to honor the household divinities.

Before the clan mother gives her permission for the sale of common property, she listens to the advice of the other members of the clan. Actually according to the old tribal custom things should be as little sold as given-away. It is said that in ages past the original ancestors, whom the individual clans reverence as divinities, apportioned out this their needs of field and wood, and these are supposed
421 to form their unsalable clan property (nongrim). To let it get out of
425 one's possession would therefore be insulting the gods. However, that

could not prevent individuals from becoming needy through misfortune 421
or laziness and their trying to rent a part of their property for an annual 425
payment or for a sum needed once. This is called ban die pan, literally: begging to buy. The sense of relinquishing by lending /133/ is contained in this. For example, a field is worth 300 reichsmarks. Fifty or 100 reichsmarks are accepted for it and the creditor remains the owner of the field until the money is repaid. This type of purchase occurs frequently. There are frequently traders (nongkhaii) who try to use such purchases to their own advantage. They turn over the field to the debtor for further cultivation in return for payment in produce of 50 to 70 per cent of the harvest. After several years the whole field is their property. Aside from this method, it also happens that instead of being able to repay the money the people need still further sums. In that case then the entire price of 300 reichsmarks is paid and the actual purchase is considered completed; that is called ban die lut; literally: totally, completely sold. A family-clan which gradually loses its property in this manner descends into poverty and need. There is nothing else for it to do than to look for work elsewhere, to rent land or to sell the children as a kind of slaves to better [567] situated people. If 40 reichsmarks are paid for a child of about 10 years, he remains in the bondage of the buyer until the money can be repaid. That happens only rarely. Besides food and the most necessary clothing only one rupee is deducted annually as wage from the purchase price; thus, practically, the child belongs to the buyer for the duration of his life.

It is the duty of individual members of a family clan to work to- 613
gether so that the clan property will be maintained and will produce 688
the necessary amount for the maintenance of all. The clan mother must oversee primarily that the appropriate customs and usages are preserved. She is held in high esteem by all. To do something against her wish to offend her, to call her insulting names, or to go so far as to strike her is considered sang (taboo), a severe crime that causes misfortune. It is a great sin (pop) and a thoroughly great dis- 613
grace (sngewsih eh tam) for the whole clan.(7) As long as a member 688
782

7. Also considered similar crimes are selling clan property in secret, incest, desecrating burial places in a coarse manner, making use of holy grounds or woods.

/134/ of the family has committed such a crime and has not begged pardon from the clan mother and the elders of the clan, perhaps with the words: pardon me, I have committed an error (to map ia nga leh

613 bakla); and as long as the expiatory sacrifice, in the form of pigs and
688 goats, determined by the elders of the family and by the sacrificial
682 priest (lyngdoh) has not been offered, the sinning member is considered excluded from the family and the family sacrifices. But even after being accepted again a certain stain still clings to him.

613 But it is also the duty of the clan mother to care for the needs of the members of her family clan with regard to food, clothing, and the like. She divides the fruits of the harvests according to the needs of the individual. She goes or sends to market to trade, to buy, or to sell. She takes care of the common purse and even the masculine members of the clan have to ask her for money when they wish to drink rice liquor or buy clothing. There the clan mother is generous
[662] rather than niggardly. This dependent relationship of the men is not considered unworthy at all or shameful. It is the matriarchal form and ancient custom. Nevertheless, the position of the men in the family clan is an esteemed one. Even the name they are called by has an important sound: Rangbah, Basan (oldest ones, advisers). On them falls often the work in the field and wood or the protection of the family; bow and arrow are handed to them as cradle gifts. In the more important family matters the clan mother consults with them. At the giving of the name, during a wedding, a funeral, or cremation the clan mother steps almost completely into the background, also during quarrels and court hearings before the chief (Doloi) or king (S'iem). She is still always influential with her advice, but the actual appearance, activity and judgments is the business of the men. The smaller,
[782] everyday sacrifices she performs in the clan hut; but she can also let these /135/ be performed by her sons. At larger sacrificial ceremonies which are offered by several family clans at the same time, by whole
[793] villages or even by one of the Khasi states, only the men are active as sacrificial priests.

613 With regard to the husbands of the clan mother and of the feminine
596 members, they are not considered members of the family clan of the women at all. They are only considered the begetters. They work and live in their own clan, participate in their sacrifices and burial places. The father has no further influence in the raising of the children, who belong entirely to the clan of the mother. But usually they have no obligation, unless the wife and children are impoverished. Even then their care comes in second place after that of members of their own
[593] clan. Nevertheless the husband is honored and is addressed by "Mr." (kynrad) by his wife. She would consider it disgraceful to approach him impertinently. Where the property of a clan has been dissolved or Christian customs introduced, the husband lives and works together with his wife and children.

his wife and children. 000

2. Holy Pieces of Land and Forest

A special kind of land property is still encountered in the Khasi and Jaintia Mountains. These are pieces of land and forests which are considered sang or kyntang, forbidden or holy, thus kyndeu sang, khlau kyntang, forbidden fields, holy forests. They are also named in connection with the name god, for example, khlau Blei, forest of the gods, which, to a certain extent, might offer the key to their purpose and meaning. The hands of man are not supposed to disturb this kind of property; this property is sacred to the gods and at the most may be used in their service. 423 778

It is not easy to trace the origin and beginnings of these reserves. But several solutions may be found in regard to sections of land. When the /136/ Catholic mission station was founded in the village of Schella which is located on a steep mountain slope, it was hard to find a place that was halfway suitable and big enough to build even a small dwelling on it. Finally the missionary discovered such a place somewhat outside the village. But then there was a new difficulty. The place was the cremation area for the dead and therefore was sang /taboo/. The spirits of the dead would punish every intruder severely. The people were finally persuaded to burn their dead somewhere else, but it was more difficult to find any who were ready to help with the work of the building. Even those whom the missionary finally persuaded to help still suffered heavily from the fear of the punishment of the gods and continuously one or the other of them had imaginary illnesses. [797] [764] [784]

In the cases of more extensive pieces of land, the snake worshippers (thlen), who carry on their dreadful activities in the Khasi Mountains, (8) may offer an explanation sometimes. If such a person is 423 784 [776] [782]

8. Im Stromtal des Brahmaputra, /In the River Valley of the Brahmaputra/, pp. 76ff.

convicted of murder, which he has committed in the service of the snake god in order to sacrifice the blood of the slain person to him, and if he wishes to free himself from the conviction, he can do nothing other than sell all his movable and immovable property. The latter thus becomes sang. Nobody would dare to take over the fields and gardens, to plant anything there, or to touch any fruit on that property. Thus in Cherrapunji a native Catholic was able to take

423 possession of a couple of orange gardens which a thlen worshipper
784 had abandoned, as the former did not believe in ghosts. (9)

9. Ibid., p. 82.

423 In the case of all these pieces of ground which are considered
784 sang, the fear of the severe punishment of the gods prevents each
797 owner from building. If another builds, he does not stop him, because he leaves him to the revenge of the insulted god. As may be seen from the case mentioned, the /137/ heathen are at a disadvantage in respect to their compatriots who have turned to Christianity. The latter no longer feel tied to the heathen laws, at least as far as religion is involved and no longer share their fears in many things. Impoverished Khasi Christians thus find an opportunity to acquire land in cases when it would not be possible for a Khasi who is still held captive by animistic beliefs.

But among the latter there are also disgraceful exceptions. In Nongbah, a larger village of the Jaintia Mountains with perhaps 400 huts -- therefore the name, which means large village -- several years ago a heathen observed with a jealous eye how so many pieces of the fallow fields of the gods were changed into fertile lands under the hands of the Christians. The wish grew in him to do likewise. Although he no longer had much fear of his gods, he still had to reckon with the anger and revenge of the members of his clan, if he as a heathen dared to take such a step. They were not likely to dare to do anything against Christians. Without further ado he became converted to the Methodist religion and appeared before the English government official in Jowai, the capital of the Jaintia Mountains, for the transfer of a suitable piece of land. After the revolt of the Synteng in the year 1862, the English government pronounced the whole territory of the Jaintia Mountains to be government land. They also claim the right of bestowal of all free-lying land, usually by a lease of many years. Since the government receives rent for the land, it is in its interest when applicants appear. In this case the deed of conveyance was issued and over the years a flourishing rice field was made from the land that had been useless up to now. Now that the renter was sure of his affairs, he turned his back on the Methodists in order to become a heathen again and to participate in the heathen sacrifices. But then he got into trouble. The heathen were incensed at such a game and brought serious charges before the English government official. He ruled that in the future no piece of ground of that type /138/ should be leased except upon

presentation of the written statement of the chieftain and the village elders that they would have no objection to it. The avaricious renter of the divine land mentioned above was despised by all. 423 784 797

As concerns the holy forests, which often extend picturesquely from the highest peak down the slope and are overgrown with gnarled oaks and bright colored rhododendron, no tree may be felled there; at the most, fallen wood or wood torn down by a storm or already rotten wood may be taken. The spirits of the forest, as punishing gods, will revenge every offense. Tigers and leopards, apes, bears, and snakes enjoy an undisturbed existence here. The only case in which wood may be cut in these divine woods is for the religious cremation ceremonies of the dead. It is the custom of the Khasi to set fire often to great areas in order to fertilize the ground with the ashes of grasses, trees, and shrubs without regard for the new growth of trees, and to make potato fields there for a year or two or to grow mountain rice, millet, or something similar and then to leave the field fallow again. Thus this is a clever precautionary rule, since there might otherwise be cases when there might be no wood for cremating the dead. 778 776 [764] [241]

(Continuation follows)

/300/ Family Property and Maternal Rights
by C. Becker S.D.S., Würzburg

Gurdon says, (10) that these holy groves were formerly the property of a village. That is not always so as the following case will demonstrate. I am also relating this because it grants us a deeper look into the whole customs of the clan under discussion. 779 423 613 777

10. The Khasis, p. 87.

Several decades ago, a Khasi who had become a Protestant, U Jacob Shai by name, was installed as a clerk with the English government official in Jowai. In order to assure his family a better living than just his meager salary, he yearned for land. By birth from Jongushen in the War territory, he remembered that he could obtain his aim in the neighboring village Syndai from the family clan Umliang. So one day he went thither. After the customary greetings, and refreshment with a water pipe and betel nut and conversation about various indifferent matters, he mentioned his desire. "I know," he said in the polite language of even these simple natural men, "I know the goodness and the good name of your clan /Stamm/ and the elders

778 423 613 787 of your clan; you are glad to come to the help of others everywhere and thereby have prepared honor and fame for your whole clan /Sippe/, for your clan gods and goddesses, and for your ancestors of both sexes. You are blessed with grandchildren and great grandchildren. I rejoice in your good fortune and I wish that the gods and goddesses of your clan /Stamm/ will be favorably inclined for all times. Therefore I dare to come to you and to make a request of you; I have only one request: nga don tang kawei ka jingkyrpad! Namely, I need a piece of land, so that I can give my grandsons and granddaughters something to eat. My own field does not suffice for so many mouths. I have noticed that a piece of forest lies here /301/ unused. I have inquired to whom it belongs and the village elders said to me that it was the property of the famous family clan Umliang. I honor you, therefore, and beg you: can I receive this forest according to the law and custom of the clan?"

Questions from the clan mother and the family elders followed this speech. Finally it was clear to them what piece was meant. "That is the khlau sang, the forest of the gods," they cried. "Certainly that belongs to our clan property, but as you yourself know, we can neither rent nor sell it. We cannot and do not even dare say, cultivate the land. But we also cannot prevent you from doing it or forbid you. That piece of land is presented to the gods; they will revenge themselves on anyone who removes it from their cult; they themselves will guard over it so that no one will seize it."

This answer satisfied U Shai completely. He had no fear of the punishment of the forest gods; he had just wanted to make certain whether the family clan would put difficulties in his way or would even bring complaints before the English government. The forest was soon arable. Fire transformed the wood and the bushes, the high grasses and the vines into ashes; oranges and lemons, pineapples, and bananas were planted and after a few years the land brought in from the sale of the fruit a sum, considerable for those conditions, of 800 to 1,000 reichsmarks a year.

The family clan Umliang was still faithful to their native faith. As the other heathen did, so they observed the undertaking of U Shai with fear and anxiety. They believed the gods must bestir themselves and the forest would devour the miscreant with his family. That did not occur. It could not be avoided that in this way the belief in their gods and native customs received a jolt among the heathen and many of them went over to the viewpoint that they might also do it.

After a while a young Khasi with such advanced views married /302/ into the family clan Umliang. Meanwhile 40 years had passed. The old father U Shai was already dead. The piece of land planted by him, as it was not actually family property, according to the special customs of the War had passed on not only to the youngest daughter but also to his son Jacob U Shai and his sisters. On their side they had helped their father in the clearing of the forest. The siblings were Catholic. The young man mentioned above brought a legal complaint against the siblings before the English government official in Jowai a few years ago: the forest made arable by Jacon U Shai and transformed into a fruit orchard had been illegally acquired and is the property of the clan of his wife; he demanded a piece of the land back for the family Umliang and for the other piece a corresponding annual rent must be paid.

In reply the siblings Shai could claim that the affair was past the legal time limit. According to tribal custom the time limit on small matters was 10 years, for greater matters 30 years. In addition the main point on their side was that the piece of land in question was khlau sang, forest of the gods, and the family Umliang could not ask anything for it. For this the Shai siblings lacked witnesses, whereas the Umliangs produced several heathen witnesses for the simple declaration of the right of possession. The case was long drawn out. It was finally decided against the Shai siblings and they were declared deprived of the property. The missionary P. Benedikt Neher now concerned himself with the affair. He brought more than 100 witnesses, all clan mothers or village elders, who were ready to swear that that piece of land was a forest of the gods as long as man could remember. The English judge, whom he informed of this, decided that this was a basis for proposing a revision and change of the judgment, but the Shai siblings had lost all their money in the previous trial to pettifogging lawyers and did not have the spirit to begin again. With oriental equanimity they accepted the loss and thus the affair remained.

/303/ The case is instructive anyway, insofar as it shows that the so-called holy forests are also found in the possession of individual family clans; how they are valued by them as long as they remain faithful to their animistic views and how they are able to make their right of possession to them valid even after years.

3. Customs Concerning the Right of Inheritance

When the clan mother dies, the youngest daughter always receives the inheritance among the Khasi. If for any reason the youngest daughter cannot take possession, her next youngest sister follows. If there are

428 613 no girls, only sons, the inheritance passes to the youngest daughter of the sister of the deceased clan mother. If there are no such sisters or if they have no daughters, the nearest, youngest female relative is next in line. If she has not lived in the family clan of the deceased up to now, she must first spend at least 3 months in the hut of the clan mother in order to be able to enter into her rights and duties. In such cases usually the successor to the office is taken into the hut previously by the clan mother and prepared for the later activity. It can happen that the successor is not even 13 years old and therefore is not of age and capable of marrying. In this case the mother or a sister of the deceased clan mother manages the rule and the household until the majority of the inheritress. But even as a child the latter has the honored name mother; she is called kmie or kmie san.

The great principle, which determines all conditions of inheritance, is that the sons and husbands are excluded from all family property, which is always passed on to the girls, the female world. But what if a fellow or a man creates or acquires property? The case is possible and also occurs.

428 556 /304/ As mentioned, each person must help with the work in his own family clan in order to have a claim on care from the common property. Between sowing the rice and the harvest and other possible common labors there are still many days and weeks. Instead of [464] spending these with archery, hunting or the popular shong kai, or loafing around, a young man can earn money by cutting wood for others and carrying loads for native traders or also for Europeans, since in the mountains nearly everything has to be carried on the back. He can also do work in the fields or gardens for pay for others outside his clan or carry on a small trade by buying wares at the market such as dried fish, betel nuts, pepper leaves and such, and carrying them a few days' journey away to the markets in the interior of the mountains where these items are not otherwise available and selling them there for a profit. What the man earns in this fashion is his property and is not counted as part of the clan property. An industrious man can thus gradually earn enough money to rent a rice field. Through sale of the surplus crop, he will finally have enough so that he is able to buy a rice field himself, which is also his property. If such a man dies unmarried, the inheritance passes 428 to his mother. If he is married then he can, if he wishes, found a clan property for his family who may be poor and without property. The property will then pass to the youngest daughter and be passed on then in the usual manner of inheritance. Thus everything finally

returns to the hands of the women. 428

The following example may explain the customs involved here and further sift them out even though it scarcely throws a pleasant light on the dissensions which have been introduced among the Khasi people as a result of the divisions of the various Christian religions which are striving for their conversion.

In the village Kyndongtupér, a man had gradually acquired some 428
property for himself with 15 oxen and cows, /305/ a decent hut and 797
furnishings and 3 beautiful rice fields, large enough to sustain a family 613
clan. After his death the youngest daughter of his sister, named Ka Pliang Shai Syndūr, was considered the valid heiress. She was still under age and her mother was already dead. As a result a sister of this mother, named Ka Pliang Shai (11)took over the management

11. Pan and Syndur are Khasi names; Pliang Shai is the name of the family, clan; literal meaning: shining plate.

of the inheritance and lived with the little heiress in the clan hut. There was no doubt that the latter would receive the entire property after she reached her majority. After a while, a young Catholic, U Salomon Taruh, wooed for Syndūr's hand. Thereupon the older sib- 428
lings, a brother and a sister, both of whom belonged to the Methodist 797
Church, became enraged. In spite of all the hostility, the young girl 671
stuck to her decision, married Taruh and became Catholic. The 613
young married couple had to flee from the clan hut because of the anger of the siblings. The latter sought to have the sister disinherited, but the other relatives involved would have nothing to do with this. They were so carried away by their anger that they did what was considered a crime even in the eyes of the heathen: they drove the cattle away secretly and sold it; likewise they cleared out the clan hut and even sold two rice fields. On complaint to the competent court, Syndūr was finally granted her right; she could take over the clan hut and the family property which was meanwhile greatly diminished.

Although the Khasi who have been converted to Christianity do not need to be bound by the laws of succession in inheritance and although this is often recognized by the heathen Khasi, there is no hindrance put in their way by the Catholic Church to following their native tribal customs in this matter. The Catholic Khasi themselves do not wish to deviate from them: /306/ a dogged attachment to ancient customs and a respect for them are in their blood. Here are a few examples.

In Nongbah the Catholic clan mother ka Johanna Sunah, wife of U Andreas Tubru, died without leaving any female descendants. It would

428 have been understood if the only son U Johannes Sunah, according
797 to the ruling custom of Christians elsewhere, had claimed the con-
671 siderable inheritance of rice fields, forest, and huts. A serious ob-
613 jection would not have been expected either from the officials or the relatives. Johannes was also spoken to about it in this fashion, but in vain. He could not conquer the inner revulsion of acting against ancient tribal customs for a temporal advantage. His simple answer was: "If I am a good Catholic, God will bless me in other ways without my going against our ancient customs." And so matters stood. The whole property went to the youngest daughter of the sister of the deceased; this branch of the family was still heathen. Through industry and economy Johannes finally acquired his own household with a goodly piece of land.

The Catholic Khasi even get rid of possessions readily which they already possess if the tribal customs demand it. It happened unfortunately several years ago that both the wife of the chief teacher of the Catholic Khasi public school in Shillong, U Thomas Byllun, as well as the wife of the cook of the mission station there, U Sebastian Shiah, were both carried away by death within a short time. Both men had acquired very nice property by their industry. According to Khasi law they had no further claims on their children who were still quite small. They belonged to the clan of their deceased wives and had to be taken by them and raised. According to Khasi law, the property that they had acquired also passed to the youngest daughter. Willingly each of them handed over the children and the interim management of the property to the relatives of the deceased wives, took the few clothes and purely personal possessions /307/ with them and sought to begin again from the beginning in the rented half of a hut. To my question, whether that had been hard for them, they answered with quiet matter-of-factness: "But that is the custom among us Khasi."

It is not necessary to emphasize especially that such respect for the tribal customs has made only a favorable impression on the Khasi who are still heathen.

Gurdon relates (12) that the clan mother loses her position in the

12. The Khasis, p. 83.

family when she changes her religion, for example at her conversion to Christianity, and that the youngest daughter takes her place. The justification for this lies in the fact that she then no longer belongs to the religion and cannot offer the customary family sacrifices.

Because of her whole position as guardian of the inherited religion and 428
customs, it is not frequent that such a woman breaks with the ancestor 613
cult. If this does happen, it does not necessarily mean that she loses 797
the entire property. That depends really on the position the other 671
members of the family take. If they are all still firm heathens, who wish to have nothing to do with Christianity, they can force the clan mother to give everything up. The high respect for her is frequently so great, however, that either the whole clan or at least a part of it decides to take the same step and change religions with the clan mother. The part that remains heathen will certainly propose a division of the family property. This is also possible in other cases.

4. Division of the Family Property.

Although it is rare, the weal and woe of a family-clan can re- 613
quire that a family-clan be split into two clans /Clan/ and that a 578
division of the common property be undertaken. The basis for this is 688
if the family /Geschlecht/ becomes too big, if the elders in the family council /308/ are no longer united and hate and revenge threaten to destroy, if a part of the clan /Clan/ tries to seize the better fields by violence and refuses to deliver the harvest for the common need, if one branch has brought the whole clan /Sippe/ dishonor and shame by false oaths, incest, revenge, treachery or some other severe crime. Only the guilty party will be excluded from the clan /Clan/ in such cases, if he remains stubborn and impenitent. But if he begs for forgiveness with his lips and participates in the expiatory sacrifice, forgiveness will not be refused him. But a certain inner tension and bad feeling often remain behind.

At the conversion to another religion, it often depends on how the 797
clan mother and also the family elders are inclined towards the re- 428
ligion in question, and also on who is changing religions. If it is only 425
brothers, sons, nephews, or grandsons, of the clan mother, a division 613
is out of the question, since the men are not capable of inheriting. But if it is the youngest or next youngest daughter or even the sister of the clan mother, then a division of property can be undertaken. A clan mother after all is so attached to her child or her nearest blood relatives that she would not like to push them entirely away from herself unless she were completely set against the religion in question and angered. If that should be so in individual cases, the heiress concerned will still consider, whether it is not more advisable to wait to change her religion until the clan mother has closed her eyes and she then has free play. Then that which was mentioned at the conclusion of the previous section can occur.

425 613 If after discussions lasting weeks all the problems involved have been settled, the agreements decided on are finally completed with the customary ceremonial. It was mentioned above, what objects [178] for the religious cult are to be found in the hut of the clan mother.[1] The little basket plaited of bamboo cane, which is considered the special seat of the divine ancestors of the clan. /Clan/ is not divided. /309/ Another, similar basket is made. By sacrifice of goats and pigs, these divinities are then entreated so that a part of them may take up their dwelling in this basket for the protection of the newly constructed clan. If the sacrificial priest can announce the agreement of the deceased spirits with the division from the oracle of the entrails of the animals and by egg throwing, then this basket is brought to the new clan hut. On another day one of the two hazelnut poles is then taken for the new hut with further sacrifices. Each of the two separated parties must fetch a new pole to go with the other one. In a like way the existent sacrificial utensils, such as rice baskets, mats, and gourd bottles are divided. With this ceremony the agreements made about the division of the other property are considered legally existent. Each party now goes his own way independent of the other. Certain relationships of [582] friendship and kinship still remain in existence; however, the bar to marriage, which otherwise would make impossible the marriage between members of the same family clan without regard to the degree of relationship, is no longer in existence.

425 797 796 If, at the conversion of one part of the members of the clan to the Christian religion, the division of property can be accomplished legally, it is better to insist on it. The members who have become Christian are more readily protected from disadvantageous treatment. Even if they should take part of the fields for themselves in separate management, the part of the clan that remained heathen could demand this back years later. Enmity, hate, and revenge would then follow. Without the formal ceremony combined with the sacrifices mentioned a Khasi does not recognize a division as legal. Since Christians cannot participate in such a sacrificial ceremony, there is nothing to do other than to have this ceremony undertaken while those seeking to be baptized are still catechumens. Before they are accepted then into the church by baptism, the heathen cult objects that were brought into the clan hut must be removed. "To /310/ this most important ceremony, "the missionary of the Synteng territory, P. Benedikt Neher S.D.S., once related, "I usually went myself if it was possible for me to or sent a European sister of the Order. Thereby the ceremony acquired a great deal

1 [See category 116, pp 4,5. — Analyst]

more solemnity and had a powerful effect on the heathen and the 425
catechumens. The basket of the gods, the two sticks, the gourd 797
bottles, and the other objects of the cult were carried to an open place 796
in front of the hut, placed on a pile of bamboo canes and wood and then lighted by fire. The heathen stood at a respectful distance, fearful and trembling, and expecting that the gods would revenge themselves and destroy me with fire from heaven. But nothing of the kind happened, and disappointed and thoughtful they went back to their huts. The clan hut would then be blessed and sprinkled with holy water."

In general the Christian religions strive to settle their members 797
in a village separated from the heathen clan members, and to settle them in such a way that the separate family clans remain together when possible. The christian customs, that husband, wife, and children then live together in one family is carried out when possible but, however it is not always done without difficulties in view of the traditional customs.

Familienbesitz und Mutterrecht.

Von C. Becker S. D. S., Würzburg.

Der Herbst des Jahres 1910 und das ganze darauffolgende Jahr sah den verdienstvollen Leiter des ethnographischen Museums in München, dem diese Festgabe gewidmet ist, in Begleitung seiner schaffensfreudigen Gattin als wissenschaftlicher Assistentin, auf einer Forschungs- und Sammelreise in den weiten und unerschöpflichen Gegenden Indiens. Aus Birma, dieser Fundgrube reicher ethnographischer Schätze, dem auch der weitaus größte Teil des indischen Aufenthaltes gewidmet war, führte das Forscherpaar der Weg in das nicht minder bedeutsame, im Nordosten Indiens gelegene Land Assam, das politisch zwar zu Vorderindien gehört, ethnographisch und linguistisch aber die Brücke zu Hinterindien schlägt.

Unter den Bergvölkern, welche die Hügelkette bewohnen, die der Länge nach das heutige Assam durchzieht und die beiden größten Teile des Landes, das Brahmaputra-Tal im Norden und die Surma-Ebene im Süden von einander scheidet, ist einer der interessantesten und zweifelsohne der fortgeschrittensten Stämme, das Volk der Khasi, welches die sogenannten Khasi- und Jaintia-(Dschaintia =) Berge bewohnt. In Schillong, dem Mittelpunkt derselben, das unter der englischen Herrschaft jetzt die Hauptstadt des Landes Assam bildet, war es, wo ich gegen Ende September 1911 zum erstenmale Herrn Prof. Dr. L. Scherman nebst seiner Gattin kennen lernte und eine langjährige Freundschaft ihren Anfang nahm. In die Khasi-Berge soll darum diese kleine Arbeit uns führen, zu seinen mit den ihnen eigentümlichen Föhrenwäldern bewachsenen Höhen, zu denen die schneegekrönten Spitzen des Himalaya aus der Ebene herübergrüßen, die von den mächtigen Wogen des Brahmaputra und den wechselnden Fluten der Surma umspült sind, in denen ein zufriedenes und heiteres Völkchen lebt, das trotz vielfachen europäischen Einflusses und dem anderer benachbarter Kulturen immerhin noch seine besondere Eigenart bewahrt hat.

Aus einer Gesamtbevölkerung von 243 263 Menschen, welche die Bewohner der Khasi- und Jaintia-Berge ausmachen[1]), gehören 203 855 zum Stamme der Khasi. 37 852 davon haben sich dem Christentum angeschlossen, während die übrigen noch Anhänger des althergebrachten animistischen Kultes sind, mit Ausnahme von etwas über einem Tausend, das zur Religion der Hindus übergetreten ist.

An Ausdehnungsmöglichkeiten fehlt es dieser Menschenschar nicht, da ihr innerhalb des Bezirkes der Khasi- und Jaintia-Berge ein Gebiet von 6022 englischen Quadratmeilen zur Verfügung steht, wobei nur 40 Personen auf die Quadratmeile kommen. Trotzdem weite Strecken unbebaut sind und auch das System der Wanderäcker die Ausnützung des Bodens verwehrt, kann es geschehen, daß bei dieser geringen Bevölkerungsziffer doch die weitaus größere Zahl der Gesamtbevölkerung (200 781) vom Ackerbau abhängig ist und Handel und Industrie nur eine untergeordnete Rolle spielen.

In bezug auf die Verteilung der Geschlechter weisen die beiden großen Religionen Assams, der Hinduismus und der Mohammedanismus, mit einer niedrigeren Zahl von Frauen als Männern ähnliche Verhältnisse wie im übrigen Indien auf. Bei den Khasi überwiegen jedoch die Frauen an Zahl die Männerwelt. Im Brahmaputra-Tal mit seiner größeren Hindubevölkerung kommen auf je 1000 Männer nur 892 Frauen; im Surma-Tale mit dem mehr muselmanischen Element dagegen 937. Umgekehrt jedoch ist das Verhältnis bei den Khasi, wo sich für je tausend Männer ein Überschuß von 74 Frauen ergibt. Die Stellung der Frau ist bei diesem Volke eine ganz grundverschiedene. Sie ist aufgebaut auf den unter ihm herrschenden mutterrechtlichen Sitten und Gebräuchen, die vor allem in dem Besitztum verankert sind, und in ihm ihren ehrenvollen Ausdruck finden.

1. Eigentumsrechte am Familienbesitz.

Der große Grundsatz, welcher bei dem Khasi das Eigentum beherrscht, ist, daß aller Familienbesitz in den Händen

der Frau und nicht des Mannes liegt. Der Mann kann niemals der Besitzer desselben sein und derselbe kann in keiner Weise auf ihn übergehen. Er mag sich vielleicht einmal etwas durch eigene Tätigkeit und Arbeit erwerben, aber selbst dann wird dieses auf dem Erbwege wieder in Frauenhände gelangen. Der Begriff der Familie ist hier nicht so eng gezogen wie bei uns. Hier handelt es sich um die Stammesfamilie, die Familiensippe, den Clan. Das Haupt derselben ist jeweils die jüngste Tochter, welche, auch wenn sie schon alt geworden, in den Jaintia-Bergen den Ehrennamen ka barit, in den Khasi-Bergen dagegen mehr ka khadduh, die letzte, die jüngste führt. Um sie scharen sich ihre nächsten Blutsverwandten, Geschwister und Kinder. Nehmen wir beispielsweise eine solche Stammesmutter mit dem Namen Ka Sing Lau. Sie hat 2 Söhne und 5 Töchter; außerdem noch 2 Brüder und 2 Schwestern, die alle verheiratet sind. Dazu kommen noch je 4 Kinder der 5 Töchter und 2 Schwestern. Diese 46 Personen wohnen bei der Stammesmutter und bilden die Familiensippe der Lau. Zu derselben zählen wie ersichtlich auch die Söhne und Brüder, die Neffen und Enkel, nicht aber deren Kinder. Letztere haben mit der Familie Lau nichts zu tun, sondern gehören in die Familiensippe ihrer Frauen, wohnen jeweils bei dieser und werden zu ihr gerechnet. Ebenso gehören hierher weder der Ehemann der Ka Sing Lau, noch die Männer der verschiedenen Töchter, Schwestern, Nichten und Enkelinnen. Sie alle werden wiederum zu ihrer eigenen Sippe gerechnet, wohnen und arbeiten nach eigentlicher Khasi-Sitte bei dieser und besuchen ihre Frauen nur gelegentlich etwa nach Einbruch der Dunkelheit.

Die ganze Stammesfamilie der Lau ist in 5 bis 6 Hütten untergebracht, die alle nebeneinander in einem Halbkreise stehen oder je nach der Bodenbeschaffenheit am Abhang eines Hügels übereinandergebaut sind. Sie umgibt vielfach ein Garten, in dem Mais, süße Kartoffeln, die kartoffelartigen Knollen der Soh-ot und Schrut, Bananen, und an den südlichen Abhängen der Khasi-Berge auch Kaffee, Ananas und andere Früchte gezogen werden. Garten und Hütten umgibt ein Kranz des für Bauzwecke, Einrichtungsgegenstände und Ge-

rätschaften so wichtigen Bambusrohres, das in armdicken Strängen bis zu einer Höhe von 10 auf 15 Meter emporwächst und zugleich einen guten Schutz gegen Unwetter bildet. Ein aus Erde aufgeworfener Wall (morscha) schließt alles ringsum zu einem geschlossenen Gehöfte ab, verwehrt den ungehinderten Zutritt und schützt Vieh und Saaten vor den Angriffen und Verwüstungen wilder Tiere.

Was betrachtet man nun als Familienbesitz einer solchen Sippe? Vor allem sind es Grund und Boden, die Gärten, Reisfelder, Waldungen, brachliegendes Berg- und Weideland. An den südlichen Abhängen der Khasi-Berge sind es Felder für den Anbau von Reps, Orangenwälder, Lorbeerhaine, Pflanzungen von Betelpalmen und den als Genußmittel beim Betelkauen weit und breit so sehr geschätzten Pfefferblättern.[1]) Gewöhnlich ist soviel an Grund und Boden vorhanden, daß die Familiensippe sich ordentlich ernähren und auch vermehren kann.

Je nach Größe und Reichtum einer Familiensippe besitzt dieselbe auch eine entsprechende Anzahl Kühe, Ochsen, Hühner, Schweine und Ziegen. Von den Kühen werden weder Milch noch Fleisch gebraucht. Man hält sie des Düngers wegen, dann aber vor allem zu Zwecken der Zucht, denn der Ochsen kann man zur Bestellung der Felder nicht entraten, vor allem der Reisfelder nicht, um die durchwässerte Erde zu einem schlammigen Brei zu zerkneten. Von den Hühnern werden vor allem die Eier geschätzt, da sie bei allerlei Unglücksfällen und Krankheiten in dem Orakelbefragen des Eierwerfens eine fast tägliche Verwendung finden.[2]) Hühner, Schweine und Ziegen dienen zu Opferzwecken,[3]) jedoch sind sie auch bei allerlei festlichen Anlässen wie Pfeilschießen,[4]) bei der Erteilung

des Namens, bei Hochzeiten und Verbrennungsfeierlichkeiten der Toten eine willkommene Zugabe zum Reis.

Zum Familienbesitz gehören fernerhin die verschiedenen Hütten, deren Errichtung und Instandhaltung die Arbeit der Glieder der Sippe, der Brüder, Neffen und Enkel ist. Vor allem gilt die Hütte der Stammesmutter selbst gleichsam als das Zentrum des ganzen Geschlechtes, und deren Besitz bildet das äußere Zeichen der Herrschaft der Stammesmutter. Hier hält sie die Familienopfer ab und bewahrt hier auch die besonderen Kleinodien auf. Als solche betrachtet man diejenigen, welche mit dem religiösen Kult zusammenhängen. Der ältesten Stammesmutter, als der ursprünglichen Begründerin des Clans, und ihrem Bruder gelten in erster Linie besondere Verehrung und Opfer einer jeden Stammesfamilie; außerdem einer Reihe anderer Geister, die je nach der Familiensippe wieder verschieden sind. Bei dem in den Jaintia-Bergen lebenden Zweig des Khasi-Volkes, den sogenannten Synteng, welche die alten Khasisitten wohl noch am getreuesten bewahrt haben, findet man in der Hütte der Stammesmutter als Geräte für den Dienst der fast durchwegs weiblichen Gottheiten Matten, kleine Körbchen für Reis, Kürbisflaschen, ein aus Bambusrohr geflochtenes und mit Federn geschmücktes Körbchen, sowie Geweihe von Hirschen oder Antilopen. Letztere sind an der Wand befestigt: sie sollen der Sitz der Gottheiten von Wald und Jagd sein. Das kleine Körbchen ist an einem Pfosten der Hütte angebracht; in ihm sollen die besonderen Gottheiten der Stammesfamilie ihren Wohnsitz haben; zwei darunter befestigte Haselnußgerten versinnbilden deren Macht. Die Kürbisflaschen dienen als Behälter für Trinkopfer von Reisschnaps.[1]) Als Kleinodien, die sich von Geschlecht zu Geschlecht vererben, gelten ferner die reichen Schmucksachen aus Gold und Silber, die schweren Korallenketten und seidene Tücher, die von den Frauen bei den Tanzfeierlichkeiten getragen werden.

Auch was die Familienhütten an Einrichtung und Gerätschaften bergen, wie Körbe, Matten, Lanzen, Schilde, Pfeil und Bogen, die messingenen Koch- und Wassertöpfe, irdene Gefäße und Messingteller gilt als gemeinsames Familiengut.

[1]) s. Die Nongkrem = Puja, l. c.

Diesen gesamten Besitz nun hat die jeweilige Stammesmutter in Händen; sie ist die gesetzmäßige und alleinberechtigte Hüterin und Verwalterin desselben. Nichts kann ohne ihre Erlaubnis auch nur ausgeliehen werden. Keinen Teil weder der beweglichen noch unbeweglichen Familiengüter darf man ohne ihre Zustimmung veräußern. Zur Ausfertigung einer darauf bezüglichen rechtlichen Urkunde ist, da sie des Schreibens vielfach unkundig, ihr Fingerabdruck zu setzen. Verschenkt darf überhaupt nichts werden: das hieße die Stammesgottheiten beleidigen, indem man ihre Güter nicht schätzte und achtete, sondern als wertlos weitergäbe. Zur Strafe dafür würde der Stamm auch die übrigen Güter verlieren und dann in Armut und Verachtung dahinleben. Die einzelnen Glieder der Sippe könnten sich etwa als eine Art Sklaven (mrau) bei anderen Stammesfamilien zur Arbeit anwerben lassen. In ihren Verband aufnehmen dürfte sie aber keine von diesen, da sie nicht zu deren Sippe gehörten und die Stammesgötter dieser Familie das wiederum nicht dulden würden. Hat darum eine Stammesfamilie beispielsweise Reisfelder, die sie nicht bebaut und gerne ärmeren Anverwandten überlassen will, so muß sie wenigstens den geringsten Pachtzins dafür in Anrechnung bringen. Dieser besteht jährlich in einer Kürbisflasche voll Reisschnaps zu Ehren der Hausgottheiten, was einem Wert von etwa 70 Pfennigen entspricht.

Bevor die Stammesmutter zum Verkauf eines gemeinsamen Gutes ihr Jawort gibt, wird sie zuerst den Rat der übrigen Glieder der Sippe anhören. An und für sich sollte nach alter Stammessitte ebensowenig etwas verkauft wie verschenkt werden. Die Urahnen, welche die einzelnen Clans als Gottheiten verehren, haben, so heißt es, seit undenklichen Zeiten diesen ihren Bedarf an Feld und Wald zugeteilt, und sie sollen ihr unveräußerliches Stammgut (nongrim) bilden. Es aus der Hand lassen, hieße darum die Götter beleidigen. Das konnte jedoch nicht verhindern, daß einzelne durch Unglück oder Trägheit in Not gerieten und suchten einen Teil ihres Besitzes gegen einen jährlichen Zins oder den einmaligen gerade benötigten Betrag zu verpachten. Ban die pan, nennt man diese Art, wörtlich: zu kaufen bitten; es ist der Sinn der leihweisen

Überlassung darin enthalten. Ein Feld ist beispielsweise 300 Rs. wert. Man nimmt dafür 50 oder 100 Rs. entgegen, und der Gläubiger bleibt Eigentümer des Feldes bis das Geld zurückbezahlt wird. Diese Art des Kaufes kommt öfters vor. Manchmal gibt es auch Händler (nongkhaii) die aus derselben ihren Nutzen zu ziehen suchen. Sie überlassen das Feld zur weiteren Bebauung dem Schuldner gegen eine Abgabe in Naturalien von 50 bis 70% der Ernte. Nach wenigen Jahren ist dann das ganze Feld ihr Eigentum. Abgesehen von diesem Modus kommt es vor, daß die Leute anstatt das geliehene Geld zurückzahlen zu können, noch weitere Summen benötigen. Ist dann im angegebenen Falle der Gesamtbetrag von 300 Rs. gezahlt, so gilt der eigentliche Kauf als vollzogen; ban die lut, heißt man das; wörtlich: ganz, vollständig verkaufen. Eine Familiensippe, die auf solche Weise allmählich um ihren Grundbesitz gekommen ist, verfällt der Armut und Not. Es bleibt ihr nichts übrig, als sich anderweitig um Arbeit umzusehen, Land in Pacht zu nehmen oder auch die Kinder an Bessergestellte als eine Art Sklaven zu verkaufen. Werden für ein Kind im Alter von etwa 10 Jahren 40 Rs. bezahlt, so bleibt dasselbe in der Leibeigenschaft des Käufers bis das Geld zurückgegeben werden kann. Das ist nur selten der Fall. Außer Nahrung und der notwendigsten Kleidung wird jährlich nur eine Rupie als Lohn an der Kaufsumme abgerechnet; so gehört das Kind praktisch zeitlebens dem Käufer.

Es ist Pflicht der einzelnen Mitglieder einer Familiensippe, zusammenzuarbeiten, daß das Stammesgut erhalten bleibt und auch den nötigen Ertrag für den Unterhalt aller abwirft. Die Stammesmutter hat in erster Linie darüber zu wachen, daß die diesbezüglichen Sitten und Gebräuche gewahrt bleiben. Sie wird von allen hoch in Ehren gehalten. Gegen ihren Willen etwas tun, sie beleidigen, ihr Schimpfnamen geben oder sie gar schlagen, gilt als sang (tabu), ein schweres, unheilbringendes Verbrechen. Es ist eine grobe Sünde (pop) und eine überaus große Schande (sngewsih eh tam) für die ganze Sippe.[1]) So-

[1]) Als ähnliches Vergehen gilt auch: Stammesgüter im geheimen veräußern; Blutschande; Grabstätten auf gröbliche Weise verunehren; hl. Grundstücke oder Wälder in Benutzung nehmen.

lange ein Familienglied ein solches Verbrechen begangen und vor der Stammesmutter und den Ältesten der Sippe nicht Abbitte geleistet hat, etwa mit den Worten: Verzeihet mir, ich habe einen Fehler begangen (to map ia nga, nga leh bakla); solange auch das von den Familienältesten oder dem Opferpriester (lyngdoh) dafür bestimmte Sühneopfer in Form von Schweinen und Ziegen nicht dargebracht ist, gilt der sündige Teil als von der Familie und den Familienopfern ausgeschlossen. Aber selbst nach der Wiederzulassung bleibt noch immer ein gewisser Makel an ihm haften.

Pflicht der Stammesmutter ist es aber auch für die Bedürfnisse der Angehörigen ihrer Familiensippe in bezug auf Nahrung, Kleidung und dergl. Sorge zu tragen. Sie verteilt die Erträgnisse der Ernten nach dem Bedarf der einzelnen. Sie geht oder schickt zum Markte um dort zu tauschen, zu handeln, zu kaufen oder zu verkaufen. Sie führt die gemeinsame Kasse, und auch die männlichen Glieder der Sippe haben, wenn sie etwa einmal Reisschnaps trinken oder sich Kleider anschaffen wollen, das Geld von ihr zu erbitten. Da ist die Stammesmutter eher freigebig als knauserig. Überhaupt wird dieses Abhängigkeitsverhältnis von den Männern in keiner Weise als unwürdig oder beschämend empfunden. Das ist einmal so die matriarchalische Form und althergebrachter Brauch. Die Stellung der Männer in der Familiensippe ist trotzdem eine ansehnliche. Schon der Name, mit dem man sie benennt: Rangbah, Basan (Älteste, Ratgeber) hat einen ehrenvollen Klang. Ihnen obliegt vielfach die Arbeit in Feld und Wald und der Schutz der Familie; Pfeil und Bogen werden ihnen schon als Wiegengabe überreicht. In wichtigeren Familienangelegenheiten wird die Stammesmutter mit ihnen beratschlagen. Bei der Namenserteilung, Heirat, Totenfeier und Leichenverbrennung tritt die Stammesmutter fast ganz in den Hintergrund, ebenso bei Streitigkeiten und Gerichtsverhandlungen vor dem Häuptling (Doloi) oder König (S'iem). Sie ist zwar mit ihrem Rate immerhin von Einfluß, aber das äußere Auftreten, Handeln und Urteilfällen ist Sache der Männer. Die kleineren tagtäglichen Opfer in der Stammeshütte nimmt sie zwar vor; sie kann dieselben jedoch auch von ihren

Söhnen verrichten lassen. Bei größeren Opferfeierlichkeiten, welche von mehreren Familiensippen zugleich, von ganzen Dörfern oder auch einem der Khasi-Staaten dargebracht werden, treten jedoch nur die Männer als Opferpriester in Tätigkeit.

Was nun die Ehegatten der Stammesmutter und der weiblichen Angehörigen anbelangt, so werden sie zu der Familiensippe dieser Frauen in keiner Weise gerechnet. Für dieselben gelten sie nur als die Erzeuger. Sie haben bei ihrer eigenen Sippe Arbeit und Unterhalt, nehmen an deren Opfer und Beisetzungsstätte teil. Auf die Erziehung der Kinder, die ja ganz in den Stamm der Mutter hineingehören und an dessen Namen und Gütern sie teilnehmen, hat der Vater weiter keinen Einfluß. Aber für gewöhnlich auch keine weitere Verpflichtung, außer Frau und Kinder wären in Armut. Auch dann kommt die Sorge für sie erst an zweiter Stelle, nach derjenigen für die Angehörigen der eigenen Sippe. Trotzdem aber ist der Ehegatte in Ehren gehalten und wird von seiner Frau mit „Herr" (kynrad) angeredet. Ihm ungehörig gegenüberzutreten, würde als schimpflich betrachtet. Wo das Stammgut einer Sippe aufgelöst ist, oder christliche Sitte bereits eingeführt, lebt und arbeitet der Mann allerdings auch mit Frau und Kindern zusammen.

2. Heilige Grundstücke und Waldungen.

Einer besonderen Art von Grundbesitz begegnet man noch in den Khasi- und Jaintia-Bergen. Es sind dieses Grundstücke und Wälder, die als sang oder kyntang, als verboten, heilig gelten, so kyndêu sang, khlau kyntang, verbotene Felder, heilige Wälder. Man nennt sie auch in Verbindung mit dem Namen Gott z. B. khlau Blei, Götterwald, was einigermaßen den Schlüssel für Zweck und Bedeutung derselben bieten dürfte. Menschenhände sollen diese Art Besitztum nicht berühren; sie sind den Göttern heilig und dürfen höchstens in deren Dienst Verwendung finden.

Es ist nicht leicht, dem Ursprung und der Entstehung dieser Reservate nachzugehen. In bezug auf Grundstücke lassen sich immerhin einige Lösungen finden. So war es bei

der Gründung der kath. Missionsstation in dem an einem steilen Bergabhang gelegenen Dorfe Schella schwer, einen halbwegs geeigneten Platz zu finden, groß genug um auch nur eine kleine Wohnung darauf zu bauen. Endlich entdeckte der Missionär einen solchen etwas außerhalb des Dorfes. Da aber gab es eine neue Schwierigkeit. Der Platz galt als Verbrennungsplatz für die Toten und war darum sang. Die Geister der Toten würden jeden Eindringling schwer bestrafen. Es gelang schließlich die Leute zu bewegen ihre Toten anderswo zu verbrennen, schwieriger aber war es, solche zu finden, die bereit waren, an den Bauarbeiten mitzuhelfen. Selbst diejenigen, welche der Missionär schließlich hierzu bewegen konnte, litten noch stark unter der Furcht vor der Strafe der Götter, und fortgesetzt war der eine oder andere von ihnen aus Einbildung krank.

Bei ausgedehnteren Grundstücken mögen ab und zu die Schlangenverehrer (thlen) Erklärung dafür bieten, die in den Khasi-Bergen ihr Unwesen treiben.[1]) Wird ein solcher des Mordes überführt, den er im Dienste des Schlangengottes verübt hat, um diesem das Blut des Getöteten zu opfern, und will er sich von dessen Bann befreien, so bleibt ihm nichts anderes übrig, als sich all seiner beweglichen und unbeweglichen Habe zu entäußern. Letztere wird damit sang. Niemand wird es wagen die Felder und Gärten zu übernehmen, etwas darauf anzupflanzen oder eine Frucht davon zu berühren. So konnte in Cherrapoonjee (Tscherrapundschi) ein katholischer Eingeborener ein paar große Orangengärten in Besitz nehmen, die ein Thlen-Verehrer preisgegeben hatte, da ersterer an den Geisterspuk nicht glaubte.[2])

Bei all diesen Grundstücken, die als sang gelten, hält die Furcht vor der unnachsichtigen Strafe der Götter einen jeden Besitzer von der Bebauung desselben ab. Tut es ein anderer, so wird er ihn auch nicht daran hindern, weil er die Rache der beleidigten Gottheit überläßt.

Wie sich gerade aus dem erwähnten Falle ergibt, sind die

---

[1]) Im Stromtal des Brahmaputra, S. 76 ff.

[2]) Ebendas. S. 82.

Heiden den zum Christentum übergetretenen Volksgenossen gegenüber im Nachteil. Letztere fühlen sich an die heidnischen Gesetze nicht mehr gebunden, wenigstens soweit ihnen religiöse Motive zugrunde liegen, und teilen in vielen Dingen deren Befürchtungen nicht. Verarmte Khasi-Christen finden so mitunter eine Gelegenheit, zu Grund und Boden zu kommen, in Fällen, wo es dem in seinen animistischen Anschauungen befangenen Khasi nicht möglich wäre.

Doch gibt es auch unter letzteren unrühmliche Ausnahmen. In Nongbah, einem größeren Dorfe der Jaintia-Berge mit etwa 400 Hütten — daher auch der Name, der großes Dorf bedeutet — sah ein Heide vor wenigen Jahren mit neidischen Augen, wie so manches Stück brachliegenden Götterfeldes sich unter den Händen von Christen in erträgnisreiche Gebiete verwandelte. Der Wunsch wurde in ihm wach, es diesen gleich zu tun. Wenn er sich nun auch nicht mehr allzuviel vor seinen Gottheiten fürchtete, so mußte er doch mit dem Zorn und der Rache seiner Stammesgenossen rechnen, wenn er als Heide einen derartigen Schritt wagte. Gegen Christen getraute man sich doch nicht leicht etwas zu tun. Kurzer Hand trat er darum zur methodistischen Religion über und kam bei dem englischen Regierungsbeamten in Jowai (Dschowai), dem Hauptorte der Jaintia-Berge, um Überlassung eines entsprechenden Stückes Land ein. Nach dem Aufstand der Synteng im Jahre 1862 hat die englische Regierung das ganze Gebiet der Jaintia-Berge als Regierungsland erklärt. Für alles freiliegende Land beansprucht sie darum auch die Vergebung, gewöhnlich in langjährigem Pacht. Da sie auf diese Weise Abgaben dafür erhält, ist es an sich in ihrem Interesse gelegen, wenn sich Bewerber melden. In dem gegebenen Falle wurde der Pachtbrief ausgestellt, und übers Jahr war aus dem bisher nutzlosen Land ein üppiges Reisfeld geworden. Nun da der Pächter seiner Sache sicher war, drehte er den Methodisten den Rücken, um wieder Heide zu sein und an den heidnischen Opfern teilzunehmen. Aber da kam er schlecht an. Die Heiden waren empört über ein solches Spiel und brachten ernste Beschwerden vor den englischen Regierungsbeamten. Dieser bestimmte daraufhin, daß in Zukunft kein derartiges Grundstück mehr

verpachtet werden solle, außer nach Vorlegung der schriftlichen Erklärung des Häuptlings und der Dorfältesten, daß sie dagegen keine Einwendung machten. Der gewinnsüchtige Pächter des erwähnten Götterlandes aber verfiel der allgemeinen Verachtung.

Was die heiligen Wälder anbelangt, die sich oft malerisch vom obersten Gipfel eines Berges den Abhang hinanziehen und mit knorrigen Eichen und buntfarbigen Rhododendren bewachsen sind, so darf dort kein Baum gefällt werden, höchstens kann man etwa abgefallenes, vom Sturme herabgerissenes oder schon abgestorbenes Holz mitnehmen. Die Geister des Waldes werden als strafende Gottheiten jeden Frevel ahnden. Tiger und Leoparden, Affen, Bären und Schlangen erfreuen sich darum hier eines ungestörteren Daseins. Der einzige Fall, in dem etwa in diesen Götterhainen Holz geschlagen werden darf, ist zu den religiösen Verbrennungsfeierlichkeiten der Toten. Bei der Sitte der Khasi, oft weite Strecken anzuzünden, ungeachtet des jungen Baumwuchses, der sich darauf befindet, um so durch die Asche von Gräsern, von Baum und Strauch den Boden zu düngen und für das eine oder andere Jahr ein Kartoffelfeld anzulegen, Bergreis, Hirse, oder sonst etwas anzubauen und das Feld dann wieder brach liegen zu lassen, ist dieses zum mindesten eine kluge Vorsichtsmaßregel, da es sonst gegebenen Falls gar einmal an Verbrennungsholz für die Toten mangeln könnte. (Fortsetzung folgt).

139 T. 299 omitted

Familienbesitz und Mutterrecht.

Von C. Becker S. D. S., Würzburg.

(Fortsetzung).

Gurdon sagt,[1]) daß diese heiligen Haine jeweils Eigentum eines Dorfes seien. Das trifft nicht immer zu, wie der folgende Fall dartun soll, den ich auch deshalb erzähle, weil er einen tieferen Einblick in die ganzen diesbezüglichen Stammesgegewohnheiten gewährt.

Vor einigen Dezennien war ein protestantisch gewordener Khasi, U Jacob Shai mit Namen, bei dem englischen Regierungsbeamten in Jowai als Schreiber angestellt. Um neben dem geringen Gehalt seiner Familie ein besseres Auskommen zu sichern, gelüstete ihn auch nach Grundbesitz. Aus Jongushen (Dschonguschen) im Wargebiete gebürtig erinnerte er sich, daß er allenfalls in dem benachbarten Dorfe Syndai bei der Familiensippe der Umliang sein Ziel erreichen könnte. So machte er sich eines Tages auf den Weg dorthin. Nach den üblichen Begrüßungen, der Bewirtung mit Wasserpfeife und Betelnuß und der Unterhaltung über allerhand gleichgültige Dinge rückte er mit seinem Anliegen heraus. „Ich kenne", sagte er in der höflichen Sprache auch dieser einfachen Naturmenschen, „ich kenne die Güte und den guten Namen eures Stammes und eurer Stammesältesten; überall seid ihr anderen gerne zu Hilfe gekommen und habt dadurch der ganzen Sippe, euren Stammesgöttinnen und Stammesgöttern, euren Ahnen und Urahnen Ehre und Ruhm bereitet. Ihr seid beglückt mit Enkeln und Urenkeln. Dieses euer Glück freut mich und ich wünsche, daß die Götter und Göttinnen eurem Stamme gütig gestimmt seien für alle Zeiten. Deshalb wage ich es zu euch zu kommen und euch eine Bitte vorzutragen, nur eine Bitte habe ich: nga don tang kawei ka jingkyrpad! Ich brauche nämlich ein Stück Land, damit ich meinen Enkeln und Enkelinnen etwas zu essen geben kann. Mein eigenes Feld reicht nicht aus für so viele Köpfe. Da habe ich bemerkt, daß hier ein

[1]) The Khasis, p. 87.

Stück Wald unbenutzt liegt. Ich habe nachgefragt, wem es gehöre und die Dorfältesten sagten mir, es sei Eigentum des berühmten Familienstammes der Umliang. Ich tue euch somit die Ehre an und bitte euch: Kann ich diesen Wald nach Stammesgesetz und Sitte erhalten?"

Gegenfragen von seiten der Stammesmutter und Familienältesten folgten auf diese Rede. Endlich ist ihnen klar, welches Stück gemeint ist. „Das ist ja der khlau sang, der Götterwald," riefen sie aus. „Gewiß der gehört zu unserem Stammeseigentum, aber wie ihr ja selber wißt, können wir ihn weder verpachten noch verkaufen. Wir können und dürfen nicht einmal sagen, bau das Land an. Wir können euch aber auch nicht daran hindern, es zu tun oder es euch verbieten. Das Grundstück ist den Göttern geschenkt, sie werden sich an jedem rächen, der es ihrem Kulte entzieht; sie werden selbst darüber wachen, daß sich keiner daran vergreift."

Diese Antwort genügte dem U Shai vollständig. Vor den Strafen der Waldgötter fürchtete er sich nicht; er hatte sich nur vergewissern wollen, ob die Familiensippe ihm keine Schwierigkeiten in den Weg legen oder gar bei der englischen Regierung Einspruch erheben würde. Bald war der Wald gerodet. Das Holz und die Sträucher, die hohen Gräser und Schlingpflanzen verwandelte das Feuer in Asche; Orangen und Zitronen, Ananas und Bananen wurden angepflanzt und schon nach wenigen Jahren warf das Land für den Erlös der Früchte den nach dortigen Verhältnissen namhaften Betrag von 800 bis 1000 Rs. im Jahre ab.

Die Familiensippe der Umliang war ihrem heimatlichen Glauben noch treu ergeben. Wie die übrigen Heiden, so beobachtete auch sie das Unterfangen des U Shai mit scheuer Furcht und Beklemmung. Sie glaubten die Götter müßten sich rühren und der Wald würde den Frevler mit seinen Angehörigen verschlingen. Nichts davon geschah. Es konnte nicht ausbleiben, daß auf diese Weise allmählich auch unter den Heiden der Glauben an ihre Götter und heimischen Sitten einen Stoß erlitt und mancher unter ihnen zu der Anschauung überging, das dürften sie auch machen.

Ein so fortschrittlicher gesinnter junger Khasi heiratete

mit der Zeit in die Familiensippe der Umliang hinein. 40 Jahre waren unterdessen schon vergangen. Der alte Vater U Shai war bereits tot, das von ihm bepflanzte Grundstück war, da nicht eigentliches Stammesgut, nach den besonderen Gebräuchen der War nicht an die jüngste Tochter allein, sondern an seinen Sohn Jacob U Shai und dessen Schwestern gemeinsam übergegangen. Sie hatten seinerzeit dem Vater noch in der Ausrodung des Waldes geholfen. Die Geschwister waren katholisch. Der erwähnte junge Mann strengte nun vor wenigen Jahren bei dem englischen Regierungsbeamten in Jowai gegen die Geschwister gerichtliche Klage an: der von Jacob U Shai urbar gemachte und in einen Obstgarten verwandelte Wald sei widerrechtlich von diesem angeeignet worden; dieser sei Eigentum des Stammes seiner Frau; er fordere den einen Teil des Grundstückes für die Familie Umliang zurück; für den anderen müsse ein entsprechender jährlicher Pachtzins gezahlt werden.

Die Geschwister Shai konnten dagegen geltend machen, daß die Angelegenheit verjährt sei. Nach Stammessitte tritt die Verjährung bei geringeren Werten nach 10, bei größeren aber nach 30 Jahren ein. Außerdem sprach jedoch vor allem für sie, daß das fragliche Grundstück khlau sang, Götterwald sei und die Familie Umliang dafür nichts fordern könne. Hierzu fehlte es den Geschwistern Shai an Zeugen, während die Umliang für ihre einfache Aussage des Besitzrechtes mehrere heidnischen Zeugen aufbrachten. Der Prozeß zog sich in die Länge. Er wurde schließlich zu Ungunsten der Geschwister Shai entschieden und diese des Besitzes für verlustig erklärt. Der Misssionär P. Benedikt Neher nahm sich nun um die Sache an. Er brachte über 100 Zeugen, alle Stammesmütter und Dorfälteste zusammen, die bereit waren, zu schwören, daß jenes Grundstück seit Menschengedenken Götterwald gewesen sei. Der englische Richter, dem er dieses mitteilte, meinte, das sei Grund die Revision und Änderung des Urteils zu beantragen, die Geschwister Shai hatten jedoch durch den vorherigen Prozeß schon ihr ganzes Geld an Winkeladvokaten verloren und nicht mehr den Mut, nochmals damit anzufangen. Mit orientalischem Gleichmut fanden sie sich in den Verlust hinein und die Sache blieb dabei.

Der Fall ist jedenfalls lehrreich, insofern er zeigt, daß sich sogenannte heilige Wälder auch im Besitze einzelner Familiensippen befinden; wie sie von diesen gewertet sind, solange sie ihren animistischen Anschauungen treu bleiben und wie sie endlich ihr Besitzrecht darauf selbst nach Jahren noch geltend machen können.

3. Erbrechtliche Gebräuche.

Stirbt die Stammesmutter, so tritt bei den Khasi jeweils die jüngste Tochter derselben in das Erbe ein, dann wieder die jüngste von dieser und so fort. Kann die jüngste Tochter aus irgendeinem Grunde den Besitz nicht übernehmen, so folgt ihre nächstjüngste Schwester. Sind überhaupt keine Mädchen vorhanden, sondern nur Söhne, so geht die Erbschaft an die jüngste Tochter der Schwester der verstorbenen Stammesmutter über. Fehlt es auch an solchen Schwestern oder an Töchtern von diesen, dann kommt die nächste jüngste weibliche Verwandte an die Reihe. Wohnte dieselbe bisher nicht in der Familiensippe der Verstorbenen, so muß sie zuerst wenigstens 3 Monate lang in der Hütte der Stammesmutter zubringen, um in deren Rechte und Pflichten eintreten zu können. In einem solchen Falle wird jedoch gewöhnlich die Nachfolgerin im Amte schon vorher von der Stammesmutter in ihre Hütte aufgenommen und auf die spätere Tätigkeit vorbereitet. Es kann vorkommen, daß die Nachfolgerin noch nicht einmal 13 Jahre alt, somit auch noch nicht volljährig und heiratsfähig ist. In diesem Falle wird ihre Mutter oder eine Schwester der verstorbenen Stammesmutter die Verwaltung und den Haushalt bis zur Volljährigkeit der Erbin führen. Selbst als Kind führt aber dann die letztere schon den Ehrennamen Mutter, man nennt sie kmie nah oder kmie san.

Der große Grundsatz, welcher alle erbrechtlichen Bestimmungen beherrscht, ist somit, daß die Söhne und Männer von allem Familienbesitz ausgeschlossen sind und diese immer nur auf die Mädchen, die Frauenwelt, übergeht. Wie aber, wenn sich nun ein Bursche oder Mann selbst einen Besitz schafft oder erwirbt? Der Fall ist denkbar und kommt auch

vor. Wie erwähnt, muß ein jeder an den Arbeiten in der eigenen Familiensippe mithelfen, um Anspruch auf Versorgung aus dem gemeinsamen Besitz zu haben. Zwischen Aussaat des Reises und der Ernte und auch etwaigen anderen gemeinsamen Arbeiten liegen jedoch mancherlei Tage und Wochen. Anstatt diese nun mit Pfeilschießen, auf die Jagd gehen oder dem beliebten shong kai, herumhocken zum Vergnügen, zu verbringen, kann sich ein junger Mann noch Geld verdienen mit Holzfällen für andere und Lastentragen für eingeborene Händler oder auch Europäer, da ja in den Bergen fast alles auf dem Rücken herbeigetragen werden muß. Er kann auch sonstige Feld- und Gartenarbeiten gegen Bezahlung für andere außerhalb seiner Sippe verrichten oder einen kleinen Handel treiben, indem er auf einem Markte Waren wie etwa getrocknete Fische, Betelnüsse, Pfefferblätter u. dergl. kauft, sie ein paar Tagereisen weit auf Märkte ins Innere der Berge trägt, wo es dieselben sonst nicht gibt, um sie dort mit einem Gewinn wieder zu verkaufen. Was der Mann auf diese Weise verdient, ist sein Eigentum und rechnet nicht zum Stammesgut. Ein fleißiger Mensch kann sich so allmählich soviel Geld verdienen, um ein Reisfeld zu pachten. Durch Verkauf des Überschusses der Ernte wird er es schließlich soweit bringen, daß es selbst zum Kaufe eines Reisfeldes reicht, das ebenfalls sein Eigentum ist. Stirbt nun ein solcher Mann unverheiratet, so geht das Erbe an seine Mutter über. Ist er verheiratet, dann kann er damit, wenn er will, auch ein Stammesgut für seine vielleicht arme und besitzlose Familie begründen. Das Gut wird dann auf die jüngste Tochter übergehen und sich nach den üblichen Gewohnheitsrechten weiter vererben. So kehrt schließlich doch alles wieder in die Hände der Frauen zurück.

Das folgende Beispiel möge die diesbezüglichen Gewohnheiten erläutern und klarer herausschälen, wenn es auch gerade kein sehr erfreuliches Licht wirft auf die Mißhelligkeiten, die mitunter in das Khasi-Volk hineingetragen werden, infolge des Zwiespaltes der verschiedenen christlichen Religionen, welche sich um dessen Bekehrung bemühen.

In dem Dorfe Kyndongtupér hatte sich ein Mann allmählich selbst einen Besitz erworben mit 15 Ochsen und Kühen.

einer ordentlichen Hütte nebst Einrichtung und 3 schönen Reisfeldern, groß genug, um eine Familiensippe zu ernähren. Nach seinem Tode galt die jüngste Tochter seiner Schwester mit Namen Ka Pliang Shai Syndür, als die in Betracht kommende Erbin. Dieselbe war noch unmündig und ihre Mutter bereits gestorben. Infolgedessen übernahm eine Schwester dieser Mutter namens Ka Pliang Shai[1]), das Erbe in Verwaltung und wohnte mit der kleinen Erbin in der Stammeshütte zusammen. Es war kein Zweifel, daß letztere nach erreichter Volljährigkeit das ganze Besitztum antreten werde. Mit der Zeit hielt ein junger Katholik, U Salomon Tarüh, um die Hand der Syndür an. Diese faßte Neigung zu demselben und war [illegible] Geschwister der Syndür, ein Bruder und eine Schwester, welche beide der methodistischen Kirche angehörten, in Wut. Trotz aller Anfeindungen blieb das Mädchen bei seinem Entschlusse, heiratete den Tarüh und wurde katholisch. Vor dem Zorne der Geschwister mußte das junge Ehepaar aus der Stammeshütte flüchten. Erstere suchten die Schwester enterben zu lassen, aber die beteiligten Anverwandten wollten davon nichts wissen. Vor Zorn ließen sie sich zu etwas hinreißen, was selbst in den Augen der Heiden als Frevel galt: Sie trieben das Vieh heimlich fort und verkauften es; ebenso räumten sie die Stammeshütte aus und verkauften selbst 2 Reisfelder. Auf die Klage bei den zuständigen Gerichten hin erhielt die Syndür endlich ihr Recht zugesprochen; sie konnte die Stammeshütte beziehen und den unterdessen allerdings stark verminderten Familienbesitz übernehmen.

Obgleich die zum Christentum übergetretenen Khasi sich ihrerseits nicht an die Gesetze der Erbfolge zu binden brauchten und dieses auch von heidnischen Khasi vielfach anerkannt würde, wurde von seiten der katholischen Kirche jedenfalls keinerlei Hindernis für sie in den Weg gelegt, diesbezüglich bei den heimatlichen Stammessitten zu bleiben. Die katholischen Khasi selbst wollen für gewöhnlich jedoch davon nicht ab-

---

[1]) Pan und Syndür sind Khasi-Namen; Pliang shai ist der Name des Geschlechtes, Clan; wörtliche Bedeutung: glänzender Teller.

weichen: dazu steckt ihnen das zähe Festhalten an dem Althergebrachten und die Achtung davor doch zu sehr im Blut. Hiervon nur ein paar Beispiele.

In Nongbah starb die katholische Stammesmutter ka Johanna Sunah, Frau des U Andreas Tubru, ohne weibliche Nachkommen zu hinterlassen. Man hätte es verstanden, wenn der einzige Sohn U Johannes Sunah, nach dem anderwärts herrschenden Brauch der Christen, das beträchtliche Erbe an Reisfeldern, Wald und Hütte für sich in Anspruch genommen hätte. Weder von seiten der Behörden noch der Anverwandten wäre ein ernstlicher Widerspruch zu erwarten gewesen. Man sprach dem Johannes auch in diesem Sinne zu, aber vergeblich. Er konnte das innere Widerstreben nicht bemeistern, einen zeitlichen Vorteils wegen gegen alte Stammesgewohnheiten zu handeln. Seine einfache Antwort lautete: „Wenn ich ein guter Katholik bin, dann wird Gott mich auch sonst wieder segnen, ohne daß ich gegen unsere alten Bräuche verstoße." Und dabei blieb es. Das ganze Besitztum ging an die jüngste Tochter der Schwester der Verstorbenen über; dieser Familienzweig war noch ganz heidnisch. Durch Fleiß und Sparsamkeit brachte es übrigens Johannes trotzdem mit der Zeit zu einem eigenen Haushalte mit einem ganz ordentlichen Grundbesitz.

Selbst von Gütern, die sie schon besitzen, entäußern sich katholische Khasi eben so leicht wieder, wenn die Stammessitte es erheischt. Es traf sich vor einigen Jahren unglücklicherweise, daß sowohl die Frau des Hauptlehrers der katholischen Khasi-Volksschule in Shillong, U Thomas Byllun, als auch die des Koches der dortigen Missionsstation, U Sebastian Shiah, innerhalb kurzer Frist vom Tode hingerafft wurde. Beide Männer hatten sich durch Arbeitsamkeit ein ganz hübsches Anwesen erworben. Nach Khasirecht hatten sie keinen weiteren Anspruch auf ihre noch kleinen Kinder. Diese gehörten zur Sippe ihrer verstorbenen Frau und mußten von dieser übernommen und aufgezogen werden. Nach Khasirecht ging auch das von ihnen erworbene Besitztum an die jüngste Tochter über. Bereitwillig überließ jeder von ihnen, Kinder und interimistische Verwaltung der Güter den Anverwandten der verstorbenen Frau, nahm die wenigen Kleider und rein per-

sönliche Habe mit sich und suchte anderwärts in dem gemieteten Teil einer Hütte allein wieder von vorne anzufangen. Auf meine Frage, ob ihnen denn das nicht sehr hart ankomme, antworteten sie mit einer ruhigen Selbstverständlichkeit: „Das ist ja doch so Brauch bei uns Khasi."

Es ist nicht nötig, eigens hervorzuheben, daß eine solche Achtung vor den Stammessitten nur von günstigem Eindruck auch auf die noch heidnischen Khasi ist.

Gurdon sagt einmal[1]), daß die Stammesmutter beim Religionswechsel, also beispielsweise beim Übertritt zum Christentum, ihrer Stellung in der Familie verlustig geht und die jüngste Tochter an ihren Platz tritt. An sich hat das seine Berechtigung darin, daß sie ja dann nicht mehr zur Religion gehört und die üblichen Familienopfer nicht weiterhin darbringen kann. Ihrer ganzen Stellung nach als Hüterin der ererbten Religion und Sitte, ist es nicht allzu häufig, daß eine solche Frau mit dem Ahnenkulte bricht. Kommt dieses vor, so ist damit jedoch noch nicht von selbst der Verlust des gesamten Besitzes für sie gegeben. Es hängt wesentlich von der Stellungnahme der übrigen Glieder der Familiensippe ab. Sind diese noch alles strenge eingefleischte Heiden, die vom Christentum durchaus nichts wissen wollen, so können sie allerdings die Stammesmutter zum Verzicht zwingen. Die Mißachtung vor derselben ist jedoch häufig so groß, daß entweder die ganze Sippe oder wenigstens ein Teil davon sich zu dem gleichen Schritt des Religionswechsels mit der Stammesmutter entschließt. Der noch heidnisch verbleibende Teil wird dann allenfalls eine Teilung des Familienbesitzes beantragen. Eine solche ist übrigens auch in anderen Fällen möglich.

4. Teilung des Familiengutes.

Wenn auch selten, so kann das Wohl und Wehe einer Familiensippe es doch mitunter erfordern, daß eine Familiensippe sich in zwei Clans scheidet und damit auch eine Teilung der gemeinsamen Güter vornimmt. Grund hierfür ist, wenn das Geschlecht zu groß wird; wenn sich die Ältesten im Fami-

[1]) The Khasis, p. 88.

lienrate nicht mehr einig werden und Haß und Rache alles zu vernichten droht; wenn ein Teil des Clans in gewalttätiger Weise die besseren Felder an sich reißen will oder den geernteten Reis nicht für den gemeinsamen Bedarf abliefert; wenn ein Zweig durch falschen Schwur, Blutschande, Rache, Betrug, oder sonstige schwere Vergehen der ganzen Sippe Unehre und Schande zugefügt hat. Ausgeschlossen vom Clan wird in solchen Fällen der schuldige Teil nur, wenn er hartnäckig und verstockt bleibt. Bringt er aber die Bitte um Verzeihung über die Lippen und beteiligt sich an dem Sühneopfer, so wird die Verzeihung nicht verweigert. Eine gewisse innere Spannung und Unstimmigkeit bleibt trotzdem oft bestehen.

Bei dem Übertritt zu einer anderen Religion kommt es vor allem darauf an, wie die Stammesmutter und auch die Familienältesten der betreffenden Religion gesinnt sind. Dann aber auch, wer den Religionswechsel vollziehen will. Sind es nur Brüder der Stammesmutter, Söhne, Neffen oder Enkel, so ist eine Teilung ausgeschlossen, denn die Männer sind ja nicht erbberechtigt. Kommt aber die jüngste oder zweitjüngste Tochter, oder auch die Schwester der Stammesmutter in Betracht, so kann eine Teilung vorgenommen werden. Eine Stammesmutter hängt doch zu sehr an ihrem Kinde oder ihrer nächsten Blutsverwandten, als daß sie diese ganz von sich stoßen würde, außer sie wäre etwa gegen die in Frage kommende Religion vollständig eingenommen und verhetzt. Trifft das im einzelnen Falle zu, so wird sich die betreffende Erbin es doch noch überlegen, ob es nicht ratsamer ist, mit dem Religionswechsel abzuwarten bis die Stammesmutter die Augen geschlossen und sie dann freieres Spiel hat. Es kann dann eintreten, was schon am Schlusse des vorhergehenden Abschnittes erwähnt wurde.

Sind nach wochenlangen Beratungen alle einschlägigen Vorfragen erledigt, dann werden die getroffenen Vereinbarungen endlich unter dem üblichen Zeremoniell vollzogen. Es wurde weiter oben erwähnt, welche Gerätschaften sich für den religiösen Kult in der Hütte der Stammesmutter befinden. Das aus Bambusrohr geflochtene Körbchen, welches als besonderer Sitz der vergötterten Ahnen des Clan gilt, wird nicht

geteilt. Es wird ein weiteres ebensolches Körbchen hergestellt. Durch Opfer von Ziegen und Schweinen werden dann diese Gottheiten gebeten, daß ein Teil von ihnen zum Schutze der neu errichteten Sippe Wohnung in diesem Körbchen nehmen möge. Können die Opferpriester durch das Orakel aus den Eingeweiden der Tiere und Eierwerfen das Einverständnis der verstorbenen Geister mit der Teilung melden, so wird dieses Körbchen in der neuen Stammeshütte angebracht. Unter weiteren Opfern wird an einem anderen Tage dann eine der beiden Haselnußruten für die neue Hütte abgenommen. Jeder der beiden getrennten Teile muß sich zu der alten Rute selbst noch eine neue hinzuverschaffen. Ebenso werden auch die vorhandenen Opfergeräte, wie Reiskörbchen, Matten und Kürbisflaschen geteilt. Mit dieser Feier gelten die getroffenen Vereinbarungen über die Teilung des sonstigen Besitzes endgültig als zu Recht bestehend. Jeder Teil geht nun unabhängig vom anderen seine eigenen Wege. Gewisse Freundschafts- und Verwandtschaftsverhältnisse bleiben wohl weiterhin bestehen; jedoch ist das Ehehindernis, welches sonst die Heirat zwischen Angehörigen der gleichen Familiensippe ohne Rücksicht auf den Grad der Verwandtschaft einfachhin unmöglich macht, nicht mehr vorhanden.

Kann beim Übertritt eines Teiles der Stammesangehörigen zur christlichen Religion die Teilung der Güter rechtlich vollzogen werden, so ist es besser auf ihr zu bestehen. Die christlich gewordenen Glieder sind so leichter vor Benachteiligung geschützt. Selbst wenn sie einen Teil der Felder für sich in getrennte Bewirtschaftung nähmen, könnte die heidnisch gebliebene Sippe diesen nach Jahren wieder zurück verlangen. Feindschaft, Haß und Rache wären dann die Folgen. Ohne die formelle Feier, verbunden mit den erwähnten Opfern, erkennt der Khasi eine Teilung nicht als rechtskräftig an. Da Christen an einer solchen Opferfeier sich nicht beteiligen können, bleibt nichts anderes übrig, als dieses Zeremoniell vornehmen zu lassen, solange die Taufbewerber noch Katechumenen sind. Bevor sie dann durch die Taufe in die Kirche aufgenommen werden, müssen die in der Stammeshütte angebrachten heidnischen Kultgegenstände entfernt werden. „Zu

dieser hochwichtigen Feier", so erzählt einmal der Missionär des Synteng-Gebietes P. Benedikt Neher S. D. S., „ging ich, wenn es mir möglich war, gewöhnlich selbst oder schickte eine europäische Ordensschwester. Dadurch gewann der Akt viel mehr an Feierlichkeit und wirkte mächtig auf Heiden und Katechumenen ein. Das Götterkörbchen, die zwei Stäbe, die Kürbisflaschen und andere Kultgeräte wurden auf einen freien Platz vor die Hütte getragen, auf ein Häufchen Bambusrohr und Holz gelegt und dann angezündet. Die Heiden standen in ehrfurchtsvoller Entfernung zagend und zitternd dabei und erwarteten, die Götter würden sich rächen und mich mit Feuer vom Himmel vernichten. Aber nichts von allem geschah und enttäuscht und nachdenklich kehrten sie in ihre Hütten zurück. Die Stammeshütte wurde dann gesegnet und mit geweihtem Wasser besprengt."

Im allgemeinen geht das Bestreben der christlichen Religionen darauf hinaus ihre Angehörigen in einem von den heidnischen Stammesgenossen getrennten Dorfe anzusiedeln und zwar so, daß die einzelnen Familiensippen möglichst beisammen bleiben. Der christliche Brauch, daß Mann, Frau und Kinder dann in einer Familie beisammen wohnen, wird dabei durchzuführen gesucht, was den überlieferten Gewohnheiten gegenüber allerdings auch nicht immer ohne Schwierigkeiten abgeht.

JOURNAL

OF THE

ASIATIC SOCIETY OF BENGAL.

Vol. LXXIII. Part III.—ANTHROPOLOGY AND COGNATE SUBJECTS.

No. 4.—1904.

101 *Note on the Khasis, Syntengs, and allied Tribes, inhabiting the Khasi and Jaintia Hills District in Assam.—By* MAJOR P. R. T. GURDON, *Superintendent of Ethnography in Assam.* (With plates III—IV).

[Read 3rd August, 1904.]

142 1. *Physical characteristics.*—The men are seldom tall; they are generally well made, and possess great strength of limb,—of leg in particular. Their features show a resemblance to those of the Japanese; their complexions are fair, noses flat, lips thick, and eyes very frequently obliquely set. The women are good-looking, of a buxom type, and are cheerful and pleasant-mannered. Children are sometimes [276] exceedingly pretty. Khasis are inveterate chewers of *pán*,—both men, [205] women, and children; the distances from place to place being measured [302] by the number of betel-nuts that can be chewed on the journey. The hair of the males is shaved above the forehead pretty high up, and the remainder is gathered into a knot at the back of the head. Very few 291 Khasis have much hair about the face. Both Khasis and Syntengs wear the sleeveless coat (*jymphong*) loin-cloth, *jain slieng* (a kind of

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

291 small kilt), and a cap which is peaked in front and which comes down well over the ears, called (*ka tupia shkor*) ear cap. The dress of the Khasi females is somewhat different from that of the Synteng, the former wears a striped cloth tied round the waist, hanging down to the knees, and another cloth, with a fringed border, knotted on both the shoulders to cover the bust and a narrow cloth, called *ka jympien*, to serve the purpose of under-clothing. A cloth knotted in front is also worn like a cloak over shoulders. The Synteng woman wears a cloth smoothed round the body fastened above the bust and drooping down to the ankles. Another cloth is thrown over the shoulders, and crossed in front. Both Khasi and Synteng women wear a cloth tied over the head, called *ka tap mohkhlieh*. Up-to-date Khasi males wear knicker-
292 bockers, stockings, and boots, and females chemises. On festive occasions, both Khasis and Syntengs, males and females, wear expensive silks, with earrings of gold or silver. There is a special dancing-dress of
301 elaborate pattern: The women at festivals wear a circlet of silver with a spear-head ornament behind, rising 4 or 5 inches from the back of the head. Large coral beads are much valued, and necklaces of alternate beads of coral and gold, and sometimes of coral alone, are worn by the chiefs and their principal followers. Such necklaces are worn by
262 women also on *gala* occasions. The staple diet of both Khasis and Syntengs is rice and dried fish. They are, however, fond of all kinds of meat, especially pork. Some of the Syntengs abstain from beef,
[177] owing no doubt to Hindu influences. Neither Khasis nor Syntengs eat dog, which is partaken of with zest by the Naga and the Garo tribes,—this is owing to the dog being considered by the Khasis to be the friend of man. Neither Khasis nor Syntengs use milk, the latter being thought by them to be an excrement. Neither Khasis nor Syntengs
411 tattoo. The weapons of both Khasis and Syntengs are bows and arrows, swords and shields. The national game of the Khasis is archery, regarding which a detailed description will be found in paragraph 10.

The people live in regular villages on fixed sites which have not
361 changed for generations,—and they appear to be much attached to these sites, where, as a rule, the family tombs are standing. The houses are
342 built in the shape of a shell, the houses being divided into three compartments,—the *Shyngkup*, or porch, where odds and ends, and sometimes fowls, are kept; *nengpei*, or centre room, which is used for cooking and sitting in; and *rumpei*, or inner room, where the people sleep. The houses are low, with grass roofs reaching nearly to the ground, the beams are of hewn timber, the walls are of either planks roughly hewn or of reeds or split bamboos plastered with clay. The Khasis' houses generally have boarded floors raised some feet from the ground level,

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

—the *Shyngkup*, or porch, being flush with the ground. The *nengpei*, or 342
centre room, is approached by a flight of steps. There are no windows, except one, which is bored on one side to admit light and air,—this is called the *pongshai*. Both Khasis and Syntengs, like other Indo-Chinese 524
races, are much addicted to gambling, and drinking to excess is a 273
national vice. Christianity has, through the agency of the Welsh Cal- 797
vinistic Mission, gained a very striking extension, and may be said in- 177
deed to be leavening the whole nation. Schools are numerous, and are pretty well attended by girls as well as boys. The Christians, and those who have come under the influence of Christianity, have adopted a high standard of comfort, and their houses resemble English cottages more nearly than the huts with which one is familiar in India.

Agriculture.—The Khasis do not use the plough; they cultivate their 241
fields with a peculiar-shaped hoe, or *mokkhiew*. They cultivate rice in the valleys, the rice being sown broadcast and the fields irrigated often after considerable labour. They also cultivate hill rice on the uplands, which they sow broadcast. The potato, which was introduced into the [177]
Khasi Hills by Mr. David Scott about the [439]
year 1830,[1] is extensively cultivated and forms one of the principal articles of export. Job's-tears (*Coix lachryma*), several kinds of millet, Indian-corn, the *Sohphlang* (*Flemingia vestita*), are also largely cultivated. The valleys on the 245
southern slopes of the hills have extensive orange groves, the oranges, especially those grown in the neighbourhood of Shella, being famous for their quality. The betel, vine, and areca nut are also largely grown on the southern side of the hills and in the low valleys, these plantations being irrigated by elaborate systems of aqueducts. The leaf of the bay tree (*'latyrpad*) is collected, and is exported to the Sylhet plains. The [439]
Syntengs differ from the Khasis, in that they make use of the plough. Both Khasis and Syntengs are industrious cultivators, and they possess a certain rough and ready knowledge of the uses of manure. A more detailed description of agriculture in these hills will be given in the monograph.

[1] Khasi and Jaintia Hills Administration Report for 1875-76 by Colonel Bivar.

2. *Matriarchal customs and law of inheritance of property.*—The 611
mother is the head of the house, and is both owner and the custodian of 428
the family property as long as she lives. Males can own no property amongst either Khasis or Syntengs except self-acquired property. On the death of the mother, in the case of the Khasis, the family property passes to the youngest daughter. According to some authorities, however, the property would in practice be divided amongst all the surviving daughters. Failing daughters, the property passes to the youngest niece, and failing a niece, to the youngest female cousin. The same

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

611 custom prevails amongst the Syntengs. Inheritance to the post of Siem
428 (or chief) also passes through the female line, there being special customs of inheritance for each of the different chiefships.

3. The Khasis are divided into clans, or *kur*. These clans are
614 strictly exogamous. Some of these clans derive their names from animals, insects, trees or fish,—*e.g.*, the *tham* clan, *tham* meaning a crab; the *shrieh* clan, *shrieh* meaning a monkey; the *rani* clan, so called from a fish by name *rani*; the *diengdoh* clan, *diengdoh* meaning a certain tree. There are other instances also. In each instances, the clan is said to have sprung from the animal, fish, or tree, as the case may be. There thus appears to be a trace of totemism amongst the Khasis, although now-a-days their totems are not worshipped, nor do people abstain from killing, eating, or utilizing them. A man when he marries does not cease to belong to the *kur* or family of his mother, but his children belong to the *kur* of the man's wife. Frequently the husband merely visits his wife at her mother's house. It is seldom the case that a man takes his wife to his own house, certainly not until several children have been born.

As might be expected, owing to the influence of the marriarchate,
562 Khasi and Synteng women enjoy a much greater share of liberty than is usually the case with the sex. Although not wishing to make any general insinuations, there can be no doubt that Khasi women enjoy considerable freedom in their sexual relations. Women do all the trading, and like their Manipuri sisters make all the bazar purchases.

4. *Ancestor worship.*—The Khasis propitiate *Ka Iawbei*, the first
769 maternal ancestress of the clan, by sacrificing a pig; they also sacrifice yearly to *U Suidnia* (the departed maternal great-uncle). Also when a family is in trouble, *U Thawlang* (the departed great-grandfather) is propitiated. Ancestors are further worshipped by the erection of memorial stones. These memorial stones will be noticed separately.

5. *Birth customs.*—At the birth the navel of a child must not be
844 severed by any instrument made of iron or steel, but by a sharp splinter of bamboo. The placenta is placed in a pot and is kept inside the house till the ceremony of naming the child takes place. As long as the placenta remains in the house, the latter is *sang*, or taboo, to anyone except the members of the family. On the day of the ceremony of naming the child, the father removes the placenta and buries it outside the house. Having done this, the feet of the father are washed with water before he re-enters the house. When the ceremony takes place, powdered rice is placed on a sieve (*u prah*) and a small bow and three arrows, if the child is a male, and a *wait* (or *da*) and a star or (cane strap) (worn across the forehead when carrying a load by the Khasis), if the child is a female.

8: Gurdon G-3 (no date) 1904 AR? Khasi AR?

child is a female. Up to the present time I have not discovered any trace of the *couvade.* 000 [546]

6. *Marriage ceremony.*—Marriage is a purely civil contract. The most prominent features of the Khasi marriage are the following:— [581] 585

(*a*) The *pynhiar synjat*, or betrothal.

(*b*) The pouring out of libations of liquor to *Ka Iawbei* (the first maternal ancestress).

(*c*) The eating by bride and bridegroom out of the same plate.

(*d*) The mixing of liquor by the *ksiangs*, or go-betweens.

(*e*) The taking of the bride to the house of mother of the bridegroom, where a ring is placed on her finger by her mother-in-law.

7. *Divorce* can be easily obtained amongst the Khasis. Adultery, want of issue, and incompatibility of temper, are some of the more frequent causes. The usual ceremony of divorce is as follows:—The husband hands the wife five cowries, or pice. The wife hands these back to the husband, with five of her own. The man then either throws them away or hands them over to some village elder, who throws them away. Divorce is then complete. 586

8. *Death, ceremonies.*—The corpse is bathed and laid on its back. A fowl's egg (*ka'lengkypoh*) is then placed on the navel. A cock (*ka' iarkrad lynti*=the fowl that scratches the way) is sacrificed. The limbs of the fowl and its feathers are placed in a bamboo basket, which is hung up near the head of the corpse. Rich people sacrifice a cow also, called *ka masi pynsum.* When a cow is sacrificed it is shot through the heart with an arrow. From the time of bathing the body till it is burned, offerings are offered daily; these offerings are called *ai ja miet ja step.* It is the custom amongst some to place the corpse in a long narrow box or coffin, which has been hollowed out of the trunk of a tree; this is called *ka shyngoid.* When this procedure is adopted, a small pig, which is killed by a spear (*u narsuh*) is sacrificed. This sacrifice takes place during the night. A goat (*U lang sait ksuid*=a goat to wash the devil)—which is believed to be a scapegoat to bear the sins of the deceased—is sacrificed. The corpse is then taken outside and placed on a bamboo bier (*ka krong*). When the *shyngoid* is used it is placed inside the bier. Some rice is scattered on the ground, and water is poured from a *lhota.* On arrival at the burning-place, the bier, with the corpse in it, is placed on the pyre, or *jingthang.* The egg placed on the navel is then broken on a plank and a fowl (*Ka iar padat*) is sacrificed. Two arrows are shot, one to the east and another to the west (this is a Khasi custom only); the arrows are intended for the protection of the spirit on its way to another world. Fire is then applied to the pyre. 764

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

764 When the body has been burnt, the ashes and the uncalcined bones are collected by the relatives of the deceased and washed. They are then placed in a dish (*ka pliang*) which is taken to a stone repository for the bones (*mawshieng*); here a further sacrifice takes place. For three days after the burning, the maternal relatives frequent the *mawshieng*, where they offer articles of food for the spirit of the departed to eat, and then three eggs are broken (called *shat leng lait ia*) in order to ascertain what is the cause of death. Until this egg-breaking has taken place the family is taboo. The ashes and the uncalcined bones are subsequently removed from the *mawshieng*, and are placed in the family mausoleum, or *mawbah*. On this occasion a special ceremony takes place.

787 9. *Divination by breaking eggs.*—As this is a very peculiar custom, it deserves some description. Shadwell describes it as follows :—

[153] Each case of sickness or other calamity is attributed to the influence of some evil spirit, and the first step is to ascertain what particular spirit has been at work, and for this the great institution of egg-healing is brought into play. An expert (but not a professional) sits down before a board, in the centre of which he places an egg on a few grains of rice; after invoking the egg to speak the truth, he sweeps the rice off the board, excepting one grain left on any spot fancy dictates. Then naming a particular spirit, he asks that if he be the cause of evil, a part of the shell of the egg may be deposited near the grain of rice; he then strikes the egg sharply on the centre of the board. This process is repeated, if necessary, till the required information is obtained. The next thing is to discover what sort of offering will be acceptable to the spirit. This is ascertained in a precisely similar way, but the desired result is often not arrived at till much time and many eggs have been expended.

I have personally witnessed this egg-breaking and can vouch for the correctness of Mr. Shadwell's description. The Khasis do nothing of what they consider to be of the least importance without breaking eggs. When a Khasi builds a new house, or before he proceeds on a journey, he always breaks eggs to see whether the building or the journey will be lucky or not. I have quoted the description of egg-breaking at length, as I am informed that there is some similar custom extant in the Arracan Hill Tracts. I hope that it will be possible to ascertain whether or not there is any similar custom in Burma.

526 10. *Khasi archery*—Archery is a regular institution amongst the Khasis, who are very fond of it. Archery may be described as the Khasi national game. There are regular archery contests between the people of different villages, one village challenging another to shoot off a match. Certain conditions are fixed, such as the date and place of the match, the number of arrows to be shot by the archers, the distinguishing marks to be given to arrows of the two different sides, etc.,

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

etc. The targets are of two kinds, i.e., *u skum*, which is made of a bundle of grass about 1 foot long and 4 inches in diameter, the target being fastened on to a pole; and from the root of a plant called *sohpdung*. The distance for the shooting is about 30 to 40 yards. 526

Before the shooting begins, a *nongknia*, or sacrificer, performs a *puja* and then the shooting commences. Each archer subscribes from half to one anna, the total amount so obtained is pooled and then wagered against a similar sum subscribed by the other side. Whilst the shooting is going on the men of both sides dance and sing, and when there is a hit a great shout, or *kynhoi*, is raised. The side that wins the match, after rewarding the *nongknia* and the man who makes the targets, buys a pig, and some liquor, which articles are partaken of by the people of the village which has won the match. In the War villages, and amongst the Syntengs, sometimes wagers of considerable sums are made in lump sums in these contests.

11. It is not intended to describe at great length the Khasi religious system, but only to note briefly regarding it at present, a full account being reserved for the monograph for the preparation of which I am collecting further information. Khasi religion is animism, or spirit worship. It may be divided into (*a*) the worship of spirits, (*b*) ancestor worship. 771

(*a*) *Spirit worship.*—The principal god amongst the Khasis is God the Creator (*U'lei Nongthaw*), who is sometimes masculine and sometimes feminine, the use of the feminine gender being no doubt due to matriarchal influence. A yearly sacrifice should be offered to this god of a cock and a goat. The cock is sacrificed as a substitute for man, it being thought that the cock, when killed, bears the sins of the man, and that by its sacrifice man will obtain redemption. How the cock came to occupy this important position in Khasi religion is not at present quite clear. Perhaps there were originally human sacrifices amongst the Khasis, and the cock nowadays takes the place of the human victim. Other gods which are worshipped are *Ka'lei long kur* (the goddess of the clan), *Ka'lei longspah* (the goddess of wealth), *U'lei um tong* (god of water). An important fact to be noted is that the Khasi gods or goddesses are never worshipped in the shape of idols in any form whatsoever. 776 782

(*b*) *Ancestor worship.*—I am inclined to think that this form of worship largely underlies the Khasi religious system. The following are some of the ancestors or ancestresses who are regularly worshipped:— 769

(1) *Ka Iawbei tymmen*,—the primeval ancestress of the family. A pig is sacrificed to her. 782

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

769 (2) *U'snid' nia*, —or departed maternal great-uncle.
(3) *U thaw lang*, —or departed great-grandfather.

824 A very striking feature of the Khasi religion is the use of the leaves
771 of the *dingsning* (*Q lanceæfolia*) or Khasi oak tree. The leaves of this tree are used to cover the sacrifical knife, a sprig of the oak is implanted in the ground before the sacrifices of fowls or goats take place, an oak bough is hung up inside the house along with the jaw-bones and horns of sacrificed animals and the feathers of fowls. A great post of oak is to be found within the *arcana* of the sacred residence of the Siem priestess of Khyrim, the custodian of the religion of the State of that name. Another feature is the use of altars of stone on certain ceremonial occasions, and no Khasi religious ceremony takes place without the use of a small gourd *u klong* from which libation are poured out to the gods. Dancing always accompanies ceremonies of any importance, *e.g.*, funeral ceremonies, the erection of memorial stones, and the great *puja* of the Siems of Nongkrem.

769 12. *Memorial stones.*—These are without doubt the most prominent
764 feature connected with these people. The first thing that strikes any visitor to the Khasi and Jaintia Hills is the immense number of these
211 stones. The latter are placed in a line, a higher one in the centre, and lower ones on each side. The centre monolith is occasionally covered with a round flat stone. The upright stones are always in uneven numbers, being in sets of three, five, seven, or even nine stones. In front of each set of three stones is placed one horizontal stone, or cromlech which rests on three or four small upright stones, the horizontal stone being raised to about one foot from the ground. If five upright stones are erected, two horizontal stones are placed in front of them, and if seven are erected three, and so on. There can be no doubt that these stones possess considerable significance, but what exactly that significance is I am at present engaged in investigating. As far as my information extends at present, I give the following explanation.

Memorial stones may be divided for the present into two classes—

(*a*) Stones erected by the family, or *kur*, in accordance with the Khasi custom of ancestor worship.

(*b*) Stones which are erected by children in honour of a deceased parent.

It should be remarked that both classes of stones are merely cenotaphs, the mausoleums of the ancestors or the parents often being nowhere near the places where the memorial stones are erected. Taking class (*a*) first: Supposing that five upright stones are erected and two horizontal stones as depicted in plate III.[1]

[1] [see end plate 1 - - - Analyst]

Stone No. 3 in the middle is called *U Maw Kni*, i.e., the stone of the maternal uncle, Nos. 2 and 4 are called *Ki pyrsa, Ki para*, i.e., the brothers or sisters, and the nephews or nieces. No. 1 is called *U Maw Ksing*, i.e., the stone of the drum, and No. 5 *U Maw kait*, the stone of the plantain. No. 6 is called *Ka Iawbei tynrai*. The word *tynrai* meaning root, *Ka Iawbei tynrai* signifies the first maternal grandmother of the family. The above is the system of naming stones in Maoshai Raj—other systems will be described in the monograph. 769 764 211

Class (*b*).—Stones of this class are generally, I am informed, three in number, consisting of three upright stones as shown in plate IV and a flat stone in front, as in the case of stones falling under class (*a*):

Here there is a marked difference in that the big stone in the middle is called *U Maw thawlong*, or the stone of the generator or father. Nos. 1 and 3 are the brothers or the male cousins of the father, and No. 4 is erected in honour of *Ka Iawbei*, or the grandmother of the father, —not the first ancestress of the clan as in the case in stones falling under class (*a*). The post split at its top containing the jawbone of a bullock which has been sacrificed in honour of the deceased parent should be observed, *vide* Fig. B. It was formerly the custom and is still in some places the custom, to spread offerings upon the flat stones to appease the spirits of the deceased ancestors. These stones, which are only 2 to 3 feet from the ground, suggest the idea of sacrificial tables at some time or other. Stones 3, 4, and 5 in Fig. A are between 9 and 10 feet high, but there are several larger *menhirs* in these hills. [782]

The description of the stones in figures A and B was given me by a man of some intelligence at Nongkrem, but many different explanations of the names, and regarding the significance of these stones, are given by other persons living in various parts of the hills, and it is not unlikely that the account I have tentatively advanced may have to be modified subsequently. The system of each clan, apparently, varies to some extent from the other, and in some cases to a very considerable degree. In the Jaintia Hills very large groups of stones are found near villages, which are thought by the Syntengs to have been merely erected by the sides of roads as *Maw-shong-thait*, or seats for weary travellers, or for persons attending markets. At one place in the Jaintia Hills memorial stones were erected to commemorate a woman, *Ka Kumpatwat*, who in generations past is said to have had thirty husbands. It may, however, be stated that no such polyandrous custom has been found at the present day. The stones are reported to be thirty in number. There are also many stones at a place on the road from Shillong to Jowai said to have been erected to commemorate those who fell in a battle between the Syntengs and one of the Khasi Siems.

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

764 As mentioned before, these stones are not gravestones, they are
769 shaped, both the vertical and the horizontal stones, remarkably like
211 the pictures of *menhirs* and *dolmens* that appear in Fergussons's work on rude stone monuments. It is a remarkable fact that Dalton mentions the existence of apparently very similar memorial stones in certain *Ho* and *Munda* villages in Chota Nagpur, and there is a drawing to be found at page 52 of Yule's Embassy to the Court of Ava of a cromlech which is apparently very like the cromlechs or *mawkynthei* to be met with every day in these hills. It is most unfortunate that the
[212] Khasis, owing to their want of a written language in former days, possess no written accounts of these stones, and that the Khasis of the present day are so very vague in their ideas about them, for I am inclined to believe that the proper elucidation of this question of memorial stones may prove to be the key to the origin of these people. I therefore strongly advise that a very careful search be made for similar stones, such as I have described, in other parts of India. It is possible that the Khasis may have found monoliths erected by some prehistoric race when they arrived in the Khasi Hills, and they may have adopted the custom of erecting memorial stones by the force of example, but the use of such stones seems to fit in with the Khasi system of ancestor worship, and it is remarkable that the shapes of the stones should be so very similar to those which exist in England, Ireland and Brittany, and I believe also in Denmark and Scandinavia. Is the custom of erecting such memorial stones in any way connected with people practising the matriarchate? The whole subject is a deeply interesting one, and I hope that it may be possible to throw some light on it.

784 13. *Taboo.*—The Khasis have an elaborate system of *sang*, or taboo. There are very many different kinds of *sang*, but some of them are the following :—

Special taboo, at time of pregnancy.—(a) It is *sang* for a pregnant woman to accompany a funeral procession.

(*b*) It is *sang* for a woman in the first stage of pregnancy to finish any sewing which she may have commenced before she became *enceinte*. There is a similar prohibition regarding the finishing of the plaiting of wicker baskets.

(*c*) It is *sang* for the husband of a pregnant woman to thatch the ridge of the roof of a house at such a time.

(*d*) It is *sang* under similar circumstances to fix an axe or a *dao* in a handle.

Ordinary taboos.—(i) It is *sang* to build a house with stone walls on all four sides.

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

(ii) It is *sang* to use nails in fixing the timber of a house. 784

(iii) The *dypei*, or hearth, should be made of one kind of timber only.

(iv) To build a house with resinous timber (*'seh khlein*). Only the Siem's family can use such timber.

(v) To cut trees from the sacred forest.

(vi) To take or give anything with the left hand.

(vii) To step over the body of any person.

(viii) To kill a fowl or a goat without throwing first rice over the body of the victim.

(ix) To drink the milk of a cow or goat.

(x) To talk with any one, except with those who are working together, when the thrashing of paddy is going on.

(xi) Not to give fire or water when anyone demands the same.

(xii) A twin birth is *sang*. It is a more serious matter even than *sang* if the twins are of opposite sexes.

There are rules of *sang* regarding marriages within prohibited 784
degrees of relationship, and there is a very stringent rule of *sang* 582
against marrying within the *kur*, or clan. Those who do this are excommunicated and their bones or ashes are not allowed to be placed in the family mausoleum. To marry within the same *kur*, or clan, is the greatest crime a Khasi can commit.

There are special rules of *sang* affecting certain families, *e.g.*, for 784
the clan *Nongtathiang* to eat a certain kind of lemon, for the clan 614
Kharumnuid to eat pork, for the Cherra Siem's family to eat dry fish, for the family of the Siem of Mylliem to eat the pumpkin. Possibly, these taboos may be relics of totemism in these families.

14. *The Thlen superstition.*—The following succinct account of this 773
interesting superstition appeared on page 254, paragraph 20, of the *Assam Gazette* of the 5th August 1882. I do not think I can do better than repeat it here: "The tradition is that there was once in a cave near Cherrapunji a gigantic snake, or *Thlen*, who committed great havoc among men and animals. At last one man, bolder than his fellows, took with him a herd of goats and set himself down by the cave and offered them one by one to the *Thlen*. By degrees the monster became friendly, and learnt to open his mouth at a word from the man, to receive the lump of flesh which was then thrown in. When confidence was thoroughly established, the man heated a lump of iron red hot in a furnace, induced the snake at the usual signal, to open his mouth, and then threw in the red hot lump, and so killed him. He then cut up the body and sent pieces in every direction, with orders that the people were to eat them. Wherever the order was

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

773 obeyed, the country became free of the *Thlen*: but one small piece remained which no one would eat, and from this sprang a multitude of *Thlens*, which infest the residents of Cherra and its neighbourhood. When a *Thlen* takes up its abode in a family there is no means of getting rid of it, though it occasionally leaves of its own accord, and often follows property of the family when given away or sold. The *Thlen* attaches itself to wealth, and brings prosperity and wealth to the family, but on the condition that it is supplied with *blood*. Its craving comes on at uncertain intervals: and manifests itself by sickness among the family, by misadventure, or increasing poverty. It can only be appeased by the murder of a human being. The murderer takes the hair, the tips of the fingers, and a little blood from the nostril, caught in a bamboo tube, and offers these to the *Thlen*. The belief is that the demon then appears in the form of a snake and devours the body of the murdered person, which is materialised from the portions thus offered. After this, its craving is satisfied for a time, and the affairs of that house prosper. Many families in these hills are known or suspected to be *Ri-thlen*, or keepers of a *Thlen*, and are dreaded and avoided in consequence. Whenever a dead body is found with the marks above described on it (and particularly if it is with no wound, and death has been caused by twisting the neck), it may be presumed with almost absolute certainty that the object of the murder was to appease a *Thlen*."

[171] It may be stated that, as far as I am aware in Assam, this superstition is peculiar to the Khasi and Jaintia Hills, and it is not to be met with amongst any of the other hill-tribes of the province. It would be specially interesting to learn whether there are any traces of a similar superstition amongst any of the tribes of Burma and Further India. The *Thlen* superstition is probably of a very ancient origin. It may be said to take the place amongst the Khasis of the head-hunting custom amongst the Nagas. The *Thlen* superstition is still deep-rooted amongst the people here, in many portions of the country the Khasis being afraid to walk out after dark for fear of being attacked by *nongshohkohs*, or persons who are searching for victims to sacrifice to the *Thlen*.

805 15. *Calculation of time.*—The Khasis adopt the lunar month. The names of the lunar months have been extracted from Colonel Bivar's report below. I am not certain whether all Colonel Bivar's explanations of meanings of the names of the months are correct:

U Kylla-lyn-kot,—the wood-burning moon, corresponding with January.

U Rympang,—the windy moon, corresponding with February.

U Lyber,—the seed-sowing moon, corresponding with March.

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

U Iaiong,—the cloudy changeable-weather moon, corresponding with April. 805

U Jim-mang,—the flowering moon, corresponding with May.

U Jil-la,—the deep-water moon, corresponding with June.

U Naitung,—the bad-smelling moon, corresponding with July.

N Nailar,—the moon when a plant called the *Jotalar*, which has a red flower flourishes. This is perhaps one of the *arums*. The plant is commonly known as the snake plant.

U Nailar,—the moon for ploughing, corresponding with September. This may be also the month for courting, the word *lar* also having the meaning to woo.

U Ry-saw,—the moon when nature fades (usually becomes red) corresponding with October.

U Naiwing,—the earthen-pot moon, corresponding with November.

U Nohprah,—the moon of the fall of the leaf, corresponding with December.

The Khasi week consists generally of eight days, although in some of the *War* villages on the southern side of the hills there is a week of four days only. The days of the week are named after the markets which are held in rotation on the different days.

Khasi.	*Synteng.*
1. Lyngkah.	Ky-llao.
2. Nongkrem.	Pyn-sing.
3. Um-long.	Mao-long.
4. Rang-hep.	'Iao-siang.
5. Shillong.	Maoshai.
6. Pomtih.	Pynkat.
7. Um-nih.	Thym-blein.
8. Teo-duh.	Ka-hat.

16. *Tokaccomy.*—One more interesting custom that may be noticed is the Khasi and Synteng custom of *tokaccomy*, or of parents taking the names of their children, *e.g.*, ka Kmi Ka Nari (the mother of Ka Nari), U Kpa Nihon (the father of Nihon). The taking of names thus is almost universally practiced. The actual names of the parents after falling into desuetude are often completely forgotten by the villagers. Only the names of the children are used coupled with "father of" "mother of" as explained above. The advent of the Welsh Missionaries and the partial dissemination of English education has, in some cases, produced some rather peculiar names. I quote some instances:—U Water Kingdom, Ka Mediterranean Sea, Ka Red Sea, U Shakewell Bones, U Overland, Ka Brindisi. 551 [197]

8: Gurdon G-3 (no date) 1904 AR7 Khasi AR7

193 *A brief note on the Khasi language.*—It is not intended here to give a description of other than what occur to me to be same of the more prominent characteristics of the language.

The article.—There are four articles in Khasi; three in the singular, *u* (masculine), *ka* (feminine), and *i* (diminutive of both genders), and one in the plural for both genders, *ki*.

All Khasi nouns take the article as in French—the great majority of inanimate nouns are feminine and all abstract nouns. The sun (day), *ka sngi*, is feminine, the moon (month), *u b'nai*, is masculine. Sometimes the word varies in meaning according to the gender: *u ngap*, a bee; *ka ngap*, honey.

Genders.—Names of mountains, stones, plants, fruits, stars, the moon are masculine, *e.g.*:—

U kyllong, the Kyllang rock.
U mawlein, quartz.
U phaw, potato.
U soh siamtra, orange.
U 'lar shai, the morning star.
U 'tiw kulap, rose.
U b'nai, the moon.

Names of rivers, lakes, books, places, the sun, and all abstract nouns are feminine, *e.g.*:—

Ka wah, river.
Ka maw, lake.
Ka kitap, book.
Ka Shillong, Shillong.
Ka sngi, sun.
Ka jingmeng, advice.

The article *i* is used either as a diminutive, as *i khunlung*, a baby, or for denoting endearment, as *i mei*, mother.

Number—*u*, *ka* and *i* stand for the singular number. *Ki* is the sign of the pural, e.g., *u khla* (a tiger), *ka khoh* (a Khasi basket), *i khaw* (a child). *Ki* is the sign of the plural, as *ki maw*, the stones. *Ki* in some few instances is used honorifically, as *ki Siem*, the king, *ki khaw*, the father-in law.

Cases are eight in number, and are denoted by prefixes—the declension of the noun *lum* (hill) is given below by way of example:—

	Singular.	*Plural.*
Nominative	*u* lum	*ki* lum
Accusative	*ia u* lum	*ia* ki lum
Instrumental	*da u* lum	*da* ki lum

8: Gurdon G-3 (no date) 1904 AR? Khasi AR?

	Singular.	*Plural.*
Dative	*ia, ka, or sha u lum*	*ia ka or sha ki lum*
Ablative	*ua u lum*	*ua ki lum*
Genitive	*jong u lum*	*jong ki lum*
Locative	*ka u lum*	*ka ki lum*
Vocative	*ka lum*	*ka phi ki lum*

The sign of the genitive case *jong* is sometimes omitted for the sake of brevity, e.g., *u kaw ups* (my dog) for *u kaw jong ups*. The preposition *ka* gives also the force of the possessive case, e.g., *ka ka jong ka jong* (their own). There are some nouns which change their form, or rather are abbreviated, when used in the vocative case, e.g., *ka ami*, not *ka kmie*, = Oh! mother; *ka pa*, not *ka kpa* = Oh! father. These, however, are all of them nouns showing relationships.

Pronouns.—Personal pronouns are *ups* (I), *upi* (we), *ua* (thou, masculine), *pha* (thou, feminine), *u* (he, it), *ka* (she, it) (diminutive form of *u* or *ka*, and *ki* (they).

The emphatic form of the personal pronoun is formed by prefixing *ma*, e.g., *manya*, *ma-u* after a verb, but not after a preposition, e.g., *dei ma-ups* = it is I. But *ai ia ma-ups* is an incorrect form.

The *Reflexive Pronoun* is formed by the word *lade* (self) being suffixed to the personal pronoun,—*ua u lah ensie ia lade* = he does himself harm, or by the addition of the word *ki* (self) to the personal pronoun,—*ua phi ki phi ong* (you yourself).

The *Relative Pronoun* is formed by the suffixes *ka, ai, ua, ka*, added to any of the personal pronouns,—*ua kaba, aba, kiba* (who, which) *kani, uni, kini* (who, what), *kawa, uwa, kiwa* (what, who), *kata, ata, kita* [that, what].

The *Demonstrative Pronoun* is formed by the addition of the particles denoting the position of things with reference to the speaker, e.g., (1) near = this, *ua* (*u-ua*) *kawa, i-ua, ki-ua*; [2] in sight, but further off = that, *ta* (*ata*, etc.); (3) further away, but still visible = that, *tai* [*u-tai*, etc.]; [4] out of sight, or only contemplated in the mind = that, *ta* [*u-ta* etc.]; [5] above = that, *ati* [*u-tai*, etc.]; [6] below = this, *thi* [*ka-thi*, etc].

The *Interrogative Pronoun* is the article followed by *ua* or *ki* (e.g., *u-ua, kawa*, who), *u-ai ka-ai* (who, which).

Adjectives are formed by prefixing *ka* to the root, thus *thi* goodness; *ka-tha* good, *ensie* badness; *ka-ensie* bad. When *ka* is dropped, the word is no longer an adjective but a verb, and in some cases a noun, e.g., *sha khrew* [adj.] = big, great; *u khrew* = he becomes great. An adjective may be formed without any of the prefixes *ka, aba, etc.*,—e.g., *ka mieu-tuk-wa* thieving cat.

9: Gordon G-3 (to date) 1904 AR? Khasi AR?

An adjective follows the noun it qualifies, and agrees with the noun
[92] it qualifies in gender and number.

Comparison.—The Comparative is formed by adding *khaw* before an adjective, followed by *ban* in [than], or simply *ia*; and the superlative by adding such adverbs of intensity, as *ban ah, ah thar, ban, ah, shibaddei*, which are followed generally by *ia* or *ban ia*.

Numerals.—In Khasi the cardinal number always precedes the noun
[93] [e.g., *ki ain, thrim times*]. The following are the first ten numerals:—

1. Wai	6. Khiew.
2. Ar.	7. Sinaiew.
3. Lai.	8. Phew.
4. San.	9. Khyndai.
5. Ban.	10. Shiphew.

The word *khad* is prefixed for forming the numerals from 11 to 19, e.g., *khad-ari, khad-ar*, eleven, twelve, etc.

Verbs.—The verbal root [which never varies] may be simple or compound. The compound roots are [1] *causals* formed by prefixing *pyn, pyl, kyn* to the simple root; *frequentatives* formed by prefixing *sang* [going on], *dang ehli, ioi, ia* [continuous to]; *emotives* formed by prefixing *ioun*.

Reciprocals are formed by prefixing *ia*. There is only one form of conjugation for all verbs. Tense and mood are indicated by prefixes, number and person by the subject. When the subject is a noun, the pronoun is inserted before the verb. The following is the conjugation of the verb "to be" in the present, past, and future tenses:

Present.		Past.		Future.	
Singular.	Plural.	Singular.	Plural.	Singular.	Plural.
1	2	3	4	5	6
Kyn long, I am.	Kyn long, we are.	Kyn ia long, I was.	Kyn ia long, we were.	Kyna long, I shall be.	Kyna long, we shall be.
Ki (noun) or phi (thou) long, thou art.	Phi long, ye are.	Ki or phi ia long, thou was.	Phi ia long, ye were.	Kna or phna long, thou shalt be.	Phna long, ye shall be.
U (noun) or ka (she) long, he or she is.	Ki long, they are.	U or ka ia long, he or she was.	Ki ia long, they were.	U'n or ka'n long, he or she will be.	Ki'n long, they will be.

The other simple tenses are made definite or emphatic by various means. *Ze*, sign of the past, when added to *lak*, sign of the potential has the sense of the pluperfect, e.g., *ngo le lak long*, I had been. To differentiate into 'e emphatic the future, the particle *ze* also indicates the future, *da* is the usual sign of the subjunctive mood, *lada*, *la*, *lyada*, *lad yada*, but *da* are other signs of this mood. The sign of the infinitive is *le*'e. The imperative is either (1) the simple root, or (2) the root compounded with some word such as *to*.

Participles.—The present participle is formed by prefixing *le* to the root, e.g., *le long*, being. The imperfect participle is formed by prefixing such words as *le*, *to*, *da*, *de lada*, etc. The perfect participle is formed by putting such particles as *le*, *la*, *lada* ', *da lada le* before the verb. Verbal nouns of agency are formed by affixing *wang* to the root, e.g., *e wang lein* (the murderer).

The *Passive Voice* is formed by using the verb impersonally and putting the subject into the *Accusative* case with *in*.

Potentiality is indicated by the verb *lak*, necessity by the verb *dei*; *dang* and *de* show the indefinite present.

The negative is indicated by the particles 'ya contracted into 'e *shyen* and *pei*. 'Ya is put before the verb,—e.g., '*ya dan lewe e* there is no one; with a pronoun it is contracted, e.g., *e'ne wan*, he does not come. It follows the sign of the future, e.g., *pei'e y'ne wan*, you will not come. *Shyen* and *pei* are negative particles, and with negative verbs in the past tense,—e.g., *e'ne shyen le wan*, he did not come.

The use of the word "ping".—One of the most striking features of the language is the use of the word *ping*, which is employed to create an abstract noun out of a verb. For instance, take the verb *lun*, to eat; if we prefix *ping* we have *pinglun* = food. *Ziet* to hold, *ping-ziet*, a handle. The use of the word *wang* has already been noticed under the heading "verbs." For example of another common prefix, it may again be mentioned here. Thus, *wang-ai-pinglun* means a table-servant, literally one who gives food. Again *wang-ziet*, a holder, literally one who holds.

Syntax.—The order of words in the sentence is usually (1) subject, (2) verb, and (3) object, in fact, the same as in English, and in this respect is different entirely from the order in the languages derived from Sanskrit, and that of the languages of the Tibeto-Burman group so far as I have been able to ascertain. For instance, in the Kachari or Boro language the order in the sentence is (1) subject, (2) object, (3) verb. In Khami when emphasis is needed, however, the object commonly precedes the verb, e.g., *ze e ah e le dia*, he has sold the fruit, literally the fruit he has sold. As stated before, adjectives follow the noun they qualify, e.g., *e lam lejwang*, a high mountain, literally, the hill that is

St Gordon G-3 (no date) 1904 AR7 Khasi AR7

193 high. Interrogative adverbs may either precede or follow the verb, e.g., *nani phi una or phi una nani*, where do you come from.[1]

121 18. *Conclusion.*—I have endeavoured to note down briefly above some of what seem to be the more prominent features of Khasi Ethnology, reserving a more detailed account of the Khasis for the monograph which is under preparation. In publishing this brief account, it is my hope that it may attract criticism by persons who are more familiar with the Khasis than myself, and it is my earnest desire that if experts who are acquainted with the Ethnology of the province of Burma and of that great country comprising the valleys of the Mekong and the Mouam, find any points of resemblance between Khasi Ethnology and that of those regions, they will kindly bring those points to my notice, so that perhaps a clue may be found to the origin of the Khasis, which is at present so obscure.

113 [1] In the compilation of this brief notice of the Khasi language, I beg to acknowledge my indebtedness to Dr. Grierson's Skeleton Khasi Grammar, the Revd. H. Roberts's Khasi Grammar, and to Nimar Singh's "Hints on the Study of the Khasi language."—P. R. T. G.

On the STONE MONUMENTS *of the* KHASI HILL TRIBES, *and on some of the Peculiar Rites and Customs of the People.* By Major H. H. GODWIN-AUSTEN, F.R.G.S., Deputy Superintendent Topographical Survey of India.

121 THE increasing interest that is taken at the present day in ethnology and the history of man in past and present ages, more particularly in the customs of semi-civilised races in distant quarters of the world as compared with the state of those races who dwelt in Europe in early historic times, has led me to put together the information I obtained regarding the people of the Khāsi Hill tracts. Their customs are peculiar, and the fact that they are among the very few who erect at the present day monolithic monuments, is alone of great interest.

This has not escaped the attention of different travellers, 122 officers of the Indian service and others who have visited that quarter of the Bengal Presidency, and from time to time papers have been published; these are scattered through a number of periodicals, and in no case is a complete record of these Hill people to be found.

Notices on the Garos and Khāsis, as well as many of the other tribes on the north-eastern frontier of Bengal, are generally very short, in some instances mislead, and in some cases do the peo- 152 ple, savages though they be, but little justice; in truth, there is very much to admire in these Hill people, they are in many ways, socially and physically, far above their Bengāli neighbours of the plains; intercourse with them is, in consequence, much pleasanter, easier, and has far greater interest; innate honesty and truth in their manners of dealing often crop out, more especially in villages well within the hills, where contact with the people of the plains is of rare occurrence.

101 I shall notice the best of these papers having reference to tribes inhabiting the range of hills running west to east, south of Assam, from the sharp southern bend of the Brahmaputra up to the Kopili and Diyung river, in long. 92 deg. 45 min., a length of some one hundred and sixty-five miles.

114 In the "Asiatic Researches," vol. iii, published so far back as 1792, is a very interesting paper on the Gāros, by Mr. John 113 Eliot; his travels, however, did not extend so far to the east as the Khāsias.

The Rev. A. B. Lish, a missionary of Cherra Poonjee, published an account of the Khāsias in the "Calcutta Christian Observer" for 1838, he gives an account of their mode of breaking eggs for omens, etc.

Neither in M'Cosh's "Topography of Assam," or in Robinson's "Assam," is any newer or better information afforded concerning

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

the Gāro or Khāsi than is to be found in earlier writers, and no 114
allusion is made to the stone monuments. The first contains a 113
very exaggerated and by no means faithful account of both the Khāsi and Gāro, and the latter has copied Elliott's descriptions.

Dr. Hooker, in his "Himalayan Journals," gives some good drawings of the stone monuments—alludes briefly to their form, and the habits of the people. Dr. Hooker also alluded to the Khāsias at the meeting of the British Association at Norwich in 1868; thus attention was drawn to them in a prominent manner. A paper was written shortly after this by Lieut. E. N. Steel, R.A., who had been quartered for some time at Cherra Poonjee, and published in the "Transactions of the Ethnological Society," vol. vii.

The latest paper that we have on the Khāsias is one published 114
in the "Ausland" of last year, by — Schlagintweit, yet is not confined solely to the people, but treats of the meteorology of the district, and very briefly of the geology. The Gāros and Nāgas are also noticed. I hope to be able in a future paper to call attention to these people, and shall then allude to one or two paragraphs where I think M. Schlagintweit has been led into error. To one such error I would now refer. He says, "The Khassias are the most numerous and most powerful of the tribes inhabiting the part running from west to south (he must mean east) in this mountainous district, but it is also necessary to mention the two groups of Gārdos and Jaintias who are their neighbours in the south (he must mean the east) and the west. The grade of civilisation of the Gārdos and Jaintias is very low, etc., etc." Now, M. Schlagintweit must have been quite misinformed as regards the Jaintias, and he has evidently never been among them, or he would have known that the Jaintias, or more properly speaking, the Sintengs, are of the same stock as the Khāsis, that the language is the same with some slight modification, and that their customs and religious rites are almost identical. In Cherra Poonjee itself there is a small hamlet of emigrants from the Jaintia side, and they are found living among the Khasias in the main village. Many of the clans in Cherra claim to have originally come, several generations back, from the side of Jawai.

M. Schlagintweit further on says:—"The want of all modesty in the grown-up people of these primitive races, to whom we apply the term savages, is very remarkable." With this statement I do not agree, and consider they have the feeling strongly developed, and are quite as particular about the exposure of their persons as the people of India proper. The Gāro wears the "Lungooti" quite as large as that worn by the lower classes in Bengal and N. W. Provinces, etc.,

9:Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

114 etc., when employed at heavy labour. Very much more decent is itthan the thin gauze-like cloth worn by even the better class of Baboo in Calcutta, which makes hardly any pretence of concealing the private parts. I can speak for the Gāro women being partcularly quiet and modest in their demeanour; and the young men on reaching a certain age, and until they marry, live and take their meals apart in a large house constructed for them; this is always the largest in the village, and where strangers are put up. This custom mitigates strongly against "their want of modesty", so often advanced, and proves, if anything, an advanced state of morality.

Again, in speaking of the Khasis and the looseness of their famiy and domestic relations, which are somewhat easy, the frequent changing of wives is not so common as might be supposed, and in the remoter villages I should say very rare.. There is a very strong force which militates against its frequent practice. The men of these tribes select their wives not for beauty and delicacy, but for their well-developed forms and hard-working qualities—those who can carry heavy loads throughout the day and the more children she begets the better for the pair: they can cultivate as these grow up a larger area, and live in greater comfort.

[113] In the *Calcutta Christian Observer*, March, 1852, is to be found one of the best papers on the Khāsis, by the Rev. W. Pryse, who was attached to the Welsh Mission working both at Cherra Poonjee and Sylhet. A very good article appears in the *Calcutta Review* for 1856, vol. 27, being a review of the "Geology of the Khāsi Hills, with Observations on the Meteorology and Ethnology of that District," by Thomas Oldham, Superintendent of the Geological Survey of India, a work containing much valuable and interesting matter. An Introduction to the Khāsia Language, by the Rev. W. Pryse, is also included in the above review.

114 The various ways in which the word Khāsi has been spelt by
101 different writers, has no doubt puzzled many an European reader, and will be familiar no doubt to some in the form of Cossyah, Khassyah, Kasia, etc. The most correct has been adopted by the mission at Cherra Poonjee in their printed works in the language, and adopted in this paper.

101 They call themselves Ki Khási, and their country Ká Ri
197 Khási;* and without going out of our way to seek for a derivation of this word, may it not be derived from the Hindustani "Ghāsi"—grassy: the whole of the upper lands being of this nature, in contradiction to the forest-clad valleys and slopes of the outer hills both north and south. The Khāsias never pro-

* Compare "Khi", a mountain (Tibetan).

nounce the hard G; and in all words of Hindustani origin this letter has the sound of K. 101 [197]

They are called by the tribes of Kúkis and Nágás on the west "Káro", the name they themselves have for the whole mass of hill people on their western side, the Gāros, though as we pass towards their confines, we find the names of local clans giving way to this general term which was not known to some of the villagers of West Nongstoin, who call the Gāros "Dékor."

The Gāro appellation for the Khāsis is "Dikkil" or "Digil"; and it was very interesting to find, after visiting the villages of both, that they mutually fear each other, and consequently border raids never occur. The Gāros owned that they feared the bow and arrow of their neighbour, a weapon they themselves are unacquainted with the use of.

The Khāsis always point to the east as the quarter from which they emigrated, but there is very little, if any, similarity with the languages of the people now occupying the hills on that side. [173] [197]

Before entering further on the subject matter of this paper, I must request my hearers or readers to remember that having no knowledge colloquially of the Khasi language, the information I give was obtained from natives who understood either English or Hindustani well. The greater part of the information was given me by a very intelligent man, a native inspector of schools in the district; thus I hope that all errors that exist may be hereafter corrected by others who have been able to elucidate with greater exactness the meaning of their many different rites and superstitions. 115

Certainly the most striking objects of interest in the Khāsi Hills are the upright stone monuments that are to be seen all over the country; these, set up by the wayside, or in the villages, more frequently cutting the sky on prominent hills, with the large slabs horizontally set before them, at once recall the Druidical remains of our own island, northern France, etc., and lead one to marvel at the similarity of the custom, and to inquire its origin and design. Many who visit those hills take it at once for granted that they are the graves of illustrious men, or, after a vain endeavour to get some information from the coolies about them, let the matter rest, or finally believe that the ashes of the dead, to whose memory the monoliths are erected, are buried under the flat kind of altar or dolmen seen in front. 764 211

It is always a very difficult matter to obtain information from semi-civilised people on such a subject as their religious rites, especially if the inquirer is ignorant of their language. A slight knowledge of Hindustani on the part of the Khāsia villager, renders the attempt still more hopeless, and the information given quite erroneous.

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

764 211 The tall upright stones are called "Mao bynna", from "mao", a stone; "bynna", to make known, to be informed, literally a monument. They are also known by the term, "Mao shinran", the male stone, while the flat seat-like slab in front is called "Mao Kynthai", the female stone, representative of all life, being in pairs. My informant explained this by saying the monument would be imperfect without the flat stone or its female adjunct.

769 764 211 The ashes of the dead are never deposited under the horizontal slabs always to be seen in front of the upright sets, the monument having no connection with funeral obsequies whatever. The monument is purely one to perpetuate the memory of a person long deceased, who, as a spirit, has watched over or brought good fortune to a descendant, his family, or clan. Wealth or [554] renown of the deceased has no connection with the size of the monument, which may be of any dimensions, from stones a foot or two and upward, but depends on the wealth of those who erect such mementos, and on the benefits the deceased has conferred aftar passing into the world of spirits and demons, for, according to Khāsi belief, the spirits of the dead and demons are the cause of all joy or woe—they give riches or strike with disease and death.

These monuments are not set up facing any particular point of the compass; the front is generally selected, having reference to the site and its surroundings: thus a number set up together on a hill-top will be found facing outwards, those by the wayside facing the road; however, single sets, standing on a hill-top or rising ground, as a rule, face to the southward.

The history connected with the erection of some large slabs near Cherra Poonjee will exemplify this curious custom. One of the clans, "Kūr" in Cherra, is known as the "Nongtariang"; and many years ago died an old lady of the clan, not famous for anything in particular during her lifetime, but whose virtues appear to have been great after her demise, for after this the Nongtariang clan, from being a poor one, rose gradually to considerable wealth; she, when propitiated and called on for aid, never failed her race, and in return, after some sixty years or more, they raised to her memory five well-cut stones, which are to be seen on the west side of the road between Cherra Poonjee and Surarun, the central monolith adorned with a kind of rose cut in relief on the front face, and an ornamental disc on the apex. It would appear that she still remained the guardian spirit of her clan; they continued to prosper, and as a further token to her memory, they added in 1869 five more stones on the other side of the road, and in a line with the first set.

It may very naturally be asked how descendants possibly dis-

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

cover what their ancestors are doing for them, and what their views and inclinations may be as regards the amount of aid they may give. To a Khasia there is no difficulty about the matter; when in distress or requiring aid of any kind, seeking omens by the breaking of eggs (which I will hereafter describe) he appeals to and propitiates any one ancestor he may select; only one or two may promise such protection, and these it may so happen have died years ago. The benefit also conferred may be very trivial, and sufficiently acknowledged by the setting up of stones of small size; on the contrary, if great favours are conferred on the wealthy we find large monoliths forming conspicuous landmarks on many a hill-top, scattered over a large area of country, and which are mostly known to the country round by the name of the individuals who have wrought so much good in their after state. 764 769 211 [782]

These stones are never erected in pairs or in even numbers; in counting over a very large series still perfect, I found them invariably in sets of three, five, seven, or, as I have before mentioned in the case of the Nongtariang clan, in two sets, five and five, on opposite sites, to the same individual.* Even numbers are considered unfinished or imperfect. 801 211 764

A reference to the plans given, numbers 1, 2, 3, 4, will show the various arrangements in which the stones are set up, both in a segment of a circle and at right angles to each other, as in fig. 3. The most common form, however, is in line, fig. 4. Fig. 1 consisted of a circular platform raised about two feet, faced with rough stones on the front face. These three examples were observed on the hill of Lailang-kote, where the bazar is held, and I have not seen anywhere else the monoliths so arranged; in other parts of the country they are invariably set up in a straight row.

These monuments are also erected for such a reason as the following:—During the illness of a person, every kind of propitiation and exorcism either by the breaking of eggs, sacrifice of fowls, pigs, etc., and by the examination of the liver and viscera, having been made, and then failing to restore him; the sick man may vow that should he recover, he will erect a set of stones to one of his ancestors, who, it is presumed, on knowing of the intention, will do his best to save him. 764 211 [782] [787]

In setting up these slabs all members of the community are under an obligation to assist on such an occasion, and are not paid for their labour, beyond receiving in the evening a little food or liquor at the dwelling of the family who have sought the aid. The skilled workmen employed on the stone-cutting are, 764 211 476

* Three and five are the most frequent numbers met with, nine very rare I have seen eleven.

[See end charts 1–4, category 116 -- Analyst]

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

476 764 however, regularly paid, as is done when cutting the stones for 211 the funeral platform; while this work is in progress musicians [533] are also entertained, and a continual beating of tom-toms (hand-drums) is kept up while the work is in progress.

That many of these monuments, and by far the larger number, 764 are of great age, may be inferred from the fact that their history 211 is quite lost.

171 As to their distribution, they are to be found over all the higher part of the range; the finest, certainly, in the central portion and in the vicinity of the larger villages, such as Cherra Poonjee, Juwai, Nurtiang, etc.

In Nongstoin, on the west, they gradually die out, and a few, not exceeding three or four feet in height, are to be found in the Khasia villages towards the Garo tribes, but at this limit the Langams come in, and their customs assimilate more with the former-named people. It is the same on the east and north-east of Jaintia; the stones set up are smaller and of rougher form, and by no means so numerous, yet they are to be seen in all kinds of out-of-the-way places quite overgrown with grass and jungle, where villages have not existed for years. Indications were not wanting, shewing that the country had been formerly much more populous, especially on the northern slopes of the Khasi and Janitia Hills. I have, on the other hand, never come across structures of the kind anywhere beyond the limits of Khasi-speaking people, that is, between longitude 91 deg. and 92 deg. 30 min., which includes the Jaintia Hills, the people of which part are called "Sintengs", differing in some minor points from the Khasis; the dialect is distinct, and there is so strong a type-form of likeness and expression, the two can be generally separated without inquiry. The same remarks hold good for the western side; a Khasi of the border Nongstoin villages can be told off at a glance: so strong are the great clan likenesses.

I have traversed the whole country on the east: viz., the North Cachar Hills, inhabited by tribes of Kookis and Nāgas, and had the Khasi ever occupied permanently a larger area either on the east or west, particularly the former, emigrating, as they are supposed to have done, from that side, I think we might have expected to find, occasionally, remains of their imperishable monuments. The only exception that I know of occurs on the road from Nenglo to Hangrūng, in the North Cachar Hills district, beyond Asālu, a part of the country now in the occupation of Nagas, and formerly entirely in that of Kacharis, who are Bodos or Méchis. The road lies through forest, keeping along the high spur; at about two miles from the peak of Hemeo are to be seen several large slabs of stone nearly level with the ground, one ten feet by six, covering some sort of receptacle, for the ends of the

9: Godwin-Austen G-3 (to date) 1872 AR7 Khasi AR7

764
211
171

stones facing the sides are plainly visible. Near to these slabs is a platform with sides built up of rough stone, similar to those about Cherra Poonjee. Now Nāgas bury their dead, and no monument is erected, the graves being dug in the village street, often at the very door of the deceased person's house, all the protection and covering being a rough one of bamboo or straight sticks interwoven and neatly pegged down all round with hooked sticks. Some tribes of Kūks bury, others burn, but I have never observed any stones set up, or used to cover the grave. There is just a possibility that the slabs on the Hemeo ridge are the remains of an old Khāsi settlement, occupied, perhaps, for a short period when on their emigration westward.

The largest collection of huge slabs and upright stones that I have seen anywhere in the Khāsi Hills, is at Lailang-kote, the arrangement is so different in every way, that there can be little doubt that it was erected for a very different purpose, and was probably a place of meeting of the chiefs and elders of the clans. The steps to ascend it would indicate such a purpose, and we can imagine all the men of rank and influence seated around, and harangued by one of their number. I could never learn the history of this structure; although I made frequent inquiries, they could not say when or by whom it was set up. The stones, especially the large horizontal one, are of great size; this, with others, is of the granite found close by, but the hill on which the structure stands is an outlier of quartzitic sandstone, horizontally stratified, and great labour must have been expended in dragging such huge blocks into their present position; for the slope to the top of the rise, though not great, yet is quite sufficient to render such work a formidable undetaking. The weight of the largest horizontal slab was twenty tons eighteen hundredweight, and of all the stones composing its construction eighty tons. The horizontal granite slabs were unhewn, as well as the highest upright monolith, which stood eighteen feet nine inches. Eight of the upright stones out of the eleven were of sandstone. The largest slab is an irregular oval in shape, thirty feet by thirteen feet in longest and shortest axis, with a mean thickness of one foot and one-third, standing nearly five feet and a-half above the ground, and resting on ten upright unhewn pillars of granite; on the south side are four other slabs arranged close to the edge of the large one, and round all rise the eleven upright pillars; on the eastern end are two other slabs forming steps to ascend by.

I give a drawing of this very curious monument with a plan, and in an appendix the measurements of every stone, and these shew better than aught else the great massiveness of the work, and what an amount of labour these people must have expended in collecting the materials and setting them in this spot.

[see and plates 2-4, Category 116 — — — Analysis]

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

764 I never saw the Khasis engaged in raising a stone into the
211 upright position, but I saw the spars which had formed a sort of
[483] cradle on which the stones forming the monument erected by the Nongtariang clan previously alluded to had been dragged from the spot where they had been quarried. They consisted of strong curved limbs of trees roughly smoothed and rounded, and would present a very small surface to friction. These stones had been taken from the side of a hill near, and had apparently been wedged out of the face of a step in the exposed sand-stone strata.

It may be as well that I should here give some account of the funeral rites of the Khasis, which will show there is no connection between them and the monuments I have been describing, and with which the other stone erections have no doubt been often confounded. In their funeral rites there is much that is wonderfully strange, and to those unacquainted with their
771 superstitions, appears unmeaning. There can be no doubt but
769 the Khasis have a very strong belief in a future state, and to say
778 that they have no religion, as has been stated by some writers, is erroneous. True, they have no temples for either worship or idols, the religion of the people is principally a demon worship, and we find the Khasi ever in communion with or in the power, as he supposes, of the spirits of those who have gone before him. While, added to these spirits of their ancestors are numberless demons, male and female, ever ready, if not propitiated, to bring evil upon himself or his undertakings, and whose power even extends over the spirits of the dead. Every dark shady wood, every stream, every conspicuous hill has its presiding demon, which in many instances gives the name to the site. Thus, the hill of Lárû, in North Jaintia, beyond Nongjinghi, is the abode of a one-legged demon, whom to see is death, but who was occasionally heard in the dense forest that clothed the northern steep face of the mountain, so said the credulous villagers of Nongtâng.

764 The dead are burnt on a funeral pyre, the logs of which are arranged very regularly, and the body lies in a sort of bed formed by them.

The calcined bones and ashes are collected and placed in an earthen vessel (small "ghara"), and are generally buried in some adjacent spot, a stone being placed over the vase for security; they do not, however, remain permanently in this place. Every family or clan has a separate receptacle for these remains, constructed in several ways, but always covered with a heavy slab of stone: these receptacles are called "Mao-lah," the great stone "Mao-shiing," a bone depository—lit., the "bone stone."

M. Schlagintweit has fallen into an error regarding the dolmen-shaped structures, and was not aware that this form is so

intimately connected with cremation, and that bangles and other ornaments are to be found in them. Whether such are removed from the body at the present day is a point I did not satisfactorily clear up, but which is one of interest. 764

You find the cromlech cuboidal form of four well-cut large stones on edge, closely fitted and surmounted by another horizontal one closing the structure. I give a drawing of a very large and striking one not far from the mission houses at Cherra; one of the sides of this has fallen and been removed, it is probably of great age, and the family is extinct. In other cases a number of rough stones are set up in a circle, crowned by a flat circular slab. I have also seen them of octagonal form, the sketch represents one in the south of Jawai, near the site of a deserted village, one of the side stones has fallen outwards, thus exposing the interior; in this I found several calcined bones and two bangles or wristlets of brass; this surprised me, for I was not aware that ornaments were left on the body on cremation; nor do I think they are at the present day. There were no traces of pottery either, and the bones had not been placed in a vessel as is the usual custom now. The structure was apparently of considerable age, and no village had occupied the site for many years.

A very general form at present of these bone receptacles is that of a heavy slab of stone, level with the ground, covering a cyst, which is lined with stones.

The bones are not consigned to these receptacles for some time, often a year or more after the burning of the body, and in no case until it has been ascertained that the soul of the deceased is at rest, and leading a life, or rather a new existence of happiness; should the whole of his family remain in health, this state is assumed to be attained, if, on the contrary, any member be afflicted with illness or pain, the spirit is understood to be restless and in want of something; the breaking of eggs is resorted to, and such may indicate that it is necessary to sacrifice a fowl or goats, and that the bones of the defunct be taken up and buried in another spot. Such removal, however, in the case of the most troublesome ghost is only done three times, and restless as he may be, the bones are then finally deposited in the family bone receptacle; man and wife are never deposited together; they belong to different clans, thus the ashes of children are placed in the receptacle of their mother's tribe to which they are considered to belong. I would here refer to the paper written by the Rev. J. Pryse in the *Calcutta Review* for 1854, p. 128, with his excellent description of a form of sacrifice. (Appendix B.) [113]

The collection of the bones into one vault, as it may be termed, is done under the impression that the souls of the departed may 764 775

[see category 86, pp. 137–9.—Analyst]

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

764 775 all mingle together again in one large family without trouble or suffering. The idea of a member of a family being a wanderer in the other world, cut off from, and unable to join the circle of the spirits of his own clan, is most repugnant to the feelings of a Khasi or Sinteng. Thus we find every attempt is made on the death of a man in a distant village or district to lead his spirit back with his calcined bones to his native place. For instance, should he die alone on a trading expedition into North Cachar and be buried by a tribe of some other denomination, some relation, if he can afford it, will proceed to disinter and burn the remains; such will be done years after when accident may take some relative near the place. Of this I had an interesting example in my own camp when marching from the Khasi Hills to Asálu.* While encamped at Thangnansip in North Cachar, one of my coolies (porters) came one morning and asked leave for the day for himself and some of his fellows; on asking why they wanted it at such an unusual time, when we were in the field and moving camp, he said that a relation had died in that village while on a trading speculation with dried fish and salt towards Asálu from Jawai. It appeared that the man, having got an attack of fever, had been left behind by his companions, in the hope that he would get round in a few days and then follow them; he, however, eventually died, and was buried by the Kúkis of "Kabír." My men had with some difficulty discovered the grave (for many years had elapsed), the site of Kabír had been changed in the interim, as is the custom of the Kukis, who seldom remain more than four years tilling the same ground, frequently not more than three, known in that part of India as "Joom cultivation"; high grass covered the old village site; the Khasia coolies, however, disinterred the remains, burnt them, and the residue was carefully preserved and sent back to Jawai, the man's native place, to be interred with the bones of his family.

When carrying the remains to the home of the deceased, not only is the greatest care bestowed on them, but the spirit is carefully considered and led onward, to prevent the possibility, as they suppose, of its wandering off the route. Leaves are occasionally plucked, and with three or four grains of rice placed on them, are deposited by the wayside as offerings. On reaching [782] a river this is done on the bank, and sometimes when such a river is large and the abode of some powerful demon, a fowl is let loose in the jungle as an offering to the titular spirit of the stream. A most curious custom exists connected with this transporting of the soul which I have seen on several occasions. The dead, they say, have not the strength or ability to wade

* In Crawfurd's embassy to Siam, we find that a similar idea prevails in that country (see Appendix C).

9: Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

through water, and if they trust themselves to it would be carried down the stream, never to be recovered. They, therefore, stretch a thread of cotton from one bank to the other, and if the breadth is great this is kept clear of the water by sticks planted in the bed of the river, and notched at the top to receive it. If the running water should be very narrow merely a stick is laid, or even a stalk of grass is considered sufficient to form a bridge for the dead man's soul. The line of thread is called the "string bridge." 764 775

On passing through some dense dark wood where it is presumed a demon may be, they think it not improbable that he may be detaining them or throwing impediments in the way, and should any of the party fall sick such is to them clearly indicated. The breaking of eggs is resorted to, or a pendulum is made by tying a stone, knife, or generally the brass box in which they keep the lime that is mixed with the betal and pan leaves, and the rite so well described by Hodgson (Appendix A) is gone through. The similarity of the Bodo or Mech customs shows how general these superstitious customs are among the tribes in this quarter. The only difference being that with the Khasi, the weight is caused to revolve in a circle should any spirit require to be propitiated, and that it should cease to revolve when the offering, either a fowl or a pig, is considered to have been accepted. 764 782

Should a Khasia lose his life in such a way that his body cannot be recovered, say by being drowned in one of the large rivers in the plains, his relations assemble on some prominent hill or rock overlooking the low country. One of the members taking some kowries (small shells used as money, Cypræa) in his hand, and, looking towards the site of the accident, shouts out the name of the deceased and calls on him to return; his spirit having been supposed to do so, they proceed to burn the cowries, which are symbolical of his bones, and any clothes of the deceased they may possess. The ashes of the cowries are then placed in the bone depository. 766

The corpse is kept in the house four or five days, occasionally longer.* In the case of chiefs of tribes, men of consequence and wealth, the body after death is preserved in honey, and kept in this way in its coffin for a very considerable period; the platform on which the body is burnt is erected during the times, and considerable expense is entailed on its construction, in cutting the stones, as well as on the expenditure of gunpowder; throughout the day explosions may be heard at irregular intervals from different quarters, now at one side, then at another to drive away [764]

* The excessive and bottomless rainfall of the Khasi Hills is not the reason why the dead are preserved in honey; it would be impossible to procure it in sufficient quantity for such a purpose. Vide M. Schlagintweit's paper in the "Ausland", where this is stated.

[Just category, 766, p. 187 — Analyse?]

9; Godwin-Austen G-3 (no date) 1872 AR7 Khasi AR7

766 evil spirits, who I suppose they think may be hovering about the neighbourhood. Here we find a custom the counterpart of one in Burmah, where the body of a Buddhist priest of rank is embalmed in honey, and laid in state for a long period, to be afterwards blown up with powder, together with the costly hearse that bears him to the place. The same custom we find in "Crawfurd's Embassy to Siam" exists in that country.

There is some slight analogy to be traced between the funeral customs of the Khasis and Singphos, particularly in the collection of the ashes and subsequent interment. (Appendix D.)

The breaking of eggs is perhaps of all modes of seeking for an
767 omen the most curious of all the Khasi customs, but it is by no means confined to these hill people. I am informed by Colonel McCulloch that the Kūkis and some other of the numerous Hill tribes around the Munipūr Valley do the same; but then it is not so commonly practised, and I never myself saw them engaged at the rite. The Gāros use eggs only for sacrifice. The number broken appears unlimited, but about twenty is a common number. It depends, of course, on the means of the individuals. They use a small board about twelve inches by eight inches square, which has a projecting kind of handle with a hollow to receive the egg to be used. The position of the chips on this board indicates the luck or answers to the inquiry that is sought, and only those pieces that fall within the board, outside of the egg-shell upwards, count as signs. The egg is personified and addressed after this manner: Egg! I am only a man, am ignorant and can divine nothing; you can commune with spirits, and between man and them have intercourse. Now, say! who has done this? (in case of sickness)—who has caused this man to fall sick? If the spirit is in the house, let the signs be on the left; if out of the house, on the right. The exorcist spits on the egg, and taking some clay in his hand, smears it over, so that the outside may be distinctly seen when it is smashed. Apology is made to the egg, saying: I do not spit on you to insult you, but to clean you and give you a colour. Then standing up he throws the egg down with all his force upon the board.

It would appear that only those pieces of egg-shell that fall to the right or left are of consequence in the matter; those that fall beyond or on the off-side of where the egg strikes are the representatives of spirits that are not implicated with the matter in hand, while those that lie on the near side show that the sickness is the cause of purely natural causes, over-eating, drinking, or exposure to heat and cold, and not through the agency of any malignant spirit; such signs are of good import, and indicate (taking a case of sickness) that the person is likely to recover. Should he not do so the egg, or rather the exorcist, a professional sacrificer called "Ka Nong Kinia" or "Ka Nong Kein Ksuid",

94
769
JUL

PLATE III.

B: Gurdon G-3 (no date) 1904 AE7 Khasi AE7

[End plate 2]

holds his own, he can reply: What was the good of calling me 757
in, to seek signs from eggs, when the man was past hope? I could only give you such, and my he was sure to recover.—As might be expected, the sacrificers prey on the ignorance and superstitions of the people; and it not unfrequently happens, I am told, that on one being called in, and after smashing a number of eggs, he declares that owing to previous communion with spirits in other houses, he can do nothing, and recommends that another exorcist be called in, to kill a pig or a fowl, and thus those who can afford it are made to give up as much as can be squeezed out of them.

Any member of the community, if he desires it, can learn the forms of offering, sacrifice, etc., under the instruction of those who are in the profession, and who can thus sanction and look to their due and proper performance. When they sacrifice a cow, goat, or pig, the liver is the principal part examined for omens; if it is smooth and healthy, such are good. The entrails, if full, are a propitious token; the size of the gall-bladder is another point—if small, poverty may fall on the family. Demons also are particular; some will not accept a black or coloured fowl; pure white only will suffice, and these they object often to sell.

It is often a matter of great difficulty to persuade a Khasia to 758
take medicine, especially men from outlying villages; they quite dread it, imagining that, should they take it, some spirit, wroth at not being propitiated, may alter its properties, and thus make them much worse. I have seen a grown-up man burst into tears, and beg that medicine might not be administered, when he was lying seriously ill. They, however soon find out the good effects of our treatment, especially that of quinine in fever, and they laugh in turn at the scruples of their more ignorant companions.

The Jaintias, or, more properly, the Sintengs, on the East, are, 759
I think, more under the influence of their exorcists than are the 762
Khasis, on the West. On certain occasions, individuals sacrifice a number of animals to different demons and a great feast is held, to which numbers are invited; men, women, and children, are then arranged in large circles, each with a leaf for a plate before them, on which the meat, when dressed, is served.

There is, however, one very extraordinary custom—one, I am 759
glad to say, confined to only a few villages in the Jaintia country—called "Tarroo". The unfortunate individual who is presumed to be in league with a demon, in order to clear his character and be again admitted into the society of his kindred, must throw everything he possesses away, even to the clothes on his body, and begin life anew. A man on whom such an accusa-

[illegible] tion falls in deserted by even his wife; for all converting with him after the fact is declared would be equally criminal. The abuse of such a custom is unlimited; private spite must enter largely into its organization; and it becomes a ready method of ruining an individual of whom the community may be jealous, or who is obnoxious to them. The civil authorities have with reason looked with disfavour on it, and done much towards breaking the custom down. The missionaries also in Jowai have, no doubt, by the establishment of their small Christian colony, done much towards the same end. This system of witchcraft does not date, I am told, from a very remote period. Names of demons are from time to time invented, or rise up, and the most formidable now is a female demon, having very evil wealth, and who is connected with the superstition "tarow". The curse may slight on an individual in many ways, of which I give the following instances of how it acts on the community.

[illegible] A person may get ill, and, as in fever, become delirious; those attending on him listen attentively to his sayings, and he may constantly take some one's name in connection with his state. This person is said to have the ear of the demoness, and to use such influence for the purpose of bewitching others.

Two persons may join in trade together, and be on the best of terms for several years; but one may have a terrible dream repeatedly, or say he has, connected with their gains; he may then accuse his partner of having obtained certain power from Tarow.

A man, originally in poverty, rising in a very short time to be wealthy, the whole village may secretly, among themselves, point at him as having entered into a compact with this demoness; but no proof is forthcoming until some person suddenly falls ill, and apparently without cause. This sick person is questioned, and even bullied into saying that he believes the [illegible] to have taken in the face of the accused, as a sign that his further acquaintance is not desired. This is a common custom, and is done to a person for other reasons, such as for stealing, or committing some heinous crime. A woman who supplants the affections of another who is a wife may have ashes thrown in her face for spoiling the husband, and in this marked, for, of course, it is done in some public place. But, to continue, the family of the sick man next count up the number of pots that have been given by the accused during their intercourse, the number is prepared, made up into a bundle, and placed at his door during the night, and a sucking pig is killed and also left there. In the morning on the first opening of the door, the sign

is seen by the deceased, and quite as seen by the neighbours, who collect to revile and jeer the unfortunate individual; his relations leave him; his wife, if he has one, returns to her parent's or sister's home, and in no other way can he recover his position in society save by throwing away all he possesses; cash and clothes are scattered on the road as he goes out of the village, and are picked up by those who follow; his house, I was told, is also demolished, and the thatch roof carried out and burnt in the outskirts of the place.

This paper has become much longer than I had anticipated, and I fear will exhaust the interest that there may be in it. I had intended alluding to the Kákis, Mikirs, Garos, etc., and exhibiting drawings of their burial-grounds, but this I think may be best postponed and introduced with some notes on the extension of those tribes and the people of the northern slopes of the Khasi range of hills, if this Society should think such of sufficient interest to them. I trust also that Captain Williamson, Deputy-Commissioner of the Garo Hills, now on leave in England, will give us the benefit of the valuable information I know he has obtained regarding the manners and customs of the Garo tribes, among whom he has mixed so much and so intimately.

APPENDIX A.

Paper on the Origin, Location, etc., of the Bóhs, Kooch, Dhimdl People, by B. H. Hodgson, Esq., Asiatic Society of Bengal, 1848, Vol. xviii, pt. ii, p. 739.—"Thirteen leaves, each with a few grains of rice upon it, are placed by the sacrificer in the segment of a circle before him, to represent the deities. The Ojha squatting on his hams before the leaves causes a pendulum attached to his thumb by a string to vibrate before them, repeating invocations the while. The god who has possessed the sick man is indicated by the exclusive vibration of the pendulum towards his representative leaf, which is then taken apart, and the god in question is asked what sacrifice he requires?—a buffalo, a hog, a fowl, or a duck to spare the sufferer (the Ojha best knows how)? a hog, and it is forthwith vowed by the sick man and [illegible] the amount to sacrificing, and he [illegible] the offending deity."

APPENDIX B.

Calcutta Review, 1854, p. 139. Paper by the Rev. J. Pryse.—"The universal desire to immortalize the memory of their dead ancestors on earth by the erection of stone monuments, may be deemed as a faint indication of an expectation of some kind of future existence. The sacrifice for their dead, which they call 'Sutí-ing', or 'Kaná-ing', that is, the ghost or demon of the dead, may be considered indicative of the same notion. The profound veneration of the sacrifice is to pacify the

spirit of the dead, so that it may come in the capacity of a "Kmail", or demon, to cause pain and calamity to the family. This sacrifice is frequently repeated after a person's death, if his bones were deposited in a small repository; but if they are placed in a large one, the fear of his injuring the family is not so great, and the sacrifice is not so frequent, because "le bah ka ainu ka eskum", the religion and customs were observed regarding him."

Extract from the Rev. J. Pryse's Paper, p. 130.—"The reader is desired to observe that this form is always pronounced, when the person on pronouncing it is in the act of offering his thankofferings; hence it was thought necessary to give a few explanations of the movements of the speaker."

"*Thank-Offering to Secure the Protection of the Goddess.*"

(The Khasia words are, "Ka jing-ngih pyrakom ia ka Mei"; the offering is made in order to secure the kind offices of the goddess in the future, rather than to acknowledge past kindness.)

"Attend, O Goddess, that thou mayest protect us all as a family."* That we may increase and prosper. O Goddess, we are now about to sacrifice a large cock, and a large horned goat, also a plantain leaf, flour, baked rice, a heart, and a twig. Do thou, O Goddess, attend to us. I put up and cause to stand the offering for the purpose of appeasing thee, O Goddess.† O thou family-builder, I remove and drive away thirty demons, nine demons,‡ and Ka Tyrsit Ka Snor,§ that I may prepare and set aright the intestines, that I may cut the throat of the cock, and sprinkle the blood upon the twig.‖ Away, thou Ka Tyrsit ka Snor! I sweep away and remove thee, that I may open a clear road for the purpose of inquiring concerning the good and the evil. Thus it is proper that I should sacrifice a large horned goat. Attend thou, O Goddess, whilst I offer to thee a member and the backbone after I shall have had it here and made it ready.¶ Attend thou, while I observe and keep the rules and customs, and while I offer to thee a sacrifice in order that thou mayest give us

[101]

* "All as a family", "hynrih shi kur", "ka kur", is generally used among the Khasis to signify all those who are related by blood.

† While saying these words, the officer prepares the place, and [illegible]

‡ The officer, while saying this, throws some rice on the ground to pacify the evil spirits, and drive them away, lest they should frustrate the sacrifice and ceremonies. "Lalyen kmail kynthei kmail"—here neither thirty nor nine should be regarded as the exact number, but both signify any number indefinitely great; much in the manner as the number one thousand was regarded by the Jews, and as that number is occasionally used in Scripture. The phrase, "kynthei kmail", nine demons, seems to be an old phraseology, the exact meaning of which is not known at present; but "lalyen kmail", thirty demons, in the common phrase in use to signify an indefinitely great number—it means all.

§ The name of one of the most powerful and malignant demons.

‖ While speaking thus, the officer kills the cock, and sprinkles the blood on [illegible] above.

¶ The officer's hands are busily employed in preparing his sacrifice while he utters the above speech.

health, that we may increase and prosper, that we may walk securely, that we may enjoy our possession in security, that we may carefully ameliorate our families, that we may increase in number. Do thou embrace us, do thou confide in us, do thou support us whilst we observe the rules and customs, that we may become numerous, that we may offer thee sacrifices. Come thou and receive us, receive us at thy feet, that we may spread out on the right and on the left. Come, confide in us; come, support us; come, envelope our spirits with thy power.*

This sacrifice is generally made by a whole Kúr or family *all related* by blood.

Appendix C.

Crawfurd's "Embassy to Siam", p. 19.—"Under ordinary circumstances so much importance is attached to the rite of burning the dead, that if the ceremony cannot be performed soon after death, either from poverty, or from the party dying at a distance, the body is first buried, and afterwards, as soon as convenient or practicable, disinterred and consigned to the funeral pile. Of persons of distinction, a few of the bones are kept, and either preserved in urns in the houses of their relations, or buried, with little pyramidal monuments over them, in the ground adjacent to the temples. Of these monuments we saw a good number: they are small and paltry, without any inscription.

Appendix D.

W. Griffith's "Journals", p. 13.—"Close to the village are the burying-places of two Singphos. These have the usual structure of the construction of the tribe, the graves being covered by a high conical thatched roof. I find, from Bayfield, that they first dry their dead, preserving them in odd-shaped coffins until the drying process is completed; they then burn the body, afterwards collecting the ashes, which are finally deposited in the mounds over which the conical sheds are erected," etc., etc.

Appendix E.

Burning the Dead, etc.—"The practice of preserving dead bodies in honey has not arisen, as M. Schlagintweit states, from the extremely cold season experienced at Chorra. Bodies are burnt throughout the year, as I have witnessed. Men of rank or wealth are treated of the dry cold weather, and not burnt until a propitious time has been selected. The custom, no doubt, has been derived from its Burmese source."

---

* Mr. Pryse remarks: "However devoid of sense or poetic the traditional and unwritten literature of the Khasis may be considered, the writer is not sure that he is able to elicit much more sense from many parts of the much talked of literature of the Vedas and Puranas of the Hindu sages," and he offers a specimen from the Sanskrit.

			417·7
			594·6

The Largest Flat Stone or Gallery.

Greatest length, 20ft. 6in.; breadth, 10ft.; and mean thickness, about 1 foot: measured by co-ordinates laid off from a central line, at 2 feet apart, with the thickness at edge. Total of cubic feet is mean 329·0.

Flat Stones or Surface Size, and the two Seats.

	Mean breadth.	Mean length.	Mean thickness.	Cubic feet.
No. 1 = 6ft. 6in. × 5ft. 6in. × 6ft. 6in. =				55·0
2 = 5ft. 6in. × 3ft. 6in. × 1ft. 6in. =				32·0
3 = 5ft. 2in. × 3ft. 3in. × 1ft. 6in. =				27·0
4 = 5ft. 1in. × 2ft. 2in. × 1ft. 6in. =				17·0
5 = 5ft. 2in. × 2ft. 6in. × 1ft. 6in. =				32·0
6 = 3ft. 2in. × 1ft. 6in. ×				12·0
				200·0 cubic feet.

The specific gravity of granite being taken at 2·6, or 163 lbs., the weight of the Lalinghate granite by experiment, we have for the weight of the largest flat stone, 329 cubic feet = tons 23 : 19 : 3 : 7; for the other-six, 200 cubic feet = tons 13 : 9 : 1 : 9.

Discussion.

[illegible] 211 104 Dr. Cranstoun said the "Asiatic Researches" for the year 1829 contained a short paper by a Mr. Walters on the Khasi (Chiefs). The paper in question, which related to the village of Sopur-[illegible], also contained drawings of certain stone monuments; among others, four large circular stones standing together. They were only a few feet

9: Godwin-Austen G-3 (no date) 1872 ART Khasi ART

high, with a smooth surface, and resembled trees cut down; but it did not appear for what purpose they were used. Mr. Walters stated that the upright and stone down referred to in the paper were monuments to the memory of deceased rajahs and chiefs; that the upright slabs of granite were detached from the rock by means of fire; and that the dead bodies of the Khasi are burned at an appointed place, and the ashes placed in earthen pots, which are deposited under the stones. He (Dr. Charnock) doubted the suggested derivation of the name of the tribe. If derived from the Hindostani, it could not be very ancient. The chief interest in the paper lay in the fact that the Khasi erect these monuments at the present day.

Sir Duncan Gibb said there was a feature of some interest in the author's very interesting paper, and that was the statement that the stones of the megalithic remains described by him were obtained from quarries of sandstone not far distant from the place in which they were erected. Now, this point he looked upon as of considerable importance, because it so readily explained the comparative facility of transport of such huge masses of stone as enter into the construction of the monument described. In this country the most diverse opinions prevailed as to the locality whence the stones were obtained composing such monuments as are found at Stonehenge, Avebury, and other places, and he thought the author had added to the value of his paper by giving accurate details as to the locality whence the stone was obtained, composing the remarkable monuments so graphically illustrated; nevertheless, as a geologist, he should like to know from the author to what formation these sandstones belonged.

Col. A. Lane Fox thought the Institute might be congratulated upon the paper which they had just heard, which was one of the most important contributions to anthropology that had been received for some time past. It was impossible to overrate the value of the details of the manners and customs which Major Godwin Austen had given, and which were associated with the erection of these megalithic monuments at the present time. They might at some future time serve as links of evidence in interpreting the object of similar monuments in other times and places. The great problem before the Institute, he thought, was how far the builders of these monuments in our own time might be regarded as the representatives of those who erected them in the prehistoric period of Europe, or how far the monuments themselves might be regarded as survivals from the prehistoric age. The geographical distribution of these monuments, as he had before shown in the *Ethnological Journal*, was continuous, or nearly so, extending from those Kasias in the north-east of India to Central India, Persia, Asia Minor, the Crimea, along the north coast of Africa bordering the Mediterranean. They are found in Etruria, up the south and west coast of France into Britain, and as far as Denmark and Sweden. In so far as our present knowledge enabled us to judge, they were unknown in Russia proper, in Northern Asia, in Central and Southern Africa, and on the two continents of America, with the exception of Peru. Their continuous geographical distribu-

9: Godwin-Austen G-3 (no date) 1872 A87 Khasi A87

24
21
114

tion extending from our own country to the country of these Kassias was in favour of the view that their erection might be a practice handed down by them from the remotest time; and this gave great additional interest to the study of the customs of the people who built them. Evidence of great antiquity of these monuments in India was wanting; most of those examined in Central India have been found to be associated with implements of iron; but it had been shown that iron in the soil in that country would be preserved for ages, and there was no knowing how far back the use of this metal might have extended. There was one peculiar custom which in Europe, Africa, and Russia appeared to have nearly the same geographical distribution as these monuments, and which was sometimes associated with them; he alluded to the custom of placing pieces of rags upon trees at holy wells and elsewhere as a cure for diseases, and he should like to ask Major Austen whether this custom prevailed amongst these Kassias or in their neighbourhood.

Mr. Hugh Clarke observed that Colonel Fox had just enumerated the geographical region of megalithic monuments, and this was precisely the region described in his paper on the Caucasus-Tibetans. The areas are coincident. The Khasias are united among tribes, which have linguistic affinities with Georgian and Paleogeorgian. The present Khasias cannot, however, be considered as *in situ* in reference to the ancient migration connected with the stone monuments of the Dekkan, but are a subsequent migration. The connection of traditions between Khasias, etc., and Burmah is simply because they are obtained from a common centre in High Asia. Among the many valuable facts is that of the male and female stones, and the numbers of these are, perhaps, also male and female. The numbers three and seven signify middle. In two cases where eleven occur they are arranged as six and five. The male stones are more numerous than the female, and may have some relation to polyandrous notions. Egg divination may possibly have its metaphysical basis in the relations which exist in many languages in the form of words for eye (orgs) and egg. Major Austen's testimony to the moral qualities of the hill tribes is of value. Dr. Hunter, hon. member Anthropological Institute, has pointed out in his *Rural Life in Bengal* that it is on the hill tribes we must specially rely for the invigoration of our Indian empire.

Mr. W. C. Dewar: The great merit of this paper is that it is written by a careful observer who was an eye-witness of all which he describes; one such narrative is worth a volume of compilations. In our own region the megalith is a relic of very ancient date, the record, perhaps, of a semi-barbarous race, and all amount of theory is usually speculative and conjectural. In the east we learn there are kistvaens and cromlechs and dolmens of recent date, the constructors of which are yet in existence, and an inquiry into their history may elucidate by analogy some of the obscurity that has yet clouded our own megalithic monuments. Choir Gawr or Stonehenge is composed of several sorts of rock, blue stone and marble, sand and granite: why is this variety of selection? Among Major Austen's sketches there is

9: Godwin-Austen G-3 (no date) 1872 ART Khasi ART

M4
201
114

one of a beautiful megalithic temple, and he alluded to male and female stones. May this variety of quality and colour in the stones be symbolical of idol or astral or planetary worship? In Asia, it seems, these relics are chiefly within a certain latitude forming a belt from Oceania to the Mediterranean, the seat, indeed, of the anthropomorphous simia; and we have accounts of the relics of Asiatic pigmies discovered in and around one of these crumbels not remote from the Khasi Hills. Remembering the influence of climate on both mind and body, it might be interesting to inquire how far a superstitious psychology may be an ethnic trait among the less accomplished orientals.

Dr. A. Campbell, Mr. James Fergusson, Mr. J. W. Flower, Dr. Stoneson, Mr. E. B. Tylor, Mr. Wake, and the Chairman, also took part in the discussion.

The Stone Monuments *of the* Khasi Hills. By C. B. Clarke. [Communicated by Professor H. Fawcett, through Sir John Lubbock, Bart].*

[31] The Khasi Hills form a plateau, at a mean elevation of 4,500 feet above the sea, between the plain of Assam on the north and the plain of Sylhet on the south. They are inhabited by the [32] Khasi tribe, a people very distinct from the Hindoos north and south of them, and who are a branch of a race which extends eastward as far as South China. Immediately east of them are the *Jaintea* people, also called Sintengs, who are very closely allied in race and customs to the Khasi tribe. The [33] Jaintea country is physically a portion of the same plateau as the Khasi, and is only arbitrarily divided from it, and exhibits the same grassy hill-tops. The Khasi and Jaintea tribes together occupy the political district administered by the Deputy-Commissioner of Shillong, and the whole plateau is accordingly called the Shillong Plateau by Mr. Medlicott, the Dep.-Superintendent of the Geological Survey in India. Shillong is the English station which is the political capital. The plateau is remarkable for its freedom from the dense jungle which covers the neighbouring Himalayas at similar elevations; it is a fine rocky moor-like plateau, with isolated

* The woodcuts illustrating this paper have been kindly lent by Mr. Murray.

[p. 421]

'0:Clarke U-3 (no date)1874 AR7 Khasi AR7

153 patches of open forest, and with scattered fir trees and oaks. Though south of the Himalaya range the character of the
157 country is more like that found in the Himalayas at 4,000 feet higher elevation, and many plants, never collected in the Himalayas below 9,000 feet above sea-level, are found in the Khasi Hills between 4,500—6,000 feet. In this marvellous plateau the sub-alpine and the sub-tropical forms overlap; at the very foot of elegant palms may be gathered the identical stag's horn moss, which, in Britain, is found only on mountains. On a fir tree much resembling a scraggy Scotch-fir is seen growing the Vanda cœrulea, the king of epiphytic orchids; a gnarled oak will carry a gigantic tropical liana; the painted lady and many other British species of lepidoptera will be accompanied by gorgeous tropical papilios and by window moths eleven inches across the wing; the cuckoo and Himalayan pheasant are above, while the tiger, the wild elephant and the green python are below. Justly has Dr. Hooker observed, "I know no spot in the world more calculated to fascinate the naturalist who, while appreciating the elements of which a landscape is composed, is also keenly alive to the beauty and grandeur of tropical scenery."

211 2. Almost throughout Khasi-land, and in a less degree through the Jaintea country, monumental stones are common. They are numerous in villages in the valleys, but are specially prominent, and sometimes of gigantic size, scattered over the rounded hill-tops where they form a feature in the landscape. In all modern treatises of Archæology and Anthropology the study of monumental stones forms an important chapter. Monuments of a remarkable similarity in design are found alike in Europe, Asia, and isolated islands in the Pacific Ocean, and these are in general of such extreme antiquity that they are treated as belonging to the prehistoric age. The Khasi stone monuments have attracted already much attention; first, because of their great number and size; and, secondly and chiefly, because on these hills the erection of these monuments is now in full practice. It is reasonably supposed that a careful study of the Khasi method of raising the stones, and of the traditions or customs in accordance with which they raise them, may throw some light upon more ancient monuments of the same kind, even upon Stonehenge. It has been proposed to send out a commission from England to survey these Khasi stone monuments. They are described by Dr. Hooker, in his work (Min. Journ. II. 276), also by Colonel Fisher in the *Calcutta Review*, and some account has been lately given by Major Godwin-Austen in the "Journal of the Anthropological Institute," No. 2, Oct. 1871.[1] The present memoir was written

[1] [This article has been prepared for Hodgkin. —Analyst]

10: Clarke U-3 (no date)1874 AR7 Khasi AR7

years ago, previous to some of these published accounts, but 211
contains several details not given by any of them.

3. The Khasi stones are of three classes, viz:—

a. The funeral pyres.
b. The kists containing the pots of ashes.
c. The monumental groups.

211
764

It is the last class (c.) which has, hitherto, nearly monopolised attention, and to which the published notices almost exclusively refer.

4. The Funeral Pyres.—When a rich man dies his body is generally reduced to ashes immediately, but his honorific cremation does not take place till some time, often a year, afterwards. In the interim the earthen jar containing his ashes is kept "under a stone" (in Khasi talk) *i.e.*, in a small temporary closed kist. For the honorific burning a pyre is prepared on which the ashes are burnt over again a very little, *pro forma*, and the great funeral feast follows.

The pyre is placed just outside the village of the deceased, on a hillock or in a clear space and near the road. The modern pyres are usually square (approximately), the sides of stone (dressed or undressed according to the means of the family) about four or five feet high, the whole of the middle filled with loose stones and earth up to the level of the walls.*

A pyre was raised about four years ago just outside the village of Mawmai close by the English main road. Many hundreds of men and women carrying from ½ cwt. to 1½ cwt. on their backs pass close by this pyre daily and a considerable per centage rest a few minutes on it. Ledges are raised on two sides, but are by no means essential to a pyre; they merely add a utility. The Khasis mean the ledges to be a convenient height to rest on with a load, and each ledge satisfies this condition, but no Khasi would dream of measuring with a two-foot rule, so as to get them the same height. So the pyre itself is meant to be a square or thereabouts. All the Khasi stonework is done in this way; they do not care to make it geometrically accurate, and consequently in my opinion little valuable result could be drawn from any minutiæ measurement and mapping of the stone monuments.

This pyre at the entrance to Mawmai is one of the most complete modern pyres. The ancient pyres were very seldom (if ever) made with hewn stones, and the Khasis state that in former times they were as often made round (*i. e.* oval) as square. Being thus originally very roughly shapen heaps of loose

* For admirable illustrations of the Khasi monuments, see "Proceedings of the Soc. Ant., Scotland," vol. i, p. 94. Fergusson's "Rude Stone Monuments," chap. viii, and "Asiatic Researches," vol. xvii, p. 368. [Ed.] 113

10:Clarke U-3 (no date)1874 AR7 Khasi AR7

211 unhewn stones, and, being used on only one occasion, they
764 rapidly fall into complete decay. Dr. Hooker mentions that he repeatedly remarked cones of earth, clay, and pebbles, about twelve feet high, upon the hills, which appeared to be artificial. These must have been the broken down pyres.

764 5. THE KISTS CONTAINING THE POTS OF ASHES.—These consist of a circle or square of upright stones, fitting as closely as a Khasi can conveniently make them to do, with one round or square flat stone on the top. They vary in size from a few inches diameter to six or seven feet.

The circular kists are more especially used by the people of the valleys, *i. e.*, who inhabit villages at less than 3,000 feet above the sea; at Walong and Sabhar, which stand west and east of the main Government road as it steeply ascends from Sylhet, there are hundreds (I am not sure that there are not thousands) of kists of this type inside the village. The Khasis of the grassy plateau, the true Nongphlang (*i. e.*, people of the grass in Khasi language, the genuine representative type of the tribe) very commonly employ square kists.

One great feature of the Khasi sepulture is that the ashes of the families are collected from time to time. At first the ashes of a man are probably kept in a small kist. Then after a few years a great general family ceremony is held, and the ashes of the various individuals of the family are collected from the smaller kists. The ashes of all the men are collected into one earthen jar, the ashes of all the women are collected into another, and these two jars are placed in one larger kist, the jar

10: Clarke U-3 (no date)1874 AR7 Khasi AR7

of women's ashes next the door, *i. e.*, the last stone closed; the reason of which is that in Khasi-land the woman is always mistress of the house. The quantity of ashes altogether is very small. 744

Each occasion of collection of family ashes is accompanied by a grand family feast, which is mainly of pig. No house of pig could by any chance get inside the kist; that would be horror.

The stones forming the kist fit so closely so a Khasi can conveniently make them; a mouse might, however, generally get in. In the neck of each earthen jar of ashes a close-fitting stone is placed so that no animal could get at the ashes within; but this, of course, does not fit by any means air-tight, and the damp of the climate affects the ashes so much that on re-opening the kists after even a few years, for the purpose of agglomerating the family ashes, it frequently happens that no trace of ashes is found in the earthen jars.

In the descriptions of the Khasi stone monuments hitherto published, these numerous kists appear often overlooked or confounded with the horizontal monumental slab. The kists differ entirely in their object and meaning, and in being closed. So long as they contain earthen jars they cannot be mistaken; but by the continual collection of family ashes the majority of the square kists are left with one side broken down and empty, and in such a state it is sometimes impossible to determine whether the horizontal slab be a monument or the lid of an old kist, unless a family can be found to claim it as their monument. Where there are no upright monumental stones near I incline to suppose that a large majority of these doubtful remains are kists and not monuments.

6. The Monumental Group.—There are two general types of monumental stones, viz., the upright slab and the horizontal slab. 2 ft

The upright slabs are commonly grouped in threes or fives (sometimes they are seven or more); they are nearly always oblong and set up in a row with the tallest stone in the

10:Clarke U-1 (no date)1874 ART Khasi ART

291 middle; central is a representation of a common type containing five stones.

A common height for the middle stone of such a monument will be six to ten feet, by 2-3 feet wide. The stones are sunk not very deep, say 1-2 feet, into the earth; great numbers of fallen stones are seen. Monuments of this character are often placed on the crest of the hills, and in many parts of Khasi-land the landscape appears dotted over with them.

The horizontal slabs are commonly grouped in pairs. The flat slabs may be 5-10 feet long, and are rarely so exactly quadrangular, and they generally have some of the corners irregularly rounded off, and thus pass into the oval or round horizontal slab, which is also a frequent type.

The upright and horizontal slabs are often combined to form a single monument, and perhaps the commonest of all the combinations is that in which five upright slabs have two horizontal before them. The combinations adopted are, however, endless in variety. In these combinations it must be understood that the whole group of stones forms one indivisible monument, which may be the monument of one individual, a household, or a family. Families retain a history of the monuments which belong to the family, and thus in a small degree of the names of their ancestors. Such family monuments may be repaired, added to, or rebuilt from time to time. They are not necessarily placed where the family ashes are kept in kists, or near such kists; but they are usually at no great distance from the village where the family dwells.

The putting up a large stone, say one that stands fifteen feet out of the ground, is a very costly matter, and the monuments of the first class in size in the Khasi country are not very numerous; in the monuments of small stones, the number of stones is often great, I have noticed twenty-one stones in a row, no stone exceeding two feet high.

The upright slabs are (particularly when unaccompanied by any horizontal slabs) usually placed in a straight line. But frequently, where the horizontal slab is round, the upright slabs stand in the arc of a circle, and sometimes the upright slabs are placed in a curved line apparently by accident, or because the nature of the stony ground suggested such an arrangement. Two such monuments occur on the main road to Lailiankote.

Major Godwin-Austen states in his article on the subject that
174 the upright slabs always stand in threes, five, seven, etc. This
207 is a mistake; to have the number of stones unequal, with the
248 central slab the tallest, is perhaps the plan adopted in forty-nine monuments out of fifty; but among the vast variety of monuments

Clarke U-3 (no date)1874 AR7 Khasi AR7

In these Khasi monuments on the binary type may now be found in which there are two equal upright slabs in the middle, and the other stones placed symmetrically on each side of them. 209 210

7. There are three kinds of rock employed by the Khasis for stone monuments, viz.— 211

a. The Cherra sandstone.
b. The Shillong sandstone.
c. The granite.

Small stones are conveyed considerable distances from the place of manufacture before they are set up—large stones are not—hence the material of the monuments is determined everywhere geologically.

a. The Cherra sandstone are tertiary and outcrops extend along the southern edge of the plateau and producing the ledges which mark its abrupt termination. In the great thickness of these sandstones are many beds in which the rock occurs in large sheets with very few joints and well-adapted for working out large slabs therefrom. The sandstone is generally very hard, but not so hard but that the Khasis can work it with their own native-made iron tools. 212

There is a quarry, now in full work, about half-a-mile out of the old Cherra cantonment, upon the Mawlai path, where slabs may be seen in preparation. The slabs made from the Cherra sandstones, admitting of being worked, are generally hewn pretty fairly to a shape and smoothed before being set up. The ancient monuments are, however, often made of very rough slabs. 213

All the well-known monuments near the old Cherra station are made of these sandstones, as also the large monuments at Mawlai, Mawmai, and Litinow. These three monuments all stand on sheets of Cherra sandstone and the stones were cut out of the rock hard by where they now stand. The stones procured now outside the Cherra cantonment, being for transport, are more of great size. 214

The Khasis also work gigantic slabs of stone for bridges. Where the span is anything under twenty feet a single slab four or five feet wide and two feet thick is thrown across; piers of enormous blocks of sandstone are raised on each side, on which the slab may rest, if there is the constant fear that the water rises, in any flood, reach the under surface of the slab. As compared with such a bridge the Khasis regard the best efforts of the English engineers as mere molehills. The arch at Amwee figured by Dr. Hooker is Bengali work. 215

b. The Shillong sandstones extend over a large area of the northern portion of the plateau: they are often more argillaceous 216

10:Clarke U-3 (no date)1574 AR7 Khasi AR7

185 (sometimes they) than the Cherra monoliths, and are geologically ancient, probably being of palæozoic age, but containing no fossils. They are generally inclined at high angles and the beds are full of joints, and do not admit of large slabs being got out of them. I know of no monument of the first class made out of Shillong rocks, but slabs of six feet high are very common. They are generally obtained by splitting out with wooden wedges and are not often finished with iron tools. The monuments on the Shillong sandstone area are therefore of a much rougher character than the Cherra monuments, the stones irregular in shape, and the stones that should correspond in size only corresponding very roughly. It is often very difficult to say whether these monuments are of the regular 3-5-7 stonal type or not, but they all are designed in general accord with the two great types of upright and horizontal slabs.

186 c. A large area, perhaps 1,000 square miles, of the Shillong plateau, is covered with scattered blocks of granite, varying in size up to masses as large as cottages: perhaps the Rollong rock itself (figured by Hooker) might be counted as the extreme size

218

187 such blocks have much. This granite area runs east and west through the centre (or somewhat through the northern half) of the plateau. It is of great width and continuity westward, however broken into isolated areas in the centre of the hills, and

12: Clarke U-3 (no date)1874 ART Khasi ART

to East Jaintia, according to the Khasis, who are good geologists. 135

These granite blocks are found on the steep hill sides and on the hill tops, the valleys between being often entirely destitute of them. The highest hills of the plateau are especially favoured with them as Nongluo (Nonkhlow) and Lailiankote. On the edges of the granite area and on the isolated peaks of the country, outlying heaps of granite blocks are found. Around *Jowyo* (the *Jaintia*, capital), the country is very uniformly at a level of about 4000-4500 feet above the sea, and not a granite block is to be seen there, nor in marching east thence, where you keep at the same level, until you reach the Rallang hill about twelve miles east of *Jowyo*, where the blocks appear again in full force all over the summit of the hill.

From these granite blocks, slabs of almost any size might be obtained, but the Khasi native iron tools will not work this granite, which is very hard, and the granite slabs used in the Khasi monuments are merely flakes obtained by heating the block with fire along a line and then pouring cold water upon it. The upright granite slabs thus frequently exhibit one convex and one concave face, as also do the horizontal slabs which are round or oval, not quadrangular. The flakes are entirely unworked in the Khasi territory, so that the granite monuments have an extreme roughness and ruggedness about them which has been commonly supposed to indicate extreme antiquity. This I believe is altogether a mistake, but at the present time the taste of the people appears educated up to a preference for worked stones, and I have not seen any granite monument in process of construction, though I am told that many have been made within the memory of man. 136

There is an important difference in the *Jaintia* granite monuments which are neatly worked to the approved form. The Bengali Rajahs of the plains *Jaintia* and *Jaintiapore*, have long established an influence in the hills, and Bengali workmen have thus penetrated the hills from *Jaintiapore* by *Amwee* up to *Jowyo*, the hill capital, and further. The Bengali tools are able to fashion this hard granite, and the gigantic slabs, whether used for monuments or for bridges, are commonly found neatly hewn, all the way from *Jaintiapore* up to *Nartiang*, north of *Jowyo*.

Large granite stones are rather more difficult to move than sandstones of the same dimensions, and the first class granite monuments are found on the spot where the granite blocks abound. Where an isolated hill was covered with large blocks, and no blocks were seen anywhere else near, this seems at once to have suggested such a hill as a suitable spot for monumental sections. In just the same way at Stonehenge the large stones

10:Clarke U-3 (no date)1874 AR? Khasi AR?

[16] were all found within 200 yards of where they now stand, as may be inferred from the story stone at about that distance from Shnongpdeng and not made use of: the small stones were probably brought a considerable distance from the government seat in the north of the county.

[16] [17] 8. In the setting up of these monuments the Khasis at the present day use only the simplest and most direct mechanical means. For transporting a big stone wooden rollers are placed beneath it and the stone is then drawn by a large number of men harnessed to it by rattan ropes. To set one of the slabs upright, one end is slipped into a hole dug 1-2 feet in the ground, while the other end is tugged by similar ropes. For putting one stone upon another, as in a horizontal slab monument, it is drawn up a sloping stage of bamboo, but if the slab be of great weight, a slope of earth must be constructed, up which it may be pulled. These are the present Khasi methods, and it is, of course, highly probable that similar measures were employed in ancient times. I add a more particular account of some of the larger monuments.

[20] 9. The monument on the Government main road, about six miles north of Cherra, not far from the village of Litnow, stands on sheets of Cherra sandstone, out of which the slabs were cut. The tallest stone was about fifteen feet out of the ground. The five stones on the left-hand side (west) of the road were erected when I first visited the hills. The five stones on the right-hand side were erected about four years ago, the family to whom the monument belongs having determined on such an addition. The two portions form one indivisible monument, and exactly correspond, the stones being accurately worked and rounded. The two top-knots are seen in several other monuments, but most, I think, be held proof always of a very late date for their erection. At the Mawmai [18] monument a large rosette is carved on the face of the middle of the big central upright slab, which is also I presume modern work.

10. The monument at Mawlee village. This is, perhaps, the monument in all the hills which exhibits the largest slabs of Cherra sandstone. It stands on sheets of the same rock and there can be little doubt that the slabs were cut on the spot. It is of the (less usual) binary type.

11. The monuments at Bamboi to the west of Khasi-land. These consist of numerous horizontal and vertical slabs of no great size, the upright slabs being 3-4 feet out of the ground, but remarkable for their arrangement on a long open slope outside the village. The monuments stand all close together, reflected in a chandelier, so that it is not easy to separate

10: Clarke U-3 (no date)1874 AR7 Khasi AR7

ent each movement. The upright slabs are placed mainly in 2.11
rows, the plane of each slab being parallel to a horizontal line of the sloping ground. The effect of the whole, at a little distance, is exactly that of a ruinous English church-yard. The upright and the flat slabs so exactly correspond to the two types of tombstone which were in almost universal use in England before the rise of modern ritualism, that the correspondence can hardly escape notice. It is improbable that this correspondence can be wholly accidental.

12. The monuments at Laitlankote. These are chiefly made out of a heap of granite blocks which occupy the level top of a small hill, and among them are the largest stones in the Khasi country. Some of the upright slabs are as much as 18 feet out of the ground, and the largest horizontal slab is stated by Colonel Rahan, in his account, to be an irregular ellipse; major axis, 22 feet; minor axis, 15 feet; thickness, about 2 feet. It is one block of granite, and, like all the other stones here, is unhewn.

These Laitlankote monuments are collected on the level top of this hill, and (partly, perhaps, from the nature of the ground) they effect, more or less, a circular arrangement—the upright slabs being placed irregularly in arcs of circles on one side of the oval horizontal slabs. The slabs being of unhewn granite are necessarily oval and not quadrangular; but it should be remarked that, in marching from Cherra to Laitlankote, the monuments will be seen to pass quite gradually from the plane to the circular type.

At Laitlankote, the largest horizontal slab is granite; of the

10:Clarke U-3 (no date)1974 AR7 Khasi AR7

211 others, some are granite, some Shilling sandstone. Of the large upright slabs round the largest horizontal slab, half are granite, half (placed with-it method) are Shilling sandstone. And so with the other monuments on this hill. There is no general plan or system (so far as I can trace) in the arrangement of these monuments, as a whole.

It has been inferred from the gigantic size, circular arrangement, and rude workmanship of these Laitlankote monuments, that they are of extreme antiquity, probably the oldest in the hills. I see no sufficient grounds for such an assumption. The workmanship is no rougher than in other Khasi monuments made of granite and Shilling sandstone: the quasi-circular arrangement may be seen in hundreds of monuments: and as to the size of the stones, that proves to me, chiefly, that the Laitlankote monuments were erected when Laitlankote was a dominant and prosperous village. I do not say that the Laitlankote monuments may not be very old, but I should not be the least surprised if positive proof turned up that they had been erected within the last century.

12. The monuments at Nartiang, figured by Dr. Hooker, and called by him, the "Nartiang Stonehenge." Nartiang is in the Jaintia territory, about ten miles east of the Khasi boundary. Dr. Hooker's picture is on a small scale, and gives little idea of the great extent of the Nartiang monuments, which stand also more closely packed than I should have supposed from the picture.

This Nartiang Stonehenge contains the largest stones of any monuments in the Shilling plateau; they are also remarkable for being of hewn granite, and further, they are not scattered about the hill tops, but placed within the sacred grove of the village, in a valley near a lake, so that they stand, mingled with large trees, in a manner which I have seen nowhere else in Khasiland.

One of the worked granite blocks is 27 feet high out of the ground, about 6 feet broad at the base, and 2½ feet thick, and is neatly shaped and dressed. This, I suppose to be the work of Bengali artisans, or of their Jaintia apprentices, possibly. There are other very large worked granite slabs; one now used as a bridge, but, perhaps, originally intended for a monument. The area at Nartiang, thickly covered with monuments, is not less than an acre, and there are more scattered monuments around. The reading name for this Stonehenge is, that at Nartiang there occurs an outlying cluster of granite blocks. None of the large stones at Nartiang appear to have been moved many feet. The numerous monuments are all referible to the two types of upright and horizontal slabs, as indicated in the picture of Dr. Hooker.

Until the English period, say up to 1830, it does not appear that the Hindoos penetrated much into the Khasi hills; but they did into the Jaintea hills, and I imagine that either themselves or their lieutenants reached as far as Nartiang. There is a typical large movement of upright slabs at Jaintiapore, the capital of the Jaintea plains. 211 177

14. The notes for the above account of the stone monuments of the Khasi hills were placed in the hands of Colonel McCulloch (late Governor-General's agent at Munipore), and I have availed myself of many suggestions which he has kindly given me in the present paper. 000

Discussion.

Major Godwin-Austen said, one of the most interesting points of Mr. Clarke's paper is the notice of the separation of the sexes of the men and women of a family, at certain intervals, into separate earthen pots. I may mention that the shape of the cysts is never the same in any one part of the Khasi hills; sometimes they are oblong and above ground, and sometimes they stand on a raised platform. On opening one, in a part of the country long since deserted, I found entire bones, enlisted, and ornaments; these are now always taken off the body before cremation, but, evidently, in former times, were buried with the dead. The distance the Khasis sometimes carry the monumental stones is considerable. I know of blocks of granite that have been taken into the sandstone area nearly four miles. The custom of setting up these stones is fast dying out, and some villages have given it up altogether. It is impossible to say what age some of the monoliths may be; all history of most of them is gone, and the present generation can give no account of them. The custom is one of great antiquity, I think, and there is no reason why some of the stones, now standing, may not be many hundred years old.

Mr. A. L. Lewis said, if he, as a visitor, might be allowed to make a few remarks, he would suggest that there was no reason whatever for connecting the monuments of the Khasis with those of Britain. Mr. Clarke had spoken of stones lying round Stonehenge as showing that the stones composing it had been gathered close at hand; but this was not so, as they had been brought from a distance of some miles, and there were no loose stones lying round Stonehenge, except those which had been placed there by design. That design was found running through all the British circles that he had seen; but it was certainly not found in the Khasi monuments. It was, however, found in the circles in southern India, figured by Colonel Forbes Leslie, which differed, therefore, from the Khasi monuments, and resembled those of Britain. He had pointed this out before the British Association as long ago as 1869, in a paper which would be found printed in full in the *Journal of Anthropology*, 1870, p. 206, and also in subsequent papers read before the Anthropological Society and Institute, and published in the proceedings.

[p 1]

KHASI KINSHIP AND SOCIAL ORGANISATION

BY

PROF. E. P. CHATTOPADHYAY.

Introduction

124 In a paper on Khasi marriage rules Prof. Hutton has tried
121 to explain the special features of the Khasi kinship terms and marriage rules on the hypothesis of a former dual division of Khasi Society, and certain new social forces which came into
D operation when the dual society broke up (1).

Hutton used for his work, the kinship terms noted in the Assam Census Report (2), Gordon's work on Khasis (3) and a dictionary by U. Nongrang. A full list of Khasi kinship terms was published by Rai Bahadur S. C. Roy shortly afterwards (4). The list is stated to have been compiled with the help of the ex-Siem of Cherra, on the genealogical method. The genealogies have not however been printed, and detailed notes are not available.

Recently the writer of this paper proceeded to the village of Mawphlang, the head-quarters of the Khasi State of this name and collected a certain amount of data to discuss this
C92 [36] problem. The village is situated to the south-west of Shillong, at a distance of sixteen miles, and has preserved the old customs to a fair extent. It is ruled over by a lyngdoh or priest-chief, assisted by four myntris. At the time of the visit, the lyngdoh was away, suspended by the Political Agent for misgovernment, and the powers of the State were vested in the council of myntris. The senior myntri U Sobo Rai, who is an old man

[Also, [illegible] has been presented in [illegible] Khasi [illegible] Society ?]

nearly seventy years of age, spoke English a little, and kindly agreed to help by acting as interpreter. The Chowkidar of the bungalow, a Christian Khasi who spoke Hindi tolerably well was however our principal interpreter. Before proceeding to the village, I had studied Roberts' Khasi Grammar and also learnt simple sentences in Khasi necessary for collecting genealogies, kinship terms and connected details, like the inheritance of the ancestral house and lands. This portion of the data was collected entirely through questions and answers in Khasi; the other details were obtained with the help of myatri U Soba Rai and his friends and the Chowkidar, U Hodrington. On important points however, some checking was made, by simple questions in Khasi, which involved definite answers in the affirmative or negative. My students who had accompanied me for training in field studies, repeated some of my observations, in my presence and with my help and guidance.

My best thanks are due to Mr. E. Gantlin, Deputy Commissioner, Khasi and Jaintia Hills, for furnishing me with the letter of introduction to U Soba Rai and for other facilities. His published notes on Khasi law, especially the chapters on inheritance also proved to be of great value in carrying out the enquiries (I). In the subsequent portions of this article, references to the works of Gordon and Gantlin, will be indicated merely by (G) and (GN) respectively.

[p. 3]

CHAPTER I

According to traditions preserved by the local people, the Iangtlah clan were the first settlers in Mawphlang. The Lyngkhe were invited to come and settle as the Iangtlah wanted priests to perform proper worship for their village. Other clans came later and settled in the State. These old clans are known as Khadar Kur. Myntris are elected from the following four clans—Iangtlah, Khar Shiing, Khar Hunai and Khar Sohlia. The above traditions of the origin of the settlement were furnished by the myntri U Sohn Bai, his sister's husband U Alisan and others. The list of Khadar Kur furnished by the myntri is noted below :— 101 [124]

(1) Iangtlah.	(2) Lyngkhe.	(3) Khar Shiing.
(4) Khar Hunai	(5) Khar Sohlia.	(6) Khar Phonnap.
(7) Khar Kynsie.	(8) Khar Sohkhar.	(9) Marbaniang.
(10) Khar Nartiang.	(11) Khar Mawphlang.	(12) Khar Syntiew.

The genealogy of myntri U Sohn Bai, of myntri U Gung Singh and others are shown at the end of this chapter. In collecting kinship terms, three questions were asked of the informant : 125 601

(i). What is the relationship of B to the informant A (and of A to B). This is shown in the tables as the kinship term.

(ii). What the informant A called B (and conversely). This is shown in the tables as the term of address.

(iii). How the informant A referred to the relationship of B to C, another relative. This is shown as the term of reference.

Generally the terms for (i) and (iii) are the same. In a few instances a distinction was said to be made. Many people however do not observe such distinctions. In the list of kinship terms published by Rai Bahadur S. C. Roy, this distinction has not been made. While his list agrees with mine in many respects, there are important differences. He has noted certain identities in kinship terms, which I did not find, and which have not been noted also in the Census Report.

The kinship system of the Khasis has certain special features:

(a) There is a clear distinction drawn in the kinship terms, with regard to seniority and juniority in age between siblings. This distinction is also made in the generation above that of the speaker, with regard to the mother's sisters, and father's brothers and their spouses. It is also observed with regard to the mother's brothers but not with regard to the father's sisters or the spouses, or their children. The distinction is however observed throughout in terms of address.

(b) A woman refers to her sister's children by the same term as a man to his brother's children; but a woman refers to her brother's children by a different term, which is applied also by her brother to her children.

(c) Certain kin are grouped together. The same term, for example is applied to the mother, step mother, the mother's sisters, and the wives of the brothers of the father. Similarly, the father, the step father, the father's brothers and the husbands of the mother's sisters are grouped together. In both cases, the actual father and mother are referred to by a term, to which adjectives denoting seniority and juniority are added for the other relatives. The mother's brother and the father's sister's husband have a common term. But the mother's brother is always distinguished by adding the adjective of age noting his position as elder or younger uncle. The father's sister's husband is not so distinguished. The sister of the father is clearly distinguished

from the wife of mother's brother by a term denoting relationship through the father. The mother's brother's wife was stated by my informants in Mawphlang not to be denoted by the term "Kha" or "Kain Kha" which was applied only to the father's sister. She was merely Kain. 601

(d) A man and his wife applied to the brothers and sisters of the spouse, with one exception the same terms (with a term added to qualify) of relationship as for own brothers and sisters. This practice is extended also to the children of these relatives. The exception occurs with regard to the term used by a man towards his sister's husband, and by the latter to him. It is a single special term, the distinction extending to the term of address. In the other cases, the qualifying term even is dropped in address and no distinction is then made between a sister and the wife's sister, or a brother and the husband's brother.

In order to appreciate the significance of features of Khasi Kinship, it is necessary to note in brief, the rules of descent, inheritance, and succession among the Khasis. An excellent summary of these have been given by Gurdon. The rules of inheritance and land tenure have been further elucidated by Cantlie and others in the work already mentioned. I shall illustrate essential points in the next chapter with reference to the genealogies included in this paper, and also note certain additional details which were observed by me. 601 611

Abbreviations used in the kinship table are those employed in an earlier paper. They are noted below :—

F—father	M—mother	B—brother
S—sister	S—son	D—daughter
H—husband	W—wife	C—child
e—elder	y—younger	o—other
e.s.—man speaking	e.s.—woman speaking	

The prefixes U and Ka have not been noted in the case of most of the kinship terms as superfluous.

60 In the genealogies Ka before a name denotes a woman, and U, a man. Hence no special symbols have been used to distinguish sex. Abbreviations used are :—

[128] [illegible] — dead. [illegible] — not remembered. [illegible] — not known.
[illegible] — died young. [illegible] — unmarried. [illegible] — not born.

Unless the village of birth is stated to be otherwise, it is Mawphlang.

(a) Myint U Sein Rai insisted on the form I Kpa and similar forms for certain relatives as noted. (Kpa—Pa).

(b) The kinship term and term of reference was not distinguished by younger informants.

(c) The kinship term and term of reference was not distinguished by younger informants. Two Christian informants gave the term Mama in place of Kai and Sangbak. It is the Bengali and Assamese term for the M.B.

(d) No distinction was made by age.

(e) No distinction by age. Younger informants said that "Kai" was also used in place of "Ma".

(f) No difference according to sex of speaker. But some of the younger informants stated Hyouaw to be the kinship term in place of Bak and Kong for e.B. and e.S. and also M.S.E. and M.S.D. if older.

(g) The older informants gave these terms. Young men and women failed to distinguish between kinship terms and those of address commonly.

(h) The husband and wife address each other as parents of the children.

601

[p.19]

CHAPTER II

Descent, among Khasis, is counted through the mother; residence is also matrilocal. A woman lives with her mother from her birth until some time after her marriage. After one or two children have been born her husband may build for his family a house on the village land, in the village of the wife; this house becomes her property. The ancestral house goes to the youngest daughter. In the absence of a daughter the next youngest sister's youngest daughter becomes the heiress. Rarely, a man will take his wife to his mother's village. This case will be considered later.

A man is born, in the house of the mother's mother, or if the parents have built a separate house, in the house of his mother. He continues to live there until his marriage, when he generally goes to live in the wife's mother's house, whether it is in the same village or a different village.

The mysteri U Sohn Rai married in the village of Mawphlang, where his mother also lived, and built the house, which is known as his house. It is, technically, the property of his wife Ka Shyrugh and will be inherited by Ka Dhaiboo, and thereafter, by Ka Elistima. The house of U Sohn Rai's mother, Ka Jin has been inherited by Ka Eirihun, and will go in the next generation to Ka Pem. If the latter has no daughters, the property will go to Ka Drei and failing her heiress, to Ka Phre and then to Ka Lamih. If she has no issue, it will pass to her sister Ka Lasah and so on to Ka Lajer. If Ka Lajer has no daughters, the property will go to Ka Jem's family to her youngest daughter Ka Aibon. As she has only sons, the next heiress will be Ka Synon, and if she predeceases Ka Aibon or has no daughters, the girl Ka Risibon will inherit next. If

427 she does not have any daughter, the property will pass to the female descendants of sisters of Ka Long, as her elder sisters Ka Lamon and Ka Lalem have left no daughters. It is therefore necessary to distinguish carefully between an elder and a younger sister, and also similarly between sisters of the mother. The generation of the women of the same house and extended family requires to be noted with care.

The youngest daughter and heiress is termed the Ka Khaddah. As Cantlie remarks the "Ka Khaddah is the custodian of the family property, not the full heir in the sense known to other systems of law, but a limited heir. She is
[364] responsible for the performance of religious ceremonies.....; she cremates her mother, and if she be Ka Khaddah of the whole family, she puts the bones of all members in their final resting place under the stone (mawbah) of the clan. The expenses of this ceremony are considerable and for this reason she gets a larger share of property, or in some cases a piece of family property in addition and apart from her separate share. Members of the family who are unable to earn for themselves and have no children to earn for them have the right of being fed at the ing-Khaddah" (house of the heiress).

429 The management of the property is however vested in the men of the family. The ancestral property of the family of myntri U Subu R...'s mother was under the management of U Joi, in his mother's life-time; then, on the death U Joi, the next brother U Doi became manager. After U Doi, the management came to U Subu Rai. After him, the authority will pass to U Hojem, as U Sumkurai is dead and then to U Nodem. Any sons of Ka Pres and other sisters will not get any precedence over U Nodem. As the senior U Kai of the Iangbiah Kur, U Subu Rai is also the manager of the common property of the Kur.
[427] This land has been leased out to various persons and the total income is divided among the different houses of the Kur.
428 Whenever there is money to be distributed U Subu Rai calls together all the representatives of the Iangbiah houses and

Ik Chatopadhyay 2-4, 5 (no date) 1941 ART Khasi ART

divides equally. U Subu Rai explained that each house counted as a separate unit. Thus if Ka Jem, Ka Jin and all their daughters were alive, the married daughters who lived in a separate house, namely, Ka Laimon, Ka Laibon, Ka Aimon and Ka Hoiman of Ka Jem's house, and Ka Phre of Ka Jin's line, would each get a share. But Ka Jem and her Ka Khadduh Ka Aibon who lives in the mother's house would get only one share. So would Ka Jin, Ka Eiribon and the unmarried daughters of the latter. The descendants of Ka Lung would get seven equal shares for distribution to each house, and not two shares first, divided later into shares corresponding to the number of daughters for Ka Jem's and Ka Jin's house. The manager does not get any share of the collections. Authority in the management of the ancestral property therefore passes from one male to another, in the extended family, and the Kur, in a manner which necessitates a clear distinction of seniority and juniority of brothers, among themselves and also of sisters with regard to brothers.

The case of succession is similar. Gurdon notes that the Siemship in Mylliem State passes from a man to his next brother, and "failing such brothers, by the eldest of his sisters' sons; failing such nephews by the eldest of the sons of his sisters' daughters; failing such grand nephews by the eldest of the sons of his mother's sisters" and so forth in the female line. In Nongkrem, the son or similar male relative of the High Priestess becomes by delegation a Siem. The office of the High Priestess passes from a woman to her eldest surviving daughter; and failing daughters to the eldest daughter of her eldest daughter; failing daughters of her eldest daughter, to the eldest daughter of her second daughter, and so on. This is the customary line of succession, and is stated by Gurdon to be "uniform in all cases" practically.

Neither levirate, nor sororate are practised by the Khasis. Widows are stated (G) quite often not to remarry if there are daughters. There is no question of the control of the property

587 421 of the woman by her husband. No occasion arises either of taking his place on death, by his brother or by sister's son; or of a sister of a deceased wife being made over to a man, as is the custom among Garos, where the husband of the heiress manages the property of his wife. Among the Khasis, the widow or widower cannot normally remarry before the end of a year after the death of the husband or wife. When a year is over, a payment is made to the Kur of the deceased to remove 587 782 the disability. If the man or woman want to remarry before the year is out, a larger sum is paid. In Mawphlang, a sum of Rs. 5-4-0 is paid at the end of the year and Rs. 11-4-0 for untimely remarriage (within the year). The payment is made to the Ka Khadduh of the deceased in each case, and a ceremony severing the relation with the dead spouse is performed. A pig is purchased with the money and it is sacrificed in the house of the Ka Khadduh by a man—usually a neighbour. If the deceased was a man, the following invocation is made: [539] "Ha kane ka mied la shim nong sang bad knia nong sang is phi. Ka tnga uta uta ban ia khuid."

Free translation :—

"On this night the tabooed person is sacrificing to you. The wife of so-and-so (naming the man) is hereby made pure."

The pig is then killed by thrusting an iron spike through the shoulder. It is then cooked and eaten by the people present. This mode of killing is known as "dung."

The myntri Orongsing, whose genealogy has been noted, remarried a year after the death of his first wife Ka Resimai. This woman died two years ago, and the ceremony for removing the bar on remarriage was performed only last year. The money was made over to an old man U Ru, who is well acquainted with the rites. He purchased a pig and killed it by the "dung" method in the compound of Ka Resimai's mother, Ka Sheribon. The spike might be of wood or iron, stated U Ichon. I was informed by the myntri U Subu Rai that the ceremony of

removal of the bar on remarriage was also of the same kind elsewhere in the neighbouring States. Clearly, the idea of leviration or sororation is incompatible with this idea of the marriage bond continuing even after death and necessitating a ceremony to break it. It may also be noted that while the Khasis permit divorce somewhat easily, remarriage is not permitted of either party "within the family of the divorced husband or wife" (G). A Khasi cannot also marry two sisters, although he can marry irregularly, more than one woman and also the wife's sister after the decease of the wife. We can now discuss why a woman or a man refers to the brothers and sisters of the husband or wife by the kinship terms used by the spouse, qualified by a special term. When a man marries and goes to live in the house of his wife's mother, he comes in contact with unmarried sisters of the wife. But he knows that they are sexually to be avoided. He lives in the wife's mother's house only during the life time of his wife. A wife's sister is comparable to a Kur sister sexually, during this period.

But his economic relations and religious ties require that a distinction should be made between these "sisters" and the "Kur sisters." The qualifying term supplies this requirement. The woman, on the other hand, has no direct relations with her husband's brothers. She has however to keep in touch with the husband's female relatives. The bones of the husband go over to the mother's house and eventually to the clan ossuary. The husband is also a potential manager of the property of his female relatives. She has therefore to take note of the order in age of her husband's sisters. As her husband uses the terms for sisters for the sisters-in-law, it is quite natural for her to extend such usage to her husband's sisters. The brothers of the husband do not count at all so far as the woman is concerned, and she will not therefore have any special term for them. As the sisters are referred to as Para Kynsi and Hymmen Kynsi, so will the brothers of the husband be referred to by similar terms. The absence of any sexual privileges between the woman and her

U; Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

husband's brothers fits in with such a terminology of kinship. It has not however determined the terminology.

We have referred to an exception in the case of kinship terms used by a man. His relation with his wife's brothers is quite different from that of a woman with the husband's sisters. The wife's brother is the manager of the wife's ancestral property; also this uncle has to be associated with important rites at birth and death of the children of the sister. Nevertheless, the husband has also his own position. The house that he sets up after marriage belongs to his wife no doubt; but he is the master there. As Gurdon states "It is he who faces the dangers of the jungles and risks his life for wife and children. In his wife's clan he occupies a very high place, he is second to none but U Kni, the maternal uncle, while in his own family circle a father and a husband is nearer to his children and wife than U Kni. The Khasi saying is "U Kpa uba lah ban iai, U Kni Uba tang ba ka Iap ka im" which may be translated freely as "The father bears the heat and burden of the day, the maternal uncle only comes when it is a question of life or death."

A man and his wife's brother represent the two aspects of the relationship which binds every man in Khasi society to his mother's house and to his wife's house.

Clearly, the two men, the sister's husband and the wife's brother, each have rights which are similar. Also they have close contact in many matters. Their relationship to each other is however distinct from that of brothers. Among the latter, authority depends on seniority. Between the S.H and the W.B, such a question does not arise. Each is in a position of authority, but in a different sphere. A special term is obviously needed to denote this special relation, which is reciprocal.

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

[p.25]

CHAPTER III

It is evident from the discussions in the previous chapter, 601
that the children born in a house have to take note, as they grow 604
up, of the seniority and juniority among the sisters of the mothers, and also of the brothers of the mother. They have however very little relation with the brothers of the father, and we have to explain why the latter are classed with the father. This point will be discussed later. Here we may note that the relative lack of importance of the father's sisters has resulted in her not receiving distinction by age in the table of Kinship terms ; it is however indicated in address. Similarly the wife of the mother's brother is also not distinguished by age.

It may however be questioned why such a distinction by age is extended to the husband of the mother's sister. As noted before, a Khasi does not set up a separate house until one or two children are born. The children who are born in the house of [593]
mother's mother, are looked after like mothers, not only by the progenitress but her sisters. While there would arise no question as to who is the actual mother, it would be normal for the children to call the mother and her sisters by the same term which would thus cover the women of that generation who live in that house. Each little child would find its mother's sister addressed as "mother" by its playmate and cousin. Hence he or she would also tend to extend the term to the mother's sister from the mother. Under such circumstances, the simplest mode of distinction would be to apply the term "mother" to the actual relation, and add qualifying adjectives for the sisters of the mother. The Khasis use for this purpose, quite appropriately, terms denoting seniority and juniority for reasons previously stated. Reciprocally, a woman uses the same terms for

K Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

her children and sister's children, using an additional term for the latter, to make the distinction clear. The mother's brother's wife, and the father's sister live elsewhere, and cannot therefore share the same kinship term with the mother. The husbands of the mother's sisters are comparable to the father, as these males are all outsiders who have married the women of the house. The actual father "U Kpa" is the husband of the actual mother "Ka Kmie" and is clearly distinguished. The others are the husbands of the "Kmie San" and "Kmie Nah." Hence they are given the labels of "Kpah San" and "Kpa Nah" or "Kpa Khynnah." They derive their kinship terms denoting "father" through their wives who are called mothers by the children—not through any sexual rights on the wife's sisters. Such sexual rights, as noted before, have no existence. Hodson is not justified in ascribing this identity of kinship terms to alleged marriage rules and sexual rights which were operative in a hypothetical earlier type of Khasi society.

The mother's brother is important to the Khasi child, and has a special name, Ma, with an adjective such as Rangbah to indicate his position among his brothers. His relation with his sister's children is different from that of the mother's sister's husbands. It is more or less formal and ceremonial. A similar relative, on the father's side of the family, is the father's sister, though her position is not so important. Nevertheless, the two relatives are comparable. The mother's brother is in charge of the management of the mother's ancestral property and helps in performing important social ceremonies for the group. The father's sister is the repository of the bones of the father's family; in her is vested the preservation of the family religious traditions. Both these relatives live in houses separate from those of the nephews and nieces concerned and are, in a sense, of other households. Each of them was born in the natal house of one of the parents. They are therefore clearly distinguished from the father, the mother, the sisters of the mother and their husbands. But a common term, allowing

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

for difference in sex, is applied to both. The corresponding uncle and aunt by marriage are referred to by terms which make this clear. The husband of the father's sister is a "Ma" like the mother's brother and is also referred to as "Kni." But as his position by age is unimportant, the adjective of position is lacking in his case. Similarly the mother's brother's wife and the father's sister have a common term "Nia"; but the latter has her relationship through the father clearly indicated by the additional term "Kha" which refers to kinship through a male. The mother's brother's wife is, on the contrary, an aunt by marriage. The husband of the father's sister derives his term through his wife; and the wife of the mother's brother, through her husband. The identities M.B. = F.S.H. and M.B.W. = F.S. are therefore derived indirectly and are not original. Hodson's hypothesis that they represent actual identity of kinship in an earlier dual society therefore turns out to be superfluous.

Reciprocally, a man refers to his sister's children by a term which is different from that for his own children. A woman also refers to her brother's children by this term which is different from that used for her own or her sister's children. As indicated, the M.B. as well as the F.S. are both on a parallel footing, and are practically labelled together, allowing for differences of sex.

We may say that there are, in Khasi society, two clearly recognised units. One of these is the house and household, where the men and women have been born. Inside this house group, the sisters have similar rights, actual as well as potential. As we have seen, on the death of one sister, where there is no female issue, another sister takes her place in continuing the traditional religious entity of the group. The brothers again, among themselves, take one another's place in succession, in the matter of authority, and of management of the family property. The other unit is that of the woman, her husband and the children. We may refer to it as the unit set up by marriage.

Referring to the first type, we may say that the second type results from the men of the house going out to marry women of other houses. As the men settle down in the wife's mother's house and later on set up a separate house on her land, the continuity of tradition in the house of birth is kept up by the women who remain behind.

It would however be a mistake to suppose that the bond between the members born in a house is severed on marriage. We have noted before that the bones of a dead man return eventually to his mother's house, for final deposition in the clan cinerary, or at least that of the extended household. The bond between the mother's brother and sister's children has also been noted as well as the authority exercised by the former over the extended family.

Further links between a man and his mother's Kur will appear from a study of the rules of inheritance and land tenure with regard to men. Any property that a man acquires before marriage belongs to his mother's house. Myntri U Subu Rai, for example, earned money before his marriage, and he purchased some land with this amount, in a village called Mawbeh. It will go to his sisters and their heiresses on his death. The earnings of a man after marriage, and after he has settled down in his wife's mother's house (or wife's house), among Khasis proper, generally go to the wife and daughters on death. But any gifts made by the parents at marriage have to be returned on death. Slmilarly, if a man has earned money after marriage, independently of his wife's capital, a part can be claimed on death by the man's mother's group.

Again, if a man returns to his mother's village after marriage, he can exercise his rights to cultivate the common land there. Every village community has its common land known as Ri Raid. As David Roy states (CN), "people can occupy a raid land where they build their houses and cultivate. For cultivation purposes land not more than can be cultivated is taken. The occupant can sell his house and the site and the garden of

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

his house or paddy field or grove; but the sale does not extend to anything more than his right of occupancy.....Any site, garden or place of cultivation if abandoned, can be taken by another."

A son of a house of the village, of which the Kur is of the ancient settlers or has been given similar privileges, has the right of building a house, and of cultivating land in the Ri Raid. Reference has been made to the rare practice whereby a man brings his wife from her mother's house to his own village. In such a case he may set up a separate house on the community land, and cultivate some of it, to maintain his wife and children. The property will pass, on his death, to his daughters as usual. It will not go to his mother or sister.

(*a*) The man U Hariluk married twice, but did not settle down with his wife on either occasion. He built a house in Mawphlang which is his mother's ancestral village and brought each wife there. Both of them were divorced in turn and have left. If any of his wives had lived with him the house would have gone to his daughters. Now, however, the heiress is Ka Jrom, the daughter of a sister. [Genealogy I(*b*))].

(*b*) The woman Ka Lakimon is of the old Lyngdoh clan of Mawphlang. When U Lynsun married her, he set up a house in Mawphlang and cultivated land. But on his death, the woman went away to Shillong with her children, about 10-15 years ago, selling the house and abandoning the jhum land. The son U Bellestar has recently come to Mawphlang and is working in U Subu Rai's house. If he settles down, *i.e.*, marries and wants to set up a house, he can do so on the Ri Raid. (Genealogy IV).

(*c*) The foundress of the Khar Dumpep clan was a woman of the village Dumpep, and of clan Khar Dohling. She had two other sisters. One of the three sisters went to Mylliem, and another came to Mawphlang while the third remained at Dumpep as Ka Khadduh. The girl who went to Mylliem founded the Khar Sohnoh Kur and the girl who came to Mawphlang founded

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

Khar Dunpep. These three clans—Khar Dohling, Khar Dumpep and Khar Sohnoh cannot intermarry on account of their common ancestry. U Alisson, the sister's husband of U Subu Rai is of Khar Dumpep clan and furnished me with the above details. He stated that his ancestress married a man of the old settler clans of Mawphlang and came to her husband's village. This man, being of the Khadar Kur, could build a house and cultivate land from the community holding. The property thus acquired passed to the daughters; and gradually the clan Khar Dumpep grew more numerous, and acquired rights in the Ri Raid like an old clan. [Genealogy I(*c*)].

(*d*) The family of the first wife of U Orongsing furnishes another llustration. The woman Ka Li came with her widowed mother from Cherra. The father had been a Synteng from Jowai. The girl has been married by U Ibchon, who is a member of one of the old settler clans. He has built a house for his family and made an excellent potato garden out of the common land for the maintenance of his wife and children. They will inherit it from him according to the usual Khasi mode. [Genealogy II(*c*)].

(*e*) U Roberts who is a Synteng of Jowai, and a Christian by religion (Genealogy V) came to Mawphlang in 1930-31 and after a couple of years married a non-Christian Khasi girl by Khasi rites thereby losing his membership of the church. He cultivated Ri Raid land when he stayed with his wife's mother Ka Shami [Genealogy V]. This woman is of Khar Sohno clan. One of her ancestresses, came to Mawphlang only a few generations ago, and married a man of the old clans. Her descendants have thereby obtained the privilege of cultivating Ri Raid. U Roberts has divorced his wife and no longer possesses this right. He now works as a tailor in the village, and lives with a friend near the bazaar.

(*f*) Gurdon has suggested that the large number of clans having Khar as the first part of the name of the Kur have originated from ancestresses who were carried off from the plains.

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

While the traditions regarding the origin of Khar Dumpep and Khar Sohnoh collected by me do not support the view that the ancestress came necessarily from the plains, it is clear that they support Gurdon's hypothesis that those clans are derived from ancestresses who came from or settled in certain villages. It is evident that Gurdon's hypothesis implies that the husbands of these women, who brought them home from elsewhere, could clear land and transmit such property to their daughters, although the mother of the daughters did not own any land locally. This right to clear the Ri Raid is therefore not a recent innovation.

I have noted these details here as this aspect of inheritance from males has not been clarified elsewhere. It is not meant of course that this right to clear land extended to the special clan lands or family property matrilenial of the man. As noted before the Kni manages such land and makes over the income or produce to the women who are the owners. Even in such land, however, a man has some rights. Both Gurdon and Cantlie state that a male can adopt a blood relative of the same Kur if all the female members of the particular stock are dead. He himself holds the property for life only, when the women of the line are dead. On adopting a girl of the Kur, she becomes the keeper of the property and also his successor. But "the profits of his labours in the landed property can be used for his wife and children." The inherent right of the male is brought out to a certain extent in this rule also. Such private lands are known as Ri Kynti. It may be of the family or the clan. As an example of family land may be noted the case of the forest of U Nong Sohra, the husband of Ka Jem [Genealogy I(*a*)]. He cleared some Ri Raid land and planted pine trees there. Only the descendants of Ka Jem can cut trees in this forest which is now practically private property of this group. But the land is essentially Ri Raid in this sense that it cannot be alienated and when all trees have been cut away, any villager will be entitled to occupy it. The Khar Shiing Kur as a whole has true private lands near the village. If people of other clans want to cultivate

it, they have to arrange with the U Kni, who is in this case U Babu of Mawphlang, elder brother of the Myntri, U Mama who represents this clan on the State organisation. Payment is made in money which is distributed to the different houses of the Kur. There is, however, Ri Kynti land of another kind, individual property which can be sold absolutely. It may be noted here that no rent is paid to the State or the British Government for the Ri Raid, Ri Kynti or other lands in Mawphlang, or in general in other Khasi States. The revenue of the State is derived from tolls levied on commodities sold in market places and also from fines and other minor sources.

The fundamental social and economic unit among Khasis is therefore the family house and the extended family associated with it; the Kur represents a later stage in its expansion. Marriage sets up new relations but does not disturb this basic structure of Khasi Society.

1L Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

[p.33]

CHAPTER IV

The Khasi marriage prohibitions may now be discussed in some detail. The rules regarding levirate and sororate have already been noted. The Khasi is also exogamous with regard to his Kur. This bar extends to clans derived from the same ancestry. A Khasi cannot also marry his father's brother's daughter, or his father's father's brother's daughter. He cannot marry his mother's brother's daughter so long as this uncle is alive but may do so after the death of this relative. He cannot also marry his father's sister's daughter so long as the father is alive but may marry her after the death of his father. Gurdon remarks that even then "such unions are looked upon with disfavour by Khasis. In the War country, such marriages are totally prohibited." 582

It has been noted in the previous chapter, that the basic unit of Khasi society is the house where the children are born and where the women stay all their lives and with which the men also are connected intimately even when they go elsewhere on marriage. It has also been observed that the authority is vested entirely in the men. The women have various rights not found in many patrilocal groups; but it would be a mistake to underestimate the position of the men in the house. The father is the head of his small family—the simple family consisting of himself, his wife and the children. He is also the person in authority over his sisters' households in matters affecting the extended family as opposed to the simple family. Although his own children, and the children born in his natal house are distinguished on account of their social and economic differentiation, nevertheless, they are, to a certain extent, both like children to 582 602 [594]

Ll: Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

him. His own brothers again, are to him his successors in the permanent rights, which are linked with the house of birth. Their bones all return to the common ossuary of thenatal house. Apparently, this close association of the brothers with the house of birth is responsible for the rule that children of brothers cannot marry. If we formulate the prohibitions from the standpoint of the women, we can get a clear idea of their significance.

A Khasi woman cannot marry her father's brother's son; nor even the son of this cousin. Again, a Khasi woman cannot marry her father's sister's son during the life-time of her father; but may do so after his death. As we know, the father's death and return of the bones severs the link of the children and their mother with the father's house of birth. The women who safeguard and maintain the Khasi religious traditions, will thereafter raise no objection to the marriage of a woman of their house with the father's sister's son, who is now no longer closely related and is a man of another house merely. But the case is different with the other cross-cousin. A woman cannot marry her mother's brother's son, even after the death of that uncle, without incurring odium. In the War country, such a marriage is not permissible even after the uncle's death. We know that the relation with the mother's brother is not severed either at marriage or at death. The links are maintained even after death. His bones come back and rest in the ossuary of the house and the clan of his women relatives. The decease of this uncle does not therefore place his son in the category of a person with whom the formerly existing bond has been broken. We may sum up the distinction as follows :—

In the case of the father's sister's son, the death of the father breaks the link between a woman and her cousin in the other house, as neither of the parents of that male cousin were born in the house or extended family of the woman. In the case of the mother's brother's son, the father of that cousin is of the woman's own house and one with whom the bond endures even

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

after death. In the first case the bones of the male cousin's parent will not rest in the ossuary of the girl's house. In the second case, the bones of one parent of the male cousn will rest there. 552

The restrictions on cross-cousin marriage, and the difference in the two cases, bring out the importance of the house of birth and of the women who preserve the continuity of the Khasi religious traditions in this house. From the women's standpoint, the bar on intermarriage of children of sisters is absolute. Their bones will rest in the same ossuary after death in every case. The limitations on marriage of cross-cousins, who are of different households are less strict, the degree depending on the closeness of the link with the house of birth of the woman concerned.

The prohibition of marriage of parallel cousins born of two brothers is based on a similar reason Stress is laid by men on the unity of brothers, just as the women stress the unity of sisters. The rights in property and common or practically common residence, and the custodianship of the 'religion' unite the latter. The authority and other rights already noted, unite the brothers in similar fashion. They also are in a sense guardians of the 'religion.' It is true that they marry in different households; but the bond that links them together and with the natal house is not broken thereby. We have seen that they retain the links and rights during life. Also, on death, they all return to the house of birth, in the repository of bones, and eventually are united with all men born in their house and the houses that have preceded it, in the same Kur. (This unity of the men and separation from the women is observed in the placing of the bones for the two sexes at every stage of the bone disposal rites.) Their children will therefore be linked always to this house through the bones of their fathers.

The recognition of the permanent bond linking the members of the natal house is, therefore, here also the important factor in prohibiting intermarriage between their children.

Hodson has suggested that the prohibition of marriage of parallel cousins was the result of an earlier dual stage of Khasi

582 society. He states "In a dual society the children of two brothers are necessarily so closely related as to be unable to marry. This prohibition takes us straight to the dual days. It survives—because—if it does not directly promote—it does not impede the great social necessity which arises when a multiple society develops from a dual society, the necessity of giving wives to and getting wives from the new groups. The children of two brothers are called para Kha because they are kins on the male side."

The prohibition of marriage of a woman with the father's brother's son's son is ascribed to the necessity of prohibiting "a marriage which maintained and was maintained by the dual system." Hodson explains that under dual organisation and matrilineal descent a man's F.F.B.D. would be of the opposite moiety and married to a man classed as mother's brother. Among Garos a man married his mother's brother's widow and also her daughter under the nokrom system for control of property.[67] "Khasi custom definitely forbids a marriage which is the pivot of the Garo system which rests on the maintenance of the dual interest in the estate. This dual control would obviously be difficult to maintain against the pressure of competing groups which results from the development from a dual basis to a multiple basis." The rules regarding cross-cousin marriage are also ascribed by him to the break-up of the dual system. Hodson did not consider it necessary to distinguish the actual cross-cousin and mother's brother and father's sister from the classificatory kin of that status. He states that the distinction between the two kinds of cross-cousin marriage could not be drawn until "the dual system had ceased to operate, since so long as it flourished, the wife of the mother's brother would be the father's sister." His explanation of the prohibitions is that they "facilitate, may be intended to facilitate and may survive because they facilitate marriages with men of clans other than those of the two, to which the parents belong." Hodson fails to realise that there is no evidence of preferential mating of cross-cousins in the past,

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

among Khasis. Even the Garos whom he cites apparently as 582
representing a type of social organisation which the Khasis had earlier, do not encourage marriage with the father's sister's daughter. There is also no evidence that a Khasi ever married his mother's brother's widow. As I have shown earlier, the marriage prohibitions regarding cross-cousins can be explained on the basis of existing social and economic forces in Khasi society. The rule regarding exclusion of the F.B.Z.Z merely states that a woman cannot marry the son of her para Kha. It is not a new prohibition.

We may now state the reasons why a Khasi calls his 601
father's brothers by the same term as father, and the wives of 602
these uncles, as mother, using of course a qualifying term for 604
seniority and juniority. As noted before, a Khasi boy or girl calls his mother's sister's children brothers and sisters. He avoids them strictly in marriage. They are not like cross-cousins, marriageable under certain circumstances. Any sexual approach towards them would have led in the old days to exile and also excommunication. The children of the father's brother are similarly excluded from the category of marriageable persons They are like brothers and sisters, and as such are addressed as Bah, Hep and Kong. They are referred to as Para Kha. As Hodson observes, the term Para conveys, when used as a prefix, the idea of having common rights or status. It also means, when used by itself, a younger brother or sister. The term Kha refers to relation (by birth) through a male. It is used for example in the combination Bah Kha, which denotes both varieties of cross-cousins, the children of the mother's brother, as well as the father's sister. A Khasi man (and) woman has already another set of parallel cousins who are sexually tabooed. Their parents are given terms denoting the father and mother, with certain modifications. As the children of the father's brothers are also sexually tabooed, it would be natural to extend to them the terms used for the parents of the other group of non-marriageable cousins.

Il: Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

601 The close connection between the social structure of the
602 Khasis and their kinship terms, is evidenced also in the case of the other relatives, by marriage. For a woman, the husband of the daughter is a son of another household, and is referred to by the term Pyrsa, used for persons of the generation below the speaker when they are of another house-unit. Her husband also follows the same rule. The son-in-law is not the son of one who is the potential successor of the speaker, in the natal house. But a distinction is necessary between the Pyrsa who is a nephew, and the son-in-law. This is furnished by the qualifying term Kurim. For the same reasons, the son's wife also gets the kinship term Pyrsa Kurim. We may expect that the reciprocal kinship terms, for the mother-in-law at least, looking at the matter from the house-unit view, will be denoted by a general term of this type. This general term ought to be applicable, with qualifications, to the reciprocal woman relative of the children who are termed Pyrsa, *i.e.*, to the father's sister and mother's brother's wife. But the terms ordinarily used stress the relationship between the houses of these nephews and nieces and their aunts noted above. The terms Knia or Nia, and Kha have come from the relationship between the houses. This aspect of these terms has been discussed in an earlier chapter. Obviously an expression like Knia Kurim would not emphasise the fact that the mother-in-law was a woman of another household. The term Syngken is however used to denote the mother's brother's wife alternatively, and we find that the term Syngken Kurim is also used for a mother-in-law. Although the father's sister and the mother's brother's wife have certain common aspects, we note that only a woman related by marriage with a male relative of the previous generation is referred to by the term Syngken. Thus the wife of the father's brother is occasionally referred to as Syngken, apparently when she is not being thought of as the mother of a para Kha. The father's sister is naturally not termed Syngken. The usage is therefore comparable to the employment of the terms Pyrsa and

Ik Chattopadhyay E-4, 5 (no date) 1941 AR7 Khasi AR7

Pyrsa Kurim, for the reciprocal relations. Normally, however, the mother-in-law is referred to by a separate special term which does not stress this aspect of the relation between the two persons.

THE KHASI HUTS OF MAWPHLANG

BY

RAM KRISHNA MUKHERJEE, RAM CHANDRA BOSE, SALIL RAI CHAUDHURI, SANGI GUPTA AND KUMARES SENGUPTA

114 Post-Graduate students of the Department of Anthropology of the University of Calcutta are expected to do a certain amount of field work for practical training. In 1940 a Khasi village was studied by us, the students of the Post-Graduate class, as part of our training, under the guidance of Prof. K. P. Chattopadhyay, the Head of the Department of Anthropology, whom we have 121 to thank also for the photographs used for this paper. This note 342 on Khasi house structure is based on our work in the village of Mawphlang, the headquarters of the Khasi State of this name, in the Khasi Hills, Assam. Our studies included a survey of the village and its house types. Particular attention was paid to the structure of the old type of Khasi house.

342 Gurdon in his book on the Khasis of Assam describes the Khasi hut as elliptical in shape. But in Mawphlang we found that they can be more strictly said to be 'U'-shaped, in ground plan the bend of the 'U' being the front, the two parallel arms the sides, and a straight line connecting the two ends of the two arms of the 'U' the rear. We found this to be the type of most of the old houses of Mawphlang village. As is well known it is the custom among Khasis for the women of a family to live together, until the number of members increases so much that they cannot be provided with room in a single house. Then new houses are built It is usual for a married couple with children to put up a separate

but for themselves. In all these cases the youngest daughter of the family who is known as the Ka Khadduh of the family must live in the old house and maintain the social and religious traditions of the family. In the village of Mawphlang we found that the houses of all the Ka Khadduhs like Ka Sadia, Ka Hosibon and others, and also the old house of the wife of U. Suburai, the myntri of the Mawphlang State, all belong to this 'U'-shaped type. This association of Ka Khadduhs and 'U' shaped huts suggests that this is the old type. The modern huts vary in their structure some being like modern bungalows common now-a-days in Shillong.

The old Khasi house, in general, can be described as follows :—

Generally there is a compound in front and a pigsty at one side, the whole site being enclosed by a fencing of reed and small plants or of wooden planks or some such material. The hut as observed from outside is elliptical in front and box-shaped behind (as seen in the diagram). It is 'U'-shaped in the ground plan. The roof of the hut is sloped on the two sides and spread out like a fan, in a semi-circle, in front.

The material used in the construction of the hut varies. In some of the old houses the walls were found to be made of blocks of stone with mud in the interstices serving the purpose of mortar. The roof had a bamboo frame covered with thatching grass. In other old huts the walls were not entirely made of stone blocks. In some we found the front portion made entirely of stone, the lower portions of the side and of the rear walls, up to a level of two to three feet, made of stone, the remaining portions being made of wooden planks or reeds covered with mud. In some modified huts again (either they were built later or the old huts were repaired) the entire rear wall except at the base and the upper portions of the sides were made of tinplates from used cans nailed to a frame. In some huts corrugated and galvanised iron sheets have been used. The material for the roof

also varies a good deal now-a-days, some being of corrugated galvanised iron sheets and others of flat tinplate sheets instead of

Ground plan
1. Ka Kyndur; 2. Ka Nympei;
3. Ka Kynrein; 4. Ka Ring Kyndong;
5. Ka Rumpei; 6. Ka Dypei.

thatching grass. In some modified houses we found a porch added in front of the main door of the hut.

Entering the hut by the main door, the interior can be divided into two compartments, the front one which is on the ground level and the inner compartment which has a wooden floor raised to a height of about four feet supported on pillars of stone..

342

KHASI HUTS OF MAWPHLANG

Construction of the frame of the Ka Kyndur

Thatching the Ka Kyndur

[facing p. 180]

342 In some huts there is a wooden partition in between the two compartments, while in others it is absent. The front compart-

ELEVATION

1. Door; 2. Supporting pillar; 3. Bahlymphan 4. U pyniar; 5. (Kynshi) & U bnoh; 6. Supporting pillar of wooden floor; 7. Outer walls.

ment on the ground floor is known in Mawphlang as Ka Kyndur, while the raised portion is known as Ka Nympei. The Ka Kyndur is smaller than the Ka Nympei and is roughly semi-circular in shape as it is formed of the front portion of the hut. Its floor is paved with stone or made of beaten earth. In some huts where there is a partition between the Ka Kyndur and the Ka Nympei, there is a raised shelf in the Ka Kyndur which is really the projection of the wooden floor of the Ka Nympei. From the Ka Kyndur the Ka Nympei is reached by means of a few steps made of stone or a short staircase of wood. Where there is a partition between the Ka Kyndur and the Ka Nympei there is a door in the middle of the wooden partition to enter the Ka Nympei.

The Ka Nympei is rectangular in shape and comprises about two-thirds of the area of the hut. The Ka Nympei is not a single compartment but is divided into smaller compartments at its two sides and the rear by means of low wooden partitions.

12: Mukherjee et al. E-4, 5 (1940) 1941 AR7 Khasi AR7

342 But in some huts there are no such partitions and the demarcation is made by the pillars and beams which support the roof of the hut. The small enclosures at the two sides in the front portion are known locally as Ka Kynrein. The Ka Kynrein at the right hand side of the Ka Nympei close to the Ka Kyndur generally is used for storing water. The Ka Kynrein at the left hand side of the Ka Nympei just opposite to that for storing water is used as a larder for potatoes and other provisions. The enclosures at the rear of the Ka Nympei and those remaining at its sides are used as sleeping places. The sleeping places at the sides are known as Ka Iing Kyndong and those at the rear 342 as Ka Rumpei. In most huts there is a window in the Ka 354 Rumpei, high up in the back wall of the hut. In some huts there is a window in the front wall, in the Ka Kyndur. In many huts there is no window at all. Besides the main door in the Ka Kyndur, there is another door to the Ka Kynrein at the right hand side of the Ka Nympei. We were informed that in Cherra the part called Ka Kyndur is termed Ka Shyngkup, and Ka Kynrein as Ka Pyngshai.

In the centre of the Ka Nympei there is the hearth known as Ka Dypei. It is a rectangular space, about four feet and a half in length and three feet and a half in breadth, enclosed by fenders of wood. The floor of the hearth is paved with stone and mud. In the centre of it there are three small-shaped stone 352 pieces which are known as Mawbyrsiew. On the Mawbyrsiew there is an iron triangle known as Ka Nar to hold the pots. The space of the Ka Nympei behind the hearth and in front of the Ka Rumpei is known as Jingbuhkhiewja.

Running round the edge of the Ka Nympei at a man's height there is a wooden frame supported on vertical posts; to this frame are fixed the partitions, separating the Ka Nympei from the Ka Kyndur, Ka Kynrein, Ka Iing Kyndong and Ka Rumpei. This wooden frame is known as Bahtymphan or Bahtympha. Just above the Bahtymphan several stout beams of wood cross the house from side to side and rest on the

352 Bahtymphan. They are known as Ukhung. The Ukhung above the Dypei are placed close to one another. A little apart from this row of Ukhungs, there is a single Ukhung parallel to the others which in some huts is hollowed out and is used as a receptacle for some household articles.

342 The frame of the roof as observed from inside consists of a central ridge pole running along the length of the hut and situated above the middle of it. From the ridge pole pairs of rafters diverge on two sides, their lower ends resting on the side walls of the hut. In front of the hut, the rafters are radially spread out from the anterior end of the ridge pole which is supported by a vertical pole known as Rijit. These rafters rest on semi-circular wall at the bend of the 'U'. The ridge pole and the rafters are known as Kynshi. Besides the rafters there are thinner wooden poles similarly arranged which further strengthen the frame of the roof. They are known as Ubnoh. The small rafters which are set cross-wise on the sloping Kynshi and form each series a 'U' round the ceilling are known as U Pyniar. This frame for the roof is made on those huts where thatching grass is used, that is, in the old type of huts. In modern huts where corrugated or flat sheets of iron have been used instead of thatching grass such a frame is not required.

In the village of Mawphlang, we saw an old type hut, of Ka Lita repaired and re-built. At first the raised rectangular portion of the hut, the Ka Nympei, was reconstructed on a raised platform, with the frame for the roof above it. Then a semi-circular area was taken in front of the Ka Nympei about one-third the area of the inner compartment. Simultaneously with the making of the frame of the Ka Kyndur, the thatch was made in sections in bamboo frames. Then the roof of the hut was covered with these sections which were arranged in overlapping sheets (see plate). An old type Khasi hut is about thirty feet long; it is about twenty feet wide at the back.

343 Reference has been made to the usual pigsty adjoining each house. It is generally a small thatched shed with walls made of

12: Mukherjee et al. E-4, 5 (1940) 1941 AR7 Khasi AR7

wood and grass matting. The shed may be partitioned into two 343
compartments one for keeping the cows and the other for keeping pigs. The upper portion of the pigsty is used for storing fuel in some houses. There is no uniformity in respect of this shed.

All the 'U'-shaped huts found in the Mawphlang village 342
were studied. Besides these typical 'U'-shaped huts there are many other huts in the village which are rather flattened in front and can be said to belong to the flattened 'U'-type. In the table given below the variations are shown in detail of the typical 'U'-type huts and also of a flattened 'U'-type hut belonging to Ka Labirmon of Lyngdoh clan. It is peculiar that all these huts have their main door facing north.

Serial No.	*Owner of the hut.*	*Materials used.*	*Peculiarities.*
I.	Ka Hosibon (Khar Hunai).	*Wall*—In front entirely of stone. Lower portions of sides and rear of stone. Upper portions of sides of wood, reed and mud. Upper portion of rear of thatch. *Roof*—Thatched entirely.	Partition between Ka Kyndur and Ka Nympei. No partition between Ka Nympei and its enclosures.
II.	Ka Krin (Lyngdoh).	*Wall*—Wood with an outer cover of reed and thatch. *Roof*—Thatching grass.	No partition between Ka Kyndur and Ka Nympei, and between Ka Nympei and its enclosures.
III.	Ka Thaiup	*Wall*—Planks covered with thatch. *Roof*—Thatched.	No partition between Ka Kyndur and Ka Nympie but the front Bahtymphan is present.
IV.	Ka Pre (Lyngdoh).	*Wall*—Planks with outer thatchings. Very low stone wall all round, at the base. *Roof*—Thatched.	No partition between Ka Kyndur and Ka Nympei.
V.	Ka Li (Rani)	*Wall*—Low stone wall all round. Upper portions of front of reed and mud. Upper portions of side and rear of planks with outer cover of thatch. *Roof*—Thatched.	Partition between Ka Kyndur and Ka Nympei.

342

Serial No.	*Owner of the hut.*	*Materials used.*	*Peculiarities.*
VI.	Ka Iet (Khar Dumpep).	*Wall*—Front, sides, and lower portions of rear of stone Upper portions of rear of flat tinned sheets. *Roof*—Thatched.	Same as above.
VII.	Ka Ke (Lyngdoh)	*Wall*—Front, sides, and lower portion of rear of stone Upper portion of rear of flat tinned sheets. *Roof*—Thatched.	Partition between Ka Kyndur and Ka Nympei. In front of the main door a porch has been added,—a two sloped tin shed resting on four wooden pillars.
VIII.	Ka Sadia (Iangblah).	*Wall*—Front and lower portions of sides and rear of stone. Upper portion of left wall of flat tinned sheets. Upper portions of right wall and rear of thatch. *Roof*—Thatched.	No partitions.
IX.	Ka Pren (Khar Hunai).	*Wall*—Front and lower portions of sides and rear of stone. Upper portions of sides of wood, bamboo, and mud. Upper portions of rear of thatch *Roof*—Sloping sides of corrugated sheets. Front thatched.	Partition between Ka Kyndur and Ka Nympei. No partition between Ka Nympei and its enclosures.
X.	Ka Kin (Iangblah).	*Wall*—Low stone walls all round. *Roof*—Thatched.	
XI	Ka Krek (Rap Thap).	*Wall*—Front entirely of stone. Lower portions of sides and rear of stone, upper portions of planks. *Roof*—Flat tin plate.	Partition between Ka Kyndur and Ka Nympei, and between Ka Nympei and its enclosures. One window in Ka Rumpei.
XII.	Ka Eiribon (Iangblah).	*Wall*—Stone all round. *Roof*—Corrugated iron sheets.	All the partitions present. Two windows at the bend of the 'U' by the two sides of the main door. One window at the back of Ka Rumpei at the left side of it.
XIII.	Ka Ko (Lyngdoh).	*Wall*—Lower portions of stone. Upper portions of sides of bamboo and mud. Upper portion of rear of tinned sheets. *Roof*—Tinplate.	No partition beeween Ka Kyndur and Ka Nympei.

12: Mukherjee et al. E-4, 5 (1940) 1941 AR7 Khasi AR7

Serial No.	*Owner of the hut*	*Materials used.*	*Peculiarities.*
XIV.	Ka Shyrngeh (Lyngdoh).	*Wall*—Front, sides, and lower portions of rear stone. Upper portion of rear of flat tinned sheets. *Roof*—Corrugated sheets of iron.	Partition between Ka Kyndur and Ka Nympei. A porch in front of hut similar to that in Ka Ke's hut.
XV.	Ka To(Lyngdoh)	*Wall*—Front and lower portions of sides of stone. Upper portions of sides of bamboo and mud. Rear almost entirely of flat tinned sheets. *Roof*—Entirely of flat tinplate.	
XVI.	Ka Pubon (Khar Dohling).	*Wall*—Front, sides, and lower portions of rear of stone. Upper portion of rear of flat sheets. *Roof*—Corrugated sheets of iron.	No partition between Ka Kyndur and Ka Nympei. No steps in Ka Kyndur to reach Ka Nympei. A small porch in front of main door as in the hut of Ka Ke.
XVII.	Ka Donbon (Lyngdoh.)	*Wall*—Lower portions of stone all round, upper portions of corrugated iron sheet *Roof*—Corrugated sheets of iron.	Small opening in the rear wall.
XVIII.	Ka Wer (Khar Wankher).	*Wall*—Same as above. *Roof*—Same as above.	
XIX.	Ka Kyrhen (Lyngdoh).	*Wall*—Low stone wall all round at the base. Upper portions of sides and front of corrugated sheets. Upper portion of rear of tinplate. *Roof*—of tinplate.	Partition between Ka Kyndur and Ka Nympei. Small porch in front of main door as mentioned in some huts previously.
XX.	Ka Labirmon (Lyngdoh).	*Wall*—Low stone wall all round. Upper portions of corrugated sheets. *Roof* Corrugated sheets of iron.	No partition between Ka Kyndur and Ka Nympei.

342

It has already been said that the Khasi house type is now changing. Some such changes have been noted in the table, such as, the addition of a porch, the ground plan of one hut changing into a flattened 'U,' and the extensive use of flat or corrugated iron sheets in place of thatch. As mentioned previously besides these typical 'U'-type huts, in many other huts the bend of the 'U' in front has been flattened but the oval roof in front is present. This is quite common. In other modified

12: Mukherjee et al. E-4, 5 (1940) 1941 AR7 Khasi AR7

342 huts the ground plan is entirely rectangular. In this type of huts the materials used are also different, the corrugated sheets and wooden planks being more used than blocks of stone and thatching grass. The inner apartments, however, conform to the old plan. In the market place of the village there are some houses which are two-storied, the front of the ground floor of which have been utilised for shops. These houses do not at all conform to the old 'U'-type but are square or rectangular in
342 ground plan. Near the market place there are three houses
177 of well-to-do Khasis which resemble the bungalows of Europeans of Shillong (and of the Mission house at Mawphlang) in their structure and material. In these modern houses unlike the old ones the main door faces the street. The myntr U. Suburai who is one of the well-to-do persons of Mawphlang village has his old house (that is, the old house he put up for his wife after marriage) of the 'U'-type, the description of which has been given in the preceding table under the name of the owner, the wife of U Suburai, Ka Shyrngeh. But their new house which has been added to their old one in front of it is altogether of the bungalow type. This new house is entered from a porch in front, leading to the central room which is used as parlour. The myntri generally sits here with his friends, round the fire-place, which is not a Dypei but a hearth in European style. The kitchen is beyond this room. Bedrooms open from the drawing room to the sides.

342 A plan of the village showing the distribution of the various
361 types of hut in Mawphlang is given below. From the plan it
177 will be found that out of the 160 houses in the village, inhabited at present, the typical 'U'-type of huts form about 11·3 per cent.; the flattened 'U'-type about 35·0 per cent.; the intermediate type, which has totally given up the 'U'-shaped ground plan but has its interior of the old type, about 27·5 per cent. and the English bungalow type about 26·2 per cent. This data shows how rapidly the old type of Khasi hut is now changing.

SOCIAL GROUPINGS AMONG THE KHASIS OF ASSAM

by BHABANANDA MUKHERJEE

Dept. of Anthropology, Govt. of India

Calcutta

(Received on 20th October, 1957)

Introduction

131 611 421 [591] [192] THE Khasis, who inhabit the United Khasi and Jaintia Hills district of Assam, are matrilineal. Like the Garos, they, are matrilocal in residence. Exclusive ownership over family property is claimed by the Khasi women and the youngest daughter (*Ka-Khadduh*) who lives permanently in the house of her mother, is the custodian of the family property and the holder of religion (*Ka bat ka-niam*)[1].

121 This paper deals with the social groupings, namely, the clan, sub-clan and family, of the Khasis. The materials were collected in 1954 from Mawphlang, Cherapunji and Mamluh and Mawsmai villages farther south of the Chera State.

Discussion

192 614 [562] [611] In the language of the Khasi, the prefix *Ka* is usually used before the name of a woman or any object belonging to a woman (or considered feminine). The use of *Ka* as a prefix before the name of each social group is suggested to have bearing on Khasi matriliny. *Kur* is not a very expressive and exact term for a clan. *Kabur*, which is supposed to have sprung from the woman (*long jaid na ka kynthei*)[2] is more exact. Similarly, *Ka-K'poh* and *Ka-iing* denote the sub-clan and family respectively.

---

[1] Gurdon, P. R. T., *The Khasis*, London, 1914 p. 89.

[2] Op, cit, page 82.

13:Mukherjee E-5 (1954)1958 AR7 Khasi AR7

The primal father and the mother of the members of every clan are respectively known as *U-Parad* (*U-Thawlang*) and *Ka-Meyrad* (*Ka-Iawbei*). 614 192 773

There is a large number of clans among the Khasis and some of the clan names are those of animals and trees. *Shrieh* is monkey, *tham*, a crab, and *dingdoh*, a tree ; yet they do not constitute totemic clan organization. The clan names are not even the names of the ancestress. The clans are not ancestral but rather were territorial in nature when the clansmen (*shi-Kur*) used to live in a place having a common land (*ri-kur*) and a clan ossuary (*mawbah*) where the bones of the dead clansmen were deposited. 614 551

Unlike the clans, the sub-clans (*ka-k'poh*) are ancestral. As for example, in case of the *Siem* clan of the Chera state, it is found that Ka-Khiem was the primal ancestress. Her daughter Ka-Pet had three daughters, namely, Ka-Sngi, Ka-Lngen, and Ka-Kreh each of whom is regarded as the *Ka-K' poh* (*meaning* womb) of their respective descendants who are *shi-K'poh* (the members of the same womb). And their names are the names of the three sub-clans of the *siem* clan. 613

The names of the sub-clans of some of the clans as collected from the elderly Khasi women are given below. 613 614 551

CLAN	SUB-CLAN
1. Siem	— sngi ; lngen , kreh
2. Khongsit	— yin , phai ; har ; jiram
3. Kharshiing	— iew ; mah ; sayngiar , iynean
4. Lyngdoh	— kaban ; summhir ; kamai
5. Nongrum	— tungan ; tungwi ; syngna , buhai
6. Khongrymai	— thania ; thani , barhai , lisi
7. Jaidkhar	— hasi ; haza , tuli ; tula
8. Simpilian	— eli ; mayar ; josi , emi

Family (*ka-iing*) among the Khasis is the socio-economic and religious unit. Due to matrilocal residence, the structure of the Khasi families assumes a different form. The constituent members are the grandmother, her daughters and their children. But the parmanent[1] residents are the youngest daughter (*ka-khadduh*), her husband and daughters. It takes an 596

[1] [Should read: permanent.— Analyst]

13: Mukherjee E-5 (1954)1958 AR7 Khasi AR7

596 extended form more often when the children of the deceased sisters of *Ka-khadduh* reside there. This extension is on the mother's side and is affiliated through the extension of mother-child relationship.

Additional members like widower brothers or widowed sisters make the Khasi family a composite one.

In a Khasi family father, mother and her brother are very important. Father who is regard as *Mynder* (stranger) or *Ushong kha* (begetter), has also the position of *Kynrad* (master) of the house (set-up by him). He is the executive head and the mother is the *dejure* owner of the household.

177 Modern conditions and spread of Christianity have greatly
178 affected the Khasi society and changed the Khasi ways of life
604 but have failed to alter the traditional mode of inheritance even
593 among the Christian Khasis. Another important fact which is
[428] apparent in the Khasi families, is the change of the status of the mother's brother (*Uknii*) in his sister's house. His influence has greatly been diminished due to clash with *Ka-Khadduh* (heiress). He has almost lost his control over his sister's
[562] family. This has made the women exert their status to a danger point. Consequently, some amount of maladjustment in the relationship system, moral depravity and disintegration loom large in the family horizon.

Family is the core of Khasi social organization and the
596 closeness of familial kin with the members of the sub-clan is
613 due more to the fact that sub-clan owes its development to the family. A *Shi-K'poh* (member of sub-clan) is a secondary relative and can easily be approached for any help.

The functions of the above mentioned social groupings are
614 as follows :

Clan (*Ka-Kur*)—It regulates marriage. It being a larger non-residential kin group contact between its members is infrequent. The amount of social participation needed on certain level to intensify the relationship among its members falls far short of. But nevertheless, there existed among the members

614
764 [Should read: regarded.—Analyst]

13:Mukherjee E-5 (1954)1958 AR7 Khasi AR7

of a clan some ceremonial attachment developed out of the custom of depositing the bones of the clansmen in clan ossuary and renewing the relationship between the clansmen on the ceremonial occasion of *thepmawbah* when the bones were finally transferred from *mawshieng* (ossuary of a sub-clan) to *mawbah* (ossuary of a clan). 614 764

Social bond among the clansmen is due to the performance of common religious ceremonies (*phur*), worship of common deities and spirits of household (*Ksuidnia*), water (*puri*) and hills (*Ksuidlum*) and observance of mouring for three days for the death of clansmen with the cessation of outdoor work specially with implements. 614 [796] [776] [765]

Economic bond among them is due further to the possession of common land (*ri-kur*), which is divided into separate holdings held by families. [423]

Sub-clan *(Ka-k'pon)*—Unlike the clan, sub-clan has nothing to do with the regulation of marriage. Its main functions are socio-religious. Mutual interest in the welfare of the members of sub-clan evinced in the observance of *aibam** in honour of the dead grandmother, profund sentiment grown out of the former practice of depositing the bones of the dead persons of the same sub-clan in *mawshieng* and the responsibility of bearing the expenses for *thepmawbah* bind the members together. 613 [765]

The observance of mourning on the death of a person of the same sub-clan for three days and the consequent [765]

*Offering of food to the spirits of the dead ancestors.

13:Mukherjee E-5 (1954)1958 AR7 Khasi AR7

613
[765]

cessation of transaction of money (*kheinsbai*) during the period, compulsory social participation in marriage, household worship, and funeral ritual, and the pride for the privilege in sucession to *siem-ship* (chieftain ship) hold together the inner structure of the society in fulfilling its function.

594
596
602

Family (*Ka-iing*)—The functions of family centre round the :

1. performance of basic religious rites,
2. management and inheritance of family property,
3. maintenance of social relations with the kin of *ka-k'poh* and *ka-kur*,
4. protection of familial kin.

602
867

From the above discussions it may be inferred that the social groupings of the Khasis function in different dimensions and make the individuals aware of their duties, and obligations towards each other. In the process of socialization and enculturation of the individual they learn that the individuals, the different social groups and the community at large are inseparable.

Even from infancy a boy is infused with the idea that family comes first in regard, sub-clan second, and clan third. The kin of the family are primary relatives, and those of the sub-clan and the clan are secondary and tertiary respectively. [553] One bow and three arrows given by a father to his son in his naming ceremony (*jerkhun*) symbolise their relationships with the three social groups. With the first arrow man has to fight for *shi-iing* (members of the same family) and *shi-k'poh* (members of the same sub-clan), with the second for his *shi-kur* and with the third for the state.

IV. THE PLACE OF THE KHASI IN THE WORLD.

By

David Roy

131 The Khasi country lies in the hills of the pro-
[64] vince of Assam in North East India. Khasi clans
[61] are exogamous and matrilineal, and the Khasis speak a
[197] MonKhmer language.

121 In speaking of the place of the Khasi in the world I intend to explain the Khasi's own view of his relation to other peoples of the world.*

829 The Khasi is very conscious of his importance. He says a Khasi claims to be the centre of the world. The Khasi has acquired such a feeling of self-importance from his great confidence in himself; and this confidence he has derived from the position in which his relationship-terminology represents him as standing with respect to himself and the world around him. Or, rather, his relationship terms and language are an expression of his attitude and notions.

601 The Khasi says—*Ka Kmie* (mother)

[114] * The writer of this article is himself a Khasi (Christian).

He calls this the world. So a Khasi places his family on one side :— 601

Ka Kmie	*U Khun*	*Ka Kmie*
(Mother)	(Son)	(Mother)

which consists of his mother, himself, his sister, and, the world on the other side :—

Ka Kmie Kha	*U Kpa,*	*Ka Nia Kha*
(His father's mother.)	*U Kpa Kha* (Father, brother)	(His father's sister)

But he places himself again between that family and that world, and claims again :—

Ka Nia Kha	*U Khun Kha*	*Ka Bakha*
(Father's sister.)	(Father's son) (Himself.)	(Father's sister's daughter)

Thus he brings it nearer to himself and claims again :—

Ka Kmie Kha Ma	*u*	*Ka Para Kha*
(Father's mother)	(*u Khun Kha*) (Himself, Father's son.)	(Father's brother's daughter.)

Thus in the family—He stands between the mother and his sister ;—and outside in the world—His father—stands between his (the father's) mother and his (the father's) sister.

Thus is the world the Khasi stands between his mother and his sister, and between his father's mother and father's sister. 602

This happens when on the death of his uncle he stands between, and on behalf of, his sister and mother; and, on the death of his father, he stands between, and on behalf of, his father's sister and his father's sister's daughter.

On the death of his father's younger or elder brother he stands between, and, on behalf of, his father's mother and his father's brother's daughter.

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

827 The Khasi's interpretation of his life is this,—'long jaid na ka kynthei,' i.e., from woman sprang the kind, or species; 'U kha uba ai ka rynieng,' i.e., it is the father who gives the stature or person. Thus, the mother produces the kind or species, and this kind 'ka jaid' springs and remains in the man's own house ('ha laing') by his mother, and is continued by his sister and his niece, sister's child. 828 The stature or person, is produced, crystallised and is endowed with power and fortune, that is, with power to resist forces which affect a man's capacity to grow in power and in fortune, by his father, father's younger brother and father's elder brother, and by the father's nephews.

602 Thus the Khasi says all those who spring 835 from the same womb are his kind, '*jaid-u sang*'; that is, they are forbidden as 'sacred' because, he says, they are suckled of one and the same breast. They are 'sang jaid.'

Again, he says, all who receive or derive re- 827 trospectively their stature from the common source 602 which gives birth to man's body—*u sang*, that is, they are tabooed or are sacred as they come out or spring or are generated from one navel-string (umbilical cord), *u sohpet kha*. They are '*sang sohpet kha*.'

(a) = *Sang jaid*

Table Woman

(1)

(b) = *Sang sohpet kha*.

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

Thus the Khasi says, "I do not marry (and I cannot even think in this wise of) my own mother, my own sister. They are of the (a) group. I cannot think like that of my father's mother (kmie kha), father's sister (nia kha), father's brother (kpa kha), father's brother's children (para kha). They are of the (b) group." On his mother's side *u sang jaid*, that is, he is *sang* or forbidden as being of the same clan, kind, species. On his father's side *u sang sohpet kha*, that is, he is *sang*, forbidden as being of the same umbilical cord. 602 835

Then he finds only himself and his *bakha* (cousins, the children of his father's sister),—he being the son of a man born of one woman, and they the children of the sister of that person, born or whose 'statures' were generated from one man.

Table

Thus the *a* woman and the *a* daughter and all those between these two and those after these two, join to the *a* woman in life through the two primary stages of life in its essence when it was sustained through the umbilical cord and later by the woman's breasts. [827]

So the *a* woman and the *b* son and all those between the two and those after these two,

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

602 join to the *a* woman in life through only one of the primary stages in the life essence when it was sustained through the umbilical cord.

Thus the connection of the *a* group is sustained to a much longer period and greater intensity in its life-formation to the *a* woman, than the *b* son.

Hence we have the double means of sustenace of life producing, through the umbilical cord and the breast, the single group *a*, while the single connection of life-formation through the umbilical cord produces a double a+b man-woman connection with the *b* son.

Thus he stands alone in the centre and he places his *jain na ka kpoh* (the kind which springs from the same womb), that is, those of (a) group (see tables) on one side, and he places his *kha* or those connected, or sprung of, the one umbilical cord, that is, those of (b) group on the other side. On the other side is *ka rynieng ka rngiew*, the 'stature', the person from which he also derives his. Then the Khasi calls the source (*thymmei*) from which he springs, *ko kur ka rngiew* (stature, person) *ki kha na uwei u sohpet* (those connected or sprung of one umbilical cord).

602 Thus the Khasi has his house of *ki kur ki jaid*
609 the relatives of his kind and species, and his world
156 of *ki kha ki man*, relatives of other people's kind and species with whom they are able to propagate human life.

This interesting Khasi fabric of human rela-
[186] tionship between man and his mother and father, of the connection between a man and his fellow-

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

human beings all over the four quarters of the globe (*ehi snieh ka pyrthei*) with whom, in the world, he can give in marriage and take in marriage, shows the nature which is believed to be innate in the Khasi, and his supposed power of moulding the world. His nature is to grow and to resist, to extend and spread out. It is against his idea of life to remain narrow or limited and resourceless. He is not to be made small or made an orphan, it will not do for him and his idea of the world to '*sah khlem khun kelem kti*,' stay without kind and species, without child, without issue. A couple would even seek to separate if there are no children of the union. His idea is, so to say, 'imperialistic,' to sow and spread out. As I wrote elsewhere, "A Khasi marries men and women of all races; to his Khasi parent the issues are all one and the same without any distinction of caste or creed or colour or possessions. The children are the 'khun kha' (*khun* = child, *kha* = born, i.e. children who are born through the union of a descendant of the parent with a descendant of another parent), and these children are unified into families and are assimilated, in the Khasi idea of life, while these groups of families are traced to their mother and are made to revolve on this ancestress as the pivot of their existence."

Thus the Khasi shows :—

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

156
601
611

In their midst the Khasi places himself always as the son of the world, thus—

Table (3)

14: Roy I-5 (no date) 1938 AR7 Khasi AR7

For the species to increase and continue he says, Here—

The mother to bear and give birth—	—	The son of others	The aunt *ka nia kha* (father's sister) } Ia, Ib

156 601 611

For the house to continue and the world to remain he says, Here—

The aunt *ka nia kha* (father's sister)	—	The son *u khun kha* (son of brother of ka nia kha)	The cousin *ka bakha* (daughter of *ka nia kha*) father's sister) } Ib, IIa

For the person (*rngiew*) to crystalise, and the stature (rynieng) to remain he says, Here—

father's mother (*ka kmie kha*) —	The son *u khun kha* (son of brother of *ka nia kha*, who is grandson of *ka kmie kha* (father's mother)	The cousin *ka para kha* (daughter of father's brother) } Ib, IIIa

The Khasi knows the 'sang' (*sacra*, sacred, that which is forbidden as sacred). He has experimented and therefore he says *ka sang iap* (*lit.*, that which is 'sacred' or forbidden or taboo unto death) in the case of those who committed incest in the same *jaid*, kind, species, that is, those of the *a* group. It is sacrilege. There is no greater punishment than for this sin,—a punishment so severe that the Khasi will not permit the bones of these transgressors to enter the family cairn. Similarly they regard as an act of sacrilege for children of brothers (*shi para kha*) to intermarry. Thus the Khasi regards as 'sacred', that is, forbidden or tabooed, for those who are sprung of or connected through the same womb, and for those who are generated of and are suspended from or strung to one umbilical cord in origin, to marry. That is they regard as *sang* for the *a*+*b* man—woman group to marry the *b* son. [see Tables (1) & (2)].

684 582

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

582 The Khasi knows the 'byrsieh'. The word *byr* means 'to appear', and, *sieh* means foul, thus *byrsieh* means to defile or corrupt; and '*tep*' means cover, *byrtep* means to cover, to spread over. Hence *ka byrsieh ka byrtep* means something which spreads over and makes everything foul, defiled and corrupt. Khasis regard marriage even in the case of cousins as not the right thing (*lit.*, not good), the *khun kha* (son of the son) that is the *b* son and his sister to give the seed to the house of his *kmie kha* (mother of the son, i.e. father's mother), that is, the house of the *a* group. Thus [824] no seed, e.g., seed of trees, rice, cucumber, pumkins, *shriw* or Job's tears, or millet, are taken from the children of the son by the family of the mother of that son, that is, no seed is taken from the children (*ki khun kha*) born of the son by his mother and sisters. Any seed given by these grand-children born of the brothers must be paid for if taken by his mother and sisters.

Thus Khasis do not consider that it is good for children of the brothers to marry the children of the sisters, though they are cousins, i.e. for III (a) to marry II(a). They believe that there will be misfortune and that they will not thrive. They consider it is better that the brother of II(a) marries the sister of III(a). In the case of these nearest cousins, however, they avoid such marriages so long as I (b), the father who is the uncle of II(a) is alive. [Table (3)]

Khasis do not consider it the right thing (regard it as 'bad') for the elder or younger brother of the wife to marry the elder or younger sister of

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

the husband. Whichever side is *jem ka rwiang* 582
(*lit.* whose person is less strong, less able to resist the evil) will suffer death. The word *rwiang* means more than literally 'fortune.' The word *rwiang* goes with *rngiew* and the two are coupled together as *ka Rngiew ka Rwiang. Rngiew* is the person, the man's 'ama'. '*Rwiang*' is the encircling power produced by that person, hence *jem ka rwiang* means the power encircling the man's person becoming easy of being conquered or subdued. (*Jem* = easy, pliable.)

In a word, the Khasi's idea of himself is that he 156
stands in the middle of the world. We do not 601
find terms in the languages of peoples with the family system to express varieties of relationship to the extent that we have in the Khasi vocabulary. Some of the other languages content themselves with terms for father, mother, uncle, aunt, cousin. They have no words to differentiate the classificatory-descriptive system of terms showing relationship with mother, mother's elder and younger sistere (*mei, mei san, mei nah*); father and his elder and younger brothers (*kpa, kpa san, kap nah*) and father's brother's children (*para kha*), father's mother (*mei kha*), mother's mother (*mei rad,*) wife's brother (*kynum*), husband's brother (*kong*), and so on. We find in the Khasi sociology, departments of 156
social organization indicating the attitude towards 829
life which is peculiar to the Khasi. The terms are 601
not mere names but serve to show well-defined groups based on an idea of their special functions. As Dr. R. R. Marett says, "Exogamy, and everything 121

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

[2] else that we do is instinct with a *plus*; and for the student of religion or of human culture in any of its forms, to account for that *plus* is the sum and substance of his task.....Whereas, then, there is likelihood that any *a posteriori* reason existed for believing that in-breeding makes for sterility, if indeed it be true in fact at all, there might well have been an *a priori* conviction to much the same effect based simply on a fear that to tamper with the fountain-head of human vitality would somehow cause it to dry up." The Khasi stands in the world as exogamous in his rule of life, and he says '*sang bad byrsieh*', that is, endogamy is forbidden and if it should ever be committed it will render life defiled and corrupt. He says this out of the fear of the knowledge that any act of carelessness in the prohibited area of the source of human life and vitality, which is in the Khasi phrase '*long briw*' (*long* is to be or become, *briew* is man, i.e., to be or become man), will make that source of human life to dry up. So he says, 'duh I jaid I khong' (*duh*=is exterminated; *jaid*= kind, species; *khong*=root).

156 829 582 [885]

In refutation of such aspersions as that the Khasi has no rules of marriage, I shall quote the most sacred pronouncement the Khasi when two persons, the man and the woman, are initiated into that state. Calling upon the name of God the Khasi says—"*U Lei thaw briew man briw, u' Lei ne ka 'Lei synshar'*, (God who creates man and is the source of human life, God who keeps, controls, preserves), "*Hei ko Blei na jrong, Ko*

582 585 [539]

14: Roy I-5 (no date) 1938 AR7 Khasi AR7

Blei na tbian, ko Lei Synshar, Ko Blei triw, man briw, kumba la hukum kumba bhu ma phi U Blei ka Blei ban long I Kha I man, kumba la pynhiar ka synjat mynta ka sgni, ba phin tip, ba phin sngew na jrong ho kyndiang ba ita I jaid bad ita I jaid ki la iapoi kha poi man ban iaroi ban ia man ban ia heh ka long kynthei ka long shynrang', Oh God from above, oh God from below, Thou God who controllest, who keepest and preservest, Thou God who createst man and the origin and source of human life,—as ordained by Thee, Oh God, U Blei (God in the male aspect), Ka Blei (God in the female aspect) that there should be *I Kha* (person to bear and give birth) *I man* (person with whom and through whom to give cause to life and to grow), as token has been brought down this day, [a ring is given], so that Thou mayest hear clearly from above, that such and such *jaid* (kind, clan) and such and such a *jaid* (kind, clan) have become joined in marriage in order to increase, in order to grow, so as to increase the state of being female and the state of being male (i. e. male and female population)." [This is said as a woman of a certain clan always marries a man of a different clan.] As I have said elsewhere, "There is no tradition among the Khasis that there was ever a time when the status of marriage did not exist among our ancestors. There is a belief among the Khasis that they were instructed in their religion and that their ceremonies and rites were delivered by God Himself to the

14:Roy I-5 (no date) 1938 AR7 Khasi AR7

581 [773] *Hynniew Trep Hynniew Sknm* (the seven nests, seven roots). These seven nests or roots were seven pairs of virgin women and men created by God to marry and they formed seven houses (families) and from them the country was filled and the rites and ceremonies were obtained. Thus the Khasi takes pride in the fact that God Himself delivered their religion and the rites and ceremonies unto them. ... The Khasi matrilineal system has come down through ages and with a definite idea of the union of one man with one woman. This is significant for those who consider that marriage is and has always been common to the whole human race, and it raises the question as to whether the Khasi idea is the survival of a period when the nature of paternity was not understood".

[851] [603] [553] In the sacred rites of baptism of this simple folk we find that a Khasi grandmother will not officiate in the name-giving ceremony unless in the marriage of her son with the woman to whom the child is born there has been the regular ceremony of marriage.

PREFACE

K
G
121

The purpose of this monograph is to present theoretical problems of Garo and Khasi social organization in relation to those of other matrilineal systems. In fact, the study of these two matrilineal systems has led me to enquire into many other matrilineal systems, as will appear throughout my discussion in Parts I and II. As a result, I think I have reached certain conclusions of theorical interest concerning matrilineal systems as a whole; these are presented in the last part of the book.

K a 121

From the beginning of my field work, my interest lay in a *comparative* study of the two systems, not in preparing a complete monograph of the cultures of the two peoples. I used the period of my field research in working among the two peoples alternately, so that I could constantly check from one field to the other as new problems appeared.

K a 114 122

The period of my field work was very limited (October, 1955-February, 1956). I did not know the vernacular of either the Garo or the Khasi (Since Garo language has much commonness with Tibetan language which I was used to read and speak, I could quickly get used to follow their speech during my field work, but I failed to do so in Khasi language). I employed altogether five local English-speaking interpreters (out of the five, three were pagan, and all had relatives in the villages where I worked). But I already had experience in studying the economic and social organization of other hill peoples in Assam, having carried out two years (1953-1955) field work among tribes in Tripura State and among the Tangkul Nagas in Manipur State, as also among Himalayan peoples. This all helped me a great deal in my work among the Garo and the Khasi, and is one of the reasons why I could collect such a considerable amount of *data*, in spite of the alove mentioned handicaps of my actual field work. (Later on, I carried out field research for four months among the Nayar of Kerala, to provide further *data* for comparative study.

K a 124 122

K a 121

The Garo and the Khasi present very different structures from each other. In order to present a more effective picture of each structure, I have used different ways of presentation, each of which brings out certain important theoretical implications. The emphasis is laid accordingly upon different features: in the case of the Garo, it is the marriage system in relation to the village community; in the case of the Khasi, it is variation in marriage forms related to the structure of descent groups.

K a 122

I wish to express my profound gratitude, first of all, to the Elin Wagner Foundation in Stockholm, by whose generous grant the field work of this study was carried out, and next to Professor C. Lévi-Strauss, who has consistently encouraged me to complete this manuscript and has very kindly given me this opportunity for publication. I am greatly indebted also to: Professor Fred Eggan, Professor Raymond Firth, Professor Meyer Fortes, Professor C. von Fürer-Haimendorf, Dr. E. R. Leach, Dr. Audrey Richards, and Professor D. M. Schneider for much stimulating discussion and helpful comment on the theoretical problems of this study.

I am grateful for invitations from the Department of Anthropology, University of Chicago (1959-1960) and the Department of Cultural Anthropology, School of Oriental and African Studies, University of London (1960-1961), as also for an association with the Department

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

122

of Anthropology, London School of Economics and Political Science, which allowed me to give series of lectures on this subject. I received great profit from discussions with staff and students of these institutions in the preparation of the final manuscript. I have a special debt to acknowledge also to Professor Sol Tax, who has afforded me consistent help and encouragement in this work. I also had some interesting discussions with Miss A. Pikelis McCormack, and Dr. R. Burling each of whom worked in other areas of the Khasi and Garo Hills. I also wish to express my thanks to Mrs. Fürer-Haimendorf of the School of Oriental and African Studies, and Mrs. Horn of London School of Economics for their kind help with the manuscript.

A major acknowledgement also goes to the Wenner-Gren Foundation for Anthropological Research who supported this study, and to the Centre for Advanced Studies in Behavioral Sciences for its hospitality in the summer of 1959 when the first part of this manuscript was prepared.

Finally my most grateful thanks go to the Institute of Oriental Culture, University of Tokyo, which in its generous appreciation of the needs of a social anthropologist has permitted me to have a sufficient period of research abroad to make this and other studies possible.

London, February 1961.

CHAPTER I

INTRODUCTION

I. ECOLOGICAL BACKGROUND

The Garo are one of the groups of hill peoples of Assam. They 101
are in many cultural aspects similar to the Naga, the Kacharee and other hill tribes, but they are characterized in particular by the matrilineal system. The Garo occupy the area known as the Garo Hills, but scattered groups extend for some distance into the plain. Administratively the Garo Hills form a separate unit which is bordered by the Goalpara District (mainly part of the Brahmaputra valley) to the north and west, and the Mymensing District (East Pakistan) to the south. The eastern border continues to the Khasi Hills where there lives another people with matrilineal system—the Khasi (see Part II). The Garo population in this District was estimated at 242,075 in the 161
Census of 1951.

The structure of the Garo economy and society is related to the 133
type of land they occupy. In the heart of the Garo Hills lie the Nokrek, the Tura and the Arbela Mountains, from which subsidiary ranges run from west to east. All the rivers in the Garo Hills flow down from these central ranges to the northern, western and southern plains. The altitude ranges from 1,000 to 3,000 feet. The climate by 132
Indian standards is moderate, though field workers find it very exhausting to go through the jungle between the end of February and the middle of October. After the exhausting tropical heat from February to April, the monsoon season which lasts from April to September, brings heavy rainfalls which cause many routes in the Hills to be blocked. Due to the warm climate, the heavy rainfalls and moderate 137
altitude, the Garo Hills are covered by thick semi-tropical forests 136
where wild elephants, leopards, tigers and other wild animals thrive. The soil is one of the richest in Assam, producing good crops of rice, 134
cotton, chili, yams, timber and many medicinal plants.

Traditionally the Garo distinguish among themselves a dozen 619

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

619 groups related to geographical area: namely Akawé (Awé), Chisak, Dual, Machi, Mathabeng, Kochi, Atiagra, Abeng, Chibak, Ruga, Ganching (Gara) and Atong.[1] These twelve groups can be arranged according to social and cultural similarities in the following seven categories:

1. Awé, Chisak and Kachu,
2. Abeng and Atiagra,
3. Machi and Matabeng,
4. Gara-Ganching,
5. Atong,
6. Chibak and Ruga,
7. Dual.[2]

[102]

MAP 2. — *Map of the Garo Hills with Classification of Groups.*

[131] The Awé occupy the northern slopes of the Garo Hills and the lower areas joining the Brahmaputra Valley. They are also known as Akawé which means 'plain dwellers' and have many contacts with

1. See Playfair, 1909, p. 59.
2. Besides these seven categories, we might add: 8. Megan,—who are said to be the people mixed with the Garo and the Khasi.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

other tribes and the peoples of the plain. Actually many of them 619
have spread into the plains lying outside the Garo Hills district.
Playfair mentions that the Chisak have a great deal in common with 184
the Awé, but they have certain distinctive features in dress and customs
which would seem to require that they be regarded as a separate 619
division. The Kachu are said to be scarcely distinguishable from the Awé whom they resemble in almost all particulars of dress and custom. Playfair notes that they comprised only seven villages, and were the smallest group among the Garo.

The bulk of the population of the Garo is represented by groups 2 and 3 above. The Machi occupy the heart of the Garo Hills and are famous for their production of cotton, while the Abeng occupy the western slopes of the Hills where dry hill rice is the main product. The Atiagra is a small group, very much akin to the Abeng. The Matabeng are situated between the Abeng and the Machi. These two groups exhibit much in common in both culture and dialect and manifest the characteristics usually termed 'the Garo.'

Groups 4 and 5—the Gara-Ganching and the Atong—are somewhat
different from the preceding groups among the Garo. The Atong 197
especially have quite a different dialect from the other Garo and it is
generally said that their dialect is nearer to that of the people of 619
Coochi-Behar than to the other Garo dialects, for other Garo groups hardly understand the speech of the Atong. However the latter are bilingual so that they have no difficulty in conversing with their
neighbours. While the Atong are well known for their skill in making 184
boats, the Gara-Ganching are renowned for their craftsmanship in
sculpture and in the building of houses. The Gara-Ganching and the 619
Atong employ different house-building techniques.

The Chibak and the Ruga are small groups whose myths and general culture show considerable variations from those of other Garos, particularly the Chibak who have different forms of folk dances. The last group—the Dual—are according to Playfair, a colony of plain-dwellers who have their home in the district of Mymensing.

Each group exemplifies certain cultural differences and a certain endogamous tendency which will be explained later, but they do not necessarily form political units. The distinct differences that exist are rather those that appear between the plain-dwellers of the first group, the Awé and others, and the hill-dwellers who constitute the
remaining groups. The plain-dwellers are cultivators of wet rice [241]
fields, while most of the Garo population in the Hills practise shifting
cultivation. The Garo of the plains have become more sophisticated [771]
by closer contacts with the lowland peoples and many of them have adopted Christianity. They seldom come into contact with the hill-dwellers and live in an entirely different ecological and cultural environ-

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

184 ment from the latter. Thus the Garo may be divided roughly into
619 two main categories as hill-dwellers and plain-dwellers.

My field work was carried out among the hill-dwellers, who have
101 maintained a more indigenous culture; the villages of Rombagiri in Machi, Siju in Atong, Emangiri in Gara-Ganching, and Rinsibara in
131 Abeng (see Map 2). The older villages of the Garo like Rombagiri,
361 Siju, and Emangiri are situated in the interior of the Hills along the upper reaches of rivers. Their founders were always in search of clean running water when they settled, so their villages are always found near or on the bank of a river.[1]

241 As mentioned above, these Garo practise shifting cultivation, generally known in Assam as 'jhum cultivation'. Their main products are cotton and hill rice. Their farming calendar is as follows: from December to January they cut down trees in a certain fixed area of jungle and leave them to dry till the end of March. In April, just before the first rainfalls, they set fire to the fallen trees; ashes remaining on the ground are washed into the soil by the rain, rendering the area very fertile. Soon after, they sow all kinds of seeds—paddy, cotton, chili, bean, millet, maize, pumpkins and gourds. They also plant various kinds of yam. These various kinds of crops are cultivated at haphazard in the same field. Paddy, cotton and chili, however, are comparatively well separated from other plants in certain sections of the fields. As many species are mixed in one field, the ripening times of the crops differ, extending from August to November; thus they can be harvested successively as they ripen. The jhum field is usually shifted every year, and the period of rotation is now one of several years. In some parts of the Hills, the jhum field is used for two successive years. It depends on the proportion between the village land and its population: the details of the use of a jhum field will be explained later.

178 These hill-dwellers have for centuries enjoyed a self-sufficient eco-
619 nomy, with plenty of rice and rice-beer. They wore loin-cloth, and, in their bamboo houses, they slept near a fireplace, on a thin mattress
[513] made of bark. In the olden days, before the British period, the Garo
[287] Hills are very rarely mentioned in historical documents of either
[291] Bengal or Assam.

Since the British period, Tura has become the administrative centre and shortly after the Independence of India, the urbanisation of Tura, and the construction of roads from Goalpara to Tura, Tura to Dalu and further to Bagmala have brought great changes to the Garo Hills. Hindu culture and modern Christian education have gradually pene-

[171] 1. They thus present quite an exceptional case, as the tribes in Assam and Himalaya generally establish their villages near the tops of the hills and far from rivers.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

 178 619

trated into the hill-dweller's way of life. Educated Christian Garo [797] leaders have been eager to bring civilization to their brethren. For instance, they are trying their best to teach the Garos to wear clothes [291] by purchasing cotton shirts from Hindu merchants. Nowadays a bare-breasted woman seldom happens to be met.

The increase in population in the last fifty years particularly led 178 the Garo to found new villages, and extend their settlements near 184 the plain. In this virgin field for cultivation between hill-dwellers 619 and plain-dwellers, the soil, in places like Rinsibara, is not good and the forests are poorer than in the interior, so that the people adopted [161] wet cultivation which, in such place, produced more yield than jhum- [361] ing (see Chapter III). Thus hill-dwellers have come closer geograph- [243] ically as well as economically to the plain peoples.

Hill-dwellers and plain-dwellers, no matter to what degree their sophistication may have proceeded nor the extent to which may have become differentiated as a result of their geographical and historical situation, have a strong tribal consciousness. As *Achik Mande* (people of Garo), all are Garo-speaking people and their social structure is uniform; hence they are very definitely marked off from neighbouring tribes and peoples.

II. Distribution and Organization of Unilineal Groups

The principle of differentiation from neighbouring tribes and 616 peoples, and the principle of dynamic coherence in the Garo tribe, operate in the Garo social organization. The Garo are internally divided by a major cleavage into two exogamous matrilineal phratries, Sangma and Marak, which intermarry. These two groups which form a moiety structure are alleged to have different origins as illustrated by the events of their legends. At present there is a third group, Momin, which is an accreted clan, i.e. additional to moiety structure by historical process of marriage with foreign women.[1] The Momin may marry either a Sangma or a Marak, thus creating a dual complementary moiety system. However, it is a much smaller group and is found usually nearer the plain. In fact, in my census of three villages, members of Momin are very few, less than 0.5%. As a whole, in the phratry organization, the Momin play but a small part: in effect, empirically there is only a moiety relationship. In order to simplify my exposition of the Garo social organization I shall leave out this third group in the following discussion.

1. It is considered that the Momin have been recently created by the marriage between a Garo (Sangma or Marak) and a Mohammedan.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

616 Every Garo individual belongs to either Sangma or Marak. When a Garo meets somebody on the way, he will ask whether he or she is Marak or Sangma. This moiety classification of clan is called *chatchi* by the natives. The *chatchi* is the most important indication of their social position among the Garo tribe. They can at once recognize the relation between *Ego* and anybody else, whether he or she is an ally or an enemy, and whether marriageable or not. Indeed, they are traditional enemies. At the same time, they are in a position of inescapable interdependence, since the Garo have a strict rule of exogamy at the level of *chatchi*.

614 These two *chatchi* are scattered all over the Garo area, being further segmented into various sub-groups, *mahari*. This distribution of *mahari* seems to have certain localized areas. For instance, *mahari* A, B and C of Sangma and *mahari* A′, B′ and C′ of Marak mostly occupied the eastern range of the Garo Hills, while D, E and F of Sangma and D′, E′ and F′ of Marak are mostly found along one of the rivers of the western area, and so on. Therefore, marriage relationship are usually to be found between *mahari* of Sangma and those of Marak which are localized in a particular area, not A of Sangma and D′ of Marak at random. Thus, they form a localized area. This socio-geographical area coincides to some extent with the differences in dialect and culture of the seven groups which I mentioned (see pp. 20-21). At least those areas I know of, show marked endogamous units with *mahari* distributions fairly corresponding with the cultural and geographical classification.

For instance, among the Atong the following *mahari* are to be found:

Ampang Sangma	Dadok Marak
Gineng Sangma	Gare Marak
Mangsang Sangma	Pantho Marak
Richil Sangma	Romtu Marak
Ronchel Sangma	Singtang Marak, etc.

These are only to be found among the Atong group along the lower banks of the Simsan River. Among the Machi, the following *mahari* are predominant:

Agitok Sangma	Chambugong Marak
Tigiti Sangma	Rangsa Marak
Manda Sangma	

These *mahari* are also found among the Abeng as well as the Matabeng.[1] It may be said that the Machi, the Abeng and the Matabeng are not

1. It is beyond the limits of my investigation to present all the names of *mahari* of these groups like the Atong, since their areas are much wider and each of the *mahari* occupies a much larger territory than that of the other smaller groups. The list of all *mahari* of the Garo is given in Playfair, *ibid.*, Appendix A.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

distinguishable as independent socio-cultural units like the Atong, but form an endogamous unit and, as I have already stated, they are, moreover, quite similar in culture. In this case, classification by their group names would seem to have only geographical and ecological significance. Their legends record that in the course of their migration, one party remained in the central part of the Garo Hills to produce cotton, while another party proceeded to the west to specialize in hill rice cultivation. The former is known as Machi and the latter as Abeng. 614

In the Gara-Ganching area, which adjoins Atong in the east and Machi in the north, there are the following *mahari* groups situated around Emangiri:

Manda Sangma	Rma Marak
Nenmanja Sangma	Rongmuto Marak
Meching Sangma	Areng Marak
Mangsang Sangma	Raksam Marak
Mankin Sangma	Jichan Marak
	Chada Marak

Among them, there may be found the same *mahari* with one of the Atong, as well as of the Machi. The distribution of *mahari* is not a clear-cut division in each group, but there appears a certain concentration of *mahari* which form an endogamous area.

Actually each group of *mahari* is again segmented into many localized lineages. Therefore, structurally, the *mahari* plays a secondary or intermediate role in the Garo tribal organization between *chatchi*, the primary organization of the phratry, and the tertiary or minor section of *mahari*—localized lineage. However, the native term *mahari* is used also to refer to the localized lineage. But in practice, the localized lineage is clearly indicated by adding its name to the *mahari* name. For instance, an individual sociological location is expressed as 'Chambugong Dinajik Sangma': Chambugong *(mahari)*, Dinajik (localized lineage), and Sangma *(chatchi)*. The broader category of *mahari* represents a sub-group of the *chatchi*, scattered in a considerably wider area. The members of this group often do not know each other, but as soon as they recognize that they belong to the same *mahari*, they behave as if they belonged to the same localized lineage. 613 614

For instance, during my field work, when I came to a village far away from my interpreter's village, the villagers found my interpreter was a member of the same *mahari* as them. Hence, they showed an extremely affectionate attitude and he addressed them as *mama* (mother's brother), though the kinship relation between the villagers and him could not be traced at all and it was the first time they had 123 574 613 614 [601]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

123 met one another. In the course of discussion, they found names of
574 some common acquaintances, then as they were greatly satisfied with
613 this unexpected discovery of kinship, much more *chu* (rice-beer) was
614 poured into our glasses, and they talked with us intimately—there was no doubt of that being of great help for my field work. Thus there is a strong feeling of cohesion among the same *mahari* people. However, it is not an organized system, but rather a feeling of closer lineage relation. The actual organic body is established on the basis of a localized group, a minor segment of the *mahari*.

613 The minor *mahari* group which I term 'localized lineage group'
621 is associated with the composition of a local community—a village or usually a group of villages. The historical formation of a localized lineage is as follows: once upon a time a couple founded a village far away from their native village. The matrilineal descendants of this couple differentiate themselves from other members of the same *mahari*, by adding a local name. In the course of time, due to the increase of its population, branch villages were formed around the original. Therefore, a localized lineage often covers several neighbouring villages, among which the parent village (the oldest one) holds a direct matrilineal local line from the wife of the founder. In the Garo Hills, each village is a political and economic unit which forms an autonomous Garo tribal political organization. However, a group of villages associated with a localized lineage has a closer tie and are always considered as one sociological unit centered upon the parent village, and distinguished from other nearby villages by their functional coherence.

628 The membres of a village or a group of villages are thus united by
613 matrilineal kinship ties. Therefore, owing to their exogamous rule, they must take spouses from one of the localized lineage groups of
614 one of the *mahari* of an opposite *chatchi* within a certain local area of *mahari* distribution. It appears that there is a traditional contact
[621] between each localized lineage of Marak and of Sangma. Within a certain endogamous geographical area which was observed previously in the distribution of *mahari*, there are arrangements made between each paired relation of localized lineage groups of Marak and of Sangma. Therefore the actual marriage takes place on the basis of localized lineages, not on that of *mahari* alone. In terms of my model, and also in the people's mind, each pair of villages is composed of a pair of opposed lineages forming a moiety arrangement with each other, from which men are exchanged traditionally according to matrilineal and uxorilocal rule. For instance, village A of *mahari* X of Sangma and village B of *mahari* Y of Marak have a traditional moiety relationship with each other. Village A consists of members of a localized lineage of *mahari* X of Sangma with husbands of *mahari* Y of village B

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

 614

and *vice versa*.[1] The villagers express this relationship as "village A is the community of women of *mahari* X of Sangma and of men of *mahari* Y of Marak," or "*a'king* of *mahari* X and *a'jiksa* of *mahari* Y." The latter expression especially touches upon a very important characteristic of the Garo social structure in relation to their economic system. 628 613

A'king is the land owned by a village: every village has its land which is cultivated by the villagers. This land is cultivated in rotation according to the method of jhum cultivation. The Garo who practise jhum cultivation have no individual ownership of land but each village household has its share in the village land. The common ownership of land is vested in the headman's wife, who maintains the direct local line of the founder of the village. This village land is called *a'king*. The term *a'jiksa* means: the village and land belonging to it where husbands come from. So the *a'king* of village A is the *a'jiksa* of village B and *vice versa*, since village A of Sangma and village B of Marak exchange menfolk in marriage. Through marriage rights, men of village A have rights of cultivation to the *a'king* of B and men of village B have the same to the *a'king* of A. This traditionally arranged social right (marriage right) based on an economic arrangement (land) is expressed in terms of *a'kim*.[2] 423 621 613 614 628 [581]

Thus marriage relations are established between two opposite lineages and are supported by the resulting economic balance. Every localized lineage finds its opposite localized lineage, and the two localized lineage groups form an inescapable interrelationship in their community. These relationships between pairs of opposite localized lineages are the nodal points of the whole net-work of Garo social organization. This localized lineage group emerges into broader *mahari* organization and again is linked to the widest range of kinship, *chatchi*. These vertical unilineal lines across a moiety organization through exogamous marriages thus construct the Garo social organization which marks off the Garo from neighbouring tribes and peoples. 61

1. The actual village composition is somewhat different, see List 2, p. 42.
2. This term: *a'kim* is used also for the expression of the right arised by a marriage bond between two households *(mok)*. Such relationship between the two household is theoretically not divorced from the relationship between two villages (localized lineages) as it will become clearer in the course of discussion. [592]
The marriage arrangement between two particular villages is an expression of the ideal pattern. The actual state is much more complicated, as I shall explain later. Owing especially to the recent increase and mobility of the village population, the concept of *a'kim* is getting out of use nowadays. The Garos of the villages I visited would talk to me in the following manner: "Village X was the *a'jiksa* of ours, but nowadays we no more call Village X our *a'jiksa*." [178]

Garo AR5

CHAPTER II

THE RELATION OF VILLAGE COMMUNITY TO KINSHIP STRUCTURE

In this chapter, I shall consider Rombagiri village in some detail, as a basis for a general description of the characteristics of Garo village communities. Rombagiri, one of the oldest parent villages in the interior part of the Garo Hills, provides ample *data* for the discussion. For comparative and supplemental purposes, however, I shall also employ *data* on two other villages, Emangiri and Siju. The structural principles derived from the analysis of the workings of Rombagiri community, offer lights for the understanding of various guises of other Garo village communities, including those affected by rapid changes owing to the recent development of the Hills along with the construction of motor roads. 128 121

I. ECONOMIC AND POLITICAL BACKGROUND

Rombagiri is situated on the bank of the upper course of the Simsang River, the largest river in the Garo Hills; its source is in Mt. Nokrek and it flows through the heart of the Garo Hills towards the eastern border where it turns southwards to East Pakistan. Many of the older Garo villages are found along this river. The Simsang cuts a deep gorge at Rombagiri between the Arbela and the Nokrek ranges. The village is situated on the southern slope where the ridge falls down very steeply to the river, and faces northwards to the Nokrek range across the river. 133 361 [131]

The Rombagiri *a'king* (village land) encompasses vast slopes of mountains on both sides of the river, centred on the village site (see Map 3). Around the village site, a certain area of jungle is marked as village land, differentiated from other village lands by clear border lines (stones are placed at every corner). The *a'king* is subdivided into several sections which correspond to the rotation of jhum cultivation. 423 621 361 [241]

involving annual changes of cropping and a return to the same part of the field after several years: the rotation in Rombagiri is every seven years. Each area of the *a'king* under cultivation is further subdivided into many small fields which are apportioned to each household of the village (see Map 4). About this economic organization of the village further details will be presented later.

The management of the *a'king* is in the hands of the *nokma* (headman) who acts in cooperation with the villagers. The *nokma* as a rule

361 cultivation: some households of the village move away from the village
423 site, but the new settlements are found somewhere inside the *a'ing*.
621 Finally a part of the *a'ing* around the new settlement becomes an
[622] independent unit separated from the original one. They soon find it necessary to establish a new *nokma*, as they form an independent

[102]
[103]

MAP 5. — *The Area including Rombagiri under the Same Leader*

body of economic management. Thus branch villages are formed around the parent village in the course of time. In the case of the Rombagiri group, there are several branch villages situated around the parent village, their distribution is shown on Map 5.

173 Rombagiri is possibly one of the oldest villages in the Garo Hills.
103 According to the legend of the foundation of the village once upon a time there was a man named Baigo who, accompanied by his wife, Gutingma, and his son, Rombu, came in search of a fertile land to the site of the present village of Rombagiri, then covered with thick jungle. Soon after their arrival, their beloved son, Rombu, was eaten

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

by a tiger. In his memory, they named the place "Rombagiri." The village was found by Bulgo Agitok Sangma and his wife, Gotingma Chambugong Marak. How old is Rombagiri? As far as people's memory goes through the names of successive generations of sokmas, the present sokma is the 28th; the details are as follows:

	Name of sokma	Chatchi	Mahari	Local lineage	Name of wife	Chatchi	Mahari	Local lineage
	—	—	—	—	—	—	—	—
1.	Sim	Sangma	Agitok	Khelang	Mikri	Marak	Chambugong	Dimajik
2.	Rongbal	—	—	—	Rengm	—	—	—
3.	Gera	—	—	—	Khem	—	—	—
4.	Gabil	—	—	—	Rengm	—	—	—
5.	Wank	—	—	—	Momang	—	—	—
6.	Machok	—	—	—	Gachang	—	—	—
7.	Gasang	—	—	—	Ziage	—	—	—
8.	Thyrak	—	—	—	Dagil	—	—	—
9.	Phiteng	—	—	—	Gaiam	—	—	—
10.	Thayong	—	—	—	Ziet	—	—	—
11.	Gindong	—	—	—	Sachi	—	—	—
12.	Mikrong	—	—	—	Dalma	—	—	—
13.	Sangma	—	—	—	Dikche	—	—	—
14.	Gobang	—	—	—	Ocjak	—	—	—
15.	Rangwal	—	—	—	Rakji	—	—	—
16.	Chamkim	—	—	—	—	—	—	—

It is considered that in early times the land of Rombagiri extended over a much wider area of southern Achaia, including the southern bank of the Simsang River, which covers all a long of the present branch villages. According to the people's accounts, it seems that the branching outwards took place during the last hundred years. In former times, there were constant fightings between villages of neighbouring lineage groups belonging to opposite *chatchi* and for purposes of military security, they found it necessary to settle together. According to numerous accounts, the Garo villages of the interior used to comprise more than a hundred households, though at present the usual number within a village ranges between 30 and 50. When the village were ceased under British administration, as indeed they did in many cases amongst the various tribes in India, satellite villages were begun to shape from a resulting increase of population as well as the need for a more efficient cultivation of the jhum fields. In a village of more than a hundred households, the distribution of jhum fields amongst the households becomes extremely complicated, since every year, when the field is shifted, each must be allocated its share. Another disadvantage was that due to the rotation of fields, on some years the field was situated very far from the village site—indeed they used to build temporary houses near the field for the period of the cultivation.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

361 The establishment of branch villages within the original *a'king* therefore enabled them to simplify the annual distribution of fields to each household as well as to each settlement situated close to the land to be cultivated. As I stated before, a group of settlements separated from the older village formed a new village, a political and economic unit, and created a new *nokma*, though they still remained part of their original social unit on the level of the localized lineage group.

In the course of time, some of these branch-villages further subdivided and created new secondary branch-villages. At present Rombagiri has altogether ten satellite villages: Gondenggiri, Adinggiri, Nagthingiri (sub-branch-village of Adinggiri), Timbogiri, Donsigiri (sub-branch-village of Timbogiri), Chiwathogiri, Makragiri, Marakiri, Chokagiri and Silsochigiri. It is very difficult to reconstruct in full the branching-off process of these ten villages from the original Rombagiri. What we do know is that in 1924, the *a'king* of Rombagiri included the area which is bounded by: ——— in Map 3, since the record made by the then Deputy Commissioner, G. D. Walker, marks the area as Rombagiri. It is understood throughout this record that by 1924 amongst the satellite villages, Gondenggiri, Adinggiri, Timbogiri and Chiwathogiri had already dissociated their land from Rombagiri. The southeastern part of the Simsang River was taken from Rombagiri at the foundation of Silsochigiri in 1936. This was the last formed of the satellite villages. The northeastern part of the Simsang River was taken by Marakiri, Makragiri[1] and Chokagiri, but there are no records relating to their breaking away from Rombagiri. We can only place it sometime between 1924 and 1936. I was also unable to obtain the date of the formation of the secondary branch-villages, i.e. Nagthingiri from Adinggiri and Donsigiri from Timbogiri.

361 At the establishment of Silsochigiri, a report was compiled by the
423 then British Deputy Commissioner. This report gives us valuable
622 information about the branching-off process. According to the report,
648 Gebung *nokma* (1918), was in debt to the extent of Rs. 400 and 2 bulls
692 to Gawan Marak and Buram Marak of his village. On January 1918
686 the section of that land which is marked as Silsochigiri in Map 3 was given to Gawan Marak and Buram Marak in payment of the debt. Now Gawan and Buram wanted it as a separate *a'king*, but the Chambugong *nokma* objected and offered instead to repay the original debt in order to take back the land. Gawan and Buram were unwilling to do this. The case was brought before the Deputy Commissioner's Court. The Deputy Commissioner, Mr. W. Shaw, granted Gawan and Buram this land as a separate *a'king* and called it Silsochigiri in February 1936.

1. The *a'king* of Makragiri became later in the possession of Mandu *nokma* (see p. 50).

MAP 6. — *Distribution of Villages in Atong and Garo-Conching Area.*

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

361 As a rule, the *a'king* is village land and no one can hold any part
423 of it as private land. However such cases do occur when the *nokma*
622 or any other rich person becomes very powerful and uses the *a'king* as
661 if it were private land to sell, buy or mortgage. The above case is not an exceptional one. Such abuses of the power of the *nokma* and illegal activities of rich and powerful men have made considerable changes in the traditional distribution of *a'king* in the Garo Hills. The present *a'king* of Dinagiri and Makragiri, both of which are in the possession of the Manda *mahari*, were taken from the *a'king* of Waimagiri (another neighbouring Chambugong village) and of Rombagiri two generations back. I found similar instances of distribution of *a'king* also among the Emangiri group and the Siju group—the branching-off of villages was nearly always accompanied by stories of influential men who effected the present distribution of the *a'king*. Thus in spite of the moral tradition that the *a'king* belongs primarily to a village, the actual state of distribution shows a more fluid character.
[721] Before the British occupation the distribution of the *a'king* was decided
[178] by local wars, but under the Pax Britannica, the individual intrigues and the judicial decisions of the British administration were the more influencial factors.

361 In the Atong and the Gara-Ganching areas, the distribution of satellite villages can be easily recognized through the names of villages and their locations alone (see Map 6). Along the Simsang River and its tributary, the Rongdik, there are many satellite village groups such as the following:

Parent village	*Satellite villages*
Badri Songmong	Badri Malongithim
	Badri Wathregithim
	Badri Rongdinggithim
	Badri Rongsagithim
Siju Songmon	Siju Songgital
(Siju)	Siju Ronthainam
	Siju Daikim
	Siju Artika
Rewak Songmon	Rewak Sakagiri
	Rewak Chokinkgithim
	Rewak Rongchekgiri
Nenghong Songmong	Nenghong Matmagitik
	Nenghong Jolegiri
	Nenghong Jeramgitham
	Nenghong Seelgiri
Emaan Rongtikgiri	Emaan Gatabilgiri
(Emangiri)	Emaan Rongbagiri
	Emaan Thebrongphathalgiri
	Emaan Drabanda
	Emaan Seelgiri

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

Politically and economically each village, headed by the *nokma* and his wife, forms a unit. However, the satellite villages and the parent village form a social and political concentration whose cohesion is the theoretical basis of the localized lineage group and the result of earlier political and military unity. 621 622 628

Through the lineage organization with its historical background, the eleven villages, comprising Rombagiri and its satellites, form a single unit headed by the former and united against neighbouring village groups. Wives of the *nokma* of the ten satellite villages are closely related to the wife of the *nokma* of Rombagiri, thus forming the localized lineage group of Chambugong Dinajik. Likewise, the *nokma* of the eleven villages are, as a rule, men of the opposite lineage group, that is Agitok Khoksep Sangma. (Makragiri is the exception since its *a'king* became of Manda.) Their traditional enemies were the adjacent villages of Sangma, Chondigiri, whose *makari* is Tigiti Sangma (Karakiri and Dinadigiri are its satellite villages) and Mandagiri whose *makari* is Manda Sangma (see Map 5). The *makari* of Sangma had always been the enemy of the *makari* of Marak. The exception is the opposite lineage group with whom they exchange their menfolk. For instance, Dimitigiri (Agitok Sangma) had always been the *a'jikna* of the Rombagiri people, never the enemies. 613 614

The distribution of a certain group of the *makari* of Sangma and of Marak is traditionally associated with a particular locality, as in the case of the Rombagiri area: east and south of the Rombagiri group there is the Manda Sangma and to the west, Tigiti Sangma; to the north, Chambugong Marak and so on (see Map 5). Accordingly Siju, the *a'king* of the Ampan Sangma, is surrounded by Richil Sangma, Romchel Sangma and Singtang Marak. Around Emangiri, the *a'king* of the Rima Marak, whose *nokma* is Manda Sangma, there are the Manda Sangma, Aren Marak, Rongmutu Marak, etc. Thus the areas of the *makari* of Sangma and of the *makari* of Marak cut across each other with traditional enemies on the one hand, and intermarriage relations on the other. This particular area where either an enemy relationship or a marriage relationship exists forms an endogamous unit, because both relationships rarely extend beyond the traditional area. This area corresponds with what I already mentioned on pages 20-21. In this fairly clearly defined area, both the *makari* of Marak of and Sangma are distributed and amongst them, at the level of localised lineages, they form the moiety relationship with one another, cutting across the area in various ways. Each localised lineage group, as a village or a village group, maintains a hostile relationship on one hand and marriage connections on the other. Thus all villages within such an area are linked directly or indirectly either by cognatic ties or by affinal ties which tend to bridge cleavages where hostile relationships exist. 613 628 614 621

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

61 Each socio-geographical area on the level of the *mahari* is united
621 by the higher cognatic relationship of the *chatchi*, which merges into the wider constellation of tribal organization. This is the Garo socio-political structure. The Garo have no centralized political office or social ranking system in their organization; there is only the unit existing through the cohesion of the lineage group, which, though it might be fragmented into smaller political economic units, maintains, nevertheless, a balance of power through its functional organization based on exogamous rule. This system might be called a democratic type, as I have concluded in an earlier paper (Nakane, 1958/A).

177 On the basis of the traditional Garo political organization which
634 is so clearly associated with their social structure, the British administration created a new political office, the *loskor*. The Garo Hills
648 were divided into new geographical and political divisions wherein as many as a dozen villages or more became one unit, the head of which was called the *loskor*. He was elected among the *nokma* of this unit by the *nokma* themselves. The unit of the *loskor* around Rombagiri is shown on Map 5. In 1949 the Garo Autonomous District was formed and is known as the District of the Garo Hills, one of the districts under the Assam Government. By this administrative change, the *loskor* organization was still maintained, but alongside it they now appoint a *sordar* in each village to assist the *loskor*. The *sordar* are appointed by an autonomous body known as the Council of the Garo Hills, which supervises all the villages. These political changes have much affected the traditional socio-political system centred upon the *nokma*. To this theme, I shall return later.

II. Setting and Composition of the Population of Rombagiri

621 Rombagiri village was a community consisting, in December 1955,
36 of 30 households, the majority of which were *songsarek* (non-Christian); one-third of the population had adopted Christianity. The houses of the *songsarek* stood in three crescents along the slope of the northern bank of the Simsang River (see Map 7). The first line, which formed the outer circle of the village, faced the *nokpanti* (bachelors' dormitory). The uppermost corner was occupied by a group of Christians' houses, with a Church and a school. The cluster of houses was in turn surrounded by the *jam* (store-houses for paddy) of each house, circling the village from north to east. Usually these *jam* are full of paddy, as Rombagiri possesses one of the most fertile jhum fields in the
621 Garo Hills. The people of Rombagiri fish and bathe in the Simsang
[312] River, cooking water being available from the stream which flows

Garo AR5

621 through the village. Richer households possess several cows, ordinary
[312] households a few pigs and several chickens.
[231] The houses are made of bamboo and timber. The Garo houses are the most impressive among those of the tribes in Assam. They
342 have a frontage of about 4-5 meters and a length of about 15-30 meters —the longer the length, the more prosperous the household. Usually they are built on the slope, the entrance is on a level with the ground and the house is built backwards with long beams of timber; thus the flooring of the living-rooms is raised as much as three meters above the ground (See Plate A & B). A typical Garo house plan is shown on Fig. 1.

FIG. 1. — *Ground Plan of a Typical Garo House.*

1. Entrance.
2. Ground floor for keeping cattles at night.
3. Entrance ladder.
4. Central hearth for receiving guests and drinking, etc. (mainly for men).
5. Cooking hearth (mainly for women).
6. Women's place.
7. Men's place.
8. Seat of the household head.
9. Seat for guests.
10. Store room.
11. Covered verandah for the use of latrine at night.
12. Open verandah keeping water pots, etc.

[231] Inside, the house is divided into three main sections. The first room
from the entrance is used for sheltering cattle at night; then there is
[354] a large hall, in the centre of which is a square fire-place. The women usually cook at another fire-place situated near the first section and that part of the hall adjacent to the first section is the place reserved for the women. The central fire-place in the hall is kept for the men who sit there to talk, drink rice-beer and eat. This is the centre and the most important room of the Garo house. At the back of

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

this room there is a small room with a small entrance for storing all sorts of property. From the right side to the back of this small room there is a sort of corridor, the back of which is used as a latrine at night because of the fear of wild animals. 342 [514]

Each household, called *nok* by the natives, is occupied usually by the members of an elementary family, including the wife's unmarried siblings and her widowed mother according to the cycle of the domestic family. When it grows, it includes the heiress' husband and her children. But as long as the heiress' parents are alive, a small hut is built for the heiress and her husband, adjacent to the main house. The couple lives in this hut until the head of the main family dies. (See Map 7; (12) and (14) are such cases). However, this kind of hut forms a domestic and economic unit together with the main house. The head of the *nok* (domestic unit) is the husband, and the owner of its property is the wife; both represent the members of the *nok*. The following list shows the names of husbands (household heads) and wives of all the *nok* of Rombagiri by *mahari*. 592 551 614 621

[622]

Traditionally, Rombagiri is the village of Chambugong Dinajik; its *nokma'swife* is always a woman of Chambugong Dinajik (see p. 33) and its *a'kng* belongs to the same *mahari*. The *nokma* should always be a man of Agitok Khoksep of the Dimitigiri village group; husbands of the wonen likewise are men of the same lineage as the *nokma*. Rombagiri is the *a'jiksa* of Dimitigiri and *vice versa*. What I have explained in the previous chapter about the moiety arrangement between the two particular localized lineage groups of Sangma and of Marak is the ideal and fundamental force underlying the Garo social structure. However, the actual village community does not necessarily include only households of the same lineage groups. As appeared in the actual composition of Rombagiri, wives belong to seven different lineage groups besides the traditional lineage of Rombagiri, Chambugong Dinajik. Husbands also originate from eight different lineage groups besides Agitok Khoksep. However, these different lineages are minor ones and are comparative new-comers to Rombagiri except Chambugong Dinajik in the case of husbands and Agitok Khoksep in the case of the wives. In fact, those of *mahari* 5-12

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

in List 2 came to Rombagiri during the last twenty years; their spouses are found among *mahari* 1-4. In spite of the accumulation of these new lineages, the majority of wives belong to Chambugong Dinajik and the husbands to Agitok Khoksep. 621 61

In order to simplify my demonstration I shall leave temporarily aside the elements of the new lineages and explain the fundamental workings of Chambugong Dinajik and Agitok Khoksep, which is the intrinsic constituent element of the whole organization of Rombagiri. The traditional moiety arrangement between the two local lineage groups, which are represented by Rombagiri and Dimitigiri, is based on the function of the cross-cousin marriage.

III. The Principles of Garo Cross-cousin Marriage and its Functional Importance

Theoretically Garo marriages are arranged between two localized lineage groups as we have seen, such as Chambugong Dinajik (Rombagiri group) and Agitok Khoksep (Dimitigiri group) by exchanging menfolk. As a result every member has his or her spouse as a cross-cousin (actual or classificatory). On this level, both types of cross-cousin marriage, matrilateral and patrilateral, are practised. It is *the symetrical cross-cousin marriage arrangement on the basis of localized lineage groups.* 582

This system is manifested in the extremely simple scheme of Garo kinship terminology. Its major framework is what is called Iroquois type. Clear lineal differentiations appear within three generations centred on *Ego*, with distinction of sex. The kinship terminology of each of these three generations clearly divides both cognates and affines into two categories: category A indicates the members of *Ego*'s matrilineal group, and category B the members of the opposite group; the former is non-marriageable and the latter is marriageable. Fig. 2 illustrates the kinship system by means of the genealogical diagram, 582 601 601

Fig. 2. — *Scheme of Garo Kinship Terminology.*

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

601 and the following table classifies categories of relatives according to native terms.

Garo kinship terms used by the male Ego:[1]

A = Ego's matrilineal group; B = the opposite group;
F = female; M = male; (E) = elder; (Y) = younger.

First ascending generation:

A – F *ama:* mother.
majong (E), *madd* (Y): mother's sister, father's brother's wife, wife's father's sister.
A – M *mama:* mother's brother, father's sister's husband, wife's father, wife's father's brother.
B – M *apa:* father.
pajong (E), *awang* (Y): father's brother, mother's sister's husband.
B – F *mani:* father's sister, mother's brother's wife.

Ego's generation:

A – F *abi* (E), *no* (Y): sister, father's brother's daughter, mother's sister's daughter.
A – M *ada* (E), *jong* (Y): brother, father's brother's son, mother's sister's son.
B – F *jik:* wife, brother's wife, father's sister's daughter, mother's brother's daughter.
B – M *boning:* father's sister's son, mother's brother's son, sister's husband.

First descending generation:

A – F *namchik:* sister's daughter, wife's brother's daughter, father's sister's son's daughter, mother's brother's son's daughter, son's wife, wife's brother's wife.
A – M *gri:* sister's son, wife's brother's son, father's sister's son's son, mother's brother's son's son.
B – F *demichik:* daughter, brother's daughter, wife's sister's daughter, father's sister's daughter's daughter, mother's brother's son's daughter.
B – M *dipanti:* son, brother's son, wife's sister's son, father's sister's daughter's son, mother's brother's son's son.

The following terms indicate affinal relations to Ego:

A – M *obiti:* wife's father, wife's father's brother, wife's sister's husband (he is also called *sadi*).
chawari: daughter's husband (*nokrom* is used for the particular *chawari* who married the heiress).
B – F *nio:* wife's mother, wife's mother's sister.
B – M *mosa:* wife's mother's brother, wife's brother.

601 These terms are used for a set of people with whom *Ego* has close
602 social ties: members of his own native village as well as of his wife's village, and members of other villages with whom he and his close kin

1. For further detailed information concerning Garo kinship terminology, see R. Burling, 1956, and 1963 (Appendix e).

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

have kinship relations. This set of relatives consists of a fairly wide circle of bilateral kins and includes certain affinal members. In fact the feeling of the Garo towards these relatives, whether lineage members or not, is very intimate, and discrimination between *Ego*'s own lineage people and others is not as great as we observe in other unilineal systems. This is because of the moiety structure, which allows lineage members and non-lineage members (affines) almost the same importance in relation to *Ego*. In this structure, the descent group solidarity is naturally minimized. For instance, the actual genealogical relation between *Ego* and the members of *Ego*'s own local lineage, whom *Ego* addresses by appropriate kinship terms, often cannot be clearly established. For the Garo actual genealogical links have no vital importance. For example, *Ego*'s relation to his wife's sister's husband (who belongs to the category of 'brother' since he is an *Ego*'s lineage member according to the moiety arrangement) is recognized through affinal lateral relation (they term this relation *saditan*), but the genealogical link between the two men is not always expressed, unless they are closely related, first cousins for instance. This is why the terms which indicate affinal relations are more developed, more frequently used than cognatie kinship terms among the Garo. This usage tends to ignore actual genealogical links among the members of the same lineage beyond a domestic scale. In fact I had great difficulty in compiling the actual genealogical relations of all inhabitants of the village, as beyond the grand mother's generation people's memory became very poor. 601 602

This also stands in close relation to the kinship system, the distinct lineal terminology of which is only found within three generations centred on *Ego*. For the grandparents' and the grandchildren's generation, the same terms are used for both paternal and maternal sides. Grandmothers of both sides are called *ambi*, likewise, grandfathers are *achu*; the grandchildren of both sides are *angsu*, though the additional distinctive terms *chongka* (true) and *jakasi* (secondary) are added.

It is clear that the Garo are organized into two unilineal categories within a clear sociological field—a certain range of unilineal groups *(mahari)* associated with a certain endogamous locality, and not into a system of descent groups of segmentary lineage. In a segmentary system, the members of a lineage are recognized through genealogical links. If the lineage is only used in terms of descent group, whose members can trace genealogical relation to each other, the Garo unilineal group in terms of localized segmentation (sub-*mahari*) which I term 'localized lineage' is not a lineage in the strict sense. Nevertheless I did use this term because, although members can not always trace genealogical links, their conceptual framework makes them out to be the descendants of a common ancestress who once established the 61

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

61 local lineage together with the founding of a village, thus distinguishing themselves from other members of the same *mahari*. In the course of time when its members increased, spreading over more than a dozen villages, actual genealogical links tended to be forgotten, since the moiety structure which provides clearly defined categories, does not require the keeping of actual genealogies. Attention should be drawn here to this structural difference between Garo 'localized lineage' —lineage with incomplete genealogical evalidation—and the lineage of the segmentary system.

582 601 61 The scheme of Garo kinship terminology fits perfectly into the framework of cross-cousin marriage which has been described. Both mother's brother's daughter and father's sister's daughter stand in the same category as the potential wife in relation to *Ego*, in which both matrilateral and patrilateral cross-cousin marriages are expected. Indeed many cases of both kinds of cross-cousin marriages are found in my census. It is apparent that theoretically the exchange marriage arrangement between two lineage groups meets automatically the scheme of symmetrical cross-cousin marriages.

428 582 592 However, the Garo cross-cousin marriage is generally understood as matrilateral (Leach, 1951; Homan & Schneider, 1955), and indeed villagers emphasize that they should marry their mother's brother's daughter and many cases of this kind of cross-cousin marriage are to be found in my data. This involves the crucial point of analysis of Garo cross-cousin marriages and the key point to an understanding of the Garo social structure. The fact is that the matrilateral cross-cousin marriage is strongly preferred in the marriage of the heiress and the heir-to-be. In other words, *on the basis of household succession the matrilateral cross-cousin marriage is the rule*. To understand this it is necessary to have a clear notion of the Garo household institution which is called *nok*.

582 61 592 The Garo word *nok* has several meanings: as already described it means a house, and also the members of a household which form a domestic unit (p. 41), but above all it has the meaning of a combination of local lines; the women who stay in the village where the *nok* exists and their husbands who come from a village in the opposite moiety. Marital relationships which provide the basis of the *nok* bridge the cleavages between the two exogamous lineages of Sangma and of Marak. They are nodal relationships of the kinship ties between genealogically interdependent lineages in the whole network of the Garo social organization. The *nok* is maintained through regular succession of two offices, the headship of *nok* (husband) and the ownership of *nok* (wife), through cross-cousin marriage.

428 582 592 61 The heiress *(nokna)* should marry one of her father's sisters' sons (actual or classificatory). The man who marries an heiress (i.e. his

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

mother's brother's daughter) is called the ***nokrom***. The ***nokrom*** is the successor to his father-in-law (the head of the ***nok***), just as the heiress is the successor to her mother (the owner of the property of the ***nok***). The wife and the husband have not only the status of a family, but each of them also represents each local line which continues from the past to the future. The combination of the two particular local lines of the Agitok Khoksep (mother's brother – sister's son) and of the Chambugong Dinajik (mother – daughter) forms the institution called the ***nok***. The husband marries into the wife's house, but at the same time it is the house of his mother's brother. Therefore, the residence pattern of the Garo marriage is not only uxorilocal but also avunculocal. Hence, if the heiress marries a man from another lineage than her father's, it implies a cutting of the matrilineal line of her father's lineage which affects the social network. In such a case, heavy compensation has to be paid to the father's lineage people, centered on ***ma'nok*** (his mother's ***nok***), where the rights of the local line of the ***nok*** rest. ***A'kim*** is the Garo word for these rights (see p. 27, n. 2). In this particular case, the Garo avuncu-uxorilocal marriage differs from the uxorilocal marriages of the Khasi, the Hopi, the Zuni and the Trukese; in the same way it also differs from the avunculocal marriages of the Ashanti, and the Trobriands, in which structural differences are involved.

428 582 592 61 [591]

This cross-cousin rule, combined with the rule of succession, binds the marriage of the ***nokrom*** in the following manner. When the ***nokna***'s father dies the ***nokrom*** must marry the ***nokna***'s mother, because the ownership of the property of the ***nok*** is still retained by his mother-in-law and not by his wife, and will remain so, as long as she is alive. The headship goes with the marriage relationship to the owner of the property. Therefore, in order to succeed to his father-in-law's position, the ***nokrom*** must marry his mother-in-law. Actually, in most of cases the Garo husband as the head of the ***nok***, takes his widowed mother-in-law as his wife besides his young wife.[1]

428 587 606

When the head of a ***nok*** dies before the ***nokna*** marries the ***nokrom***,

428 595

1. A young ***nokrom*** sometimes refuses to marry his old widowed mother-in-law, as seen in the case described in pp. 50 and 84. In some areas, this rule is not kept strictly. For instance, I found in Emangiri village of the Garo-Gangchin, that this rule is not insisted upon; if the ***nokrom*** refuses to comply with it, the people just accept him as the head of a ***nok***, even though he does not cohabit with his widowed mother-in-law. The people said that of course it would be nicer if he could cohabit with his mother-in-law; but they do not insist upon it if he does not wish to do so. However, I am reluctant to agree with Burling's view that sexual relations between the ***nokrom*** and his mother-in-law after his father-in-law's death seem extremely unlikely (Burling, 1963, pp. 142-143). For the ***taboo*** (avoidance of intimate relations) between the ***nokrom*** and his mother-in-law is radically abandoned by his father-in-law's death, which marks the change of the man's status from being the ***nokrom*** to the head of the ***nok*** (see pp. 66-67).

[183] [114] [835]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

428 the *nokrom* will marry both mother and daughter at the same time:
595 the former is recognized as *jikmamong* (principal or first wife), and the latter *jikgile* (secondary wife). In such a case, the widow is usually comparatively young and her daughter still a child. Actual sexual relations with the latter will take place only when she attains puberty. Some times it happens that both mother and daughter have their babies in the same year. The relation between such co-wives as mother and daughter is usually amicable, the situation being taken for granted. Many Garo men pass through such a period of having as co-wives, mother and daughter.

592 The *nok* is maintained by the constant succession of the combina-
611 tion of two lines—the male line from the mother's brother to the sister's son and the female line from mother to daughter established through an actual or classificatory relationship—linked by marriage ties. Gaps caused by death should be filled by the members who have the right to do so through kinship relation. The succession of a *nok* is dependent upon the legal status of husband-wife as well as of two matrilineal lines which are, strictly speaking, local lines rather than descent lines.

428 The actual process of the rule of succession in the *nok* is shown
592 by Fig. 3, which illustrates the case of the *nokma*'s *nok* of Rombagiri.
622 The 14th *nokma* of Rombagiri, Gobang, had four wives: Nujak (1st), Misak (2nd), Alin (3rd) and Nujin (4th). In fact he married women of those categories; MoBrDa (1st), MoBrWiSi(classificatory)Da (2nd), and MoBrWiSiDaDa (3rd). His last wife was a woman of Chisim *makari* of Marak, while his other three all belonged to Chambugong. The first wife, Nujak, was in possession of the *a'king* (village land). Nujak was the daughter of the 13th *nokma*, Simjang, who was Gobang's mother's brother. Therefore, her daughter Nokli was the heiress. Gobang's *nokrom*, Rangmal, who was Gobang's sister's son, married Nokli, and when Gobang died, Nujak, according to the rule. This is the point which I have already mentioned: Nujak was the possessor of the property, and Nokli was not, so long as Nujak was alive. As for Rangmal, he should marry Nujak, his mother-in-law, in order to succeed Gobang. Thus Rangmal became the 15th *nokma*. Nujak was already old, and died soon after her marriage to Rangmal. Her daughter, Nokli, automatically succeeded to her office. When Nokli died, leaving Rangmal, the place of Nokli was taken by Kalji (Rangmal married Kalji), because before the death of Nokli, her daughter, Wanji, had not been selected as the *nokma* nor had Rangmal chosen his *nokrom*. This is very important because this case shows that the real daughter is not always the successor of the mother. The husband-wife relation is a no less important factor than the real mother-daughter relation. Thus it is clearly understood that

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

the *sok* is formed by local lines, not simply by descent lines. What is important is that a woman, just being a daughter, has no exclusive right to become the successor in the *sok*, unless she is appointed as the *sokma*, the *de jure* successor. Likewise, this procedure applies to also a wife: it is important whether she is the *de jure* owner of the *sok* property or not. In fact, in another case, which will be dealt with later, the daughter has the right to succeed before the wife. 428 592 622

When Rangmal died leaving his young wife, Kalji, all members of both *makasi* finally agreed to take Chambat as his successor (as the husband of Kalji) because Rangmal had no direct sister's son. Chambat was the grandnephew of Rangmal (his sister's daughter's 587 604 622 592 428

FIG. 3. — *Diagram showing Successions of Nokma of Rombagiri.*

son). Thus a classificatory sister's son is taken in the absence of a direct sister's son. Chambat is the present (16th) *sokma* of Rombagiri.

The above succession cases to the *sokmaship* of Rombagiri give typical instances of the succession to a *sok*. Thus the network of the succession overlaps descent lines by combinations of selected members of each moiety in various circumstances. It should be understood that descent lines are not the fundamental lines of succession through cross-cousin marriage, though the descent defines the categories. The institutionalized pair of succession lines, the *sok*, are local lines, not descent lines. 428 592

In addition, it is necessary to clear up problems of certain cases which might occur in the succession to the *sok*. If the *sokma* refuses 428 587 606 592

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

428 to cohabit with his widowed mother-in-law, he cannot become the
587 head of the *sok* by succeeding his late father-in-law. Though this
606 is the traditional rule among the Garo, a young *sokrem* sometimes
592 refuses to cohabit with his old mother-in-law and continues to live in a separate hut. Recently, in particular, there have been many complaints to this effect before the District Court at Tura. The plaintiffs are usually mothers-in-law, which fact embarrasses the judge —the Hindu Deputy Commissioner of the Garo Hills. During my
[622] field work, I came across such cases. For instance, in Rimshibara
[562] village, the people told me that their *sokma* was a woman though according to the Garo rule the *sokma* could not be a woman. The woman *sokma*, who was about sixty years old, complained to me that
[595] her *sokrem* was very bad, he was not at all kind to her. Later, I found out that her young *sokrem* was a youth of nineteen, and that he was a very good husband to his young wife *(sokma)*; but he had refused to live and to cohabit with his widowed mother-in-law. Therefore, though he was in the position of the *sokma*, he was not recognised as such because of his refusal to cohabit with his mother-in-law.

FIG. 4.
Possible Shift of the Succession to the Sok by Marriage Relations.

In such a case, he might lose the status of the *sokrem*, and his wife likewise that of the *sokma*. The possible consequences of his refusal to marry his mother-in-law would be as follows (see Fig. 4): his mother-in-law (M^1) might marry another man of her late husband's lineage (N^1), who will then become the head of the *sok*. Meanwhile when (M^1) dies, her husband (N^1) may take a woman (M^2) from the late wife's lineage in place of (M^1). By this marriage (M^2) may have a daughter (Na^2), who may be elected as the *sokma*, the successor of (M^2), and she will marry the *sokrem* (Nk^2), her father (N^2)'s sister's son. Thus the former *sokrem* (Nk^1) and *sokma* (Na^2) lose completely their status as successors to the *sok*, unless the (Na^2)'s mother (M^2) does not marry. It should be remembered that in any case such a development is the result of the decision of both the lineages whom they belong to. Usually the lineage peoples do not like to supersede the *sokma* and the *sokrem* upon whom they once decided, and consequently such cases are very rare, as are the cases of divorce which I shall describe later. Actually in my census, such a change of the *sokrem* and the *sokma* does not occur, and the above description is a theoretical extension based on the information I collected.

428 If the wife dies before the *sokma* and the *sokrem* have been select-
587 ed, the people of the wife's lineage supply a woman in place of the
592

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

late wife, as shown in the case of Rangmal's marriage to Kalji. But if the daughter of the widowed father has already been decided upon as the *nokna*, she is the successor of the late wife (her mother), marrying the *nokrom*; she never marries her father.[1] In this case the father may remarry another woman, but this new wife cannot succeed the late wife, if the *nokna* was already decided upon. The *nokna*'s (daughter's) rights have precedence over those of the wife, since she is the authorised heir of the deceased woman, her mother (cf. pp. 48-49). In such a case the woman who came into the picture as the wife of the widowed father will remain an outsider to the *nok*, without sociological locus in its structure. Actually her status is uncomfortable, and usually she will leave this *nok* as soon as her husband dies. The alternative arrangement in such a case is that the widower who took a secondary wife may leave this *nok*, and establish a new independent *nok* in which this secondary wife can possess full rights as the owner of the *nok*.

Thus actual matrilateral cross-cousin marriage works on the basis of the *nok* institution, not on the basis of the lineage group as such. There is a clear institutionalized *nok* relationship called *nok-chawal*. Every *nok* has two kinds of *nok-chawal* relations: the *nok* to which the husband is given and the *nok* from which the husband is received, since the matrilateral cross-cousin marriage is the rule at the level of the *nok*. These two *nok* should belong to the opposite moiety in relation to *Ego*. The relationships are shown in the following diagram, Fig. 5. Before his marriage, *Ego* was a member of *Nok* Y; by his marriage he became member of *Nok* A. On marrying the male mem-

1. On this point, Professor R. Firth put a question to me when he read the first draft of this manuscript: "why cannot the father marry his daughter?" Up to that time, I had taken it for granted, attributing it to the incest taboo between real father and daughter. After his question I started to rethink the situation. There must be some structural reason for it, since all other rules are reasonably explained in terms of structure; in such a society as the Garo in which the structure is well established, the structure may take precedence over the biological situation. An incest taboo observed in one society is not always the incest taboo of another society: the incest taboo is not biological, but sociological. Then I came to the following conclusion—it seems that the important reason is structural.

The *nokrom* married the widowed mother-in-law in order to acquire the headship of the *nok*. On the other hand, the ownership was automatically handed over to the *nokna* when her mother died. This ownership is not based on the headship in the same way as the headship is based on the ownership; the relation is not that of the chicken and the egg. In relation to the headship, the ownership is logically but not functionally, the primarily important factor. The *nokna* does not need to marry her father in order to acquire the ownership; the ownership is already in her hands, and through it her husband is the head of the *nok*; thus the father theoretically loses the headship and retires from office on his wife's death if the *nokna* and the *nokrom* have already been chosen. In such cases, the *nokrom* has rights to the headship before the father-in-law. Thus, the Garo structure avoids the marriage of the father and the daughter.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

582 ber thus becomes part of his mother's *nok*. The female
592 member, if she is the heiress, remains after marriage in the same *nok*
However, a non-heiress *(agatè)* has to branch off from her parent's
61 *nok*, and establish a new *nok* by her marriage

FIG. 5. — Nok-chamé *Relations*.

582 Except for the particular member who are involved in the succes-
592 sion of the *nok*, anyone is free to marry anybody he wishes in the
[61] opposite moiety. However, even in such marriages, the conception of the *nok* plays an important role. One cannot marry members of a *nok* into which one's sister or brother has married. The matrilateral cross-cousin marriages of the *nokna* and *nokkrom* create considerable matrilateral tendencies even in the marriages of the free members.
[835] The Garo avoids having more than one conjugal relation between members (real siblings) of two *nok*. A man's sister unlikely marry his wife's brother and likewise his brother also unlikely marry his wife's sister.[1] Reciprocal first cousin marriage is thus avoided. Since, as a rule a man *(nokrom)* marries his mother's brother's daughter

1. The people of Rombagiri observes this avoidance strictly insisting that they should not have such relations, and in fact, I did not find even single case
[184] of the brother exchange between two *nok*. However I found two cases in a colonial village, Rinsibara (see p. 78). Burling stresses the existence of brother exchange (see Burling, 1958/B; 1963, pp. 158-160) against my earlier discussion (1958/A). Neverthless, he himself states 'Most people, in fact, seem to feel that it is a mildly awkward arrangement' (1963, p. 160). Certainly the avoidance of brother exchange is not a strict rule comparable to that of the exogamy. However, this orientation seems a natural outcome of the structural arrangement of the Garo social organization. For example, it also works logically on the basis of the *nok-chamé* relationship, just discussed. Mere existence of brother exchange itself, which is rather rare, does not affect the basic scheme of the working of the Garo social organization, which I am presenting.

Furthermore, it should be noted that the avoidance of brother exchange applies to only the case between two sets of *real* siblings. Such a case as marriage of two men to each other's classificatory 'sisters' (considered as an similar case by Burling, 1963, p. 160) is a quite different matter (and certainly acceptable and in fact many cases are found), since the latter are not the members of the same *nok*. The difference of my discussion from that of Burling on Garo kinship, is mostly attributed to the analysis in which I distinguish *nok* as an important institution, while Burling seems to fail in differentiating local lines *(nok)* from descent groups.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR9

(*nokna*), the siblings of the *nokrom* and *nokna* avoid patrilateral cross-cousin marriage (real, not classificatory). As the result, the orientation of matrilateral cross-cousin marriage dominates over that of patrilateral cross-cousin marriage.

This orientation of the rule differentiates the Garo type of marriage from the Kariera type, in which a man marries his mother's brother's daughter who is also sister to his own sister's husband. On the other hand, the Garo marriage system, an asymmetrical cross-cousin marriage on the basis of *nok*, may be fairly regarded as a matrilineal version of the Murngin system. As with the Murngin, the general rule of marriage is that of matrilateral cross-cousin marriage and this is coupled with a moiety system.[1] However, the Murngin system seems to lack the counterpart of the *nok*. Hence, a mere comparison with the Murngin system may mislead the understanding of the Garo system. First of all, the number of *nok*, the unit of institution on which matrilateral cross-cousin marriage is based, increases constantly through addition of the *nok* created by the marriage of *agnit*. Hence the whole picture of a kind of circulating marriage relationship without any fixed number of constant bodies becomes highly complicated.

Secondly, the roots of the *nok* lie in the descent group, the localized lineage. Any member of the authorized local lineage group can be called upon to fill the gap caused by the death of a member of a *nok*. Actually all unmarried members are regarded as an immediate reserve for its continuation. The nature of the *nok* is such that a lack of members is to be expected. *Nok* A might fail to supply a husband to *Nok* B, which is in *nok-chami* relationship with it, or *nok* B might fail to supply an heiress. In such emergency cases they look for lineage members in the immediate reserve. The nearest individual in the descent line is usually taken. It may, however, depend also on personal liking or capacity. The selection is made at a meeting of members of the localized lineage groups of both the husband and the wife. For instance, in deciding upon the *nokna* and *nokrom*, the lineage [illegible] will be decided upon by the parents in consultation with her mother's brothers, including their lineage members. Likewise, the *nokrom* will be chosen by the parents of the *nokna*, especially by her father, in consultation with his lineage members. Thus the formation of a *nok* is dependent upon the functioning of the lineage. In other words, the whole network of the organization does not confer any independent social status on the *nok*. Hence, the matrilateral cross-cousin marriage

1. The Murngin system, since presented by Warner (1937-41), has been discussed great deal as one of the important cases in relation to theories of cross-cousin marriage systems (particularly see Lévi-Strauss, 1949, pp. 319-24; and Leach, 1951).

19: Nakane E-5 (1959-1964) 1967 AR? Khoo
Gero AR5

arrangements on the level of the sub-lineage do not cause status differences between the husband-giving sub and the husband-receiving sub.

The economic loss or gain derived from the matrilateral cross-cousin marriage tends to individual sub in compensated by the society arrangement which integrates this mechanism as the exchange of men between two localized lineages, the economic base of which lies in the village land. In this respect, a village is a convenient economic segment of the wider unit, a local lineage group. Actually, the man (or woman) acts, socially, as a member of a localized lineage rather than of a particular village where he (or she) was born. For instance, A (born in village X) may succeed as a subsub of B (born in village Y), or of C (born in village Z), instead of a man born in village X. In this sense, a considerable mobility of the members of a lineage group among villages of the same lineage group may be observed. As shown

Fig. 6. — The Network of Cross-cousin Marriages between

in Fig. 6, the network of genealogical cross-cousin relations between the Chambugong Dingik and the Agitok Khokong of the present inhabitants of Rombagiri (November, 1955) includes a number of dead, as well as living members of other satellite villages of Rombagiri and of Dongiri.

However, the function of the village as an important unit should not be disregarded. The village serves as an effective economic unit accommodating actual households, sub, which are the units of the domestic as well as property group, whose members share production

19: Nakano E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

and consumer activities. The village is not only an economic unit 621
based on the *a'ring*, it is also the important ritual unit, the mainspring of the people's life.

In conclusion, the analysis of Garo social organization reveals that 61
three units are to be distinguished: *lineage*, *village*, and *mahr*, each of 621
which plays an important role, being closely interwoven with the 182
functional unity of the Garo social structure.

IV. Interrelationship or Disjunction between the Ideal Rule and the Empirical Facts

As I have explained, the moiety arrangement between two patrilineal lineal lineage groups through cross-cousin marriage is the 182
fundamental rule. Now if the whole network of the composition of 182
the present population of Rombagiri is analyzed, it will be observed 191
that the population of the present village does not conform entirely 61
to this rule. The moiety arrangement is the ideal pattern of a Garo village community but not the actual state. According to the ideal 621
rule, the wives of Rombagiri should belong to Chambugong Dimajik [183]
and their husbands should belong to Agitok Khiliang. However, as we have seen in the lists of wives and husbands by *mahrs* (pp. 40-42, Lists 1 & 2), there are ten different *mahrs* besides the traditional *mahrs*. Thus actual conditions are very complicated: firstly because a minority practice virilocal residence in a society where arrangements are generally uxorilocal,[1] and secondly, because marriage relations sometimes extend to the third lineal lineage group apart from the traditional opposite lineage group. These two variations occur easily amongst members of the community who are free from the rigid cross-cousin principle, e.g. non-*mahrs* and non-*mahrs*. The following will explain the multiformity of the different lineages in regard to the traditional arrangement as found in the composition of the present population of Rombagiri.

Virilocal residence brings complexity into the lineal arrangements [illegible] lineage is to be A), there may be found women of lineage B, who belong to the opposite moiety in relation to A. In the case of Rombagiri, women, as a rule, are to be Chambugong Dimajik, but actually there are Agitok Khiliang wives and Chambugong Dimajik husbands.

1. In this discussion the terms 'virilocal' and 'uxorilocal' are used at a village level, the uxorilocal residence for the case in which a couple resides in the wife's village, not necessarily in the wife's parents' house. Likewise, in the case of virilocal, a couple resides in the husband's village, but never in his parents' house.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

182 What factors have brought about virilocal establishments in a uxorilocal arrangement? The study of Rombagiri reveals these factors to
582 be due to personal attachments. After the appearance of a great
591 male personality such as Gobang *Anker* of Rombagiri, his descendants
67 show great attachment to him and desire to remain in their natal
621 village. In the village remarks were often heard such as "I am Gobang *Anker*'s so-and-so," which indicates a cognatic or affinal relationship with Gobang. Thus, people like to explain their social position in a community through a great personality. They are proud of it and consider themselves to be of a social status rather superior to that of others. These people, Gobang's sons, grand-sons and nephews, had a strong tendency to stay in Rombagiri, bringing their wives to the village. And they form an influential family group, together with their sisters and their husbands. The core of this group is not a matrilineal descent group, but rather a kind of an ambilateral descent group, the members of which linked through Gobang *Anker*. As manifested in such a particular reason for the existence of virilocal marriages, in general it seems that when a man has a particularly strong attachment to his natal village in various reasons involved, it is not so difficult to bring the wife from the opposite lineage group instead of his going to his wife's village.[1] More important in the arrangement between the localized lineages the actual residential locus seems of secondary significance to it.

The descendants of the women of such virilocal marriages are always addressed or classified as members of the opposite moiety. Their descendants may, under the exogamous rule, marry any member of the village in which they were born. As a result, marriages occur between members of the same village, which fact gives again more chances of creating houses of Agitok wives; because of uxorilocal usage, daughters of such wives naturally stay near their mothers' houses. At the same time, it gives men easier opportunities to remain in their natal village: for a Chambragong man will automatically stay in his village if he takes a wife among daughters of such wives, and as

[illegible] the wife or two in his village [illegible] "For his village [illegible] have a male relative present" (Burling, 1957, p. 200; and the similar statements in Burling, 1958A and 1958B). This same view was also held by D. M. Schneider in his comment on this manuscript. These views are obviously based on a concept such as the strong cohesion and interdependence of brothers and sisters, which Schneider presents as one of the distinguishing features common to matrilineal peoples (see Schneider, 1961, Introduction). Though I do not deny their view to be true to a certain extent in the Garo case, I am reluctant to take it as the only factor or the primarily decisive one in this particular situation. For I take the view that the Garo exemplify a quite different structure from other matrilineal societies such as appear in Schneider's just mentioned work; among the Garo solidarity of the descent group is minimized (see p. 27). This point will be clarified in the concluding discussion of this book.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

Agitok man born of such wives need not change his village on his marriage: he can just marry a Chambugong woman born in the same village.

The second variation is the result of marriages with members of the third group. A woman (or man) may sometimes marry a member from another localized lineage of the opposite *Aatchi*, a quite different group from the one with which their own members have traditional relations. Once established, a new *sok* by such a marriage conforms to the logical succession rule of the *sok* as found among the traditional *sok*, by which the relations between the two lineages become an insti-

182

591
61
621
[592]

FIG. 5. — *Cross-cousin Relations with the Third Local Lineages of Rombagiri.*

tutionalized continuum, inserting itself into the traditional local arrangement. This phenomenon is illustrated in the cases of Rombagiri by the establishment of the Manda and the Tigiti lineages. The Manda came to have marital relations with the Chambugong of Rombagiri [illegible] village of Rombagiri, Nabi's elder sister, Sima married Tuja (Manda). (see Figs. 6 & 7). This might be regarded as one of the first steps towards the disintegration of the Chambugong Dimajik-Agitok Khoksep relationship. It is said that Tuja, being a very influential man, sold some part of the Chambugong *a'bing* to his own people, the Manda and this became the *a'bing* of the present Dimajigiri and Makragiri (see p. 56). Since then, the Manda have encroached upon the Chambugong area and soon continuous marriage relations were established.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

182 Here, the logical extension of the principle of the *nok* and *nok-chawa*
582 was made: the relation of the Chambugong of Rombagiri and the
591 Manda of Makragiri became constant. Thus, there are many members
61 of the Manda in the genealogy of Rombagiri, whose cross-cousin
621 relationship can be seen in Fig. 7.

In a similar way, Tigiti came upon the scene when Gangri became Rangmal *koker*'s fourth wife: this resulted marriage relations between Tigiti and Chambugong as shown in Fig. 7. The Manda and the Tigiti have now become the third groups in Rombagiri after the Agitok. Both Manda and Tigiti are of Sangma like the Agitok. It is important, however, that to whatever extent the marriage relationship may go, the exogamous rule on the level of *chatchi* should be strictly maintained[1]

Complications such as these arising from the practice of vicliocal residence and from marriages with the third local lineage groups have resulted in multiformity of lineages in one community as in the case of Rombagiri, which again increases the chances of village endogamy.
[198] The present Garo villages are in a state of considerable flux. This contrasts with their traditional view of their former structure, allegedly well arranged and restricted in relationships, and in fact it may be really due to newly created circumstances. This tendency has increased everywhere since the cessation of fighting between the villages of Songma and Marak and elsewhere in the Garo Hills; modern developments in the Hills allow the Garo more frequent and closer contacts with each other in various ways. As may be noted, several new marital relations with the new lineages of Rombagiri, such as Chambugong Machu, Chambugong Anil, Manda Akchanda, Manda Pukron, Rangsa and Gabil, etc., have taken place. However, the majority of the Garo still follow the traditional moiety arrangement, especially among the older *nok*, and in fact, the people ideally still adhere strongly to it.

The multiformity of lineages in one community has appeared to
[p. 1] the extreme amongst the Atong and the Garo-Gaochin. The village
the Sintang, consists of members of Ampang Sangma, Sintang Marak, Richil Sangma and Rowchel Sangma, each of which are quite numerous, and form thus an endogamous community like those we shall find among the Khasis. According to actual lineage members, there are nowadays no clearly distinguishable exogamous geographical units in

1. In Fig. 7, this rule was broken in two cases, the marriages of Rangmal (Agitok Sangma) with his fourth wife, Gatji (Tigiti Sangma), and of Rangi (Tigiti Sangma) with Sonjin (Manda Sangma). Villagers regard them as an
[684] incestuous relationship especially the latter marriage (because the former was a secondary marriage). The nation call such a relationship *ahi-kama*. They had to pay a considerable fine.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

this area. Such a high degree of integration may be due to the small size and close distribution of the local lineages. Even the possession of a'ding by a particular lineage becomes nominal. Emangiri belongs also to this type of community. There are two dominant *makari*, the Manda and the Rima, including other neighbouring Garo-Gaochin *makari*, as follows:

182
582
591
61
621

List 3. *Numbers by Makari of Household Heads and their Wives of Emangiri.*

2. Manda Sangma	15	16
3. Areng Marak	8	3
4. Rakam Marak	4	4
5. Sumnanja Sangma	4	4
6. Rongmatta Marak	5	5
7. Mangrong Sangma	2	1
8. Shiking Sangma	1	2
9. Jengchiam Marak	0	0
10. Shatim Sangma	0	0
11. Chalab Marak	0	1
Total	57	57

Out of the total of 57 couples representing all of the households, 3 took virilocal residence: these were husbands whose parents lived in this village but who took their wives from outside the village; 41 cases are marriages within the village. The remaining 13 cases are those in which husbands from outside the village married women of the village. The above list should be compared with the list of Rombagiri (p. 41, List 2). In Rombagiri the traditional Chambugong-Agitok relationship can still be clearly seen in the distribution of the numbers of wives and of husbands by *makari*. Households of Chambugong wives form the majority and there are more traditional Agitok husbands than of other *makari*. On the other hand, in Emangiri, the numbers of wives and husbands of Rima and Manda are almost the same, so that the tendency towards village endogamy is more marked. However, the existence of a paired traditional lineage arrangement can be seen amongst the members of Rima and Manda who form the largest *makari* in the village. Besides these two *makari*, the third *makari*, Areng Marak, is also fairly numerous. As a matter of fact, there are three *nokpanti* (bachelors' dormitories), one of the Rima, one of the Manda and one of the Areng. This fact shows that in Emangiri, besides the traditional *makari*, the Rima, the Manda and the Areng have also the right to regard this village as their own, though the *a'ding* belongs to the Rima. The villagers take for granted

[595]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

182 such multiformity of more than two lineages within one village. In
582 this way Garo traditional rules and ideal arrangements are being modified greatly.

591 One of the leading educated Garos, who belongs to the Gara-
61 Ganchin explained this phenomenon to me as follows: "In the begin-
621 ning we used also to take a husband from a particular village. But afterwards, our families used to worry about whether our sons were happy or not in their wives' houses. If they marry inside a village, such worry ceases, and so people started to marry inside the village.
[178] Nowadays marriages inside a village have become quite common." This might be an explanation of this tendency to village endogamy. However, the fundamental reason must be regarded as the consequence of political changes effected by the British administration, coupled with the increase of the population and its branching off into satellite villages, which, I think, inevitably weakened the lineage solidarity and complicated inter-lineage relations. It is needless to add that
[177] the recent modernization and Christianization are another significant factor.

The most important underlying facts in the process of disintegration of the Garo social organization are the following: the tendency to village endogamy is paralleled with the disappearance among the people of the *a'ibba* concept which lies at the basis of Garo social organization. Another is that the advent of a third lineage group, which inevitably renders the composition of a local group more complex, tends to ignore the function of institutionalized cross-cousin marriages as an organic whole upon which the core of the Garo social organization is founded.

V. Ownership and Power Relations among Families in a Village Community

61 In this section, I shall discuss some political aspects of the village
621 community, keeping in mind the information given in previous sections.

Each Garo village community is an autonomous political unit, the
622 head of which is the *nokma*. The *nokma* holds his office through the
[421] right of the *a'ibing* which theoretically belongs to his wife and her *mahari*. The office of the *nokma* is hereditary through the *mal* institution. The *nokma's nokrom* is his successor. The office of the *nokma* has the intrinsic importance from the point of view of the Garo organization: it is the pivot of the village organization, through which the basic network of the entire Garo society is woven. In fact the *nokma* plays the leading role as the central figure in the village activities, and externally represents the village. However, the position of the

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

nokma is very delicate. As a matter of fact, the *nokma* cannot be compared to a chief who exercises his political authority with various social and economic advantages. The *nokma* is rather social and economic representative of the village without having a distinguished advantage or authority. 61 621 622

The *nokma*'s position becomes clear when we consider the characteristics of the Garo social structure, associated with the *mok* institution. Though every *mok* is independent, the function of the *mok* is always backed by all the members of the two lineages in moiety relation. No *mok* can develop a social solidarity or a differentiated status from others, as already discussed (see pp. 53-54). The *nokmaship* also follows this principle. No doubt, the *nokma*'s *mok* has prestige as the oldest *mok* among the *mok* of the village. The word *nokma* itself indicates 'mother of the *mok*,' according to the people's explanation. However, the *nokma* (including his family members) cannot claim any superiority of status, because he is simply a selected member from both local lineage groups, in which the members are of equal status in the kinship network. Any male member of one lineage group may become the *nokma*. The opportunity is provided according to the circumstances.[1] Thus, structurally, the *nokma*'s status does not confer on him any distinguishable social rank. 592 61 621 622

With regard to the economic organization, the *nokma*'s status is also basically equal to that of the others. Though the *a'king* belongs to the *nokma*'s wife, it is actually held in common by all the inhabitants of the village. Every member of the village has the right to cultivate the village land. The possession of the *a'king* is simply represented by the *nokma*'s wife. As a rule, no portion of the *a'king* can be sold or mortgaged by the *nokma*, since it is the common property of the villagers. The village land is divided into several parts on the basis of the annual rotation of jhum cultivation (see Map 3). Every year one of these parts is distributed to each household according to the number of its members (see Map 4). The share of the *nokma*'s family is allotted in the same way as that of the other families. The *nokma*, in theory, has no special economic advantage over commoners. Sometimes indeed the *nokma*'s family is poorer than the others.[2] 423 621 622

1. Indeed the villagers, together with lineage people, have also the right to dismiss him from the *nokma*ship should he fail seriously to perform his duties, as happened a few years ago in a neighbouring village of Rongbagiri, where the *nokma* was replaced because of his failure to arrange the funeral of his wife.

2. As a matter of fact, when I was in the Hills, the members of the Council of the Garo Hills were considering giving the *nokma* some economic advantages thus raising their position in a village community. The series of political and economic changes occurred since the British rule, which gradually leads to disintegration of the traditional Garo system, have obviously affected the status and function of the *nokma*. These factors also related to the recent decline of *nokma*'s vigour. [177]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

622 The *nokma*'s expenses are high, the *nokma* being the centre of social activities within the village as well as outside. The entertain-
[574] ment of visitors rests on his shoulders. It is the usual custom for visitors who have no close kin in the village to stay at the *nokma*'s house and to eat there. Festivals, funerals, and marriage ceremonies
[527] are conducted in his presence, and as the *nokma* does, he usually offers extra meals and drinks to the people. Actually, such social
[556] activities, which result in considerable expense to the *nokma*, are sometimes taken over by some rich and powerful man in the village, if the *nokma* is poor.[1] Such a man is then also addressed as *nokma* or *nokma-gawa*: but this *nokma* should be differentiated from the *a'kong-nokma* (*nokma* of the village land) which I am discussing at present, as the Garo distinguish clearly between two kinds of *nokma*.

556 The fairly well balanced economy based upon the allotment of
621 land to every household in the village according to the number of its members does produce nevertheless some relative differences in their wealth, ascribable to varying methods of management and to the labour force available in a particular household. Therefore rich and poor do appear, though the differentiation may not be great or constant. When a man becomes very wealthy, the villagers address him as *nokma*, so as to encourage him to take on some extra activities such as those just mentioned. And when such a man becomes extremely
[527] wealthy by native standards, the villagers expect him to give a great feast. Not only the villagers, but also many related peoples come to partake of it. They enjoy eating and drinking for several days—it
[301] has no fixed period. After the feast, he is offered a silver ring for
[554] his arm, this being the greatest honour and prestige the Garo can confer, and he is addressed as *nokma-gawa*. However, by gaining such great prestige, he usually becomes again a poor man, having used up all his stock for the fantastic feast. Thus the Garo prevent any *nok* from acquiring a constant economic superior status.

621 In the absence of political authority, the village community, the
622 households of which have basically socially and economically equalitarian status, tends to have a somewhat delicately balanced temporal
[554] internal rank-order or power-relationship among the families resulting from various given factors. The following are the major factors: the higher prestige for the pedigree of older *nok*; the nearness to the descent line of the women to the wives of precedent *nokma*; the advantage of and respect paid to the age of the head of *nok*; friendly support given by more adult males (heads of *nok*); economic and social capacity and achievement as the head of the *nok*, as a rich

[184] 1. Likewise, if a *nokma* is a Christian as in the case of Rombagiri, in a certain activities in which the *nokma* has to play a religious role, a wealthy and senior *nengsook* (non-Christian) is to take his role.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

man and a manof leadership. The last factor is essential; when a man has this quiity in greater measure than the rest of the villagers, combined with ay one of the other factors mentioned, he is a very powerful figure. The 14th *sokma* of Rombagiri, Gobang, was a typical example of a ma who had all the above qualities. He was the most outstanding perso among the villagers. Many stories which showed his powerful pesonality as the leader were told to me. He was, no doubt, the richet man, having four wives altogether. He fully used the advantage obeing in the position of the *sokma* and was later elected as the *loskor*,the head of the nineteen villages around Rombagiri.

621
622

I should saythis kind of personality, combined with *sokma*ship, is rather rare. n a village where no distinguished leader comes forth, there usually exits power relationships between more than two groups of *sok*; this has lso been the situation in Rombagiri since the death of Gobang. Cetain families in the village support the *sokma* mainly in their own intrest; other groups vie with the former group, while the rest stand a a third power or maintain indifference. This kind of situation is itensified in such events as the election of a new *sokma*. Theoretically, the post of *sokma* carries in itself no advantage other tan prestige, as we have discussed; but it provides considerable advntage for the accumulation of political power by an individual or a goup of people. This is the reason why intrigues and competition amng parties, as well as among individuals, become intensified whendeciding upon a new *sokma*. This situation is well illustrated in thease of the election of the present *sokma* of Rombagiri.

Several year ago, the last *sokma*, Rangmal, died, leaving his young wife, Kiji, and without appointing his *sokrom*, as already mentioned. Thre were many intrigues amongst the families in Rombagiri for the choosing of his successor. (For the following discussion, refer to Figs. 31 6.) Mingrin (20) whose wife, Gonjak is the direct descendant of Gbang as well of Rangmal, trind to obtain the *sokma*ship by marrying Kiji. Another candidate was Kiljan (12) (in spite of his being Mang *sokmari*, -drum-wife. Mingrin, is the daughter of Gobang by his first wife, Nujak. The wives of both the candidates belong to the direct descent line of Gobang's first wife. Among males related to the descendants of Gobang's second and fourth wives, there was no one who could be Kalji's husband. The sons and grandsons of Gobang's third wife, including the husbands of their sisters, joined forces and formed a strong third party against the two candidates. This third group also represented the Christian population of the village since Gobang kept only his third wife in the later period of his life when he had become a Christian: his remaining wives were given to Rangmal, his successor. This Christian group had no suitable bachelor who could marry Kalji. They, therefore, started to seek an Agitok

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

621 man amongst their relatives, who could be the *nokma* under their
622 control. Meanwhile, they persuaded Kalji to embrace Christianity. Kalji, becoming a Christian, was backed by the third group who were trying to counter the schemes of Mingrin and Kiljan. As Kalji lived alone, Mingrin's *saditan* (wife's sister's husband—this relation is considered as one of the most close and friendly), Songan (18) had sympathized with her, and made her a *jam* (store house). Mingrin became very angry about this. Later on the relationship between these two *saditan* further deteriorated. Finally Songan adopted Christianity and joined the third group. The third group, after two years' intrigues and desperate search, finally found Chambat, a grandnephew of Rengmal, who was living at Silsochigiri and agreed to become the *nokma* as well as being converted to Christianity.

In comparison with the third group, Kiljan and Mingrin might have had a stronger voice since their wives belonged to the direct descent line of Gobang's first wife. However, the third group was too strong for them. Actually, this third group had more adult male members than the other parties. As we have already discussed elsewhere (p. 56), the sons and grandsons being very much attached to the great figure, Gobang, and practised virilocal residence in their marriage. Though their mother (or grandmother) was the third wife of Gobang, they say that she was his most important one, since he kept her after his conversion to Christianity, and she was the wife who was present at his death. Furthermore, she also belonged to one of the oldest *sok* of Rombagiri. I observed that this group was becoming more and
[178] more influential and powerful in the village, having the advantage of being Christian : Christians usually lead modernization and development in the Hills.

429 The foregoing is an instance concerned with particular kin groups.
592 The other aspect, the distribution of fields, presents a more general
621 example of power relations within the village community. As I have
6'. stated elsewhere, the fields change hands every year over a seven-year period of rotation. Upon the eighth year of this seven-year cycle, the distribution of the field to each household usually follows the last pattern. But in seven years there are usually considerable changes in the numbers of each household; while some families have moved away, some have died, and new families have appeared. Hence, every year a large meeting, comprising the heads of each household in a village, is held after the harvest of the current year. At this meeting there are usually long discussions and sometimes even quarrels develop when the new boundaries of each family's share are being determined. In disputes of this kind, the *nokma* has no authority to give a final decision. An agreement is usually arrived at on the basis of the best opinion put forth. Those who swayed the meetings

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

423
592
621
61

most skillfully during my sojourn were the representatives of the Christian group mentioned above; others were Kiljan (12) who was the *sordar* of Rombagiri and who tried to become *nokma*; Rintang (9) and Jinban (16) both of whose wives belong to one of the oldest lines descended through Najol. Rintang was one of the oldest men in Rombagiri. These people usually have a stronger voice in the various matters concerned with village life, and the *nok* of these men appeared to rank somewhat higher amongst the villagers. I found that their fields lay in the more fertile portion of the slope, or contained a proportionally larger share of fertile soil than that of the others. The more fertile portion is considered to be in the lower part of the hills where there is more water. These parts are usually occupied by older *nok*, while new *nok* (households of newly married couples) have their share mostly in the upper part of the hills.

Another clear indication of the advantageous position of these particular *nok* is the orange gardens situated along the river where the jhum field ends. These orange gardens are owned by each household permanently. Only those *nok* which enjoy the advantages mentioned above possess them. These gardens bring in a far better income (in cash) than the jhum field. I asked these people whether they had the consent of the villagers to make their own garden, since these are part of the village land. What they replied was, "no, we just made them, nobody could object to it, as we have the right to do it." These families, no doubt, belong to the traditional lineage of Rombagiri —the wives or mothers are Chambugong Dinajik and have a advantageous social status, which is closely associated with their economic standing.

It is clear that, to a certain extent, the women's descent lines confer the internal rank order, and serve to form groups—a kind of descent group including their spouses—in a comparatively shallow generation depth. This fact implies that, in spite of various factors which do not allow the differentiation of *nok*, or the formation of particular descent groups, the descent line in shallow depth functions as criteria to establish a temporal body of power. Further, a village may include many members of various lineages other than the traditional one, and political power within a village community is found in those households where the wives (or sisters) belong to the traditional lineage under which name the *a'king* is kept. Thus, though the households of the traditional lineage may not appear in great number in the census, the underlying situation reveals that the existence of these households has a much more important meaning than appears in the statistics.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

VI. Formation and Stability of the Domestic Family

592 The simplest Garo domestic pattern is the elementary family: husband, wife and their children. The composition of a domestic group changes according to the cycle of the *mok* institution, as we have seen. It increases with the heiress' husband *(mokrom)* and her children, while her siblings leave to form other domestic families.

591 According to custom, the *agatí* (daughters other than the heiress)
592 establish independent domestic families with their husbands one or two years after their marriage, during which period they prepare their new houses. The *agatí*'s husband[1] lives with his wife's family, works in his wife's parents' field for the first year, and, in the coming year, marked by the new distribution of a jhum field, the newly married couple obtain a share in the fields. At the same time, their house is built in the village of the wife with the help of the villagers, the expense being met by the bride's parents with whom her husband has worked for a year or more as a member of the domestic unit. Thus a new domestic family, a *mok*, is established.

591 In the case of the *mokrom* who is destined to succeed his father-in-
592 law as the head of the family, the newly-wed *mokrom* and his wife are usually given a small newly-built temporary house next to his
606 father-in-law's house, so that a newly-married couple are separated
[428] from other members of their *mok* and can enjoy matrimonial privacy. As already mentioned, however, they are not an independent domestic unit. They form one productive and consumer economic unit together with the wife's parents and other members of the *mok*. They work
[587] together in the same field,[2] but sleep separately. When the *mokrom*'s father-in-law dies, his family joins his mother-in-law, whom he marries,
[835] and he succeeds to the headship of his father-in-law. This residential arrangement is important in relation to the sex taboo of the Garo. They observe a strict sex taboo between the son-in-law and the mother-in-law. However, this only obtains while the father-in-law is alive. As soon as the latter dies, the situation is entirely reversed—son-in-law and mother-in-law are virtually forced to live in the same house. Thus the independent sleeping arrangements for the *mokma* and *mokrom* are not only intended to protect the matrimonial life of the young

1. *Agatí*'s husband has no particular name like *mokrom* simply called *chawari* (son-in-law) but in the next generation there will be need to have a *mokrom*. The *mokrom* and the *mokma* are created in every household, once *mok* is established.

2. The portion of the field allotted to each domestic family is adjusted every year to the new distribution of households inside the village and to the changes in number of each domestic family.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

591
592
606

couple, but also to avoid sexual relations between the son-in-law and the mother-in-law. The residence pattern is a clearly reflected picture of the *sok* structure.

Implications of nokpanté *and Courtship.*

591
592

Sons and daughters *(agaté)* are members who leave the house on marriage, while a *sokrom* is a member whose addition increases the number of the unit. Hence, sons and daughters *(agaté)* are fluid elements of the perpetual continuance and the solidarity of a domestic family, i.e. the *sok*. According to their ideal rule, and in fact, to their general practices, the following is the picture resulted from their marriage arrangements. At the fission of the *sok*, daughters *(agaté)* have many advantages in comparison with sons since, though they have to leave their parents' house on marriage, they establish new households in the same familiar environment, i.e. in the same village; while sons must change their *sok* from their father's to their maternal uncle's (*sokrom*'s case) or to the new *sok* established in their maternal uncle's village (non-*sokrom*'s case). They have to start their married life in an entirely different village from that in which they were born and grew up.

591
592
604
606
613
[171]

Usually uxorilocal marriages militate against the status of husbands and constitute an element of tension in the relations of parents-in-law and son-in-law, as we shall see among Khasi marriages. In the case of the Garo, these disadvantages are well covered by their social system and usages. First of all, as already discussed, Garo uxorilocal marriage is at the same time avunculocal marriage; a man's father-in-law is always the actual or classificatory maternal uncle or at least of his own lineage people. This father-in-law can check various pressures from the wife's lineage people and relatives-in-law upon the newly arrived bridegroom. Not only within the single *sok*, but also within the village community, the bridegroom will find many familiar faces belonging to his own lineage people, who have also come to the village as husbands.

575
604
613

The first orientation and shift from father to maternal uncle is experienced by the boy when he enters the *nokpanté* (bachelor's dormitory). Boys become members of a *nokpanté* when five or six years old. This institution prepares them to become conscious of their lineage and social group, of which the members belonging to the same *mahari* gather at the *nokpanté*, situated at the centre of the village (see Map 7). Each village has its own *nokpanté*. If a village includes more than two major lineages, a *nokpanté* is made for each dominant lineage, as for instance in Emangiri, which has three *nokpanté* in the

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo ARS

575 village (see p. 59). Boys of the same lineage gather at the *sokpanti*
604 after their supper and spend the night there chatting about field work
613 and love affairs, etc., and playing music (they practise music and dance for their festivals). They are all unmarried young men of the same lineage and the eldest boy becomes the leader while the others follow in strict order according to their ages. (It is not merely ideal; I observed this in their daily life.) It is an entirely masculine community. Women are not allowed to enter the *sokpanti*, although in [562] festivals, sweet-hearts bring food-stuffs to their lovers through the back door (the front entrance is forbidden to women). In the *sokpanti*, boys cultivate friendship and develop great intimacy and co-operation among themselves. Thus, men of the same lineage grow up together. The role of the *sokpanti* has a great influence on their social life and prepares them for adulthood and married life, as they become more and more conscious of lineage comradeship. Actually their social orientation gradually shifts from their fathers to their maternal uncles, as they approach a marriageable age. Reciprocally, the maternal uncle begins to look after his nephews, paying less attention to his own sons. Thus, the *sokpanti* plays an intermediate role in the passage of a man's life from his natal house to his maternal uncle's house or village.

593 Actual relations with maternal uncles are kept up by occasional
604 visits from both sides. When an important event occurs in one of
613 the two groups (a paire of particular local lineage groups) the opposite group of villagers visits the village. For instance, on the occasion of marriage, serious illness, funerals, periodical festivals, etc., villagers of the opposite local lineage group would come. In such cases boys visit first their *mama*'s (maternal uncle's) house. The *mama* himself often visits his natal village and gives special attention to his maternal nephews, which involves looking for his successor among them. Thus, though a boy works in his father's field and dines with his parents, his psychological and social orientation to his *mama*'s *sok* and village becomes more and more pronounced as he grows up.

The last break with his natal family occurs at his marriage. The resistance to the change is manifested in the process of courtship which will be explained presently. By marriage a man is transferred from his father's authority to that of his *mama*. Especially if he is appointed to the *sokrom* of his *mama*, he is under the direct authority
591 of the *mama*, marrying his daughter. Even a non-*sokrom* stays at his

1. Boys who belong to minor lineages in a village and have no *sokpanti* of their lineage, join the *sokpanti* of the major lineage of the village. However, according to my observation, some of them may not join. The function of the [178] *sokpanti* seems to be declining as the traditional social organization is becoming looser.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

father-in-law's house (which is often his actual or classificatory *mama's* house) during the preliminary period of his marriage before he gets an independent house. At the same time, a newly-arrived husband finds amongst the husbands of his wife's village many of his *mokpantè* comrades whom he can consult and from whom he can gain support in matters of importance. These husbands develop strong friendship and cohesion amongst men of the same lineage, the basis of which was laid in the *mokpantè* period, thus combating the various disadvantages and hardships of coming to a new village.

The psychological, social and economic change in a man's life is well arranged by their social system and usages. The system of cross-cousin marriage and the *mokpantè* play an important role as an organized body to protect husbands in their new *mok*. Further, Garo men, as individuals, keep on their best behaviour in order to establish themselves securely in their new *mok*. This is fully apparent in the picture of their courtship.

The Garo have a peculiar custom in proposing. The man who makes a marriage arrangement is the head of a *mok*, the father. According to the rule, the successor of the father is his sister's son and not his own son. For the Garo *mok*, the most important concern is to find an ideal successor, *mokrom*. After the members of the *mok* and the *chra* (wife's kin) have selected their *mokma* from amongst their daughters (actual as well as classificatory), the head of the family chooses his *mokrom* from among his sisters' sons, in consultation with both lineage people. Then the head of the *mok* proposes that the *mokrom*-to-be should marry his daughter, *mokma*.[1] The boy, or the boy's family, never gives a definite answer to the first proposal and usually the boy's answer is negative.

Some time after the first negotiation, all the young boys in the village, who belong to the same *makari* as the girl, i.e., the members of the *mokpantè*, plan stratagems to bring the boy to the girl who wants to marry him. They suddenly attack the boy either at home or in the field and bring him to the girl's house by force. The young boys of the girl's *makari* grip his arms and surround him so that he cannot escape. Then, he is forcibly brought to the girl's village. In day time, he is made to visit every house in the village under the strict guard of these boys. In fact they never free his arms, being afraid that he might run away. At nightfall, they bring the boy inside the girl's house. During that night, all the boys who belong to the girl's *makari* do not sleep at the *mokpantè*, but in the girl's house. The boy who was brought in sits in the corner of the room.

1. *Apai*'s marriage also follows the same pattern; however, the desire to marry particular boy is naturally less, and more flexibility in choosing the husband is seen.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

584 full of shyness, while the members of the family and the boys enjoy chatting. The mother of the girl offers them rice beer, corn, and tobacco, etc. When they sleep, the boy is placed next to the girl and the other boys sleep around them, keeping a boy near the door to guard him from escape. In spite of such strong guards, the boy often escapes during the night by breaking the bamboo wall with his *dao* (hatchet). In most cases the boy's village is far away. Garo husbands say they were never afraid of tigers, leopards and elephants at such a time. One *must* run away! Afterwards, another attempt is made to bring the boy back. It might be weeks or months later, depending on the circumstances. Again he is forced to spend the night in the girl's house and again he does his best to escape. If successful he may be brought back a third time.

When I stayed in a village, I came across such an occasion. The boy sat in the corner of the room, near the entrance hiding his face in his arms. The girl's mother said to me, "I don't know whether he wishes to marry my daughter or not. This is already the third time, but he is still like that." She was worrying very much. If the boy really likes the girl, he shows a friendly face. The third time the guard is especially strong and no opportunity to escape is given. In such a case, he pretends that he might stay with the girl for a few days. When the tension has relaxed, he might offer to show the girl to his parents. Then the young couple start out for his village. Sometimes he runs away somewhere in the midst of jungle, leaving the girl alone. The poor girl, full of misery, comes back to her house. When such a couple passes through a village, people peep out and whisper to each other, "Look! a young couple is passing." In the beginning I could not understand what this meant. There is some significance behind it as to whether the girl could really keep the boy or not. In spite of her eagerness towards the boy, should he not respond, the girl sometimes goes to his parents' house and assists in their domestic work as well as in the jhum field in order to show that she is worthy enough to marry their son. When night falls, the girl prepares some delicacies which the boy likes, proceeds to the back entrance of the *nokpanti* and calling him shows her affection for him. By such means the girl does her best to lure him and get him as her husband.

584 [184] [795] Among Christian Garo, the process of proposal is essentially the same though it takes on a different form. A Christian Garo does not ask boys of the same *mahari* to bring a potential husband to a girl, since the *mahari* comradeship is not regarded as so important a matter and these boys often do not sleep in the *nokpanti*. Moreover, they do not care to follow the same customs as the *songsarel* (non-Christians). The Christian way of proposal is as follows: since most of them can read and write, a girl sends a letter to the boy whom she likes, request-

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

ing marriage. This is not a love letter in our sense, it is only a variation of the traditional Garo proposal. The following letters are examples of those written by Garo Christians:[6] 584

1. —The first letter usually accompanies one written by her father— 539
584

Rombagiri. 1st, Dec. 1955.

Dear nephew, Rupenkengjiri Sangma,

I am writing a few lines to you, enclosing my daughter's letter to you, with an idea of knowing your intention in your reply. If you could marry my daughter, Gaujak, I would be very happy. I don't mean to say that my daughter is a wonderful girl, but I hope that you would kindly help your maternal uncle and consider my request. For a man it is necessary to take a partner in this world and to have a happy married life. If you receive this letter, kindly reply to us, as I am anxious to hear from you.

With best wishes, I remain,
Yours sincerely,
Your uncle,
Gimbilipu Sangma.

Rombagiri. 1st, Dec. 1955.

Dear friend, Rupenkengjiri Sangma,

I am writing a few lines to you today, and I hope you will pay attention to my words. As my father has written to you, I request you to take me as your wife. I am ready to serve you. I don't claim to be clever and beautiful, but one must have a partner in this world, God created man and woman to live together. So we too must have a partner to live in this world. I hope that you will choose me as your partner.

Please let me know if you have any other plan in your future in your reply.

With best compliments, I remain,
Yours sincerely,
Your friend,
Gaujak Marak.

Reply Chokagiri. 5th, Dec. 1955.

Dear friend, Gaujak Marak,

I have received your letter and I like to let you know that I have no idea of choosing a wife for myself yet. Therefore, I would like to advise you to try someone else instead of me. I am intending to go for further study and afterwards I have to support my own parents. Kindly excuse my inability to take you as my wife.

With best wishes,
Sincerely yours,
Rupenkengjiri Sangma.

6. I tried to find whether any couple might have kept some original letters after their marriage, but I unfortunately failed to find any. But I happened to know a man from a neighbouring village of Rombagiri, whom the people regard as a good writer as well as a narrator of old Garo stories. He willingly agreed to produce for me a set of typical letters of the Garo courtship. These are the letters I present here. The Christians of Rombagiri highly appreciated them, saying they were exactly the same style as theirs, but rather more beautiful than the letters which they used to write. The English translation was done by one of the Garo intellectuals at Tura. 126

Dear friend, Repraksagipi Sangma,

I have received your letter, dated 9th, inst. I am very sad, you have not shown any intention to have me as your wife. I request you once more to consider this matter. I understood that there is no other man better than you who could be my husband, from my father's words. You are so capable in managing affairs and working in the field. I am a helpless girl, without your protection, it is very difficult to carry on my life. I shall obey all your orders. This is my duty. I have no property, I am poor. Although I am in such a position, if you consider taking me as your wife, I shall be very grateful. But if you do not consider this matter and do not take me, I shall be in great sorrow. I shall be nowhere.

Expecting your kind reply, with best regards,

Yours sincerely,

Ganjak.

Reply:

Chokagiri, 15th, Dec. 1955.

Dear friend, Ganjak,

I have received your letter, dated 10th, inst. I have read all what you have written. But I am in difficulty to take you as my wife, because I have no property or education. Your family is big. I don't know how to work. If you have me, you will lose all your property. There will be many difficulties under such circumstances for both of us. Please don't write any more, give up your writing to me and try to have another better boy. It will be useful for you.

With best wishes,

Yours sincerely,

Repraksagipi Sangma.

III.

Rombagiri, 20th, Dec. 1955.

Dear friend, Repraksagipi Sangma,

I have received your letter and I feel so sad about it. What you have written shows your indifference to me. I have already chosen you as my partner. It is impossible to think of another man. Though we are poor, if you come to my house, you would feel very much at home with my father, your maternal uncle, and my mother and uncles and brothers will be very kind to you. I shall do my best to serve you. Please think over it once again!

In the night when stars are shining in the sky, sorrow fills my heart, thinking of you. I dream of happy days when you come to my home and we work in the jhum field together. But I know you have no mind to take me. Oh! when we will be united! Please do make a fresh decision to make me your wife, rather than to continue to work for your parents. I have lots to tell you, but please let me stop here.

Your lost friend,

Ganjak.

Reply:

Chokagiri, 28th, Dec. 1955.

Dear friend, Ganjak,

Just a few words to tell you that I was extremely glad to receive these three letters which you have written to me. I can now realise all the facts. So

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

I have decided to marry you. I shall come to your house on 2nd January 1956. 539
But please let me know whether your uncles, brothers and elders are really agreeable to our marriage or not. I was very pleased with the way you wrote 584
to me. Please let me know when you desire to have our marriage ceremony. In the moonlit night I think of you very much. Please keep to your statements. I believe you are the only one with whom I can share my heart. I am closing here with best wishes and sweet expectation.

Yours lovingly,
Repraksogijil Sangma.

The period of a courtship may last for a month or so, or even for 584
a couple of years. It depends on the circumstances of the young people. Young Christian boys usually receive several letters from different girls. For the girls, however, it is difficult at times to know whether unwilling letters from a boy are a real refusal or simply part of the process of courtship. They say that they have to write at least three times to one boy.

This peculiar aspect of Garo courtship is well known amongst many 583
neighbouring tribes and peoples in Assam. Those who are patrilineal 584
laugh at the Garo, saying "How cowardly the Garo boy is! He cannot approach women by himself but must wait till girls come to him. The Garo are really matriarchal people. Women propose to the boys. It is women who choose husbands." This opinion is also held by foreign travellers who have visited the Garo Hills; but this impression is false and is based on ignorance of the details of the Garo social organization and the real meaning behind it. The Garo men express it themselves clearly by the following remarks: "A man must not approach a girl even if he loves her very much, but he may let fall a hint to the girl so that she will come to his feet. When he is caught by the young men of the girl's *makari*, he must run away at least three times, in order to show his pride as a man, and to give the impression that there are many girls luring him. He is not so cheap as to throw himself at a woman's feet. If a man married without running away, he would be regarded all his life as a poor fellow, who was afraid that no girl would approach him for marriage except that particular girl, he is such a poor man." Among Garo, the more a man refuses offers of marriage the more manly he appears.

This is not only due to men's pride; there is also considerable reasons behind it. Refusals of marriage help to establish the boys in a more powerful position after their marriage. Most Garo men have to go alone to a new village by marriage, leaving familiar kinsmen and the fields of their native villages. A newcomer, a newly-wed 583
bridegroom, is in a weak position as a result of uxorilocal marriage; in order to combat this situation, he endeavours to discover the girl's

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

583 weakness during his courtship. Then finally he decides to marry if
he likes the girl, but pretends to do so unwillingly and only at the
strong request of both her and her kinsmen. In the beginning of
[593] his married life, he behaves as if he came to his wife's house to protect
her and to make her house prosperous by attending to all her requests.
But she must obey his orders. By such careful manipulation the
newcomer firmly establishes his position in his new home. This peculiar
form of courtship is also indicative of the man's resistance to the
transition from his father's to his maternal uncle's circle. Courtship
amongst the Garo thus appears closely linked to the Garo social
structure.

Relationship between Husband and Wife.

592 A well arranged and carefully prepared Garo marriage usually gives
the husband paternal authority in his new soil. The place of the
593 husband in the family is firmly established in the function of the soil.
In the case of the widower, he is placed in the second seat among the
[428] members of the soil, next to his father-in-law.[1] The Garo domestic
[606] family has strong cohesion and solidarity, centred upon the leadship
of the husband (father), on the basis of residential rule and domestic
economy. In spite of the lineage grouping of the wife and husband,
there is a considerable degree of privacy and cohesion in each domestic
family. The residential autonomy is an index of the economic auto-
nomy: it is a single economic unit engaged in food production and
consumption, cultivating the field in common.

423 This norm appears very clearly, for instance, when the boundaries
of family shares in the new jhum field are being marked. Following
592 the day of the burning of the new jhum field, all the members of
each domestic family rush to the field in the early morning to mark
out their new portion for the coming cultivation. There may be
[578] many quarrels when marking the border lines between neighbours.
The husband, wife and children whose interests are entirely in com-
mon claim their rights in the field to the fullest possible extent,
showing the strongest solidarity in relation to others. It is they who
must cultivate the field for their livelihood and prosperity in the
coming year. Thus the economic system acts as the strongest possible
bond in uniting them.

593 However, as already described, the central core of the soil, and

1. This is easily observed in their daily life as well as on religious occasions. His mother-in-law is next to him, being his potential wife; she is not placed before him, though she is his mother-in-law. This is quite different situation
[171] from the Khasi husband of an heiress, whose status is the lowest among the members of his domestic family.

15: Makaua E-5 (1955-1954) 1967 ABT Kiaei
Garo ABS

of the domestic family, is the husband-wife relationship (with the [595]
successors when it grows), rather than that of the parents and children.
This husband-wife relation is firmly established under the patronage [591]
of both their local lineages. The wife, according to the promises
made by her during the courting period, subordinates herself to the [593]
newly-arrived husband. The power of the husband is, no doubt, [619]
checked to some extent by the wife's uncles and brothers, backed
by their local lineage people. But this pressure from the wife's
side is checked by the husband's lineage people, one of whom is his
father-in-law. With such a balance of power on both sides, most
Garo marriages are successful. The stability of the relationship of
husband and wife grows more and more in the course of their married
life. Divorces are very rare except in the very early period of the [596]
marriage. During my field work in four villages, I discovered among
people whose genealogies I collected only two cases of divorce after
the couple had established their own household.

In a domestic unit, the husband is given all the responsibility
for the family affairs. The wife is subordinate to him, in spite of
matrilocal residence. In daily behaviour, we can easily see this rela-
tionship in action. The husband is the first person served by the
wife. The husband, though it is very rare for him to do so, can beat
his wife, if she acts against him unreasonably. It is permitted, as
a matter of course, since he is the holder of authority in the family.
However, cases of wife-beating are less common than among neigh-
bouring patrilineal tribes, because of the nature of matrilocal mar-
riages; a husband must be conscious of the existence of his wife's clan
always around him. Indeed he is always aware of their looking
shadow. On the other hand, if a wife beats her husband, it is a serious
matter for the Garo. They think of it as a great insult to the husband
and his lineage people. According to their information, as soon as
such news is received by her husband's *machong*, all his *machong* people
come to his wife's house. Parties of both *machong* gather together and
a row is mediated in their presence. They persuade the wife not to
behave in such a way again and to reflect upon her action. Even if
the situation is worse than this, and the couple want a divorce, the
people of both lineages try their best to smooth over matters and
usually succeed in doing so by making the couple conscious of their
lineage responsibilities. With such a line going on, the husband and
wife are made to appreciate their duties as representatives of their
respective *machong* and to attach less importance to their personal
things. Personal friction between a husband and wife are thus closely
bound up with the relationship between the two *machong*. Once estab-
lished, the marriage relationship becomes an almost inescapable insti-
tution until the death of one of the partners.

399 It is characteristic of the Garo marriage that an affectionate relationship of husband and wife is cultivated in the course of their married life. In fact, I often met very affectionate couples. For instance, I once gave a man a cup of tea and a piece of biscuit; his wife joined us a few minutes later. He drank half of the tea and gave the other half to his wife, together with half of the biscuit. This simple matrimonial affection impressed me a great deal. When I said this to my interpreter, he replied, "We are like this." It is quite true and I often found similar cases. On another occasion, when we happened to pass near the village whence my leaves had come, he suddenly shouted to a man, who was on top of a tree, watching for elephants, to ask whether his wife was well or not. As soon as I got the meaning of his shout through my interpreter, I smiled at him, as he was somewhat embarrassed, but he was very happy to receive news of his wife's good health. Garo husbands are indeed
[191] very kind and care very much for their wives. This seems to be an outstanding phenomenon amongst the various tribes in Assam. It is not correct to say that it is the natural outcome of matrilocal residence and matrilineal succession, for we shall see later that the matrilocal and matrilineal Khasi are unlike the Garo in this respect. It seems to be the moral code cultivated by the nature of the marriage which has resulted from the whole structural dynamics of their society.

The wife is fully dependent on her husband in her daily life. The promises made by both parties during their courting appear as facts in their married life. But sometimes the wife shows that she is a member of a matrilineal and matrilocal society where the relation of husband and wife is rather different from that among patrilineal tribes and peoples. For example, if the husband is not at home when a meal is ready, she eats it with her children without waiting for him,
[266] leaving his share wrapped in banana leaves. If the wife is engaged
[267] in looking her baby when the husband asks her to bring some firewood to burn in the fireplace, she simply says "I cannot, I am engaged." Or, if the time is unreasonable, she may say "I am tired now, I am going to sleep." If the wife's remarks are reasonable, the Garo husband easily understands the circumstances and never forces her against her will. So far as my observation goes, neither the authority of the husband nor the subordination of the wife are ever carried to extremes.

Of course, there are exceptional cases, as in any society. Among 30 houses in Rombagiri, 4 houses are notorious, because the wives keep their husbands under their thumbs. They often have quarrels. For instance, when the yield of the jhum field was bad, they started to quarrel in the field, blaming each other. The children, especially the daughters, sided with the mother. Villagers regarded it as a very bad and shameful state of affairs. I think, however, that while these

10: Nakano E-9 (1955-1956) 1957 ARI Khasi
Gara ARS

are always similar cases in any society, these are certainly not typical 595
instances of Garo society.

The higher status of the husband and the establishment of the parental authority are based not only on the unique arrangement of the marriage, but also on the actual economic contribution of the husband as manager as well as worker. In fact, if a husband dies [613]
and it is some time before his lineage people supply the next husband, the widow's house rapidly becomes economically poorer, owing to the lack of management and labour. In general, the Garo have a concept about men and women, which clearly appears in such a remark as "after all, women are weak, what can they do without men?" Another interesting remark is "If I am afraid of my wife, I shall tear my *gando*." The *gando* is the loin-cloth worn by the men. This is [291]
considered their most important article of clothing—an usually their [558]
only one. To be without a *gando* is the most shameful state for a man; they would sooner die. When they fight among themselves, they [578]
declare at the beginning: "I am Marak, my father's *machar* is so-and-so Sangma, my mother's *machar* is so-and-so Marak. If you defeat me, [615]
you shall have my *gando*," holding up a piece of cloth, a loin-cloth, in the right hand stretched upwards. In their houses, men occupy the centre of the room, while the women are allocated the lower seats near the entrance (see p. 91). Thus the men definitely maintain a higher status.

In addition to the foregoing, the case of the polygynous family 595
should be presented here. A Garo husband may take secondary wives, provided that he obtains the first wife's permission and her lineage people's consent. The former does not usually cause difficulties, when a husband is capable and energetic. Indeed, it often happens that the household of a prosperous man becomes too big to be managed by one wife, who in such cases is usually alone, and she herself may press her husband to take another younger wife who can help her in her heavy domestic duties. The wife's *machar* may of its own accord supply [613]
another woman or give its consent to him to take another wife from their *machar* or from another *machar*, whom he likes. A secondary wife mostly belongs to the same *machar* with that of the first wife; she may be a younger sister or a niece of the latter (as seen in Gobang's case, p. 48). But there are the sharp distinction between *almamong* (first wife) and *rikgiri* (secondary wife), as clearly understandable in the light of the structural working of the *mal* institution, already discussed.

The practice of this kind of polygyny should be considered in [587]
relation to the rule of succession in the *mal*, which also often results in a kind of polygyny, the widow marrying her widowed mother-in-law and her daughter at the same time. I believe that this practice may prepare them socially and morally to have more than two wives

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

595 if the circumstances allow. In certain well defined marital spheres, the Garo individual is subject to the dictates of the *mok* and the lineage function. Further, the Garo women are quite resigned to their [171] husbands taking further wives, which, I think, is closely associated with the subordination to the husband—a unique feature among matrilineal peoples (cf. Khasi polygyny, pp. 139-70).

As a rule, secondary wives come to the first wife's house, where lived is the husband. In most cases, they live together very peace- [556] fully, dividing their domestic work. I once met a rich old man who possessed seven wives and who told me that he was going to have another. This, of course, is an exceptional case. However, one or two polygynists are usually to be found in any village. In my genealogical tables there are three cases of polygynists: Gobang and Rangmal of Rombagiri and Ramding of Rimbara. They had extra wives besides marrying mother and daughter in the cycle of the *mok* succes- [556] sion. They were all influential and wealthy men as well as being *mokma* in the villages.

171 In conclusion, the high stability of Garo marriage is in contrast 192 with the unstable marriage of other matrilineal peoples, one of which 531 I will deal with in Part II. Usually a matrilineal system tends to show strong solidarity in the matrilineal descent group. Therefore, there is always potential conflict between the marriage bond and the descent bond—which weakens the husband-wife relationship. No doubt, the Garo also have bonds of the descent group as do other matrilineal peoples, as represented in the Garo word, *chra* (see p. 75). However, the function of a descent group is limited. Instead, the function of a *mok* has more significant structural importance, and this is the core of Garo social organization. In the Garo system, the ownership of the property group and the authority of its controlling power can never be found in the same descent group, which certainly weakens the solidarity of matrilineal descent groups. Moreover, the property group, *mok*, is in fact established by the combination of two descent groups in perfect balance, as analysed in the previous sections of this chapter. The structural extension of this is also found in the composition of the village, the land-holding group. As manifested in their avunculocal marriage, neither to the Garo husband nor to the wife does marriage mean marrying into one of either group (the *mok* is located in the balance of two descent groups) unlike the marriages of in-marrying women in virilocal or avunculocal marriages, and of in-marrying men in an uxorilocal one. These are the structural implications of the stable marriage found among the matrilineal Garo. In this respect, the Garo system differs greatly from other matrilineal systems of which I will give a comparative analysis in the last part of this volume.

Chapter III

SOCIAL CHANGE IN VILLAGES NEAR THE PLAIN

In this chapter I shall discuss the significant aspects of social 101
change, and of structural change in particular, which occur in the frontier Garo community—the newly-formed villages on the southern slopes of the Hills near the plain of Bengal.

The bulk of the Garo population have lived in the interior of the Hills for centuries. The Garo who occupy the northern slopes of the Hills, together with those in the Assam Valley, are also considered to be inhabitants as old as those in the interior Hills. They are said to be the descendants of those who remained in these areas during the migration of the Garo tribe that originated in the north—according to their legends, they migrated from Tibet through Cooch-Behar, stayed for a time in the plain near the present Goalpara, and finally reached to the present Garo Hills. The southern slopes of the Hills are therefore the frontier of the Garo population, and indeed, as far as I can tell, most of the Garo villages in these areas seem to have been established during the last hundred years.

Political changes, coupled with an increase in population, resulted 161
in the formation of satellite villages around a parent village, as described in the previous chapter. However, during the last few decades, 192
the rate of increase in population has become too high to be accommodated in the interior Hills near the parent-villages. According to 311
the Census of Assam 1951, Garo Hills District Census, the population of the district was 145,173 against 103,381 in 1941, i.e., it has increased by 5.41 per cent over this period, which is slightly less than half the percentage increase of 13.11 recorded in 1931-41 but larger than the 4.37 per cent of 1921-31. Such a rapid growth in population is a serious matter for a people whose economy is based on jhum cultivation, because this method requires an area of more than ten times

15: Nakane E-5 (1955-1956) 1967 ART Khasi
Garo ARS

that of wet cultivation for the same population, and the technical arrangement is too simple to allow improvements in yield from the same amount of land. Thus, the serious shortage of land, coupled with the increasing population, made it imperative that the people of the interior should look for a new area in which to accommodate the surplus population. Most of the jungle areas in the interior were already exploited. Thus some of them had to move to a new site far away from their social villages. This tendency resulted in the establishment of new villages near the plain. The regions along the foot of the southern slopes of the Hills, near the plain, had been left unclaimed, since the land was not sufficiently fertile for jhum cultivation, nor was it fit for large-scale wet cultivation owing to the fairly steep slopes—the plain dwellers, the Bengalee, likewise had not penetrated into these regions. But because of the pressure of increasing population in the Hills, the Garo had to settle even in these areas. Also on account of increasing population, these Garo, once settled near the plain, had to engage in wet cultivation in the available flat lands which could support a greater density of population.

These series of events naturally brought about social and economic changes. The main forces which led to a change in Garo organization can be summarized as follows: firstly, the shift to an entirely new area, far from the parent villages, inevitably resulted in the establishment of a kind of colonial village. The social rules and customs had to be modified: in particular, the moiety relation between two traditional *machas* was difficult to maintain, since such a village is usually composed of volunteers from various *machas* as well as villages. Thus the basic setting of their organization could not be maintained, and this resulted in a series of modifications at the organizational level.

Secondly, the change in agricultural technique from jhum to wet cultivation constituted the decisive factor in the Garo economic and social changes. So long as the village economy depends entirely on jhum cultivation, the village land is held in common by all the inhabitants of the village, represented by the *nokma*. However, once the villagers started wet cultivation, the field could no longer be held in common by all of them; it became the property of the particular family who first brought it under cultivation and continued to cultivate it.

Thus wet cultivation inevitably develops private ownership of fields. Wet cultivation differs a great deal technically from jhum cultivation. First of all, it does not require the cooperation of all the villagers, which is essential in jhum, particularly in the period of felling and burning the jungle trees. Once cultivated, a wet field requires great care throughout the year and is cultivated every year by the same family. As a result, the cultivators develop a great

attachment to their field, which is hardly ever found among the cultivators of jhum fields, who cultivate a new piece of land every year. The right to the field naturally falls to the family who reclaimed it. So far as my own observation goes, conversion to a wet rice field of a part (flat land) of the jhum field, which originally belonged to the village, does not create opposition among the other villagers who continue jhum cultivation. This is because the jhum field usually extends over a vast area and jhum cultivation is usually done on the slope, not on flat land. Hence the conversion does not vitally affect the village economy. When a family in a village starts to convert a piece of flat land into a wet rice field, the people are usually not aware of the loss of land. The problem lies not in the actual commencement of wet cultivation itself, but in the gradual results which lead to social differentiation between the jhum cultivators and the wet cultivators within a same community, because of the different types of ownership.[1]

The observation of social change ascribable mainly to the first factor is based upon field work done in Rinsabara village, and I have chosen Joshipara village as an illustration of economic change, the second factor.

Rinsabara

Rinsabara is situated about five miles north of the bordering bazaar, Dalu, in the plain. This area is located where the mountains cease and the plain starts gradually. At Rinsabara, the major economy was jhum cultivation. Twenty years ago, wet paddy cultivation was begun alongside the jhum cultivation. Rinsabara, established about sixty years ago, was a community of 20 households in January 1956 (see List 4). I decided to choose this village because many of the present population were closely related to the people of Rombagiri. The *a'kong* belongs to the Agitok and the *mahna* was Doljel Marak since the founder of this village was a man from Doljel, whose wife was Agitok. However, at present there are no members of the Doljel Marak in the village. Actually the majority of the population comprises people of Agitok and of Chambugong. The analysis of the formation of this village, as well as of the present composition of the inhabitants, reveals various aspects which are different from those of Rombagiri.

1. This is a very common phenomenon in many tribal areas in Assam bordering the plain. On this problem I did further field work among the tribes of Tripura State see Nakane, 1959.

173 The founder of the village was named Ramling, a Doijel Marak.
614 He married Muchi whose *makari* was Agitok Sangma of Shanshapara
621 village near Tura. He had four wives altogether including this first
622 wife:

Name of wife	*Makari*	*Born at*	*Married at*
—	—	—	—
1. Muchi	Agitok	Shanshapara	Shanshapara
2. Gedek	Agitok	Shanshapara	Shanshapara
3. Gaon	Chambugong	Rombagiri	Rimsibara
4. Naren	Agitok	Chamagiri	Rimsibara

The second wife, Gedek, is the daughter of the younger sister of the first wife (Muchi)'s mother, and the fourth wife, Naren, is Gedek's elder sister's daughter (see Fig. 8). After his marriage to the second wife, Ramling came to this site and founded the new village, Rimsibara. Some time later, Gaon visited Rimsibara, accompanied by her parents from Rombagiri, and fell in love with Ramling (note, Ramling and Gaon both belong to Marak, though they are of different *makari*!). After her parents left, Gaon remained at Rimsibara as the third wife of Ramling who later took a fourth wife, Naren.

Ramling's daughter, Amon, whose mother is Gedek (the second wife), became *sokma*. She married Ramling's classificatory sister's son (note, a cross-cousin marriage for the succession of *sok* of *sokma*). This *sokma*, Sanjin, was the second *sokma* of Rimsibara. When his wife, Amon, died, he was given a woman, Rohi, from the late wife's *makari* people. This woman, Rohi, is the present *sokma*. When Sanjin died, his *sokma*, Jingan, married his *sokma*, Nonjak (Rohi's daughter). According to their rule, Jingan should have married the widowed Rohi, his wife's mother. However, he refused to cohabit with his mother-in-law and thus could not act as *sokma*. Temporarily, therefore, Rohi is recognized as *sokma* by the villagers. (I have already mentioned this case in pp. 47-50.)

Jingan belongs to the Maron Marak, not to the Doijel like Ramling and Sanjin. Sanjin's *makari* had failed to supply his successor. Therefore Jingan was taken as the *sokma* since he was a Marak, though Maron not Doijel. *A'kim* (the right of marriage—see pp. 27, 45) is still held by the Doijel *makari*, who are attempting to make the *sokma* of the next generation a Doijel man. However, in such newly-formed villages the arrangement between the two *makari* is not well followed.

614 In cases other than that of the *sokma*, the genealogy of Rimsibara
621 shows that marriage relations are not maintained between the Agitok and the Doijel. Moreover, there are no living members of the Doijel *makari* at present in Rimsibara. In place of this, Chambugong and

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

Agitok marriages are common. Out of 40 married men and women, 34 belong to the Chambugong (women-10, men-7) and the Agitok (women-10, men-7). Combinations of Chambugong and Agitok comprise 13 out of 20 couples (these numbers refer to the head of each house and his wife, see List 4). The Agitok—the descendants of Ramding's second and fourth wives, including other members of the same *makari*—and the Chambugong from Rombagiri—the descendants of Gaon, the third wife of Ramding—form the main population of the present Rimsibara. They have a marked tendency towards village endogamy. Since Rimsibara is a totally new village, it has no firm

FIG. 9. — *Genealogical Relations of Rombagiri and Rimsibara.*

foundation economically and socially upon which to establish a society arrangement, such as we observed in Rombagiri.

In actual fact Rimsibara was formed by colonies of the Shomdapara and the Rombagiri. The process of colonization appears clearly when we combine the genealogical data of Rombagiri and of Rimsibara, as shown in Fig. 9. Gaon herself and the next generation still have a close relationship with the Rombagiri people. Gaon had four daughters and a son from Ramding; the second daughter married Gobang *lodoe*, then *sobma* of Rombagiri. The third daughter went out to Alabagiri. However, the first and fourth daughters and the son remained at Rimsibara; most of the present Chambugong people are their descendants. Not only these descendants but many of the villagers think of Rombagiri as their homeland, since a number of them are related to Rombagiri people through kinship or affinal ties. In fact many of them visit Rombagiri. My field work was carried out

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

123 with considerable ease in this village, because I knew all their relatives in Rombagiri and the villagers were very pleased to hear from me news of Rombagiri. I am not able to present such data for Shomchapara, which I did not visit. In any case, in Rimsbara there are many
582 members of the Agitok and the Chambagong of both sexes, resulting
614 in a tendency to marry between the two: thus making feasible to
621 practice cross-cousin marriages among members of the same village.

This colonial village has not only a tendency towards endogamy
166 but welcomes also various villagers who seek new land. The composi-
621 tion of the population includes people who came from various villages
[109] as illustrated in the following list:

Note: The figures record the movement of population in Rimsbara over the last thirty years. These villages are scattered over a vast area from Dala to Bagmara, Rombagiri, Tura and down to Dala through Rimsbara. These figures were collected by myself through village genealogy.

582 There are twenty-four villages with which individuals of Rimsbara
621 have had marriage relations over the last thirty years; 17 men and

19: Nakane E-5 (1955-1956) 1967 AR? Khasi
Garo AR5

7 women came into the village and 6 men and 2 women left it; immigrants are in the majority: 24 immigrants against 8 emigrants. The majority of the fluid population is male, which shows that matrilocal residences predominate in this case as in other Garo villages. Thus the composition and the genealogical table of the inhabitants show typical characteristics of a colonial community of the Garo. The traditional arrangements between two particular lineages based on the *a'ring* are distorted. 582 621 [184]

The analysis of the genealogical table (Fig. 8) reveals, too, that certain traditional rules concerning marriages are not strictly followed. For instance, amongst orthodox Garo like those of Rimdogiri, more than one marriage relation is avoided between two families; one's sister is forbidden to marry one's wife's brother, and the brother is also forbidden to marry his wife's sister. However, the people of Rimdhara are not aware of this rule; we can find such relations in the genealogical table of Rimdhara, as in the case of marriage (11) and (13), and those of (3) and (16) in Fig. 8. These facts must be attributed to the nature of such a village where it is difficult to maintain the traditional Garo organization based on *a'ring*; and accordingly the *a'kim* and *sub-chama'* arrangements have little significance. In such a situation, the matrilateral cross-cousin marriage based on the sub succession has also to lose its functional force. As a result, there are only general cross-cousin marriages in practice, so that evidence of brother exchange naturally ceased to be. (See pp. 52-53.) 182 582 621

Again, we should not forget the case of the marriage between Rumding (Dalui Marak) and his third wife, Gasu (Chambugong Marak). Marriage within the same *chatchi* is regarded as a great sin amongst the orthodox Garo; where such practices occur a considerable fine is exacted and the culprits are usually expelled from their village. This rule is not so strict in the colonial villages. During my trip, I also found some marriages of the same *chatchi* (but not the same *machari*) in the colonial area. Their moral concepts are much less exacting in the case of such marriages. They accepted it, saying they are not of the same *machari*, though they do not appreciate the four points involved. However, the last line, i.e., the marriage between the same *machari*, is strongly opposed even amongst these villagers. 182 582 614 616 [684]

The relaxing of the social rules is really associated with economic changes due to colonization and the application of wet cultivation. The people do not entirely live on *a'ring* and the *a'kim* concept no longer works systematically in these areas. These are the main reasons why the social system is losing in the colonial areas its dyadic compact nature. 182 184 621

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

Jenkipara[1]

178 Jenkipara provides an illustration of more radical changes in the
184 Garo social system, particularly for economic reasons. Jenkipara is
243 situated three miles southeast of Rimibara—closer to the plain. It is
621 quite an old and large village for this area, the number of households
[191] amounting to about 70 (Jan. 1956). Its economy is similar to that of Rimibara; wet cultivation is practised alongside jhum cultivation. However, some features are different from those of Rimibara. First of all there is more flat land than at Rimibara, so that wet cultivation is practised on a much larger scale. A more significant difference is that in Jenkipara a certain number of households are entirely dependent on wet cultivation, while the rest rely only on the jhum field, in Rimibara almost every household had a jhum field as well as some wet paddy fields.

178 One-third of the population of Jenkipara (10 households) practices
184 wet cultivation; this same group is also differentiated from the others
243 in forming the Christian population. In 1908, one of the villagers
621 (a man) was converted to Christianity which spread slowly in his
971 extended families through the channels of kinship. The Government
[195] Lower Primary School was established in the village in 1922. That
[192] same year, the man who had become the first Christian started the wet paddy cultivation, copying its technique from Gurkha farmers living near the border. In general, among the Garo "to become Christian" means "separation from all the traditional ways of living." This attitude often results in an antipathy against all aspects of the old culture. For instance, as soon as a person becomes Christian, he starts to build a new house in modern style and destroys the drums and ornaments to which he used to be greatly attached. This change
[201] of attitude, in practical terms, is a fertile field for the acceptance
[199] of a new culture, for example, missionary education, wearing shirts over the naked body, etc.[2] In this case, the acceptance of the technique of wet cultivation must also be encouraged by such an attitude.

182 Whether Christian or not, those who changed their vital economy
243 to wet cultivation had to face considerable difficulties which forced
421 them to seek an alternative solution by changing existing rules. Those
621 who established private ownership of land by wet cultivation, abandoning their rights on the village jhum field, are practically cut off from the village economic organization centered upon the *ochma*. This

1. Jenkipara was selected as one of the areas of the Agricultural Irrigation Project, the Government of India, 1954-55.
2. Aspects of social change due to Christianization among the Garo were dealt in my earlier paper (Nakane, 1957).

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

means that their descendants cannot claim their shares in the village jhum field. In this situation, the traditional succession rule in private ownership faces significant difficulties in the following manner: 182 243

According to the traditional rule, the *mama* is the successor to the property. When this rule is applied to the new situation, the wet land is to be inherited by the *mama* undivided, leaving no share for the other daughters. While the *mama* enjoys her father's acquired property, wet land, other daughters have to face after marriage a serious economic situation, since they have no share of the wet field nor have they a share of the village jhum field, being cut off from the economic organization of the village, based on the jhum. Thus considerable economic unbalance is created among the descendants. 423 621 [428]

The problem does not concern only the *mama* inheritance, but also the *mamaship*. Though the wet cultivators are cut off from the village economic organization, they still keep close kinship relations as well as affinal relations with the rest of the members of the village, including of some other villages, amongst whom they choose their *mamas*. Now the families from whom their *mamas* comes are not always in the same economic situation as those who practise wet cultivation—they might be jhum cultivators. One can easily imagine the condition that will develop when the private wet land is handed over to the *mama* and her husband, the *mamas*, who does not know how to cultivate it. The wet cultivators of Jonhipara say that private land must be bequeathed to their sons and not to their *mamas*. Because the son has worked with the father in his field, the father is glad to hand it over safely to him. 182 243 423 428 [593]

The private ownership of wet land develops strong ties between the father and the son who collaborate in the same field which is owned by the family. Sons no longer sleep at the *mahpanti*, since they are Christians. They are attached more to the father than to the kinsage men, including the maternal uncle. At the same time, the father's attention goes to his sons who help him in his own field, instead of to his nephew who works in another field which belongs to someone else, or in the jhum field from which he is already divorced. The father develops a great desire to see his son succeed to his land, as he has worked with him and knows the technique of cultivation as well as the value of the land. The relation between the father and son becomes similar to that existing in patrilineal families. Indeed, the paternal authority also increases, since his management and his labour predominate over that of the other members of the family, particularly in comparison with that of the women. The wet cultivators at Jonhipara say: "The daughters, being women, cannot do anything, except rely on their husbands. To let them succeed to the land is a great risk." They try hard to have a son succeed to their private land, 182 243 423 593 182 428

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

182 rather than the mahar and the mahram. Actually some of the families
428 in this area have already started to hand over the land to sons, against the Garo law.

This tendency, no doubt, tends to break up the traditional Garo
182 social organization. If a father decides to let his son succeed to his
243 land, the son will remain at his father's house after his marriage,
423 most probably taking a woman from a neighbouring household which also practises wet cultivation. Such a practice really marks a depar-
61 ture from the traditional organization, not only transforming from matrilineal to patrilineal succession, but developing a new type of
428 organization which might be called an inter-family group organiza-
621 tion divorced from the network of the social organization to which they have belonged. The latter, especially, is one of the phenomena occurring in many tribal areas in Assam.

Whether matrilineal or patrilineal, the important social change among such population is gradual development of a new type of a corporate group consisting of several neighbouring households, while a localized lineage or village organization began to lose its effective function as the important corporate body. Among those owned wet paddy fields, the land may be inherited in common by the sons, or divided amongst them, or it may be inherited by one of the sons while the other sons become cultivators for the successor. In any case, a set of households thus related through kinship and inheritance will form a socio-economic corporate group. In the course of time, there may be many such household groups, and among them marriage relations are established. According to my observation in Assam tribal areas, development of this type of new local groups and household relationships affects significantly to the traditional lineage or village organization based on jhum cultivation.

Trends, such as we have observed in Joshipara, suggest the latest stage in the series of changes undergone by Garo society, which will result in an entirely different organization of the community, in which the traditional network of Garo social organization will be destroyed. However, these economic changes have only been in operation over the last thirty years and only very recently have they started to undermine the traditional organization.

182 The adoption of wet cultivation seems to be a important factor in
184 social change occuring in tribal areas, as discussed here. However,
243 it is necessary to consider some other factors relevant to it. For instance, in Rinsibara, in spite of the adoption of wet cultivation, the
423 degree of change was not so great as in Joshipara. The reason for
621 this might be found in the following: in Rinsibara, wet cultivation began to be practised by every family, whether Christian or not (Christians were very few, and there were no clear-cut groups of

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi
Garo AR5

Christian and of *songsarek*), at more or less the same time. As in List 4, out of 20 households 7 did not possess wet fields; they were members of much younger generations, whose wives were not *nokna*. Older families possessed some wet paddy fields between 1 and 5 acres in extent. However, in 1956, all of them still had jhum fields as well, while among the people of Joshipara, there was a clear-cut division between jhum cultivators and wet cultivators. It seems that the degree of economic differentiation among the households within a village community is important. If every household has a similar economic activity the traditional organization can be fairly preserved, in spite of the adoption of wet cultivation. For instance, though I did not do field work among the Garo who live on the northern slopes of the Hills near the Assam Valley, and depend mainly on wet rice fields for their livelihood, I understood through different information that they have a very similar organization to the Garo of the interior Hills and keep to the basic rules to a considerable degree.

182 184 243 423 621

Another remark I should like to add here is that the social change observed in Joshipara would never be so radical and so serious in any other tribal areas of Assam in a similar situation. This is no doubt because the Garo have had a matrilineal system in which social change involves an entire structural change. The same analogy can be applied to the rapid disintegration of the Nayar joint family in comparison with that of patrilineal Hindu joint family (see the discussion in Nakane, 1958/B and 1962).

CHAPTER I

INTRODUCTION

The homeland of the Khasi is the hilly country situated in the northeast of India and known at present as the District of United Khasi and Jaintia Hills, under the Assam State Government. The area is bounded by the plains of the Kamrup and the Nowgong Districts to the north, by the Cachar Hills and East Pakistan (District of Sylhet) to the south, and by the United Mikir and North Cachar Hills Districts to the east. The Khasi and Jaintia Hills are divided politically into two subdivisions, with headquarters at Shillong for the Khasi Hills, and at Jowai for the Jaintia Hills, respectively. The peoples of both subdivisions are called "Khasi" in a broad sense, and are distinctly marked off from other neighbouring tribes and peoples by language and social structure. The population of the Khasi in the District is 363,999 (*Census of India, 1951, Assam*). Their language belongs to one of the Mon group of the Austro-Asiatic family to which the Munda in central India also belongs.[1]

Though all Khasis share fundamentally the same language and social structure, their culture, dialects, economy, social usage, and political organization vary greatly, owing to the ecological and politico-historical differences among them. The United Khasi and Jaintia Hills are much higher than the neighbouring Garo Hills. The plateau of the Khasi Hills ranges from about 5,000 feet to 6,000 feet, of which

1. The *Census of India, 1951, Assam*, makes the following remarks on their language: "Their nearest kinsmen have been discovered to be the Palaungs, a tribe inhabiting one of the Shan States to the northeast of Mandalay on the middle Salween. Later the relationship of the Khasi language has been traced not only to the Mon-Khmer language, but also to the Nicobarese and several dialects spoken by some tribes in the Malay Peninsula. In Assam, this special form of speech is only found in the Khasi and Jaintias while nearly all the other primitive languages with which it is surrounded belong to the great Bodo family. The Khasi language is the only member of the Mon-Khmer family which possesses a grammatical gender distinguishing all nouns as masculine and feminine, and here also the feminine nouns immensely preponderate."

19: Nakano K-5 (1955-1956) 1957 AR7 Khasi AR7

the highest point in the Shillong Peak, 6,445 feet, covered with scrub, grassland and forests (mostly oak, rhododendron and pine trees). The Jaintia Hills are considerably lower, with much flat land; wet paddy cultivation is practised here and there where sufficient water is available. From the plateau of the Khasi Hills northwards to the Assam Brahmaputra Valley there is a gentle slope covered with thick jungle, and the southern slope towards the Bengal plain is very steep, so that

Map 6. — *Map of the Khasi-Jaintia Hills with Classification of Groups.*

the upland remained practically cut off from the plains until the middle of the 19th century.

Following the geographical and ecological differences, the five groups are segregated into fairly well-defined cultural areas, each developing a different economy and dialect:

1. The Jaintia[1] — associated mostly with wet rice cultivation.
2. The Khasi (upland Khasi) — practise potato cultivation with small-scale rice and maize cultivation.
3. The War — inhabit the southern slope of the Khasi and Jaintia Hills (they are called geographically the Khasi War and the Jaintia War). Due to the heavy rainfall, the soil is the most fertile in the Khasi and Jaintia Hills. The Khasi War practise jhooming of which the main yield is millet. In the lower part of this area, pan-leaf, betel-nut, and orange gardens are cultivated. The Jaintia War practise wet rice cultivation like most of the Jaintias, as well as pan-leaf cultivation.

1. They are called also the Syntong or the Pnar.

G. Kilwa women of Kongwa village

H. Young Kilwa women of Mafia village

15: Nakano E-5 (1955-1956) 1967 A&T Khasi A&T

a. The Khasi — occupy the northern slopes of the Khasi Hills, covered with thick semi-tropical forests, they practice jhum cultivation. 679

b. The Jaintiaps — inhabit the western border of the Khasi Hills, near the Jaintia Hills. They are said to be half-Khasi and half-Garo. Their economy is similar to that of the Khasi.

These ecological and geographical differences correspond also to political-historical differences. From the 16th century to 1835, one of the annexation of the Jaintia Hills to the Khasi Hills under the British administration, the people of the Jaintia Hills formed part of the Hindu Jaintia kingdom, whose capital was Jaintiapur, on the border of the present East Pakistan and of the Jaintia Hills. The capital, at one time, was moved to Nartiang near Jowai in the heart of the Jaintia Hills. The Jaintia Hills were administrated by twelve governors. Such a highly developed economic system as based on wet rice cultivation, must have helped a great deal informing a kingdom adjoining the plain. Through the common economy and political organization with the Hindus of the plain, the Hindu civilization of the Bengal plain penetrated deeply among the Jaintias, who are mentioned hill dwellers. 175 648

On the other hand, the Khasi Hills have remained outside the horizons of either Assam or Bengal. They were governed by a number of petty native chiefs; there were twenty-five chiefs ruling the Khasi Hills when the British colonial administration was established there. Most of these chiefs belonged to the Siem clan. The history of the Khasi Hills had been shrouded in darkness till the beginning of the 19th century, except for fragmentary stories such as Khasi raids on the lyllot people.

The development of the upland Khasi Hills started with the establishment of its headquarters at Shillong in 1874. Since then the features of the Khasi and Jaintia Hills have changed a great deal. What was once a small Khasi hamlet, untouched by the light of history, has become nowadays a busy modern town where many Khasi intellectuals live, mixing with various outsiders who are engaged in official work or in business. The British administration opened the way to missionary activities, especially that of the Welsh Calvinist Methodists who set up a mission in the Hills in 1841, almost at the same time as British political influence began to make itself felt in the Khasi Hills. Along with the political penetration from Cherrapunjee (1833) to Shillong, missionaries established many institutions, including churches, schools and hospitals, etc. Christian education, bringing with it the promise of clerical positions, attracted young Khasi a great deal; and the majority of the upland Khasi have been converted to Christianity. They have become the modern intellectuals of their people. 178 668 797 [891] [745]

197 Besides these political and religious changes, there have been very
198 important changes in Khasi economy, particularly by the spread of
244 potato cultivation. Potatoes were first introduced into the Hills in
1830 by Mr. David Scott. Since then, the upland Khasi Hills have been completely planted with potatoes. This groundnut seems to be very easily adapted to potato cultivation; it spread so rapidly and successfully, becoming basic economy of the people, that they hardly remember life without potatoes. Information is very scanty on what was the major cultivation before the potato. However, we may surmise that they must have practised jhum cultivation as do the present people in War and Bhoi. Nowadays, there are no jhum fields in the uplands as there are practically no forests with which to make jhum fields. There must have been a long period of jhum cultivation, which resulted in recent ecological changes in the uplands through the exploitation of the jungle. This hypothesis might be supported by the existence of big timbers in old buildings in the Khasi Hills, as well as by the present economic techniques of the people.

197 The present potato cultivation is also a kind of shifting cultivation
244 like jhuming, with a rotation from three years to five years. The
241 uplands are covered with groundnut, and sometimes with scanty pine trees which were also introduced by the British. For potato cultivation, the Khasi first cut branches from these pine trees, and the groundnut is cultivated by the small Khasi hoe. They root out grasses with earth attached about three inches in depth and one foot square. These pieces are turned onto the cultivated surface, where fallen leaves, branches and wild grass have been spread, in such a way as to keep a space between the ground and the turned up clods of earth. The field in which the potatoes are to be planted is entirely covered in this way. The grass and leaves are set on fire in one corner of the field and this fire spreads through the middle spaces and burns all of the grass and branches, thus converting it into excellent manure. The potatoes are planted afterwards. Two crops of potatoes are raised generally in a year. The following year the field is shifted to another grass-growing area, leaving for a few years the last field to grow another crop of grass. This is a type of small-scale jhum cultivation. This example of the present economic method suggests that
198 the Khasi had been jhum cultivators before potatoes were introduced.
244 It might be indicative of the last stage of jhum cultivation when the
[241] forests are completely exhausted. Before the potatoes, they must have grown yams, maize and millet more or less in the same manner; these items are still cultivated on a small scale along with potatoes; the yield must be very low as compared with that of the War areas, obtained through the exploitation of land. In the uplands, pan culti-

15: Nakaoka E-5 (1955-1956) 1957 AR7 Khasi AR7

cation is impossible because of the cold climate. In the past, Khasi economy must have remained at a very primitive stage.

Potato cultivation has been much encouraged along with the development of Shillong and the opening of the motor road to Gauhati from Shillong after the Independence of India when Shillong became the seat of the Assam Government, as well as the capital of the Khasi-Jaintia Hills. Shillong has become an important trading centre, where big merchants collect the harvests of potatoes in exchange for rice, clothes and various other goods from the Assam valley. These changes have introduced the Khasis into an active commercial economy which again has brought about various changes in their social life. Recently coal excavations have started in the upland Khasi Hills, and many Khasi become miners.

Thus the history of the Khasi Hills during the last hundred years has changed a great deal the picture of the Hills. However, dark corners still remain in Bhoi, War and in the area bordering on the Garo Hills. These have been kept in a vacuum between the Hindu civilization of the bordering plain and the modernization of the uplands centred in Shillong. In these areas, the people are still practising primitive jhum cultivation. I have chosen two villages in War located in one of these areas as subjects of my major field-work.

[P. 100 is blank]

15: Nakane E-5 (1955-1956) 1967 AR? Khasi AR?

CHAPTER II

VILLAGE COMMUNITY

As models of a Khasi village community, I have taken my data for the discussion presented in this chapter from two villages situated in the Kadashinong area, Sohkynshah and Kongton, with comparative data from Shella and Jatinga villages. 121

Sohkynshah and Kongton are situated in one of the most secluded spots of the Khasi Hills and the economy is shifting cultivation, with millet as its main product. Only a few Christians are found; most of the population are pagans. Shella is situated on the southern border of the Khasi Hills, adjacent to Pakistan. Jatinga is in the North Cachar Hills, surrounded by patrilineal tribes, such as the Zemi-Naga, the Kuki and the Cacharee. The economy of both villages is pan-leaf and orange cultivation. In Shella, Hindu, Christian and pagan are found among the villagers almost in the same proportions, while the Jatinga villagers are all Christian. The two Kadashinong villages, Shella and Jatinga, differ from one another not only in their religious and economic aspects, but in overt culture, dialect and political organisation as well. (Additional information concerning Shella and Jatinga is given in Appendix.) Shella and Jatinga are unique among Khasi villages and quite sophisticated, having been developed under a trading economy, with considerable contacts with other peoples, including Hindus. I selected these villages in order to ascertain how far the structural principle which operates in the Kadashinong villages can be found to act also in totally different economic and environmental situations.

I. Setting and Economy: Background of Sohkynduh and Kongton

Sohkynduh and Kongton are villages of the Kadashinong,[1] one of the areas under the Cherra Chief. The Kadashinong is situated on the southern slope of the Khasi Hills, in what is called War country. These two villages are situated at the farthest point from both Shella, the centre bordered by the plain, and Cherrapunjee, the seat of the Cherra Chief, one of the centres of the upland Khasi Hills. The people at Cherrapunjee say that these villages are one of the most backward parts of the Khasi Hills. They correspond to Rombagiri in the Garo Hills, as they lie in the innermost parts and more traditional economic and social settings have been preserved there than in other villages. These are also the reasons why I selected those villages as my field.

It is nine miles to Sohkynduh from Cherrapunjee, crossing two deep valleys towards the east. Kongton is located at the heart of the mountain ranges, ten miles from Cherrapunjee, towards the north-east. It is about twelve miles from Sohkynduh to Kongton, and the way leads through one of the most difficult passes, where even villagers seldom travel. In December, 1955, Sohkynduh was a community of 46 households (List 6), and Kongton of 62 households (List 9). The settlements of both villages are clustered in the southern depressions of a mountain, not far from the summit, a typical location of Khasi villages. Sohkynduh has poor soil, covered with plenty of pieces of stones. The yield therefore is very poor. On the other hand, Kongton, a much older village, enjoys fertile soil, and is one of the most prosperous communities in the Kadashinong.

The major economy of both villages is shifting cultivation. We have already seen, in the chapters on the Garo, the fundamental technique of "Jhuming cultivation." The differences between the Garo and the Khasi shifting cultivation are to be found in two aspects: one is the nature of the crops and the other is the type of landownership. In this area, the main crop is millet, while that of the Garo is rice. Besides the shifting cultivation, the Khasi have pan-leaf gardens and sometimes pineapple gardens, though on a small scale and not in every household. The most important feature of Khasi shifting cultivation is the development of private ownership. In the tribal areas in Assam, such private ownership of the jhum field is quite an

1. Kadashinong is the name of a group of villages. Its literal meaning is "twelve villages," and it comprises the following villages: Sohkynduh, Rymmai, Mawbawein, Mawshiut, Mawmang, Kongton, Shyntiang, Krohiawhiar, Pdei, Tenshun, Nongpriang, and Diengnaw. (Khasi spelling follows the customary usage in Cherra State.)

15: Nakano E-9 (1955-1956) 1967 AB? Khasi AB?

exception. As I pointed out in the last chapter on the Garo, private ownership started with wet cultivation. In Kongton, there are no common (village) or clan land: every piece of land is owned by some household—more precisely it is owned by the woman, the head of a household, and managed by her brother or maternal uncle. The majority of households in Kongton possesses land. Some of the richer households lend the land while some of the poorer households lease it. The rate for leases is Rs. 30/- per year for an area where one maund (80 lbs.) of millet seeds can be sown. As there is no acreage system, the measurement is by quantity of seeds, and since shifting cultivation requires a change of field every year, the rent is fixed by the year. The pan-leaf gardens, also privately owned, are never leased. When labour is required, the owner engages villagers, paying them Rs. 3/- per day.

In Sohkyndoh, there are some lands called "clan land." Throughout the history of the formation of Sohkyndoh village, as reconstructed from my data, can be traced some evidence of the evolution of land ownership. The first inhabitants of Sohkyndoh were said to be the people belonging to the Prarian clan (See Lists 6 and 7). It seems that when the Prarian came to this site, the land already belonged to the Dkhar clan of Rymmai village, five miles north of Sohkyndoh. The present distribution of land ownership confirms this story. The jhum field belonging to Sohkyndoh is divided into four sections according to the locality:

1. Lum Sohkyndoh
2. Sohliang
3. Mawkhalai
4. Lumpalong

One part of Lum Sohkyndoh belongs to the Prarian clan. The rest of Lum Sohkyndoh, Sohliang and Mawkhalai belong to the Dkhar clan of Rymmai village, the management of which is in the hands of Phrensing who came from Rymmai and married a woman of Sohkyndoh. Lumpalong is owned by Sor (Kynshah clan, 32 of List 6) privately. The Prarian and Dkhar lands are used by their descendants respectively. The people of other clans have to pay a rent of Rs. 80/- to use these clan lands. For the land which belongs to Sor, even the people of the same clan (Kynshah) have to pay rent since this land is privately owned. Thus the land of Sohkyndoh belongs partly to particular clans and partly to a private owner.

Gurdom explains the existence of the clan land in the Khasi Hills as follows:

"The clan lands originally, when population was sparse, were owned by families, but as the members of the family increased and a clan was formed, the lands became the property of the clan instead of the family. Such clan lands are properly demarcated by stone boundary marks. The manager of the clan

178 lands to the two (matrilineal) uncle of the youngest daughter of the main family,
423 or branch of the clan), whose house 'ka ing khadduh,' as last house, is the place
for performing all the religious ceremonies of the clan, and is also called ka
614 ing ang. All the members of the clan are, however, entitled to share in the
produce of any of the clan lands they may cultivate. No clan lands can be
alienated without the consent of a durbar of the whole clan" (Gordon, 1929,
p. 88).

178 Theoretically we can assume that the land was owned by the family
423 (precisely, ing, the matrilineal descent group at the lowest segmenta-
428 tion, the structure of which will be discussed later) who first claimed
the right to the land, and was managed by the maternal uncle of the
614 youngest daughter, the heiress entitled to the property. In course
of time, with the increase of the descent members and with fissions
of the descent group, this land was inherited through the youngest
daughter's line, but other members who had become segments of the
main descent group had a right to use the land, so long as they remained
in the same area. Newcomers who belonged to another clan were
not granted the same right and had to pay rent. According to the
information I was able to collect, even people of the same clan could
not claim the right to use the land, unless they were the direct matri-
lineal descendants of the woman who first owned the land. In this
sense, the descent group solidarity at a lower level is much stronger
than that of the Garo.

Therefore, newly possessed or purchased land is always owned by
the individual family (ing, descent group). This Khasi conception
of land ownership produces a picture of predominant private owner-
ship of land, combined with high geographical mobility of the popula-
tion (see p. 112). In such circumstances, it seems that even the
land called "clan land" has been alienated or sold frequently, and
has developed small holdings to suit the small segments of descent
groups. In particular, when the entitled owner moved away to another
area, the land was sold. For instance, in Sohkynduh, the maternal
uncle of Sor (mentioned above) purchased the land indicated above
about ten years ago from a family of Siem Lyngngoh who left for
another village. This land was originally purchased by the Siem
Lyngngoh from the Dkhar to whom the land belonged as part of the
clan land.

Under this system, clan ownership of land can develop only (1)
when the members of the descent group remain in the same community
for a considerable period and (2) when there is sufficient land to acco-
178 modate all members. I think these are the main reasons why land-
423 holding at present among the Khasi is found to be in small descent
428 groups—in one household as in Kongton in most cases, and this I call
private ownership. For the second reason, further explanation is

19: Nakane K-5 (1955-1956) 1967 AR7 Khasi AR7

summary. The chances of acquiring a piece of land nowadays are 178
small, except for very successful men, and usually the size of the plot
is only just enough to maintain one household. When this land is 423
passed on to the next generation, the youngest daughter will hold the
title to it. This fact tends to exclude married elder sisters from the 428
right to use the land, since it is not sufficient for more than one household. Thus the ultimogenitrow succession rule seems to have developed more sharply and to have encouraged limited inheritance in conjunction with the shortage of land.

This tendency creates unbalance in the economy of the households 178
within a community. It is a usual picture in Khasi villages, for the
bigger and well-built houses to be occupied by the youngest daughter's 189
family, while the elder sisters reside in poor huts. Youngest daughters 423
are usually landowners, while their elder sisters have often to become
day-labourers after their marriage, unless their husbands are capable 428
men, or their fathers wealthy enough to give them some share of their 556
acquired property. On the whole, the variations at present between [171]
rich and poor are considerable in a Khasi community, in comparison with that of the Garo, where the economic condition of each household in a village is more or less similar. These differences are not only a matter of economic organization but arise from the nature of each social structure.

The economic and social patterns of Sohkynduh and Kongton are 197
very similar, but their dialects are slightly different: my interpreter, [124]
who came from Cherrapunjee, could work quite well at Sohkynduh, but at Kongton he found some difficulty, especially with the speech of the old men, and with their religious expressions. The head man of Kongton, who was quite accustomed to the Cherra dialect, acted as an interpreter for us. Such differences in dialect in the Khasi Hills are common phenomena; it is said that every valley has its own dialect. Differences are found not only in speaking, but also, to a certain extent, in culture and in social usages.

II. Village Endogamy

One of the outstanding features of Khasi social organization is 582
the predominant tendency of endogamy on the level of the village,
which contrasts with the structural orientation of the Garo village 621
exogamy. This is closely connected with the distributions of clans [171]
and the nature of the descent groups.

The Khasi population consists of a number of *kur*, matrilineal 614
clans, whose members consider themselves to be descended from a
common ancestress. The members of the same *kur* have a common [765]
[769]

19: Nakane K-5 (1955-1956) 1967 AR7 Khasi AR7

614 *maubs* (green stone), in which the bones of all the dead members
[765] are buried. When the *maubs* becomes full, or some members move
[769] away to a considerable distance, they provide another branch *maubs*, creating a new *kur*.[1] Thus in course of time, every elder *kur* occasionally branches off. Every branch *kur* has a different name, but can be grouped into a major *kur* thus forming a distinct exogamous group. Relationships among the minor *kur* of one major *kur* are usually known, or can be ascertained, so that marriages among these members are avoided. When the Khasi express this kind of group consciousness, they use the term *jai* (own people). For outsiders, it is difficult to know through the names of minor *kur* whether *kur* A and *kur* B are of the same group or not.

However, neither clan solidarity nor corporative activities are found among the Khasi, except in those clans which are considered of higher status, and maintain a functional position in the political or religious fields. Such are the Siem of the ruling clan and the Ringdoh of the priest clan, etc. Among commoners like the villagers of Sohkynduh and Kongton, the importance of a *kur* is confined to recognising a common ancestress, with a common *maubs* conception, which requires them to maintain a strict exogamous rule. But whether of major or minor *kur*, its members do not meet together or have a common leader. Actually major *kur* of which there are a considerable number all over the Khasi Hills, have no clear-cut geographical distribution. Each is scattered over a wide area, cutting across territory which includes several villages, and mixing with various other *kur*. Indeed, some of them are very widely distributed geographically and found in almost all regions of the Khasi Hills. A minor *kur* is also scattered over many different villages, though it shows more concentration than the
[621] major one. Consequently a village may be composed of small segments of more than a dozen different *kur*. Even those small segments of each *kur* found in a single village have little or no sense of kin-group solidarity, unless the members have quite close kinship ties. In many cases, though some members have the same *kur* name, their relationship may be distant, so that they cannot always reconstruct their genealogical relationship. In such a case their behaviour and attitude towards the same *kur* members and towards other *kur* members show no difference.

613 Individuals are not grouped actually under the name of *kur* but in a smaller group of matrilineal descendants from one great-grand-

[764] 1. The Khasi cremate dead bodies: bones and ashes are usually kept in a spot near the youngest sister's house which is the centre of a functional descent group, for many years and finally placed in the *maubs* of the *kur*. They say that these bones are to be collected and replaced into the *maubs* every hundred years with a great ceremony. However, none of villagers are certain about the year when the last ceremony was held.

19: Nakane K-9 (1955-1956) 1967 AR? Khasi AR?

mother, for which unit the Khasi word *kpuk* is used. Such a group of matrilineal kin is usually confined to one domestic family or to a group of households, linked by direct extension of a main household. However, even this descent unit is not a single productive and consumer unit, though it may act as a religious unit, having common ancestral property. I shall take up this thread again at a later stage of my analysis. 613

Because of the lack of the functional lineage organization as a corporate unit, the village community becomes the significant unit at a higher level of organization than that of *kpuk*. This fact is supported by the high tendency to community endogamy which links every household of a village into a unit with considerable cohesion and solidarity. In fact the members of a village community are linked to each other in various ways by affinal or cognatic ties. 621 613 614 551 621

Note: Numbers correspond to that of List 9.

The data I collected in Sohkynduh and Kongton show that the number of households that can be included in a single descent group (actual kinship ties through female members) is strikingly small, as shown in List 8 (Sohkynduh) and List 11 (Kongton). The maximum number of households belonging to a recognizable descent group was four, and mostly two. Many households (19 households of Sohkynduh; 25 households of Kongton) which did not appear in List 8 and List 11,

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

613 formed independent descent groups by individual households, for
614 which no traceable genealogical relation with any other descent groups
621 could be established, though some of them belonged to the same *kur*. In Sohkynduh, the total 48 households were divided into 16 *kur* (according to the house-owner), and in Kongton, the total 62 households were divided into 9 *kur*, while the number of actual descent groups amount to 31 in Sohkynduh and 41 in Kongton.

166 This fact, I presumed, indicated a considerable mobility of the
178 population of each village community. Hence, I tried my best to
613 reconstruct the historical alignments of these descent groups, both
614 from my genealogical data and with the help of the villagers' memory. The result showed that the mobility of the population over the last fifty years had been surprisingly great and complex. In Sohkynduh,
621 the Praian clan seems to be the oldest inhabitants of this village with 16 *kur* segments. Next came a family of the Ksing. The third wave was a family of Khonglam, and the fourth, Siem Lyngngoh which I mentioned previously (p. 104). The next were families of the Kynshah, many members of which had left for Nonprian village after a few years. The sixth wave was the Srieh family. All the above movements took place before the great earthquake of 1897 which shook Assam. After 1897 the movements became more intense and complicated, and involved many families of various *kur*. The villagers could not remember the order in which they came: there has been continual coming and going even up to now. At present, the Prarian, the Ksing, the Khonglam, the Kynshah and the Dkhar are the older among the 16 *kur*. However, such migrations concern usually a single family only, not a group of *kur*, and that is the typical pattern of Khasi migration. Hence, families which have the same *kur* name do not always indicate the same movements. The incentive for such migration seems to be to get land better appropriated to one's economic condition. Particularly, as I have already mentioned elsewhere (p. 105), the shortage of land seems to encourage families of older sisters who have no share of property, to move to other areas and look for land.

Thus, many households which make up the present village are minor segments of different *kur*, or of the same *kur*, but they can hardly trace their genealogical relations to one another. A migration to a new village was not undertaken at random; it was mostly as a result of information received from neighbouring villages, or from those where friends or relatives had already settled in. Several neigh-
178 bouring villages usually dispose of more than one common market
613 where they can exchange information and developed friendships over
614 trading. The matrilineal kinship relation is no more important a
621 factor than any of the others mentioned above. Among the Khasi,

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

the matrilineal descent group has a distinguished function only when there is common residence and common property. 178

In Kongton, among 9 different *kur* (List 10), Pohnong and Khonsit accounted for the majority of the population, while the rest, seven *kur*, were more or less of equal size. On the whole the population seemed more stable than that of Sohkynduh. However, as in Sohkynduh, actual descent groups amounted to 41, many of which have the same *kur* name but could not always establish genealogical relationship with one another; nor was there any functional cohesion. I failed to reconstruct the history of the formation of these descent groups: the villagers had no memory of their past except very fragmentary information which was quite insufficient to account for their present composition. They only insisted this was a very old village in comparison with Sohkynduh and other neighbouring villages. 613 614 621 [182]

While I was struggling with the villagers' scant accounts of their past and fragmented kinship relations among the present households, I was struck by the poorness of the villagers' genealogical memory in comparison with that of the Garo. Suppose A, B and C, who belonged to the same property-holding descent group three generations back: A and B being sisters and C being B's daughter. If B, including her descendants, moved away from the village two generations back, the present generation of A's and C's descendants would easily lose contact and knowledge of their genealogical relationship. This fact, on the other hand, illustrates some important aspects of the Khasi social structure: the kinship relation—matrilineal descent link—is not a significant factor beyond the scale of the household (property-holding descent group), and locality is more important than matrilineal descent for the formation of the Khasi community. Through the predominant practice of endogamy on the level of the village, the small segments (found on a level of a household or a group of a few households) of various different *kur* clustered in a village are linked by affinal relations each other, by which altogether form a well knit social organization of a village community. The cohesion and solidarity of the Khasi village community is strengthened by the local endogamy not by the localized lineage organization. 182 613 621

In fact, in contrast with the rather loose kinship relations which link different households, the affinal relations link almost every households in the village, as shown in Fig. 10. The lines, ———, indicate marriage relations between living members of households, and the lines, - - - - -, indicate affinal relations established through dead members of present households or through spouses' kinship relations at Sohkynduh, as in November 1955. In this way, except for one household (24), members of a single household are all linked together through affinal or cognatic ties. In some cases, the affinal relations between 602 621

- - - - - Affinal relations (indirect) among household-members.

particular two families are not restricted to one, but may be accumulated two or three, though I omitted to indicate these in Fig. 10.

582 There are some extensions of marriage relations with members
591 outside the village. In Sohkynduh, out of 88 (48 houseowners and
61 40 their husbands) 13 men and 2 women came from neighbouring
621 villages. Owing to the predominant uxorilocal arrangement, those
who came in from outside the village were mostly men. By these
628 members, five different *kur*, new to Sohkynduh, were found, as shown in List 7 (17-21). Most of these outsiders came from villages inside the Kadashinong, or villages no further than a day's journey there and back. This area might be called a secondary endogamous area, and includes more than half a dozen villages. In Kongton, 20 husbands and 3 women came from neighbouring villages by their marriages. The secondary endogamous areas of Kongton and of Sohkynduh are not the same but they overlap in certain places, the surrounding areas being centred on each village. There were, by December 1955, no instances of direct marriage between these two villages.

184 There are a few exceptions to local endogamy, such as those
582 individuals who have become Christians and are educated in towns like Shillong or Cherrapunjee. They usually move to a town, seeking

621
[795]

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

184
some clerical work. However, such instances are very rare in these 582
regions and few Christians are to be found among the people. So far
as my genealogical table accounts for, only two boys from Sohkynduh, 621
and one girl and one boy from Kongton, left for Shillong, and [171]
married there. In contrast to these exceptional cases in these villages,
in the upland Khasi Hills, there are considerable changes in the [178]
composition of a village with high geographical and social mobility
of population because of the spread of Christian education and urban
influence.

The people of the two villages say that marriages with outside 166
people were not formally practised, and were only a recent tendency. 178
However, the composition of the population of the two villages showed
extensive movements of population in the past (not to urban areas, 582
but from village to village). Such movement is attributed mostly to
migration by a family rather than by an individual on marriage. 621
This type of migration is clearly found also in the process of the [184]
formation of Jatinga village (see Appendix, Jatinga).

The composition of the village community and the social character- 582
istics of Sohkynduh and Kongton show very similar features of village
endogamy. They seem to be typical of the traditional pattern of 621
Khasi villages. Village endogamy is the intrinsic pattern among the 184
Khasis. This fact can be also observed to a considerable degree in
Shella and Jatinga.

[P. 116 is blank]

CHAPTER III

KINSHIP STRUCTURE AND ITS IMPLICATIONS IN VARIOUS FORMS OF MARRIAGE

I. KINSHIP TERMINOLOGY AND SELECTION OF SPOUSE

The Khasi social structure differs greatly from that of the Garo; and one of the important differential elements is revealed in their kinship terminology. The Khasi kinship terminology does not show the structural significance of the marriage rules except for the basic distinction between own matrilineal kin, *kur*, and non-matrilineal kin, *kha*; this distinction serves to enforce the exogamous rule. 601 [117]

All members of Ego's generation, including both maternal and paternal cousins, are classed as *para* (sibling), and those of Ego's child's generation as *khun*. In these two important generations, the generation principle is the basic pattern in terms of marriage. Cutting across this principle, distinctions of sex (*ka* for female, *u* for male) and order of birth (old or first, young or youngest, sometimes middle is added) are to be found. For instance, *ka-para-kur* is mother's sister's daughter, *u-para-kha* is father's brother's (or sister's) son. Wife is *ka-lok*, and husband, *u-lok*. The youngest daughter is *ka-khun-khadduh*.[1]

Though the terminology of Ego's and child's generations shows the generation principle, the matrilineal structure is reflected in the following points apart from the distinction between *kur* and *kha*. 1) In the child's generation *(khun)*, the matrilineal nephew and niece are termed *pyrsa* as well as *khun*, signifying the sociologically closest members of the child's generation. 2) *Kñi* is the most important kinship term among the Khasi; it designates the head (and potential head) of the descent group, i.e. the mother's brother. The mother's mother's brother is also termed *kñi*, just like among the Nayar the [171]

1. For further instances, see U. R. Ehrenfels, 1953.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

601 [171] term *mama* for mother's brother designates as well mother's mother's brother. 3) Terms for mother's sister *(kmie)* and father's sister *(ñia)* are different; and, needless to say, father's brother is called *kpa*, not *kñi*. 4) Mother's mother *(meirad)* is differentiated from father's mother *(meikha)*, though the grandfathers on both sides are termed *parad*.

582 601 [171] As regards cross-cousin marriage, which, as we have seen, was an essential part of Garo social structure, the Khasi have no institutional arrangements. The cross-cousin distinction is indeed found in the Khasi kinship terminology. Among those who are called *para* (sibling), an additional term is applied to cross-cousins (both matrilateral and patrilateral). They are called *bakha*. However, this additional cross-cousin term should not be considered as indicating a preference [171] for cross-cousin marriage. This is structurally different from that of the Iroquois type discussed in terms of Garo kinship terminology, in which a prescrived cross-cousin marriage is involved. The term *para* (sibling) is more often used for them than *bakha*.[1] Actually, among the Khasi there is no preference for cross-cousin marriage; indeed there are even indications to the contrary, in that marriage with the mother's brother's daughter is not allowed during the life-time of the maternal uncle. In the same way, marriage with the father's sister's daughter is not allowed during the life-time of the father.

582 In fact, the Khasi have numerous prohibitions of marriages between near kin on both paternal as well as maternal sides. The first and second parallel cousins are avoided. Those related to father within three generations are avoided. Within such a framework of marriage prohibitions, the use of a special additional term for cross-cousins is an indication of marriageable relatives within the framework of prohibition. This should not be considered to indicate a marriageable member in an active sense or a preference for cross-cousin marriage.

However, such marriages do sometimes appear in my census; for example, a man may have married a woman who is the sister of his brother's wife, or of his sister's husband. Thus sometimes between two descent groups there are more than two exchanges of men. But such relations are temporary and would terminate after one or two 582 generations. There is no structural continuity. My censuses of four Khasi villages do show some tendency to marriages between two 614 specific *kur*, but I consider this to be largely accidental. When the choice of an individual is random, but one or two *kur* are larger than the others, it will naturally follow that there will be a high frequency

[171] 1. Such use of the dual terminology is also found among the Zuni and the Trukese, (see the discussion, in pp. 154-155).

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

of marriages between these two *kur*. Such marriage arrangements 582
cannot be regarded as constituting a cross-cousin institution. From 614
my data of four villages it was not possible to produce any institutionalized pattern.

In general, the selection of a marital partner depends mainly on personal choice, though the authority of the *iing* (descent group) and parents should be consulted. The man proposes to the girl. The network of marriage relations among the Khasi seems in no way to follow any set principle. Every marriage is likely to be fortuitous: it is ruled simply by temporary personal liking, except for the strict rule of exogamy and the avoidance of near kin.

Exogamy is strictly kept. In the olden days breaking this rule 178
was equivalent to being sentenced to death. Offenders had their
heads shaved in a particular way and had to leave the Khasi com- 582
munity completely. Even now such a marriage is considered as the 614
worst kind of sin; a Khasi Christian intellectual said to me that it 684
was worse than homicide. I came across one couple who had broken this rule. Though they had different *kur* names, both *kur* were segments of one common *kur*. It happened in Jatinga, one of the most modern Khasi communities whose inhabitants were all Christians. The couple were not allowed to have their house inside the village. Their house was in the jungle about one mile away from the village.

Successive sororate marriage—marriage to a younger sister of the 587
late wife—is practised, since it justifies the widower in remaining in the same household as his children after his wife's death. Otherwise, the Khasi rule demands that he should leave the house and his children in order to remarry another woman. We shall deal with this aspect again in terms of marriage.

II. Principle of Descent and Succession

Previously I have mentioned the *kpoh*, the matrilineal kin group 613
with a common great grandmother. This is not, however, an institutional corporate descent group. The most important functional descent unit is called *iing*. The *iing* is the lowest order of clan segmentation, smaller than the *kpoh*—a *kpoh* may include two or more *iing*. The generation depth of an *iing* is usually two to four, in some cases an *iing* is formed only by mother and child. The Khasi consider this unit to be the most important social index for the classification of individuals. Marriages are arranged by individual *iing*, not by wider groups of kinsmen. The *iing* is the structurally significant norm. The term *iing* is also used for a house building itself, as is the *nok* of the Garo. However, the membership of the *iing*, as I shall

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

613 explain later, does not always correspond to a domestic unit, nor to a corporate production unit. At least husbands are excluded from the wives' *iing* though they share a common household. The members of an *iing* consist of a set of strictly matrilineal descendants, who have a common right over the ancestral property, are subject to a common authority and practise some joint ritual.

The membership of the *iing* is determined through the mother. The central core of the *iing* comprises two persons, one holding the authority and the other owning the property; the rule of succession is strictly matrilineal. The authority goes from mother's brother to sister's son while the property is handed down from mother to daughter. A man continues to be a member of the same *iing* all his life whether he marries or not. A woman, if she is not the heiress (the youngest daughter), will branch off after her marriage and though she herself will continue as member of her mother's *iing*, the third generation from her will form an independent *iing*. It is sometimes difficult to trace the clear line of each group, as it is formed by a process of branching off. The actual working of the *iing* may be explained as follows (see Fig. 11).

FIG. 11. — *Composition of the Members of an* Iing.

All members appearing in Fig. 11 form a *kpoh*. The dotted lines mark off members of one *iing*. F is the mother who possesses property and A is her brother who holds the authority in the *iing*. F's property is at the disposal of all members of the *iing* for funerals, and for religious ceremonies of the *iing*. But all members of the *iing* do not usually share the property, as I shall explain later in connection with the dwelling unit.

G, H, I, J, S and T are excluded from F's *iing*, but F is responsible for them if their mothers should die before their marriage. In case they loose their mother they must be fed by F, or by F's daughter, or by F's grand-daughter. The descendants of B, C and L will form respective independent *iing*, separated from F's. Thus, the position of B, C and L show the process by which an *iing* segments. F is succeeded at her death by her youngest daughter M.

On the death of A, he is succeeded in his position of authority by K. If K is too young, and D or E live in the same house as K, D or E will succeed A. Succession to the position of authority normally depends on seniority, but capability and the place of residence are also taken into account, according to circumstances. In the

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

absence of A, D E, K and N, U succeeds to the office if he is grown up. 613
If U is too young, a chance arises for F's husband, if F is alive, if not, for M's husband.[1] In the event that none of these males be available, finally the office is taken by F and then by M. It should be noted that the office assumed by F's husband, M's husband, F or M would have to be returned to M's son, as soon as he comes of age. These cases are considered a temporary measure to meet an emergency.

The Khasi follow a strict descent line, and neither a classificatory 611
uncle (or brother) is allowed to take over the authority of the *iing*,[2] 613
though if there is no successor to the property, a daughter may be adopted from the nearest matrilineal descent group. Instead of the adoption of a daughter, the following steps may also be taken. The property is handed over to the nearest matrilineal descent group; or if there is a son, he may inherit his father's or mother's acquired property, but ancestral property should go to a matrilineal kin. In such cases, the particular *iing* actually becomes extinct: in the former case, though the property is handed over to another *iing*, this *iing* belongs to the same matrilineal line; in the latter, the property goes eventually to the son's wife and to his children, i.e. an *iing* of an entirely different *kur*. The latter arrangement suggests that though the Khasi follow the strict descent line, so far as the acquired property is concerned, the child has primary rights over the mother's other matrilineal kin, as expressed by the son's right of inheritance in the absence of a daughter. In this way, the *iing* may become extinct by the death of the female member who has no daughter.

The Khasi consider the *iing* institution as the basic and most 613
important functional unit; it represents also the religious unit which keeps ancestral property and shares a common religious ceremony. This is indeed the key to the whole Khasi social organization.

III. Residential Unit

In this section I shall deal with the relation between the *iing* and 592
the domestic dwelling unit and examine the type of relation maintain- 593
ed between the marital family (husband, wife and children) and the 613
iing. Among the Garo, the *nok* corresponds to the actual group of individuals residing within one household. Upon this point the Khasi system is more complicated since spouses of members of the *iing* are excluded from the *iing*.

1. This would only arise in cases where the husbands of F or M live in the same household as their wives.
2. In the case of succession to the chieftainship, a classificatory sister's son is taken in the absence of a direct nephew or brother

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 The Khasi domestic unit (co-residential group) can be divided into four categories:

1. Households consisting of wife, husband and their children, wife's unmarried sisters and brothers—sometimes including widowed or divorced.
2. [613] Households including all members of an *iing* (excluding their spouses from members of 1). In this type, larger households contain all the descendants of three or more generations from one woman (in this case, an *iing* corresponds to a *kpoh*).
3. [591] Households of intermediate type between 1 and 2. Husbands are supposed to live in their wife's house, but they often go back to their sister's house for meals, and sometimes sleep there. They are supposed to work in their wife's field but they might work in their mother's (sister's) field, if necessary. This tendency is especially strong among newly married couples before they have a child.
4. Households consisting of only one elementary family. This mostly happens when a man married a non-heiress.

Most Khasi households are of types 1, 3 and 4 and these three types are usually found within one village. They were found in the four villages in which I worked. It is to these dwelling units that I have given the name of house in Lists 6 and 9. Category 2, according to [178] the information of Khasis and Jaintias, was used to be found among the Jaintias, though nowadays such cases are rapidly decreasing, changing into forms 1, 3 and 4. The members of category 2 belong to an *iing*, which structurally corresponds to the *tarwad* of the Nayar, and the *parui* of the Minangkabau.

178 Category 2 may have been practised among certain of the Khasi a long time ago. Kongton people said that as recently as their father's 184 generation, there were many husbands who stayed at the mother's house after their marriage and visited the wife at night. Nowadays, 591 visiting husbands are very unusual cases in the Khasi Hills, though such situations may occur among newly married couples before they have children. Gurdon, who wrote his book *The Khasi* in 1914, states:

> "Amongst the Khasis, after one or two children are born, and if a married couple get on well together, the husband frequently removes his wife and family to a house she and her husband pool their earings, which are expended for the support of the family" (p. 76).

In the Khasi Hills, the transition period between duolocal residence and neolocal or uxorilocal residence seems to have been shortened during the last forty or fifty years. This might have been effected through the influence of Christian marriages, which start cohabitation of the wife and the husband immediatly after the marriage ceremony. However, in Jatinga whose inhabitants originated in the Jaintia Hills where duolocal marriage is the usual practice, there are even now many instances of a man staying at his mother's house for several

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

years after his marriage. During this period he works in his wife's 178
field, then, if the couple gets on well, they start to live together in 184
an independent house (non-heiress's case) or in the wife's house
(heiress's case). In spite of the fact that the inhabitants are all
Christians, they have retained this custom.

It is difficult to determine at what date the Khasi people have 178
changed from duolocal marriage to uxorilocal marriage. However, 591
the present dwelling unit, with its fluid relationship between husband
and wife (in fact, there are many cases of category 3), suggests a situation linked with the duolocal residence pattern. The fragmentary historical information available and the present Khasi residence pattern suggest that the duolocal arrangement may be an older pattern of marriage. When I was in Kongton there was no husband who stayed at his mother's house permanently, visiting his wife at night. The head man told me that, when he married, there were many who did not stay in the wife's house. He was the first person to settle in the wife's house. In his case, he said, he felt sympathy for his wife who had no brother who could work for her. After he had settled in his wife's house, many villagers began to follow his example.[1] When the [621]
pattern of a visiting marriage was in vogue, a village must have constituted a more compact endogamous unit. If the husband's house was in another village, a visiting marriage must have been a great inconvenience. The tendency to settle in the wife's house and work for the wife's house must have brought about a wider range of marriage contracts, such as with members of nearby villages, even though in the present form of marriage, village endogamy is much preferred as it is decidedly advantageous particularly for a husband, since he can continue his life in the same familiar environment in spite of uxorilocal marriage.

The variations in the pattern of co-residential grouping, which 592
I have classified into four categories, reflect two different themes in 593
the social structure of the Khasi. On the one hand they represent 613
different stages in the maturity of the individual families concerned. For example, a householder who starts in category 3 or 4 may end as an old man in category 1. On the other hand these variations also reflect the polar opposition between the obligations of matrilineal kinship and the obligations of parenthood; a man, in particular, has conflicting obligations towards the *iing* of his sister and the *iing* of

1. However, all the information which I collected in the upland Khas [184]
Hills indicates that the uxorilocal residence pattern has been practised for a long time. According to stories often told by the Kongton people, they migrated from the Jaintia Hills. If these accounts are to be taken as a reflection of the real history of their migration, it would seem that the Kongton people may have kept up the Jaintia custom including the duolocal residence pattern up to recent times, while the majority of the Khasi practised uxorilocal marriage.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 his wife. Paternal rights are not well recognized among the Khasi.
593 The religious elements in the *iing* institution lay stress only on matri-
613 lineal solidarity. These elements tend therefore to orient each individual of the domestic unit to his or her own matrilineal kin group, the *iing*. This results in unstable relations between members of each elementary family, in other words, the marriage relation is one of the weakest.

000 This is the crucial point in matrilineal societies, and has been much discussed by anthropologists. Richards says,

> "In this balance of privileges and duties between the patrikin and the matrikin the crucial point is obviously the husband's right to determine the residence of the bride. If she and her children live in the same homestead or village as his kinsmen, his domestic authority is likely to be greater than where they remain with the wife's relative" (Richards, 1950, p. 208).

This statement is quite acceptable for those matrilineal systems which provide possibility for a man to take his wife from her matrikin to his house or village where the husband's kin are found, as in cases of the matrilineal Central Bantus, the Ashanti, the Trobriands and
591 the Nayar in North Malabar. However, among the Khasi, there is no such custom of removing a wife from her kin to that of her husband. Since most marriages take place inside a village, there are only two different residential arrangements: one is to take the husband to the wife's house, where he lives with his wife's parents and other matrikin; the second is for the newly married couple to establish an independent house. Among Khasi men and women the usual practice is to leave the parents' house at marriage, except in the case of the heiress (the youngest daughter). In this respect the Khasi differ again from the Nayar and the Minangkabau who form a sibling family on the basis of duolocal residence,[1] and from the Hopi, the Zuni and the Trukese who form a residential group of an extended family, based on matrilineal descent including in-marrying husbands of married females. Khasi sisters do not form a residential group after their marriage; sisters' houses are scattered over the whole village residential area, mixing with households of other descent groups (see Fig. 10 with List 8).

Then, what is the factor that makes the Khasi have two different types of residence i.e. uxorilocal and neolocal[2] within a matrilineal

1. Only the case of some traditional Jaintias (category 2) would appear to show groupings similar to those of the Nayar, however, I did not work among them, nor are there anthropological reports available for them, particularly in this respect.

2. I use 'neolocal' in terms of house-building, since they usually build a house for newly married couple in the same village where both wife's and husband's parents live—village endogamy.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

society? Among the matrilineal Central Bantus, Richards says that 591
the determining factor in residence at marriage is the marriage payment
or the type of goods and services which the bridegroom gives (Richards,
1950, p. 249). However, the Khasi have no such custom in the mar-
riage contract, it is therefore out of the question to explain the two
types of residence in this way. In the case of the Khasi, the determin- 182
ing factor is the type of marriage with relation to the rule of inheritance 428
and ownership of property, which is clearly related to the structure 581
of the *iing*. Khasi marriages can be divided into two categories i.e., 591
marriage with an heiress and with a non-heiress. Marriages with an 602
heiress must be uxorilocal. This accounts for category 1 or 3 of the 613
household pattern. On the other hand, marriages with a non-heiress
become neolocal and correspond to category 4 of the household unit.

IV. Marriage with the Heiress

A man married to an heiress, usually lives with his wife's parents 182
and her unmarried or divorced brothers and sisters. For a man, life 428
after marriage under such circumstances require great adjustment 591
and endurance. The husband's status is especially weak when a male 592
member of the wife's kin lives in the same household. The manage- 593
ment of property and all economic activities are entirely controlled 602
by the authority (wife's brother or maternal uncle) of the *iing*. The 604
husband works in the wife's field under constant supervision from 613
this authority. Both economic activities and domestic affairs are
always under the management of this authority. The children have
more attachment to, and are more obedient to, the maternal uncle
than to the father. The tie between the uncle and the nephew is so
strong that the father is rather like an additional member of the
household. He is the last person to be introduced to visitors. [574]

This family system is clearly reflected in the daily behaviour. 123
When we visited the Khasi household of a youngest daughter, if a 574
man (obviously the husband) came first to greet us, he always said 592
"please wait, my wife (or mother-in-law) is coming." And it was 593
the wife who entertained us, offering tea or pan and discussing matters 602
with us, while her husband remained silent in the corner of the room, 604
or in the next room. If her uncle or brother was there, *he* would be
the person who talked to us, while his niece or sister served us. In
such a case, we were seldom introduced to the husband. When I was
working at Shella, I happened to stay in such a family. I had hardly
any opportunity to talk to the husband during the two weeks of my
stay. He left the house very early in the morning and came back 592
late in the evening from the fields. While he was at home, he was 593
604

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

592 always somewhat outside the family conversation which was centred
593 on the maternal uncle and his sisters, nephews and nieces, by whom
604 I was well taken care of. This is somewhat similar to the situation amongst the Cewa and the Yao of the Central Bantus, which have what Richard calls 'the detachable husband' (Richards, 1950, pp. 233-35, 248), though the parallel is not by any means exact.

428 There is, therefore, inevitably an element of tension in the relations
581 between the wife's maternal uncle (including parents-in-law) and the
586 husband (son-in-law) and this tension makes the latter's life extremely uncomfortable. This awkward position is well shown in the divorce
[604] rate. At Kongton (see List 9), out of 61 couples (house-owners and
[606] their spouses), the number of persons who had experience of divorce
[592] was 33 (female 15, male 18) and those married more than twice
[593] numbered 19 (female 7, male 12). Out of 61 couples, there were only 31 in which neither husband nor wife had been divorced. In my census of Jatinga village, 70 per cent of all divorce cases were marriages to heiresses. In general, the period when divorce occurs more frequently is before a couple get children and after the wife has passed the child-bearing age. A marriage breaks up either through the action of the wife or of the husband, but generally through that of the wife. However, the state of separation which I presently describe is brought about by the husband, though later it results in a divorce from the wife. Divorce does not mean a great catastrophe for a Khasi wife, especially if she is an heiress and her husband's economic
[587] contribution is not significant. Moreover, in this society remarriage is as easy for a widow or divorcée, as it is to divorce. In the villages of Sohkynduh and Kongton, the couple who wants to divorce has only to throw a few Annas together in the presence of some witness, usually an elderly man.

581 In addition to divorce, there are many actual separations of husband
593 and wife, of short or long duration, when the husband runs away from his wife's house to his sister's. Though it does not always end in divorce, considerable number of husbands have a strong tendency to spend most of their time at their sister's house. Khasi women often told me, "I don't know why he does not come back to my place." I have often found the husband staying at his sister's house only a few houses away from his wife's, without any particular reason. They are obliged to see each other every day whether divorced or separated. This kind of ambiguity in the marriage relation seems to have an important correlation with the Khasi social structure, combined with the village endogamy. The man and and wife have grown up together from their childhood in the same village and known each other very well. Hence their psychology cannot clearly distinguish the marriage form as a newly-established independent social relation-

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

ship. They still live in the same familiar atmosphere as before their 581
marriage. The implications of this ambiguity in the married state are 593
considerable. Particularly the husband's uncomfortable situation, when the wife is heiress, encourages him to take marriage less seriously.

A husband who undergoes hardship in his wife's house, finds 581
himself as the authority in his sister's house; if he is not the authority, 591
he can find at least a respected position as uncle or brother. In the 592
case of a man of authority in the *iing*, the tendency for him to regard 593
his *iing* as more important than his married life is proportionately 602
stronger, as I will discuss later. Hence the most unstable and unsuccessful marriages are those between the heiress and the man of 604
authority. This is one of the reasons we often find among the Khasi: 613
a brother or an uncle, who is already married, acting nevertheless as 428
the head to a family *(iing)* and as a member of its domestic group. This means that he is in a state of temporary separation or divorced. Among the Ashanti, a man and his wife's brother are never found as [171]
members of a common household (Fortes, 1950, p. 262), but among the Khasi, on the contrary, a man and his wife's brother are often found as members of a common household. In such cases, however, the brother has no wife, or never brings his wife to his *iing*. Therefore, a man and his wife and his sister never reside together. As far as the residence of women is concerned, the Khasi keep to the strict descent rule; two women who belong to different descent groups never live together. This point differentiates the Khasi residence pattern, in which social structure is involved, from that not only of the Ashanti but also of the Yao where the head of a descent group can bring his wife to his sister's household, though, among other members, uxorilocal marriage is the rule. These differential aspects of matrilineal systems will be discussed from a more theoretical point of view later.

In addition, should a Khasi man even succeed in spending his life 602
with his wife's kinsmen, as soon as the wife dies, he will usually 613
return to his *iing*, that is, to his sister's house, where he is received warmly and where he often acts as the *de facto* authorithy, as in the similar situation of divorce and separation. Thus the strong matrilineal structural principle tends to orient a man towards his own descent group, the *iing*.

The man's attachment to his *iing* is very great throughout his 171
life. In this regard the Khasi differs from the matrilineal Negri 592
Sembilan Malay. Among the latter, returning to the matrilineal kin 602
is regarded by the man as an imposition rather than as the enjoyment 613
of a legitimate privilege (see Swift, 1958, p. 157).[1] This difference 428

1. He presents this fact as one of the reasons of the durability of marriage [581]
among the Negri Sembilan. Indeed, on this precise point they differ from the Khasi where marriage is rather unstable.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

171 seems to come *firstly* from the different residential arrangement on
592 marriage: among the Negri Sembilan a man marries into his wife's
602 group, i.e. his wife's village; being thus separated from his kin, and
613 as a result of the physical absence of his wife's brother or maternal
428 uncle in his domestic family, he enjoys considerable rights in his wife's household—as Swift states, he is 'master in his own house.' On the other hand, since among the Khasi the man stays in the village where his mother's (or mother's successor's) house is, even after his marriage, his relation to his natal house is preserved; *secondly*, from the structural difference of organization of the descent group. Among the Khasi, the *iing* is always the centre of the descent group, based on unigeniture succession and inheritance. Hence, the core of the descent group is always found physically in a particular household, whereas among the Negri Sembilan, the descent group is *not* organized on a *household* level, but is a much wider organization, including apparently many households. Membership of an actual household and of a descent group are at different levels. To marry out and become a member of his wife's household means for the man the transfer of his household membership. Likewise, his sister's husband becomes a member of his sister's household. Thereby he becomes a secondary member of his sister's household after marriage though he keeps his memberhsip in the descent group to which his sister belongs. Among the Khasi, membership of a descent group always corresponds to membership of a particular household. The Khasi man can always demand his rights at his natal house primarily, as he is a member of that descent group. But it should be noted that he has this right only in his mother's (or mother's successor's) household, not his other sisters' (non-heiress') and mother's sisters' households (unless one of them is successor of his mother), though they may belong to the same descent group. These matri kin's households are considered as separate *iing* (strict functional descent group) from his.

586 Indeed, sometimes a man cannot find his *iing*, because his mother
613 died leaving no daughter to succeed her, or his sister died leaving
736 no successor, and his *iing* became extinct. Such a case occasionally
428 happens when a man becomes a divorcé or a widower as he is getting old. Then he has to face a serious social and economic condition. In divorcing, he has to leave everything he owned, his earnings including the house which he built, and even children . . . really he has nothing left him except his body.[1] Such a wretched man collects some timber and makes a small hut for himself, though sometimes lads who sympathize with him help him to build it. Unless he finds some woman

1. A widower has an alternative solution—to remain in his late wife's household till he marries again, though his position is not comfortable there.

15: Nakane E-5 (1955-1956) 1967 AR7 Khasi AR7

whom he can marry, he has to endure this miserable lonely life, while often in the same village his former wife is living in a well-built house with her children and her matrilineal relatives as before. Households of 3, 13 and 30 of Sohkynduh in List 6, and 23, 29, 38 and 56 of Kongton in List 9 are instances of such cases. It is really a pitiful picture to see such a man, aged and poor, living all alone. 586 613 736 428

V. Marriage with the Non-heiress

Outsiders who come to the Khasi Hills are often impressed by the Khasi husband's miserable status and express surprise at the high divorce rate. This is mostly due to exaggeration based on the marriage with the heiress. However, where a man marries a non-heiress, there are many successful marriages with paternal authority. In most of these cases a man's status as a husband and as a father is stable. First of all, the domestic residential unit is an elementary family. From the onset of the marriage the husband's labour is of great importance to his family, since a non-heiress usually has no economic background, i.e., no dowry or inherited property (see p. 105). The economic circumstances allow a man to be the *de facto* head even though whatever he earns belongs, as a rule, to his wife. A man who succeeds at the beginning of his married life is respected and honoured as father in his family for the rest of his life. By this type of marriage, the man's status is firmly established. It is therefore a more secure form of marriage than a match with an heiress. 184 428 593

In such a marriage the children love and obey their father. The management of his acquired property will be taken over by his son and the property will be handed over to his daughter. Thus the paternal authority is as well established in this form of domestic family, as in a patrilineal family. However, the great difference from a patrilineal case is that the husband/father status is not permanent as the authority of the family. Theoretically he exercises it in the absence of a male adult member of his wife's *iing* (actually founded by his contribution), in other words, till his son is grown up (see p. 12). In the next generation this will form an established *iing* in which the husband of his youngest daughter will suffer again. [613]
